

California Northstate University College of Dental Medicine Self-Study 2019 Table of Contents

Volume 1

Volume 1 Table of Contents

Section 1 Required Program Information

Administrator Verification Initial Accreditation Application for a Dental Education
Program Summary of Factual Information on the Developing Dental Education Program
Documentation of Compliance with Commission Policies

- Third Party Comments
- Complaints:
- Distance Education

Section 2 Forward

Description of the University
Criteria for Granting Initial Accreditation
Curriculum Mission and Vision
Program Learning Outcomes (PLOs) for the DMD program
Curriculum Structure and Course List

- Human Systems
- Oral and Maxillofacial Studies
- Behavioral and Social Sciences
- Credit Hours and Student Contact Hours
- Analysis of Program's Strengths and Weaknesses
- Description of Program Initiation

Section 3 Standards

Standard 1 – Institutional Effectiveness
Standard 1-1: Purpose/Mission
Standard 1-2: Ongoing Assessment
Standard 1-3: Humanistic Culture
Standard 1-4: Diversity

Standard 1-5: Financial Support
Standard 1-6: Support from outside entities
Standard 1-7: Authority for admissions, curriculum, faculty, administration
Standard 1-8: Institution's Accreditation History
Standard 1-9: Interactions with other components of higher education

Standard 2 Educational Program

Instruction

Standard 2-1: Syllabi and Course Listings
Standard 2-2: Student Advancement

Curriculum Management

Standard 2-3: Four Years of Instruction
Standard 2-4: Goals, Competencies
Standard 2-5: Student Evaluation
Standard 2-6: Equivalent Instruction in all sites
Standard 2-7: Integrated program
Standard 2-8: Curriculum Management Plan
Standard 2-9: Patient Distribution

Critical Thinking

Standard 2-10: Critical Thinking

Self-Assessment

Standard 2-11: Lifelong Learning

Biomedical Sciences

Standard 2-12: Core Biological Principles
Standard 2-13: Oro-facial Complex
Standard 2-14: Pathology
Standard 2-15: Integration Biomedical Science with Clinical Care

Behavioral Sciences

Standard 2-16: Behavioral Sciences
Standard 2-17: Diversity, Cultural Competency

Practice Management and Health Care Systems

Standard 2-18: Legal, Regulatory issues
Standard 2-19: Principle of Practice Management
Standard 2-20: Communication Health Team

Ethics and Professionalism

Standard 2-21: Ethics, Professionalism

Clinical Sciences

Standard 2-22: Literature
Standard 2-23: General Dentistry Across Lifespan
Standard 2-24: Competencies in General Dentistry - a, b, c, d, e, f, g, h, i, j, k, l, m, n, o
Standard 2-25: Patients with Special Needs
Standard 2-26: Community Experiences

Standard 3 Faculty and Staff

Standard 3-1: Number distribution of faculty
Standard 3-2: Faculty Development

Standard 3-3 Faculty participate in school decision making process

Standard 3-4 Faculty Evaluation

Standard 3-5 Faculty Promotion Process

Standard 4: Educational Support Services

Admissions

Standard 4-1: Admissions criteria

Standard 4-2: Advance Standing Admissions

Standard 4-3: Advance Standing Curriculum

Standard 4-4: Admissions resulting in diversity

Facilities and Resources

Standard 4-5: Facilities

Written Agreements

Standard 4-6: Written Agreements with sites not owned by university

Student Services

Standard 4-7: Student Services

Standard 4-8: Students advised of total cost of education

Standard 4-9: Regulatory Compliance

Health Services

Standard 4-10: Students advised of health standards

Standard 4-11: Student health services

Standard 4-12: Students encouraged to be immunized

Standard 5: Patient Care Services

Standard 5-1: Policy on Patient Centered Care

Standard 5-2: Patient Care is Evidence-based

Standard 5-3: Quality Improvement Plan for Clinical Care

Standard 5-4: Quantitative criteria must not compromise delivery of comprehensive care

Standard 5-5: Dental Emergencies

Standard 5-6: Faculty, students, staff - BLS and CPR Certification

Standard 5-7: Radiation safety

Standard 5-8: Infection Control and Hazardous Waste

Standard 5-9: Confidentiality of information

Standard 6: Research

Standard 6-1: Scholarship

Standard 6-2: Faculty Research

Standard 6-3: Student Research

Section 4: Conclusion

Conclusion and Summary

Volume 2 – Exhibits, Appendices for Compliance with Commission Policies and Description of Program Initiation

Response to Request for Additional Information

Response to Request for Additional Information Table of Contents

Criteria Responses

Criteria D: Financial resources
Criteria E : Contractual Information/Shared Basic Sciences
Criteria I: First year curriculum objectives, activities, evaluation
Criteria J: Subsequent years curriculum
Criteria K: Facilities and resources
Criteria L: Evaluation instruments
Criteria N: Adequacy of patient caseload
Criteria O: Class Schedule and facility use
Criteria P: Facility diagram
Standard 6: Research budget
Additional Requested Information: start-up schedule, new Standards

Exhibits

Administrator Verification Initial Accreditation Application for a Dental Education Program

Administrator Verification Initial Accreditation Application for a Dental Education Program

The Commission requires appropriate administrators of the institution* verify that the contents of the application are factually accurate.

SPONSORING INSTITUTION
Name: California Northstate University Street Address: 9700 West Taron Drive City:, Elk Grove State: California Zip: 95757
Chief Executive Officer (Univ. President, Chancellor, Provost) Name: Alvin Cheung Title: President Phone: (916) 686-7300- Signature:  Date: May 7, 2019
Chief Administrative Officer (Dean) Name: Leon Assael Title: Dean Phone: 916 686 7871 Fax: (916) 686-7310 E-Mail: leon.assael@cnsu.edu Signature:  Date: May 7, 2019
Associate Dean for Academic Affairs: Name: Rosemary Wu Title: Associate Dean Phone: (415)505-0133 Fax: (916) 686-7310 E-Mail: rosemarywu@gmail.com Signature:  Date: 5-7-2019

*If the program is co-sponsored by more than one institution, the appropriate administrators of both institutions must verify the contents of the application. This page may be expanded to include all verifications.

Summary of Factual Information on the Developing Dental Education Program

The purpose of providing the following information is to give the reader of the completed “Initial Accreditation Application for a Dental Education Program” a brief summary of critical factual information about the proposed dental education program.

Admissions

Proposed enrollment:

1 st year students	<u>80</u>
2 nd year students	<u>80</u>
3 rd year students	<u>80</u>
4 th year students	<u>80</u>

Projected month/year of enrollment of first class:	<u>August 2020 (if approved or as soon as CODA approves)</u>
Projected month/year of graduation of first class:	<u>June 2024 (dependent on start date)</u>

Facilities

Projected or established number of clinical treatment units:	<u>60 initial (2020-22) 80 projected (2022-2023)</u>
Projected or established number of preclinical/simulation units:	<u>44 (2020)</u>
Projected or established number of radiography units:	<u>30 (2020)</u>
Projected or established number of laboratory units:	<u>80 (2020)</u>

Financial Support

Total direct cost budgeted for first fiscal year: \$10,700,000

(\$7,200,000 plus
\$3,500,000 cash
purchase expense
for 2400 Maritime
Drive CNUCDM
building)

Documentation of Compliance with Commission Policies

Please provide documentation demonstrating the program's compliance with the Commission's Third Party Comments, Complaints and Distance Education policies.

Third Party Comments:

The program is responsible for soliciting third-party comments relative to the Commission's accredited programs. Third party comments may include comments submitted by interested parties such as faculty, students/residents; program directors/administrators, Commission consultants, specialty and dental-related organizations, patients, and/or consumers that pertain to the standards or policies and procedures used in the Commission's accreditation process. An announcement for soliciting third-party comments is to be published at least 90 days prior to the site visit. The notice should indicate that third-party comments are due in the Commission's office no later than 60 days prior to the site visit. Please review the entire policy on Third Party Comments in the Commission's "Evaluation and Operational Policies and Procedures" (EOPP) manual.

1. Please provide documentation and/or indicate what evidence will be available during the site visit to demonstrate compliance with the Commission's policy on Third Party Comments.

See [Appendix C-1 Notice of Request for Third Party Comments](#)

Complaints:

The program is responsible for developing and implementing a procedure demonstrating that students/residents will be notified, at least annually, of the opportunity and the procedures to file complaints with the Commission. Additionally, the program must plan to maintain a record of complaints received since the Commission's last comprehensive review of the program. Please review the entire policy on Complaints in the Commission's "Evaluation and Operational Policies and Procedures" (EOPP) manual.

1. Please provide documentation and/or indicate what evidence will be available during the site visit to demonstrate compliance with the Commission's policy on Complaints.

The CNUCDM, with its parent university, CNU, will publish and post its procedures for accepting and processing comments and complaints with regard to the formation and development of CNUCDM. The complaint policy is noted as [Appendix C-2 Complaints Policy](#).

Each complaint will be memorialized and logged and will include its status regarding referral and action taken. All complaints will be managed via the appropriate component of CNU administrative and committee structure. The complaint forms and log can be found in:

[Attachment C-3 Grievance-Complaint Form Non Accreditation Issue](#)
[Attachment C-4 Grievance-Complaint Form CODA](#)
[Attachment C-5 Complaint Log](#)

Distance Education:

Programs that offer distance education must have processes in place through which the program establishes that the student who registers in a distance education course or program is the same student who participates in and completes the course or program and receives the academic credit.

Methods may include, but are not limited to:

- a secure login and pass code;
- proctored examinations; and/or
- new or other technologies and practices that are effective in verifying student identity.

Please review the entire policy on Distance Education in the Commission's "Evaluation and Operational Policies and Procedures" (EOPP) manual.

1. If applicable, please provide documentation and/or indicate what evidence will be available during the site visit to demonstrate compliance with the Commission's policy on Distance Education.

There is no distance education currently planned for the CNUCDM program.

FOREWORD

Description of California Northstate University

California Northstate University (CNU) is an institution of higher education dedicated to developing and training professionals who are leaders in healthcare science, education, and research. As an attempt to address the continued deficits faced by California in the production of healthcare professionals, the College of Pharmacy (COP) was founded in 2006 and gained approval to operate as a degree-granting college from the Bureau for Private Postsecondary Education (BPPE) on April 15, 2007, according to the standard operations as set forth in California Education Code 94705.

The College of Pharmacy (COP) welcomed its inaugural class in the fall of 2008, and CNU was granted WSCUC accreditation in June 2012. In continuing the mission of CNU to advance the art and science of healthcare by providing innovative education and delivery systems, the College of Medicine was added through WSCUC's substantive change process in August 2013 and accepted its first class in fall of 2015. In May 2015 WSCUC approved the addition of an undergraduate program in Health Sciences. The College of Pharmacy and the College of Medicine offer a PharmD and MD respectively, and the college of Health Sciences offers a BS degree in Health Sciences. The College of Pharmacy is accredited by the Accreditation Council for Pharmacy Education (ACPE), and the College of Medicine is accredited (Preliminary Status) by the Liaison Committee on Medical Education (LCME).

The Doctorate of Psychology (PsyD) program was planned in 2016 and created in 2017 to further CNU's mission of advancing the art and science of healthcare by adding another important healthcare-related professional doctoral degree to the current offerings. The PsyD program teaches scientifically proven interventions and provide hands-on clinical experience to students who are educated to become solo practitioners or work within multidisciplinary treatment teams. Upon graduation, students will possess and demonstrate the knowledge and skills needed to treat diverse and complex mental health populations. This program was added through the Substantive Change process via a proposal in the fall of 2017 and approval in the spring of 2018, and a small class started in September 2018.

The CNU Graduate School was another natural extension of the University's mission *to advance the art and science of healthcare*. The MS in Pharmaceutical Sciences program was added to program offerings within the College of Pharmacy via a substantive change, approved in the summer of 2018.

The purpose of the new College of Dental Medicine is to strategically align oral health with CNU's Vision to provide innovative education and healthcare delivery systems for the Northern California region and beyond. The DMD program will provide a venue for integrating oral health into human health science education and practice. Oral health will be integrated into primary care as well as medical surgical specialties in sites where CNU health science education occurs across Northern California: affiliated teaching hospitals, clinics and community health centers.

The establishment of graduate and professional degree programs in health sciences provides an opportunity for CNU to expand its range of scholarly activities and continue its development of an innovative, integrated curriculum. This also provides development opportunities for existing faculty from other colleges to contribute to another program that speaks to their expertise. The program serves as an additional venue for CNU to prepare a new workforce for a modern, fast-evolving healthcare sector, specifically in the areas of access to care, public health, and technology development and implementation. Dental medicine will assist the other health professional programs in developing oral health as integral to primary care medicine, pharmacy practice and behavioural health among others. It further helps the University expand and advance research opportunities.

In making a determination that the College was both a worthy and achievable goal for the university, the planning committee and a principle consultant, Leon Assael DMD addressed the “Criteria for Granting Initial Accreditation” as noted in the CODA Initial Accreditation Materials. Each of these criteria was presented to the university leadership in late Fall 2018 and is updated for this submission.

As part of the Foreword, the following section directly addresses each of the Criteria for Granting Initial Accreditation. The purpose is to demonstrate that California Northstate University is in compliance with all criteria.

Criteria for Granting Initial Accreditation

The application for initial accreditation of a dental or dental-related program is considered complete when the following criteria, as applicable, who meets the requirements of the discipline-specific standards, have been adequately addressed in the application.

In the winter of 2018-2019, a point-by-point assessment of CNUCDM readiness for meeting the criteria for accreditation was carried out with the leadership team and was subsequently presented to and discussed by the planning group and prospective faculty, and when gaps were noted, they were addressed. A summation of the status of compliance is noted below for each of the criteria, indicating full readiness of the CNUCDM to successfully address the criteria for granting initial accreditation.

a. A dean, as applicable, who meets the requirements of the discipline-specific standards, has been employed and at least six (6) months prior to a projected accreditation site visit.

Leon A. Assael DMD was appointed Dean of the College Of Dental Medicine on September 26, 2018, and immediately began work in developing the new college. On November 1, 2018, Dean Assael became an employee of the University and commenced full-time as of December 1, 2018.

Immediately prior to his appointment, Dr. Leon Assael DMD was Clinical Professor in Public Health, and Oral Maxillofacial Surgery at University of California San Francisco. He is the immediate past Chair of the Board of the American Dental Education Association. He is Dean Emeritus of the University Of Minnesota School Of Dentistry. Dr. Assael holds a BA from Columbia University and earned a DMD from Harvard University School of Dental Medicine, as well as a Certificate in Medical Management from the University of Kentucky. He completed his residency in oral and maxillofacial surgery at Vanderbilt University.

Dr. Assael was in medical school/hospital-based practice at the Mount Sinai School of Medicine until entering dental education at the University of Connecticut in 1989. He has served as residency program director in oral and maxillofacial surgery at Medical College of Wisconsin, Mount Sinai School of Medicine, the University of Connecticut and Oregon Health & Sciences University. Dr. Assael has served as an officer on medical boards at several hospitals and as acting chief of medical staff of John Dempsey Hospital. Dr. Assael served as Dean at the University of Kentucky, College of Dentistry until 2003, when he was appointed program director then chair of Oral and Maxillofacial Surgery and Medical Director Hospital Dentistry at the Oregon Health & Science University.

He is the past editor-in-chief of the Journal of Oral and Maxillofacial Surgery (2001-2011), current co-editor in chief of Oral and Maxillofacial Surgery, past chairman of the Council on Dental Education and Licensure of the American Dental Association, and a diplomate to the American Board of Oral and Maxillofacial Surgery. Dr. Assael is the past chair of the Council of Deans of the American Dental Education Association. In 2001, President George W. Bush awarded Dr. Assael the America's Promise Award for advancements in oral health in Appalachia achieved by the University of Kentucky faculty. He is the recipient of the Donald Osborn award for outstanding educator in oral and maxillofacial surgery. In 2010, the American Association of Oral and Maxillofacial Surgeons awarded Dr. Assael the Board of Trustees special recognition award. Dr. Assael has clinical and research interests in value-based health care, systems-based oral health education, Dental therapy, bone diseases and nerve injury. Dean Assael's Curriculum Vitae is included in [Appendix 1-7 Assael CV 2019](#).

- b. [The program is sponsored by an institution that, at the time of the application, complies with the discipline-specific accreditation standards related to institutional accreditation.](#)

California Northstate University is a regionally accredited University that has achieved successful discipline-specific accreditation standards of the Western Association of Schools and Colleges – Senior College and University Commission (WSCUC). The University currently has WSCUC approval for the College of Pharmacy, College of Medicine, College of Psychology, a BS in Health Sciences and a Master's Degree program in Pharmaceutical Sciences. Application for WSCUC approval through the substantive change process for the DMD program was submitted in November 2018, and final submission of all components of the proposal for substantive changes occurred in February 2019. The substantive change review occurred on April 25, 2019. Interim approval was received with the following commendations:

Commendations:

1. The proposed program is clearly aligned with the institution's mission.
2. The institution is commended for its responsiveness to previous substantive change and commission recommendations.
3. The faculty are commended for the organization and efficiency of the proposal itself.

The WSCUC submission documents are included in [Appendix 1-8 WSCUC 2019 CNUCDM](#). The WSCUC Substantive Change action report is [Appendix 1-8 Substantive Change Action Report](#).

- c. [A strategic plan/outcomes assessment process, which will regularly evaluate the degree to](#)

which the program's stated goals and objectives are being met, is developed.

The first Strategic plan of the College of Dental Medicine was developed in the winter of 2018-2019 by the planning committee for the College with the Dean of Dental Medicine. After review by California Northstate administration, including President Cheung, it was presented for review to the curriculum committee of the Sacramento District Dental Society. On January 11, 2019, at SDDS headquarters, 64 members reviewed the strategic plan in plenary and breakout sessions and offered feedback on curriculum content. On February 4, 2019, 70 potential faculty met to review the strategic plan as the College of Dental Medicine Advisory Committee. A motion was made to accept the strategic plan as written and amended. It was unanimously approved. It was noted to the group that each of those voting in the affirmative will appear as reviewers of the strategic plan unless they preferred not to be supportive. All agreed to be listed as reviewers and supporters. At its April 2019 meeting, the CNU President's Executive Council (PEC) was presented with the College of Dental Medicine Strategic Plan which was discussed and approved with modifications in the final draft by the PEC. The strategic plan is presented in [Appendix 1-2 CDM Strategic Plan](#).

In the winter of 2018-2019 a process to regularly evaluate the degree to which the program's stated goals and objectives are being met was developed. This resulted in the development of an institutional effectiveness action plan (the cycle of continuous improvement: [Exhibit B: CODA Table 2](#)) that defines improvement issues and the mechanisms for monitoring expected outcomes. This table is attached to the strategic plan [Appendix 1-2 CDM Strategic Plan](#), and is included separately as well in [Appendix 1-2 CODA Table 2](#).

- d. [The long and short-term financial commitment of the institution to the program is documented.](#)

The Board of Directors and the Board of Trustees reviewed the pro forma created by the working group of CNU. This was presented at the June 2018 meetings and is provided in [Appendix 1-1 President Report On Planning for the Dental College 2018](#). This includes pre-enrollment startup costs of \$7,200,000 which since June have been increased due to a cast building purchase of \$3,500,000 for the College of Dental Medicine, exclusively, increasing startup costs to \$10,700,000. In addition, an updated pro forma was submitted for the WSCUC application in February 2019. This currently extant pro forma indicates net loss for the school of \$4,696,000 in the first year of pre-enrollment due to the hiring plan and other startup costs as presented in [Appendix 1-5 Detailed Working Pro forma](#). By Year 3, the pro forma indicates a net operating margin of \$1.9 million to be just under \$4 million operating margin by year 5. In February 2019, the University purchased a 16,000 square foot primary building dedicated to the College of Dental Medicine on the expanding campus of CNU in Elk Grove as presented in [Appendix 4-5 CNUCDM Facilities Schematics](#). Contracts and commitments with the architect of Pressey and Associates, CNU's facility manager James Bunsey, A-dec, and Patterson Dental are underway to complete the preclinical laboratory and the first 32-unit dental clinic. The University is committed to building a second clinic devoted to the College on the campus in Elk Grove as part of the ambulatory care services building for the California Northstate University Hospital and Clinics. This second commitment is for 60,000 square feet to include 48 additional operatories for the DMD student groups and additional clinical services.

- e. [Contractual agreements are drafted and signed providing assurance that a program dependent upon the resources of a variety of institutions and/or extramural clinics and/or](#)

other entities has adequate support.

In preparation for initiation of the College of Dental Medicine, University administration and the dean have met with entities with whom educational, research, and service programs will be developed. These have resulted to this point in the MOUs (memorandums of understanding) presented in [Appendix 1-6 MOUs Clinical](#).

These MOUs, and correspondence indicating pending MOUs or research agreements, are with:

1. HALO Health: a FQHC dental program with four clinics and over 100,000 ensured lives for oral health care
2. Wellspace Health: a health system with a pediatric dental program with 70,000 Sacramento area children in 5 clinics
3. Asian Health Services: The largest FQHC in central Oakland serving 250,000 people in the Asian community of immigrants speaking 18 distinct languages. It has the first combined behavioral health and dental health clinic.
4. Public health research grants for the virtual dental home and preventive dental health by Dr. Paul Glassman
5. Shingle Springs Wellness Center: a 24 operator, 7 dentist program serving the communities of the foothills.

In addition, developmental meetings have occurred with the following entities that will likely result in additional clinical rotations and MOUs:

1. The California Department of Public Health, Office of Oral Health
2. Yolo County Oral Health Services
3. Colusa Indian Health
4. Sacramento Native American Health Center
5. Marin Community Health Clinics
6. Fresno Hospital System
7. Irvine, California Dental Associates
8. Pacific Dental Services

f. [A defined student admission process and due process procedures are developed.](#)

The Dean of Student Affairs and Admissions, Dr. Richard Simonsen, has been appointed. The Vice President of Student Affairs and Admissions, Xiaodong Feng, has centralized many admissions and student affairs functions for the professional schools. CNU has applied for and been accepted as a member of ADEA which will allow participation in the AADSAS WebAdmit dental admissions processes. The College will be listed with AADSAS when application is complete but will NOT enroll any students in the DMD program until CODA approval. Our listing will disclose that CNUCDM is pending accreditation and that no final offers of admission will be made prior to the completion of initial accreditation by CODA.

The membership of the Admissions Committee has been named. The processes and procedures for admissions, student affairs, academic policies, due process, grading, remediation and other student affairs policies are included in the student handbook found in [Appendix 2-3 2020-2021 CNUCDM Student Handbook](#).

g. A projection of the number, qualifications, assignments and appointment dates of faculty is developed.

The hiring plan for the faculty of the CNUCDM is included in [Exhibit R](#) and [Appendix 3-1 Faculty Hiring Plan](#). The plan includes a pre-enrollment faculty of 15 with an increase of 15 FTE's per annum for a mature faculty of 60 by year 4. Among these 60 faculty, 42 will be FTE's assigned to the CDM budget. These 42 faculty are those responsible for the curriculum in dental medicine. The remainder will be basic science faculty, assigned to Common Pathway courses, paid by the College of Medicine and reimbursed through the dental medicine budget to the College of Medicine. Additionally, volunteer Community faculty will be salaried by their health systems entity while CNU students rotate on clerkships to those sites.

The plan is undergoing implementation at the current time with the completion of hiring of the Dean, Administrators, and faculty. Some faculty whose start date has not yet arrived are currently under consulting engagement for the preparation of the self-study and will have start dates subsequently. This is summarized in [Appendix 3-1 Hiring Plan for Faculty Years 1 and 2](#) as well as in the President's project management timetable in [Appendix 1-1 President Report On the Planning For Dental College 2018](#).

Of note is that currently active appointments with assignments include leadership in administration, academic affairs, curriculum, student affairs, research, institutional research and development, clinical affairs and admissions. The position Associate Dean of Academic Affairs had been filled, but has now reopened and should be appointed by the end of June, 2019. Curriculum development with faculty leaders in disciplines of comprehensive dentistry, oral surgery, periodontology, pediatric dentistry, oral facial pain, oral medicine, oral radiology, orthodontics, prosthodontics, and endodontics is ongoing including curriculum planning activities on February 4 and February 20, 2019 as demonstrated in [Appendix 1-7 Task Force and Advisory Committee](#).

The College of Dental Medicine at CNU will provide didactic, laboratory and simulation education and experiential patient care education with a team of full- and part-time faculty. CNU does not offer tenure. There will also be a dean and five associate/assistant deans of

1. Academic Affairs and Faculty Development
2. Clinical Affairs
3. Curriculum and Clinical Education
4. Student Affairs and Admissions
5. Research

	Year 1	Year 2	Year 3	Year 4
Research Faculty	1	2	2	2
Teaching Faculty	14	28	43	58
Total	15	30	45	60

CNUCDM anticipates 42 FTE salaried faculty, 30 of whom will be full-time, making the salaried faculty make-up of 71% full-time. Our target is to have at least 50% of the faculty full-time and

the other 50% part-time up to .8. 18 FTE non-salaried Volunteer Community Faculty will be utilized at health systems for which we have or are developing MOUs.

Teaching faculty will provide instruction for two classes per semester, while research faculty will teach one course per semester. Each class will be taught for 3-12 hours a week.

Faculty will also be expected to develop curriculum, with their focus on developing student learning outcomes, and faculty will be responsible for assessing student learning. Additionally, faculty will mentor students and serve on research project/dissertation committees. Faculty members are expected to be academic advisors for a maximum of ten students. Research faculty are allotted 30 hours a week for research.

The Associate/Assistant Deans of Academic Affairs, Curriculum, Student Affairs and Clinical Affairs will lead the assessment of educational effectiveness by monitoring set norms and developing programs to address ongoing issues.

Supervision of students while at practicums and internships will occur on site. It is the responsibility of the training locations to have a clinical supervisor on staff to provide supervision and mentorship to the students. Separate faculty are not hired by the University for this purpose, though the Associate Dean of Clinical Education and the Field Placement Office will monitor placements to ensure that students are being trained in the key areas of the practice of dentistry and at the expected level proficiency.

Types of Faculty

- Basic Medical Sciences educators (in addition to COM Common Pathway educators)
- Preclinical educators
- Clinical educators - general dentistry
- Clinical educators - dental specialties
- Part-time clinical educators
- Volunteer Clinical Adjunct Faculty (no cost) associated to affiliated sites

A breakdown of faculty duties into hours per week, including a list of responsibilities will be part of every faculty members assignment and time allocation as noted in **Appendix3-4 Faculty Evaluation Form**. The number and type of all CNUCDM faculty are outlined in **Exhibit R**.

The College of Dental Medicine at CNU will provide didactic, laboratory and simulation education and experiential patient care education with a team of primarily full-time faculty. Our target is to have at least 50% of the faculty full-time and the other 50% part-time up to eight FTE. While the part-time faculty will include the administrative team and content experts across the spectrum of dental medicine, its disciplines and its specialties, part-time clinical educators from the Northstate region will provide clinical preceptorship/education, mentorship, lecture and small group learning seminars at the primary campus and in community-based education sites.

A planning group of over 70 future faculty associated to the Sacramento District Dental Society has met several times to develop curriculum. The 12 original members of the planning group for the College of Dental Medicine will also serve in part-time faculty capacity. The hiring plan calls for 60 FTEs comprised of full- and part-time faculty; this plan provides a comprehensive mix to accommodate instructional, clinical, service and scholarly needs of the college.

- h. An explanation is included of how the curriculum was developed including who developed the curriculum and the philosophy underlying the curriculum. If curriculum materials are based on or are from an established education program, there must be documentation that permission was granted to use these materials.

The curriculum was developed with no engagement of any established dental education program. It does share human studies courses with the California Northstate College of Medicine. The CNUCDM curriculum was entirely developed by the teams described below. The organization of the curriculum was developed by the Dean. Thus, no permission from any entities is required.

The development process began with the work of the planning committee in 2017 and 2018 which resulted in the recommendation to the board for formation of a dental college based upon the principles of CNU to advance the art and science of medicine through exceptional education, service, scholarship and social accountability. A committee of over 70 potential faculty of the Sacramento District Dental Society met on four occasions in the winter of 2018-2019 to develop the components of curriculum needed. Minutes of these meetings and their findings are included in [Appendix 1-7 Task Force and Advisory Committee](#). This resulted in the plan presented and approved by the committee, the College of Medicine Curriculum Committee and Dean, and the University in February 2019, as presented in the minutes found in [Appendix 1-7 Task Force and Advisory Committee](#).

Curriculum Mission and Vision

The Mission of the College of Dental Medicine is to advance the art and sciences of health care through excellence in oral health education, practice, research, service, and social accountability

Education: Create skilled and knowledgeable clinicians who will constantly advance their capabilities throughout life

Practice: Produce clinical leaders in oral health who will serve in private practice, health systems practice, and in interprofessional settings

Research: Promulgate scientific inquiry throughout the curriculum and support student and faculty research that creates an environment of scientific curiosity and an evidence based foundation for clinical practice.

Service: Provide individual patient care services at all clinical sites under the auspices of CNUCDM that produces the very best oral health outcomes and clinical value.

Social Accountability: Advocate for and help build stronger communities in California and globally through improved oral health care, disease prevention, health promotion and protection from oral diseases through community-based approaches.

The Vision of the College of Dental Medicine is to provide constructive innovation in its education programs, and leadership in integrating oral health care into human health care systems.

Our Values:

- Patient-centered didactic and clinical education that always puts improved health outcomes first

- Foster a humanistic and character-developing environment for dental students
- Making better communities and a better world through improved oral health
- Understanding the professional responsibility of the dentist as the head of the oral health care team
- Practicing health promotion and disease prevention and protection
- Advancing California Northstate University through excellence in all we do

Supporting narrative: The integration of oral health into human health requires dentists who are capable of performing at the highest level in an ever more complex and demanding environment of emerging technology, social change, human disease management, and evolving health systems. The CNUCDM is developing a curriculum with four basic themes into which all didactic and clinical content will be served. These four themes are: **Human Systems, Odontology, Oral and Maxillofacial Studies, and Behavioral and Social Sciences.** All four themes will be delivered in a diagonal curriculum.

*(Definition: the **diagonal curriculum** includes concurrent didactic, small group learning, simulation and clinical experiences at all phases of the curriculum with increasing clinical experiences and decreasing didactics gradually through all four years. While basic clinical encounters begin in the fall of the first year, advanced clinical practice occurs in the fourth year. While emphasis on didactic foundations is at a high level in the first year, some didactic component with seminars and case-based didactics continues through the fourth year)*

Program Learning Outcomes (PLOs) for the DMD program

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient-centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare
8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

The four themes will be presented utilizing interprofessional education in part utilizing a **Common Pathway** for some courses. The **Common Pathway** consists of aspects of courses especially in human systems and behavioral and social sciences that can be taught alongside students in medicine, pharmacy and clinical psychology. Courses that will utilize in part or in whole a Common Pathway, will be noted in the course list as **CP** courses.

These courses are presented in each of the four years. For year one headed by numeral “5”, year 2 numeral “6”, for year 3 numeral “7” and for year 4 numeral “8” preceded by the thematic heading **HS** for Human Systems, **Odont** for Odontology, **OMFS** for Oral and Maxillofacial Studies, and **BSS** for Behavioral and Social Sciences.

- i. The first-year curriculum with general course and specific instructional objectives, learning activities, evaluation instruments (including, as applicable, laboratory evaluation forms, sample tests, quizzes, and grading criteria) is developed.

Answered in conjunction with j. below

- j. As applicable, courses for the subsequent years of the curriculum are developed, including general and specific course objectives.

I and J are answered in common as they are linked in the diagonal curriculum. Syllabi for first year courses, including outcome assessments and grading rubrics for the first year, are attached in **Appendix 2-1 Consolidated Course Syllabi**.

CURRICULUM STRUCTURE AND COURSE LIST:

Students will be engaged in a 45-week curriculum for the first three years, beginning in September for each year, and culminating in a DMD degree granted in June of the fourth year making the fourth year curriculum 40 weeks. Total curriculum weeks are 175.

A continuous series of didactic, small group learning, laboratory, and clinical courses in:

Human Systems: Developing applied knowledge in the normal function and structure of human biology and the pathophysiology of diseases of human systems at all stages of life. Understanding and applying the implications for oral health exerted by these human systems and their associated diseases.

Odontology: In-depth knowledge of the normal structure and function of the teeth, alveolar bone, and masticatory system at all stages of life. In-depth knowledge of the diseases of teeth, including caries, periodontal disease and masticatory disorders, the methods to diagnose, prevent, and treat odontologic diseases. Obtaining primary and advanced skills in the treatment of odontologic diseases.

Oral and Maxillofacial Studies: In-depth knowledge of the normal structure and function of the oral and maxillofacial region at all stages of life. In-depth knowledge of the diseases of this region including those of growth and development, neoplasia, degenerative diseases, infectious diseases, and trauma. Emphasis on OMS systems, including oral mucosa, cutaneous diseases, the jaws, neurologic disorders, salivary gland disorders, paranasal sinuses, airway, and musculoskeletal diseases.

Behavioral and Social Sciences: Developing knowledge in human psychology and behavior impacting oral health and the interventions that positively and negatively impact oral health. Understanding the economic, regulatory and political environment for oral health practice.

Understanding the sociologic, cultural, economic determinants of health and how to positively influence the health of communities and societies.

The 4 theme diagonal curriculum:

Human Systems

Case-based biomedical sciences: For the following Common Pathways courses (labeled CP Course) with the College of Medicine (COM), the clinical case presentations will include those oral cases presented by the CDM faculty, in addition to selected common cases with the COM. The supporting basic science with each courses will be Common Pathway anatomy, histology, embryology, biochemistry, immunology, microbiology, nutrition, pathology, pharmacology and physiology.

Course #	Course Title	Credits	Year	Term
HS 511	Hematology (CP Course)	4	DS 1	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences will include: dental care in the hemophilia patient, acquired bleeding disorders in the dental patient, oral effects of anemia, and dental care for the hematology oncology patient.

Course #	Course Title	Credits	Year	Term
HS 521	Integumentary and Musculoskeletal Systems (CP Course)	7	DS 1	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences will include vesiculobullous disease of the oral mucosa, oral manifestations of muscular dystrophy, oral cancer, myofascial pain dysfunction syndrome, arthritis in dental practice, osteoporosis and oral health.

Course #	Course Title	Credits	Year	Term
HS 512	Neuroscience (CP Course)	9	DS 1	Spring

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences will include maxillofacial nerve injury, oral manifestations of Parkinson's disease, oral and maxillofacial movement disorders, trigeminal neuralgia, migraine and facial migraine, oral care of the stroke and spinal cord injured patient.

Course #	Course Title	Credits	Year	Term
HS 522	Cardiovascular and Pulmonary Systems (CP Course)	9	DS 1	Spring

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences include: prevention, diagnosis, and immediate treatment of acute myocardial ischemia in dental practice, oral health aspects of obstructive sleep apnea, managing asthma in dental practice, congestive heart failure implications in oral health care, valvular heart disease implications in dental practice, Marfan's syndrome.

Course #	Course Title	Credits	Year	Term
HS 611	Renal System (CP Course)	5	DS 2	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences include oral manifestations of renal failure/renal osteodystrophy/HPTH, dehydration and oliguria in odontogenic infection, acid/base considerations in fever and dental infection.

Course #	Course Title	Credits	Year	Term
HS 621	Gastroenterology (CP Course)	5	DS 2	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences include oral effects of chronic liver failure, oral surgical considerations in Vitamin K dependent factor depletion in chronic hepatitis, oral manifestations of bulimia, Salivary gland disorders, concomitant disorders of the GI and oral microbiome, effects of mastication/salivary health on GI health, oral manifestations of patients with colonic polyps.

Course #	Course Title	Credits	Year	Term
HS 631	Endocrine System (CP Course)	5	DS 2	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences include , oral health considerations in obesity, oral health impact of type 1 and type 2 diabetes, oral findings in endocrine disorders, e.g. multiple endocrine neoplasia, hyperthyroidism/hypothyroidism.

Course #	Course Title	Credits	Year	Term
HS 641	Clinical Pharmacology LAL	3	DS 2	Fall

This course will review the basics of pharmacokinetics and drug development and review the important clinical characteristics of the major drug categories including cardiac, pulmonary, GI, GU, endocrine, musculoskeletal, psychotropic, neurologic, dermatologic drugs, antibiotics,

Course #	Course Title	Credits	Year	Term
HS 642	Clinical Pharmacology 2/Oral Pharmacology LAL	3	DS 2	Spring

This course will review the major drugs used in dental practice. Emphasis on analgesics, pain and anxiety control, antibiotics. Other drugs of oral diseases including oral mucosal diseases, diseases of the dental pulp and periodontium, paranasal sinuses, and those for musculoskeletal problems of the head and neck. Correlation of drugs in the general pharmacopeia with oral health impact for HS 641 will concentrate on side effects of the oral region including examples of xerostomia, superinfection with thrush, tardive dyskinesia, among others.

Course #	Course Title	Credits	Year	Term
HS 721	Junior Year Medicine Seminar SEM	2	DS 3	Fall

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Cases will be selected from existing active patients as well as from standardized patients, for the D3 class with evidence based review of relevant medical findings and their impact on oral health and clinical interventions. This will be done with a purpose to mitigate risk and improve patient care outcomes.

Course #	Course Title	Credits	Year	Term
HS 722	Junior Year Medicine Seminar SEM	2	DS 3	Spring

Complex cases will be selected beyond the level of HS 721 including those commonly requiring medical surgical intervention in concurrence with oral health care. Examples such as oncology patients, obstetric patients, and transplant patients will be examined. Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities will be continued in the seminar as well.

Course #	Course Title	Credits	Year	Term
HS 821	Senior Year Medicine Seminar SEM	2	DS 4	Fall

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Continued development of advanced case-based patient presentations including those on hospitalized patients.

Course #	Course Title	Credits	Year	Term
HS 822	Senior Year Medicine Seminar SEM	2	DS 4	Spring

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Development of advanced knowledge of cases presenting for medical treatment for which dental consultation is needed in the preanesthetic presurgical patient and in concurrence with major systemic disease including trauma, stroke, myocardial infarction.

Odontology

Course #	Course Title	Credits	Year	Term
Odont 511	Foundations of Odontology <i>LAL, LAB and CLIN</i>	6	DS 1	Fall

This course will introduce students to infection control, the dental office and clinical care site, and provide initial skill in interaction with the patient and the patient's oral cavity. Students will enter the clinical setting with faculty and upper level students to provide limited aspects of oral care and join the oral health care team.

Course #	Course Title	Credits	Year	Term
Odont 521	Dental Anatomy <i>LAL and LAB</i>	6	DS 1	Fall

Anatomy of the teeth and associated structures is presented including the masticatory apparatus. Clinical correlations affecting function such as sleep disorders, temporomandibular disorders and growth and development anomalies are clinical correlates to explain function and structure in dental anatomy.

Course #	Course Title	Credits	Year	Term
Odont 522	Cariology <i>LAL</i>	3	DS 1	Spring

The biology, phenotype, epidemiology, anatomical changes from caries is presented. The prevention of caries through CAMBRA is developed as well as strategies for management at all stages of the disease. The course introduces the pathways of caries as a regional and systemic disease.

Course #	Course Title	Credits	Year	Term
Odont 611	Operative Dentistry <i>LAL and LAB</i>	6	DS 2	Fall

The surgical treatment of caries and degenerative and congenital diseases of the enamel and dentin is presented through the development of technical skills to remove diseased portions of the teeth and to provide anatomical functional direct restorations of teeth. Prevention and minimally invasive procedures for caries management is emphasized. Laboratory session focus on the development of procedures and psychomotor skills using surgical armamentarium in a simulated clinical setting for the treatment of caries and other diseases of the enamel and dentin.

Course #	Course Title	Credits	Year	Term
Odont 621	Periodontology <i>LAL and LAB</i>	3	DS 2	Fall

The normal structure and function of the periodontium is presented. The pathology, microbiology, immunology, and pathophysiology of diseases of the periodontium is presented. Prevention, chronic disease management, and nonsurgical/minimally invasive procedures for periodontal diseases is emphasized. Laboratory session focus on the development of procedures and psychomotor skills using surgical armamentarium in a simulated clinical setting for the treatment of diseases of the periodontium.

Course #	Course Title	Credits	Year	Term
Odont 622	Periodontology <i>LAL and LAB</i>	3	DS 2	Spring

In-depth understanding of the etiology and progression of chronic periodontal diseases is developed in this course. The influence of systemic diseases such as HIV, diabetes mellitus, and obesity on the health of the periodontium is explored. Surgical interventions for the treatment of diseases of the periodontium is presented. The laboratory is focused on advanced techniques including flap surgery, guided tissue regeneration, socket preservation among others, as well as continued development of skills in curettage.

Course #	Course Title	Credits	Year	Term
Odont 632	Prosthodontics and Implant Dentistry: Removable Prosthodontics <i>LAL and LAB</i>	6	DS 2	Spring

The anatomic and pathophysiologic aspects of partial and full edentulism is presented. Development, construction, placement and maintenance of full and partial removable prosthodontic restorations is presented. The laboratory will include impressions, jaw occlusal registrations, gnathology, cast development and mounting, development of wax rims and occlusal scheme and teeth mounting.

Course #	Course Title	Credits	Year	Term
Odont 642	Endodontology: Diseases of the Pulp and Pathways of Odontogenic Infection, Endodontic Therapy and Technique <i>LAL and LAB</i>	3	DS 2	Spring

The diagnosis and treatment of the diseases of the dental pulp throughout life is presented. The biologic basis for treatment of diseases of the pulp is developed as well as the rationale for these methods. The laboratory will introduce students to the ortho-endodontic therapy methods including the use of magnification, access the pulp canals, instrumentation of the canals and obliteration of the pulpectomy site to clinical standards.

Course #	Course Title	Credits	Year	Term
Odont 662	Comprehensive Care Family Dentistry <i>CLIN and LAB</i>	3	DS 2	Spring

Treatment of caries and periodontal disease with discipline based faculty from operative dentistry, prosthodontics, endodontology and periodontology is carried out with the DS 2 as an active participant in the care team that includes a DS 3 and DS 4. Students will participate in case presentations, medical record assessment and recording, and other aspects of the clinic activities. The laboratory will include a simulated clinic visit including OSCE record and electronic health record.

Course #	Course Title	Credits	Year	Term
Odont 741	Prosthodontics and Implant Dentistry: Fixed Prosthodontics <i>LAL and LAB</i>	6	DS 3	Fall

The indirect restoration of teeth and the indirect replacement of missing teeth with crowns and bridges is presented. Treatment planning for these restorations including occlusal, periodontal, caries assessment is presented. Other methods for indirect restoration including partial coverage indirect restoration is presented. The introduction of digital techniques for impression and CadCam restoration development is presented. The laboratory will provide practice with the surgical armamentarium for tooth preparation for fixed prosthetic restoration, for impressions with analog and digital methods and for the construction of fixed indirect restorations. The laboratory will also teach methods for provisional restoration of the fixed prosthodontic patient.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Fall

This daily clinic will focus on students developing their family of patients in conjunction with other members of their team headed by the faculty team leader. Emphasis on diagnosis and treatment planning and completion of initial urgent procedures will be carried out.

Course #	Course Title	Credits	Year	Term
Odont 752	Periodontology Seminar <i>SEM</i>	2	DS 3	Spring

Using a case-based format, the treatment planning, outcome assessment, management of medical and dental comorbidities among others of the patient with diseases of the periodontium is presented. Patient-centered, health systems informed, and culturally aware aspects of care are discussed through the case-based format.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 841	Periodontology Seminar <i>SEM</i>	2	DS 4	Fall

Using case-based format, interdisciplinary problems especially with orthodontics, endodontics and prosthodontic consideration will be developed through patient presentations of patients of record or via the OSCE format. Further exploration of comorbidities in periodontal diseases will be developed.

Course #	Course Title	Credits	Year	Term
Odont 851	Prosthodontics and Implant Dentistry: Implant Surgery and Prosthodontic Reconstruction <i>LAL and LAB</i>	3	DS 4	Fall

The replacement of missing teeth utilizing dental implants is presented. This course includes the biomechanics of implants, concepts of osseointegration, restoration options for implants, implant systems and the placement of implants. The laboratory will teach the placement of implants including appropriate assessment and osteotomies, and the restoration of implants using indirect and direct techniques.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

Course #	Course Title	Credits	Year	Term
Odont 862	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Spring

The final semester of comprehensive care family dentistry will focus on the completion of phase 2 care for patients of record, increasing facility in providing initial evaluation and care of the dental patient, and addressing complex issues in care including those associated to overall health, stages of life, cultural awareness among others.

Oral and Maxillofacial Studies

Course #	Course Title	Credits	Year	Term
OMFS 511	Foundations of Dental Medicine <i>LAL</i>	3	DS 1	Fall

This course will focus on introduction to the patient/doctor relationship, the role of dental medicine in health care, the scientific basis of the pathophysiology, diagnostic methods, and treatment modalities of major oral diseases. Examples will include congenital diseases such as cleft lip and palate, degenerative diseases such as rheumatoid arthritis, neoplastic disease such as oral squamous cancer, traumatic diseases such as facial fracture, and infectious disease such as HPV. This course includes a review of biochemistry relevant to the medical school first and second year HS courses to match the coursework provided to the MD students in foundations of medicine.

Course #	Course Title	Credits	Year	Term
OMFS 512	Oral Microbiology/Immunology <i>LAL</i>	3	DS 1	Spring

The oral microbiome in health and disease is presented including the ecologic niches of the oral region: periodontium, teeth, mucosa, nasopharynx, and salivary glands. The virology of the upper airway mouth and pharynx is presented including HPV, HIV, and acute viral diseases. The presence of prions and their potential role in disease is presented. The host response resulting in homeostasis or the initiation of infection is reviewed

Course #	Course Title	Credits	Year	Term
OMFS 532	Surgical Anatomy of the Head and Neck <i>LAL and LAB</i>	2	DS 1	Spring

The structures of the viscerocranium are presented including osteology, myology, cranial nerve peripheral anatomy, salivary glands, lymphatics, arterial supply and venous drainage. In-depth understanding of fascial planes, infratemporal fossa, triangles of the neck, myology of the mandible and maxilla will be presented with clinical illustrations as to their utility in dental medicine practice.

Course #	Course Title	Credits	Year	Term
OMFS 621	Dental Medicine at All Stages of Life <i>LAL</i>	3	DS 2	Fall

Growth, development, function and the human experience from birth to death will be presented including the impact of oral health and oral health interventions, prevention, disease promotion and treatment at all stages. This topic is developed from the biologic, social, economic and cultural aspects of the human experience.

Course #	Course Title	Credits	Year	Term
OMFS 631	Dental Anesthesiology 1: Local Anesthesia <i>LAL and LAB</i>	3	DS 2	Fall

The pharmacology of local anesthesia, armamentarium for administration and technique for administration is presented. Local and systemic complications of administration, contraindications and comorbidities are presented. The laboratory will demonstrate and practice technique of local anesthesia administration on analogy and haptic simulators.

Course #	Course Title	Credits	Year	Term
OMFS 641	Oral Radiology 1 <i>LAL and LAB</i>	3	DS 2	Fall

The physics of ionizing radiation and the development of Roentgen's methods are presented. The components of clinical equipment to emit radiation and sensors, both analog and digital are presented. The interpretation of oral radiographs, periapical and bite wing radiographs is developed. Intraoral radiographs using a simulator are performed in the laboratory.

Course #	Course Title	Credits	Year	Term
OMFS 632	Dental Anesthesiology 2: Pain and Anxiety Control, Analgesia, Medical Management of Local Anesthesia Patients <i>LAL and LAB</i>	3	DS 2	Spring

The risks of local anesthesia detection and management are presented. Understanding pain and anxiety in dental practice through assessment methods is presented. The pharmacologic and nonpharmacological means of mitigating pain and anxiety in dental care is presented. This includes the use of nitrous oxide, oral anxiolysis, and parenteral drugs.

Course #	Course Title	Credits	Year	Term
OMFS 642	Oral Pathology/Oral Medicine 1 <i>LAL and LAB</i>	3	DS 2	Spring

The significant tumors, anomalies, oral manifestations of systemic disease and other pathologies of the oral and maxillofacial region are presented. The laboratory will focus on the gross pathology and microscopic pathology of the oral and maxillofacial region

Course #	Course Title	Credits	Year	Term
OMFS 652	Orthodontics and Craniofacial Growth and Development <i>LAL and LAB</i>	3	DS 2	Spring

Principles of craniofacial growth and development will be presented. Abnormalities leading to malocclusion and dentofacial deformities will be shown. Methods of diagnosing disorders of dental facial growth and development will be understood and utilized by students. Orthodontic interventions for these conditions including methods, and outcomes will be shown. The laboratory will concentrate on diagnosis and orthodontic treatment methods.

Course #	Course Title	Credits	Year	Term
OMFS 751	Oral Radiology 2 <i>LAL and LAB</i>	3	DS 3	Fall

The understanding of Panoramic, planar films, CT, MRI. Nuclear medicine, and non-ionizing methods of image acquisition is presented. Comparison of these methods and appropriate case selection for these studies is presented. The utility in treatment planning and integration with other digital treatment planning methods is shown. The diagnosis of pathology via these methods is developed.

Course #	Course Title	Credits	Year	Term
OMFS 761	Principles of Oral Surgery <i>LAL and LAB</i>	3	DS 3	Fall

The principles of aseptic technique, flap design, surgical access, surgical hemostasis, infection prevention, and wound healing are presented. Technique for the removal of erupted and non-erupted teeth, both surgically and via forceps and elevator is presented. Preprosthetic surgical technique and minor soft tissue surgery including biopsy is presented. The laboratory will focus on the surgical and nonsurgical removal of teeth and on soft tissue surgery and biopsy.

Course #	Course Title	Credits	Year	Term
OMFS 771	Pediatric Dentistry <i>LAL and LAB</i>	3	DS 3	Fall

Child development and child management in the clinical setting will be developed from a holistic and family based perspective. Major diseases in growth and development of the oral cavity will be elucidated. The development of the deciduous and mixed dentition along with craniofacial development is presented. Caries diagnosis, treatment and prevention in the deciduous dentition is shown. The laboratory will provide simulated clinical experiences in caries treatment, deciduous crowns, space maintenance, and care of the pediatric patient.

Course #	Course Title	Credits	Year	Term
OMFS 742	Oral Pathology/Oral Medicine 2 <i>LAL</i>	3	DS 3	Spring

Further development of the oral manifestations of systemic disease is presented with emphasis on diabetes, hematologic bleeding disorders, hematologic malignancies, lymphomas, myeloma, xerostomic diseases, autoimmune disease, maxillofacial movement disorders, other neurologic diseases such as Parkinson's, with oral manifestations.

Course #	Course Title	Credits	Year	Term
OMFS 752	Clinical Clerkship: Pediatric Dentistry <i>4 weeks, 30 hours per week plus call CLIN</i>	8	DS 3	Spring

The student will engage in clinical experiences in the pediatric dentistry clinic as a member of the care team, treating patients under the supervision of pediatric dentistry faculty. Consultation on pediatric patients referred for oral conditions via pediatric medicine will occur.

Course #	Course Title	Credits	Year	Term
OMFS 762	Advanced Topics in Oral and Maxillofacial Surgery <i>LAL</i>	2	DS 3	Spring

Understanding of major conditions of the oral and maxillofacial region requiring surgical intervention is presented. This includes diagnostic features, techniques for corrective surgery and outcome assessment. Categories include the treatment of facial trauma, ablative tumor surgery of the head and neck, cleft lip and palate surgery, craniofacial surgery, orthognathic surgery, reconstructive surgery of the jaws and face, and surgical treatment of temporomandibular disorders.

Course #	Course Title	Credits	Year	Term
OMFS 772	Clinical Clerkship: Oral and Maxillofacial Surgery <i>4 weeks, 30 hours per week plus call</i> <i>CLIN</i>	8	DS 3	Spring

The students will enter the oral and maxillofacial surgery care team for this clerkship including the care of patients for dentoalveolar surgery, major maxillofacial surgery and complex conditions of the head and neck. Clinical experience in ambulatory oral surgery and anesthesia and assisting for maxillofacial surgery in the operating room including emergency and trauma care occurs. Participation in hospital rounds and conferences occurs.

Course #	Course Title	Credits	Year	Term
OMFS 851	Oral Radiology Seminar <i>SEM</i>	2	DS 4	Fall

This case-based seminar will present findings using all methods in OMFS 641 and OMFS 751 to demonstrate through active learning the radiographic findings in key diseases of the oral and maxillofacial region.

Course #	Course Title	Credits	Year	Term
OMFS 862	Oral Pathology/Oral Medicine Seminar <i>SEM</i>	2	DS 4	Spring

Concentration on oral medicine will include the risk assessment and management of complex systemic diseases related to dental medicine care in dental practice. Case-based discussion on the dental medicine patient with HIV, ongoing chemotherapy for malignancy, osteoporosis/osteopenia among others will be presented by students in seminar format.

Course #	Course Title	Credits	Year	Term
OMFS 872	Clinical Clerkship: Orthodontics <i>4 hours per week for 8 weeks</i> <i>CLIN</i>	2	DS 4	Spring

Students will enter the orthodontic care team providing diagnostic and treatment services for patients undergoing orthodontic care under the auspices of orthodontic faculty in College of Dental Medicine clinics.

Behavioral and Social Sciences

Course #	Course Title	Credits	Year	Term
BSS 501	Managing Student Life <i>LAL and Lab</i>	1	DS 1	Fall

Resilience, sustainability as a student and future health professional will be presented. Managing student debt, stress management, effects of social media, interpersonal relationships, and ethics in student practice will be discussed. The problems of drug and alcohol abuse will be shown. Respect in the University including cultural, gender, and sexual conduct issues will be presented. Students will be made aware of resources to promote student wellbeing.

Course #	Course Title	Credits	Year	Term
BSS 522	Ethics in Dental Medicine and Health Care <i>LAL</i>	2	DS 1	Spring

The fundamentals of dental and medical ethics are presented including beneficence and non-maleficence. The Helsinki statement and other aspects of human research guidelines are presented including the role of Human Studies committees. The care of animals in biomedical research is discussed as well as the ethical use of human tissue in clinical care, transplant medicine etc. Ethical financial relationships and the underlying law behind them in clinical practice is discussed. The role of the criminal, tort system, the Board of Dentistry of California, and the ADA in dental ethics is presented.

Course #	Course Title	Credits	Year	Term
BSS 662	Behavioral Medicine (CP Course) <i>LAL, Clinical</i>	3	DS 2	Spring

In this course aspects of clinical psychology of importance in dental practice is presented. Cased base learning will include: minor and major psychiatric illnesses impacting on oral health and the provision of oral health care; elder, spousal and child abuse; dental fear; and, dental phobias.

Course #	Course Title	Credits	Year	Term
BSS 701	Dental Public Health <i>LAL</i>	2	DS 3	Fall

The fundamentals of public health are presented including health and public health measures for health protection, protection from disease and health promotion. The surgeon general's report, 2000, updated 2019, on the status of oral health in America is presented. WHO assessment of oral health globally is presented. Population based initiative to improve oral health are discussed with a focus on clean water and fluoride exposure.

Course #	Course Title	Credits	Year	Term
BSS 721	Practice Management 1 <i>LAL</i>	2	DS 3	Fall

Addressing issues of student debt, career path, and modes of practice will be presented. Operating a dental practice via solo or group practice model and in health systems based practice will be discussed. Issues including human resources management, the actions of the care team in practice and financial responsibility and accounting will be presented.

Course #	Course Title	Credits	Year	Term
BSS 861	Clinical Clerkship: Community-based Education <i>4 weeks, 30 hours per week plus call CLIN</i>	8	DS 4	Fall

Affiliated health systems based practices will accept CNU students into their care teams where senior students will provide clinical care under the supervision of Volunteer Community-Based Faculty in those sites. Suitable transportation and housing will be arranged for where needed. The purpose of the course is to provide community engagement with the constituencies served, to gain experience in community-based clinical care and to interact with the interprofessional and intraprofessional care team

Course #	Course Title	Credits	Year	Term
BSS 871	Seminar in Dental Public Health <i>SEM</i>	2	DS 4	Fall

This weekly seminar develops through cased based discussions led by student teams the public health issues in oral health in California and globally including access to care, social determinants of oral health, scope of practice issues, insurance and payment systems for oral health, access to fluoride, immunizations especially for HPV, and health protection for vulnerable populations such as children and elderly.

Course #	Course Title	Credits	Year	Term
BSS 822	Practice Management 2 <i>SEM and LAB</i>	2	DS 4	Spring

The simulation of dental practices in various models will be developed by students in groups including addressing issues of hiring, overhead, interaction with vendors, staff development, marketing, accounting and all operations in dental practice. The regulatory environment for pricing, dental insurance, health insurance will be reviewed as well as all aspects of the operation of dental practices.

Course #	Course Title	Credits	Year	Term
BSS 862	Clinical Clerkship: Community-based Education 4 weeks, 30 hours per week plus call CLIN	8	DS 4	Spring

This course will be at a second community-based rotation site to elaborate on the activities of the first rotation and engage a new community and a new clinic. In addition to comprehensive care experience, the student will compare and contrast communities and clinical care entities and provide a reflective essay on their community care experience.

Course #	Course Title	Credits	Year	Term
BSS 872	Senior Elective Clinical Clerkship CLIN	6	DS 4	Spring

D4 students will select from additional clerkships available at clinical sites either discipline based or comprehensive care in odontology, oral and maxillofacial studies or human studies. Examples include comprehensive care at a remote clinic (odontology), dental specialty clerkship in oral maxillofacial surgery (OMFS), clerkship in internal medicine (Human Studies), or population health study abroad or in the United States (BSS).

Credit Hours and Student Contact Hours

Curriculum Theme	Credit Hours	Year	Credit Hours	Contact Hours
Human Systems	58	Year 1	55	1140
Odontology	84	Year 2	66	1380
OMFS	62	Year 3	60	1590
BSS	36	Year 4	59	1470
Total	240		240	5580

- k. If the capacity of the facility does not allow all students to be in laboratory, pre-clinical laboratory and/or clinic at the same time, a plan documenting how students will spend laboratory, pre-clinical and/or clinical education sessions has been developed and is included.

The CNU campus currently encompasses more than 200,000 square feet and includes the two original Elk Grove and Rancho Cordova facilities. The DMD program will be housed in a separate building at 2400 Maritime Drive in Elk Grove, in close proximity to the original Elk Grove facility. The building for the DMD program is 16,000 square feet and will house class space for didactic aspects of the program, preclinical laboratories and the first teaching clinic of the college. At the original Elk Grove facility, DMD students will also have access to class space for Common Pathway courses, two laboratories, a library, distributed study rooms, a cafeteria, and various offices.

All dental students will begin clinical training in their first year, utilizing the preclinical laboratory and clinical simulation labs that are planned to be built in the Elk Grove building dedicated to CNUCDM. First-year students will also have clinical experiences as part of the care team in the clinic. The CNUCDM facilities will contain 40 dental simulation units and 4 Haptic units where the students will be able to practice the skills taught within the classroom. The units will contain instruments and configurations, compartments to store instruments, a torso with adumbrated arms and shoulders, and height adjustment. The unit will be on wheels and have the ability to fit comfortably under workstations.

The main clinical practicum of the CNUCDM DMD program will be in two clinics operated by the University on the Elk Grove Site. The first to be built in 2019-2020 will be 32 operatories in the CNUCDM-dedicated facility on Maritime Drive. The second clinic will include 48 operatories and will be part of the California Northstate University Hospital and Clinics in its ambulatory care building in a building adjacent to the primary site with a planned opening by the end of Year 2 of the program, Summer 2022. Additionally, within the greater Sacramento/San Joaquin Valley area California Northstate is planning on operating additional interprofessional collaborative practice facilities for medicine, dental medicine and behavioral health. These additional sites are currently being actively planned, but will not be sites as planned where DMD students will undergo competency assessment. Like other dental school-based clinics, CNU's two main clinics will feature faculty and students working side by side and providing the highest level of clinical care while completing competency assessments and gaining clinical experience for the DMD students.

The initial capacity of the College of Dental Medicine will accommodate a class of 80 students. All Common Pathway courses are in plenary classrooms accommodating 220 students which will seat all 180 medical and dental students. Small group learning facilities are adequate to accommodate all students into their "college" group of 20. Anatomy laboratory, learning center and library, general skills laboratories are all adequate to accommodate all students in a regular schedule.

Preclinical and simulation laboratory will have four types of facilities in the dedicated College of Dental Medicine building:

1. Type 1: Bench laboratory space with seating, audiovisual and instrumentation for 80 students (class example: dental anatomy)
 2. Type 2: Operative dentistry/A-dec simulator with scanning self-assessment optical scanner, work station, 40 units. Students will practice in this environment in two sections.
 3. Type 3: Operative dentistry utilizing A-Dec 40 dental chairs with simulator dental head: Students will work in this environment when rotated from type 2 simulation during the same hours. Students will either be assigned during preclinical laboratory hours to the Type 2 or 3 units. Of note is that this will be performed for the first 2 years as there will not be a 3rd and 4th year class. The second clinic and additional simulation space using emerging technology is anticipated for the 3rd -5th year of operations.
 4. Type 4: Haptic simulators: these 4 MOOG Simodont units will be assigned on a rotating basis to students in groups of 4.
1. As applicable, evaluation instruments for laboratory, pre-clinical, clinical, and clinical enrichment experiences are developed.

Rubrics for laboratory activities are noted in the syllabus for first year dental anatomy courses. Rubrics for assessment of performance in Foundations of Odontology are included for infection control, clinical assessment, patient intake, the medical record and dental sealants. These can be found in [Appendix 2-1 Consolidated Course Syllabi](#).

Evaluation instruments, including grading rubrics, for Hematology, Musculoskeletal and Integumentary, Renal, Cardiovascular and Pulmonary, Gastrointestinal, and Neurosciences block course are also enclosed in [Appendix 2-1 Consolidated Course Syllabi](#).

- m. As applicable, policies and procedures such as a patient recruitment system; patient classification system; an ionizing radiation policy; an infection control policy; and a student tracking system are developed.

Patient intake occurs through a recruitment system of announced patient screening days. Along with faculty practice capacity, it is anticipated that all patients with oral health needs will be seen in some capacity by the CNU clinics including complex medical and dental patients. Patients will be initially seen and will receive urgent care without regard to ability to pay. The College will make its best effort to provide patient care at a reasonable cost so that patients without insurance will be able to have necessary dental care and achieve good oral health outcomes.

The ionizing radiation policy and infection control policies are attached in [Appendix 5-7 Ionizing Dental Radiation Proposed Policy](#) and [Appendix 5-8 Infection and Environmental Hazards Control Policy](#).

The registrar of CNU currently tracks students with regard to fundamental aspects of enrollment, credit hours, grades, tuition and compliance with academic policies. The College of Dental Medicine Offices of Academic Affairs and Clinical Education will develop a spreadsheet tracking system for students that will include clinical experiences, rotations, experiential data, completion of competency assessments, and entrusted clinical activity monitoring.

- n. As applicable, the adequacy of the patient caseload in terms of size, variety and scope to support required clinical experiences is available.

The size of the onsite clinical case load for students should culminate in a diverse patient experience encompassing oral health care at all stages of life and incorporating medical and dental complexity that reflects the practice of dental medicine in our region. At peer institutions, this has resulted in about 300 patient encounters per student at the time of graduation. However, dental school based practice at a typical school that *also* utilizes community-based education, produces in excess of 300 patient visits per student, as demonstrated in the following graph.

From White J, average clinical visits per US dental student from sample school

DBC = discipline-based curriculum, CCC = comprehensive care curriculum, PRC = procedural requirements curriculum, E = externship

(Dental Students' Clinical Experience Across Three Successive Curricula at One U.S. Dental School). White JM, Jenson LE, Gansky SA, Walsh CJ, Accurso BT, Vaderhobli RM, Kalendarian E, Walji MF, Cheng J. J Dent Educ. 2017 Apr;81(4):366-377. doi: 10.21815/JDE.016.010)
 DBC = discipline-based curriculum, CCC = comprehensive care curriculum, PRC = procedural requirements curriculum, E = externship

The marketing goal for the first four years of the CDM is to have 80 students in each Year 1 with a total of 320 students by the 4th year in operation. Dean Assael's experience in comprehensive care dentistry for students at Minnesota indicated an average of 6 patient visits per active enrolled patient per annum.

Thus, 160 clinically active DMD students at CNU will each require enrollment of 30 new active comprehensive care patients with sufficient health care needs per annum in addition to episodic emergency and other special services patients.

This construct requires a patient care marketing goal of 5000 new patients (5,000 patients x 6 visits = 30,000 patient visits) enrolled per year. Along with follow ups, urgent and episodic care, and the developing of other return services, overall patient services should grow in the first 5 years of operations to 50,000 per year for the DMD students.

Patient care marketing will emphasize prevention and the value of oral health screening. When operational, the CDM clinics will also be utilized for health screening integrated into other CNU health services and informational purposes. The college will liaise with the California DentiCal system for the identification of populations of children for whom dental services in Sacramento are linked with the MediCal provider. The important feature of this aspect is the extension of a DentiCal waiver program called the Dental Transformation Initiative (DTI) that provides support

and incentives for the enrollment of new patients, especially children, into dental practices for patients living in Sacramento County. This project has been extended, likely for 5 years, and will add patients living in Yolo, Sonoma, El Dorado, Napa, Merced, Santa Clara and San Joaquin adjacent counties. Achieving this project's goal will require a substantial increase in DentiCal providers which will position the College well in achieving its patient care goals. The DTI will generate further cooperation with medical/pediatric based health systems as well. The CNUCDM is working with these systems, particularly UC Davis, Sutter Health, HALO and Wellspace in this regard.

o. Class schedule(s) noting how each class will utilize the facility are developed.

The academic calendar of the College of Medicine is in [Appendix 2-3 COM-Academic-Calendar-2019-2020](#).

Of note is that students will be scheduled typically in Common Pathway courses utilizing the COM classrooms and laboratories which are adequate in size and facility to accommodate both COM and CDM students. Major classrooms seat 220 with total students from COM and CDM at 180. The anatomy lab is the only site for which hands-on experience would be limited by the number of learners. The plan is to use the facility jointly for demonstrations and then assign hours to CDM and COM students for supervised dissection and study.

Regarding classes for the CDM only, 2400 Maritime drive will have an 80 seat classroom and small class learning facilities that complement those available at the original Elk Grove facility.

p. As applicable, diagrams or blueprints of the didactic, laboratory, pre-clinical laboratory and clinical facilities, and equipment needs are developed to support the anticipated enrollment date.

The building profile of the principle building of the College of Dental Medicine at 2400 Maritime Drive is included in [Appendix 4-5 Facilities Schematics](#).

The building profile of shared facilities with the Colleges of Medicine and Pharmacy at 9700 West Taron Drive are also included in [Appendix 4-5 Facilities Schematics](#).

[Analysis of Program's Strengths and Weaknesses: Assessment of Priorities and Risk Assessment \(high, medium and low risk assessment and actions\)](#)

Assessment by the planning committee, the executive leadership of California Northstate University, and the community of interest led by the curriculum/education committee of the Sacramento District Dental Society, resulted in program initiation during the years 2017-2019. This resulted in the development of a Presidents Report on the Planning of the College of Dental Medicine presented by President Cheung to the Board of Trustees at its June 2018 meeting, ([Appendix 1-1 President Report On the Planning For Dental College](#)). This report summarizes the program initiation process including the risk assessment and actions taken to address these program initiation issues.

In the final report, the six leading principles of CNU program initiation were assessed. They include:

1. The education program(s) must be of demand by the general public,
2. The program(s) must lead to gainful employment while serving humanity or society's needs,
3. The program must be affordable and compliant with regulations and accreditation,
4. The program(s) must be deliverable by multiple learning modalities/media and able to reach learners of the future,
5. CNU must continue to address diversity and access issues in education,
6. All colleges must operate in a fiscally responsible manner to fulfill the education mission while maintaining long term sustainability and viability.

The specific areas of feasibility review included assessment of:

1. Demand of the program
2. Employment outlook
3. Earning potential to cost of degree ratio
4. Dentist per population ratio
5. Financial sustainability of the education program
6. Financial sustainability of CNU "oral health clinical operations"
7. Start-up costs

Assessment of each of these areas was answered in the affirmative. The demand for dental services in California is at an all-time high in large part due to the advancement of third party payment under the Denti-Cal Program and private payers such that 99% of California children are eligible for dental coverage. The more than 31,000 licensed dentists in California must be replaced and added to at a rate of 4% of the workforce per annum, equaling about 1200 dentists while all 6 of the current California dental schools produce less than 700 graduates per annum. California must import nearly half of its new dental workforce each year to continue to meet demand. California dentists are fully employed at the time of graduation.

However, some further analysis was generated by the *Gies in the 21st Century* report (for which Dean Assael is an author) and the work of the ADA Health Policy Institute, which demonstrate a modest excess in workforce under the current market demands. It was assessed that the Central Valley Delta, Sierra Nevada mountains, and Northern California, with its 12 million people without a dental school, do not submit to the same conditions found in the coastal cities such as Los Angeles and San Francisco. Our region has been consistently unable to attract sufficient workforce from large coastal academic health centers similar to problems identified in the upper Midwest and South in the US. This is likely to exacerbate for our region as the dentists in interior California, like the dentists of the upper Midwest and South, are nearly a decade older than those in the major coastal metropolitan areas. Those dentists arrived in the 1970's and 1980's when there were 2.4 dental school graduates per 100,000 US population while today there are just 1.8 graduates per 100,000 population. (Current Demographics and Future Trends of the Dentist Workforce, Valachovic, American Dental Education Association and found in [Appendix 1-4 Current Demographics and Future Trends](#)).

The costs of the program and the affordability of it are enhanced by not being subjected to the high costs of public education and the high costs of coastal city cost of living, construction, labor and related costs that exist in most of California. The capital district of Sacramento is not a seismic area, has a moderate climate and has housing/commercial real estate costs that are a fraction of those found in the San Francisco bay area. The pro forma examined the planned

tuition and cost of living as being substantially lower than the national average for private dental education. Our CNU planned tuition is \$76,000 per year. The tuition at other private schools in California, adjusted for an average rate over a 4 year period, range from \$77,940 to \$86,551. The return on investment for students was also presented in the Presidents report indicating an ROI of about 30%. The Bureau of Labor Statistics report also indicates a rising income for dentists in the next two decades. ([Appendix 1-1 President Report On the Planning For Dental College](#)).

Beyond the sustainability of the program, Dean Assael met with the leadership of the University in the Fall of 2018 culminating with an afternoon with the President's Executive Council on September 17, 2018 at which time a presentation was given on Vision 2030, an assessment of where dental medicine education and practice was headed in the coming decade and the opportunity to lead that change at CNU, presented in [Appendix 1-2 ADEA Vision 2030](#). In this presentation, the key elements of change for dental medicine in the coming decade and the response needed in health science education were presented.

The key elements of change in dental medicine associated to the new College plans presented were:

- Collaborative interprofessional practices
- Integrated payment system
- Value-based payment system
- Reduce the unit cost of dental care with:
 - Workforce development: team care intraprofessional education
 - Emerging practice models
 - Technology
- Oral health integrated into primary care
- Evidence-based integration into key health focus areas associated to CNU primary care mission:
 - Diabetes
 - Obesity
 - Atherosclerotic diseases
 - Oncology
 - Child development
 - Pregnancy

To accommodate those changes, a new dental education model is needed - one focused on the needs of the public and the need to integrate oral health into human health education and practice. This requires that the Colleges of Medicine, Pharmacy, Health Sciences and Psychology, integrate oral health education and practice into their developing models. This requires dental education to substantially change at every level including:

- Holistic admissions to dental school
- True commitment to diversity in dental education environment
- Advancing community-based education with interprofessional education and collaborative practice models
- Educating dentists as leaders of the oral health care team
- Clinical education of dental workforce entirely in health systems
- Collaboration with schools of health sciences and health systems

- Adoption of ACGME core competencies and developing a graduate medical education model for dental medicine
- Presence of oral health in every health science component
- Advance degrees and programs in Health Systems that promulgate integrative and value-based health care

This presentation was accepted by the President's Executive Council with a commitment to create an integrated health delivery model including oral health with existing CNU partners.

Acceptance of a Common Pathway model integrating medical and dental students in the primary biomedical sciences in a clinical case-based pedagogy was also accepted. The College of Health Sciences also agreed to collaborate as they do with medicine and pharmacy with a pipeline program to attract Sacramento area and California interior students, especially a diverse student body, to CNUCDM through baccalaureate level and post-baccalaureate programs.

Analysis of Program's Strengths and Weaknesses

Following the hiring of the Dean, the self-study for the Senior Commission of the Western Association of Schools and Colleges (WSCUC) and CODA was initiated resulting in the following document. In this analysis, a standard-by-standard qualitative analysis of the program's strengths and weaknesses as they exist now at the time of submission has been carried out with the senior leadership team of the University and the school. A process to rank order all recommendations generated during the self-study process of questions delivered via PowerPoint in two sessions with prospective faculty and with the senior leadership team. This Delphi method used questionnaires to rank the need for recommendations and their performance. The Delphi recommendations were recorded in real time in 8 groups of leaders and prospective faculty. They are reprised to follow in [Appendix 1-7 Task Force and Advisory Committee](#). In addition informal discussions occurred to further elaborate on this assessment. Leadership meetings included those with the Deans of Pharmacy, Health Sciences, Psychology, Medicine and the Vice Presidents for Operations, Academic Affairs, Institutional Effectiveness and Assessment, Chief Financial Officer, and Human Resources Director. The recommendations are categorized according to high, medium and low priority as requested for the CODA Initial Accreditation instructions.

For CNU the following definition of high, medium and low priority was used (Prioritization is based upon temporal urgency, not the importance of the standard to the success of the program):

1. **High priority:** this is an accreditation standard that must be immediately addressed to achieve Initial Accreditation
2. **Medium priority:** This is an accreditation standard that must be met prior to the enrollment of students
3. **Low priority:** This, too, is a required accreditation standard that must be achieved prior to the time of the second site visit in year two to accommodate the needs of the class of 2024 and subsequent classes

All recommendations generated during the self-study, including recommendations being implemented or implemented are presented. Short- and long-term plans for implementing the high priority recommendations are described.

Standard 1 Institutional Effectiveness assessment

- 1-1 It was felt by all that the purpose, mission, vision and values of the College of Dental Medicine was well defined, consistent with the strategic plan of the University as well as its history and ethos. While this is a **high priority** item it now is completed and is at **low risk**
- 1-2 Ongoing planning and assessment was deemed to be at an appropriate stage of development for a program that has not enrolled students, treated patients, or performed community service and biomedical research to date. Success in this area can only be measured by the following means: the infrastructure being put in place for excellent and positively evolving education, service, clinical and research programs, and the measurement and improvement activities as defined in **Appendix 1-2 CODA Table 2** and **Exhibit B and C**. Assessment of these components at this time were made and it was felt by leadership of the CDM that this is a **medium priority** due to the need to complete a quality assurance cycle prior to the second year site visit. The college is currently at **low risk** as these programs are properly implemented by the CDM team to date with timetables to preserve their effective implementation.
- 1-3 Those already affiliated with California Northstate were very supportive of the assertion that CNU was already an institution with a strong humanistic culture and that assessments of that culture by students, faculty and staff have shown the way towards further improvements. It was noted by prospective faculty that those who had experienced an exceptional humanistic culture in dental school (which has been promulgated fortunately in California) would be committed to continuing that culture at CNU, and those who had not experienced respect and humanism as students were eager not to repeat that experience at CNU. This is a **high priority** item that requires strong development prior to the enrollment of students. The leadership team of the college is being selected in part to assure the promulgation of the humanistic environment in education, service, patient care and research. This is an area of great and detailed discussion with CNU administration who aver that the CNU environment is dedicated to a humanistic culture, and appears to be a standard of **low risk**.
- 1-4 Many participants of the planning committee and the leadership team of the University are themselves from minority groups. Thanks to the diversity of our Sacramento community, where over 60 languages are spoken and Latino, African American, and American Indian communities are robust, CNU students, faculty and staff have reflected this diversity. Both pharmacy and medicine have “majority-minority” student bodies and support multiculturalism and respect at every level. The leaders and future faculty believe this is an area of **high priority**, in that the development of faculty students and staff much be in place before enrollment. It is also felt to be an area of **low risk**.
- 1-5 Financial resources of the University have been dependent on the original and new investors of the past decade, on tuition, fees, grants, and contracts. There is no state aid directly to the University though support of clinical programs, GME-related programs and government funded health care, drive the success of CNU education programs. Considerable improvements in the California Medicaid system have been of particular value in the sustainability of clinical education programs in medicine, psychology and dental medicine. CNU is a private University with investors expecting a return on investment. The financial leadership of the University has carefully produced a pro forma that has positively received investor scrutiny. This is a **high priority** item that must be continuously addressed through all phases of college development. It was felt by all, including University leadership, that

financial resources were more than adequate and that the college was at **low risk** regarding resources.

1-6 The University was noted in the self-assessment to be completely independent of other entities as it has been since its inception. This is a **high priority** requirement, but with no support from entities outside the institution, CNUCDM was felt to be at **low risk**.

1-7 All development of curriculum development and approval rests with CNU and specifically with the College of Dental Medicine. Direct inquiries to the President and the Vice Presidents of Academic Affairs and Health Sciences (Dean of Medicine) indicated no potential issues in this regard. This is a **high priority** item but CNUCDM is at **low risk**.

1-8 CNU is a WSCUC-accredited institution and is accredited in medicine by LCME and ACPE for pharmacy. The Psychology program in its first year is undergoing APA self-study. This is a **high priority** item but CNUCDM is at **low risk**.

1-9 Affiliations with various health care systems via MOUs were demonstrated to the faculty section meetings, but additionally it was noted that most of the other dental schools in California have expressed their support and desire to work with CNU. In addition, the Sacramento District Dental Society and the California Dental Association have expressed their support and positive interest in the college. Health systems in regional counties and hospital systems have interest in the progress of the college as well. Since the development of affiliations is an ongoing activity for which implementation will be for the main clinical years of 2023-2024 this is a **low priority** implementation item and CNUCDM is at **low risk** for this standard.

Standard 2: Educational Program Assessment

2-1 Several syllabi have already been developed including those for the entire human studies curriculum and curriculum components of the odontology, oral and maxillofacial studies, and behavioral and social sciences components. These include all syllabi for the first two years prior to the second CODA site visit. While some faculty to be assigned will need active development in syllabi construction, the Dean of Academic affairs and faculty development has extensive experience in this area to apply. Due to the fact this is a four year curriculum, the implementation needed makes this a **medium priority** item. The college is at **low risk** for this standard.

2-2 Due process is well established in the University and also in the CNUCDM student handbook. The Dean of Student Affairs and Admissions is further developing these processes which will be implemented by appropriate student progress committees. These activities must be immediately in place prior to enrollment making this a **high priority** item but CNUCDM is at **low risk** in this regard.

2-3 The enrollment plan is for 4 continuous academic years. This is a **high priority** as the elements of all four years must be in place prior to enrollment, CNUCDM is at **low risk**.

2-4 The goals of the education program are well stated in the strategic plan. The outcomes specific to the plan are under an appropriate stage of development as course directors for most of years 2, 3 and 4 are developing syllabi that will include learning outcomes. The

process of development will include working groups to precisely develop the defined competencies of the curriculum referred and mapped in each case to the ILOs, PLOs and individual Course Learning Outcomes. Assessments including competency assessments are to be linked to the three components noted. Although this process is under development as a **medium priority** item, it is at the appropriate stage making CNU is at **low risk** for this standard.

2-5 The working group developed the grading and student evaluation methods and systems including competency based grading and remediation policies these are linked or in the process of being linked to defined competencies. Competency assessments will occur at all stages of the program so the development of grading and student evaluation methods must be both immediate and ongoing making this a **high priority** item. CNU is at **low risk** for this standard.

2-6 Affiliation contracts and discussions with all sites will ensure the calibration of VCF (Volunteer Community Faculty) at all sites. Discipline leaders will be committed to this task including the development of calibration manuals. While initial calibration of faculty is already underway with assessment of MOU faculties through the checklist assessment and interviews regarding commitment to CAMBRA and integration with primary care, this is a **low priority** item in that implementation is needed prior to first rotations to community sites in 2023. CNU is at **low risk** for this standard.

2-7 The integrated curriculum is a **high priority** standard for CNU and is proceeding effectively. The planned curriculum in four themes (human studies, behavioral and social sciences, odontology, and oral and maxillofacial studies) delivered in a diagonal curriculum weaving didactic and clinical material in an integrated fashion throughout the four years puts CNUCDM is at **low risk** for this standard.

2-8 Curriculum management is planned through the curriculum committee as defined later in the self-study document. This is a **high priority** item in that the comprehensive curriculum management plan must be immediate and ongoing CNUCDM is at **low risk** for this standard.

2-9 Since this is a new college within the context of an existing oral healthcare community, success with the adequate number of patients will depend on CNU's ability to successfully compete and develop relationships with government agencies and health systems. While one clinic is under development in a purchased building and a second one is in the period of negotiations, these need to be completed within reasonable time to ensure the first classes have adequate clinical experiences. The planning for this must be immediate and ongoing, making this a **high priority** item. Until the second clinic is under contract/construction, CNU is at **moderate risk** for this standard. At the time of the first site visit, 4-7 months from this submission, CNUCDM will be at **low risk** for this standard.

2-10 The development of critical thinking must be incorporated fully into the initial courses in order to be promulgated throughout the curriculum. This is a **high priority** item on that basis. The entire curriculum is evidence and case-based, using small group presentation and project methods to apply knowledge critically, and will ensure critical thinking is a leading component. CNUCDM is at **low risk** for this standard.

- 2-11 Self-assessment must be incorporated fully throughout the curriculum making this a **high priority** item. The grading forms for students will include self-assessment alongside faculty assessment and in some cases peer assessment as noted in syllabi. CNUCDM is at **low risk** for this standard.
- 2-12 Biomedical sciences are both integrated through Common Pathway with the medical school as well as including dental case-based education. This is a particular strength of the curriculum. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 2-13 Case-based learning demonstrates oral facial complex aspects of all biomedical human studies components. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 2-14 The summary in the self-study demonstrates the high level of depth in the curriculum in regard to etiology, pathogenesis, epidemiology, differential diagnosis, prevention, treatment and prognosis for oral diseases. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 2-15 The development of junior and senior case-based seminars in dental medicine and in medicine are to ensure the application of biomedical sciences in patient care. In addition, preceptors in clinical education will serve as faculty in case-based learning in the Human Studies Common Pathway courses. This is a **medium priority** item. CNUCDM is at **low risk** for this standard.
- 2-16 The behavioral sciences curriculum is under development within the College of Dental Medicine and with the colleges of medicine and psychology and will focus on the dental patient-centered issues in behavioral sciences. This is a **high priority** item in that the integrated curriculum in this area will occur in each of the four year program. CNUCDM is at **low risk** for this standard.
- 2-17 The program development has included strong attention to directing oral health education and services to underserved communities. Particularly the relation with Halo Health, Wellspace, and Indian Health tribal clinics will ensure this outcome. Of note is that the primary clinic of the college is located in the most ethnically diverse community of the region. This is a **low priority** item in that the management of patients from diverse backgrounds will begin to occur in earnest in 2022-2023. CNUCDM is at **low risk** for this standard.
- 2-18 Discussions with the Sacramento District Dental Society planning group have included practice management, organized dentistry and state board of dentistry leaders. The University attorney Dina Ragab will be a faculty member and Paul Wagstaffe, the University Attorney Emeritus, is a faculty member for the other colleges and will do so for dental medicine as well. The self-study reflects this. This is a process integrated into all 4 years of the curriculum and is thus a **high priority** item. CNUCDM is at **low risk** for this standard.
- 2-19 The planning group described above will interface on the issues of practice management. Students will learn with other members of the oral health team and will be taught as well by dental assistants, medical professionals, dental specialists and the whole health care team.

Since this will occur mostly in the clinical practicum, this is a **low priority** item. CNUCDM is at **low risk** for this standard.

2-20 Communication is a key ILO and PLO to be linked to most syllabi. This is throughout the curriculum and is a core principle associated to most syllabi. This is a **high priority** item. CNUCDM is at **low risk** for this standard.

2-21 Ethics and professionalism is a key ILO and PLO to be linked to most syllabi. This is a **high priority** item. CNUCDM is at **low risk** for this standard.

2-22 Assessment for evidence-based practice and communication of that evidence in clinic and small group learning sessions is a key component of the curriculum. This is a **high priority** item. CNUCDM is at **low risk** for this standard.

2-23 While excellent relationships for the care of pediatric patients, including Head Start and well-baby patients, are already in place, time has not yet permitted the development of strong geriatric relations with existing domiciled elderly patients and through senior centers. This process is underway. This is a **low priority** item. CNUCDM is at **low risk** for this standard.

2-24 The working groups of faculty have addressed clinical experiences, faculty resources and clinical facilities in all these areas including the rubric for competency assessment. This will occur in years 3 and 4, 2023-2024 thus this is a **low priority** item. CNUCDM is at **low risk** for this standard.

2-25 The University is committed to the development of a special needs clinic as part of the approved academic health center where all DMD students will participate. These will be developed with the hospital and clinics construction in 2022-2023. This is a **low priority** item. CNUCDM is at **low risk** for this standard.

2-26 As noted in the self-study, 12 weeks and two courses are in community-based learning to be implemented in 2023-2024. This is a **low priority** item. CNUCDM is at **low risk** for this standard.

Standard 3 Faculty and Staff Assessment

3-1 The faculty and staff hiring plan as noted in the self-study and exhibits, is adequate and meets industry norms for development and mature levels. This is a **high priority** item. CNUCDM is at **low risk** for this standard.

3-2 The faculty development process as noted in the self-study is adequately developed to this point and will undergo continuous development as faculty are appointed. This is a **high priority** item. CNUCDM is at **low risk** for this standard.

3-3 Negotiations with the CNU faculty senate have occurred to ensure equal representation of CNUCDM with faculty governance. The outcome ensures equal representation of dental medicine in the Senate. A CNUCDM faculty council is also planned. This is a **medium priority** item. CNUCDM is at **low risk** for this standard.

- 3-4 Faculty evaluation processes were developed during WSCUC submission and are in the self-study narrative. Faculty evaluation must be immediate and continuous. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 3-5 As noted in faculty handbook, attached to self-study, the processes for promotion are in place. This is a **high priority** item. CNUCDM is at **low risk** for this standard.

Standard 4 Educational Support Services Assessment

- 4-1 Fully developed processes for admissions exists for the Colleges of Medicine and Pharmacy and are now completely developed for the College of Dental Medicine. These are noted in the self-study consistent with CNU policies. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 4-2 Currently, no advanced standing is applicable at CNUCDM. This is a **low priority** item. CNUCDM is at **low risk** for this standard.
- 4-3 Due to the nature of the curriculum, admission of transfer students is not being considered at this time. This is a **low priority** item. CNUCDM is at **low risk** for this standard.
- 4-4 As stated in the self-study, both the University and the college have admissions policies designed to include recruitment and admission of a diverse student population. During the course of program development, meetings with community and regional colleges have focused on recruitment of a diverse student body with special attention towards underrepresented minorities, immigrants, and American Indians. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 4-5 Initial assessment at the time of initiation of program development put CNU at **high risk** in this regard as no building for the college had been determined and the expectation that current facilities could accommodate the entire program needed to be addressed. A local site analysis determined that the classroom space for Common Pathway courses was adequate as well as student life, library and non-dedicated lab space. No suitable space for the clinics or preclinical simulation laboratories was initially identified. In January 2019, this circumstance changed with the purchase of a building adjacent to the main campus dedicated to the College. This will supplement University facilities with space for a fixed simulation laboratory, the first of 2 major clinics, and a classroom for 80, plus additional seminar space. While most of these facilities will be completed before enrollment of the first class, the development task is ongoing. Thus, this is a **high priority** item. With recent developments and purchases, CNUCDM is at **low risk** for this standard.
- 4-6 Written agreements are completed or in process without anticipated obstacle for all learning sites. This has been an ongoing project for the past 3 months since the Dean was hired to meet individually with leadership, community boards, and dentists from all sites to gain commitment to be sites for DMD education. This is a **low priority** item in that the implementation of these sites will be in 2023. CNUCDM is at **low risk** for this standard.
- 4-7 All of these student services are in place and noted in the student handbook. This is a **high priority** item. CNUCDM is at **low risk** for this standard.

- 4-8 All of these costs of education are noted in the pro forma and planning document for the school. They have been submitted to lenders. All will be made available to applicants at the time of admission. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 4-9 These policies on student aid and privacy are in the University documents for existing colleges and are incorporated into CNUCDM program documents. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 4-10 These policies on mandatory health standards are in the University documents for existing colleges and are incorporated into CNUCDM program documents. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 4-11 Policies and programs regarding student health are in the University documents for existing colleges and are incorporated into CNUCDM program documents. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 4-12 Immunization policies are in the University documents for existing colleges and are incorporated into CNUCDM program documents, especially with regard to specific disease immunizations. This is a **high priority** item. CNUCDM is at **low risk** for this standard.

Standard 5 Patient Care Services Assessment

- 5-1 The Assistant Dean of Clinical Affairs working with existing and prospective faculty from January through April developed these policies regarding patient's rights and patient-centered care. These are now in place but will be implemented in the coming 2 years. This is a **medium priority** item. CNUCDM is at **low risk** for this standard.
- 5-2 The clinic committee and the Dean of clinical affairs have developed the evidence-based care principles to this point with development to be specified by engaged clinicians in the coming months and years as clinics come on line. This is a **medium priority** item to be implemented in 2022. CNUCDM is at **low risk** for this standard.
- 5-3 The parameters guiding the clinic committee for the development of standards of care is in place. The cycle of continuous improvement with regard to established standards, their assessment, continuous monitoring, and evolution are noted in the establishment of the role of dean of clinical affairs and the clinic committee. This is a **medium priority** item. CNUCDM is at **low risk** for this standard.
- 5-4 The comprehensive care plan indicates that students will treat patients solely with regard to the patients' needs. The ability to take competency assessments will not interfere with comprehensive care. This is a **medium priority** item. CNUCDM is at **low risk** for this standard.
- 5-5 The plans for the clinic are to have a 24 hour emergency service associated to the adjacent hospital. Until hospital operations are in place, faculty will take this call with the support of a regional hospital service. This is a **medium priority** item. CNUCDM is at **low risk** for this standard.

- 5-6 All clinical personnel will be BLS certified. This is a **medium priority** item. CNUCDM is at **low risk** for this standard.
- 5-7 Ionizing radiation policies are developed with assistance of OMF radiology and the Dean of clinical Affairs. This is a **medium priority** item. CNUCDM is at **low risk** for this standard.
- 5-8 Policies are developed based upon CDC guidelines for asepsis and specifically supported with manufacturer recommendations vis a vis equipment. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 5-9 University and school policies for compliance with federal (HIPAA) and local statutes with regard to patient confidentiality are under development. Those for the CNUCDM will match those of the ADA and CDA documents. This area is complemented by the planned CNU Hospital and Clinics for which additional policies for the security of protected health information will be made including a HIPAA compliant electronic health record, training and associated policies. This is a **high priority** item. CNUCDM is at **low risk** for this standard.

Standard 6- Research Program assessment

- 6-1 The commitment as an integral component of the college is in the mission, vision, goals and objectives. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 6-2 The commitment of time, work product, facilities, equipment and other support to faculty to engage in research has been a principle item of development with the Vice President of research and the Dean of research in the CNUCDM. This is a **high priority** item. CNUCDM is at **low risk** for this standard.
- 6-3 The Dean will administer a fund to support student research as well as funds to be developed by the Dean of research. Students at CNU health professions colleges currently have an exceptional participation in biomedical research. This is a **high priority** item. CNUCDM is at **low risk** for this standard.

Description of Program Initiation

1. If a feasibility study has been conducted, briefly describe the study.

The DMD program supports the institution's mission of preparing future professionals to advance the art and science of healthcare and the vision of the University towards primary care, community service, and social consciousness and accountability. California Northstate University (CNU) currently offers an array of healthcare programs whose students would benefit from the addition of a dental education program and the interprofessional education opportunities that such a program would afford. Currently, the University provides discipline based and interprofessional education experiences for students in the medical, pharmacy, and psychology doctoral programs.

Sacramento is an ideal location due to its strong professional community, strong need for a dental school, the lower cost of living within California, and access to very prepared students and excellent faculty. CNU's DMD program would be in a position to partner with health systems and the state to improve oral health access and oral health outcomes for Sacramento, the east bay, the central valley and mountain regions of Northern California. Additionally, the dental school would be able to partner with community resources, foundations and charities for care for underserved Californians in Sacramento and beyond.

Sacramento is in need of a dental school, as one of the 30 largest metropolitan areas in the nation, Sacramento joins San Diego as the only ones without a single dental school associated with their region.

Dentistry is the health profession in the highest demand: The 66 US dental schools have about 6000+ spaces for about 13,000 US applicants and an equal number of non US dental graduates seeking a US dental degree. Graduates of dental schools have virtually 100% employment in professional related activities on day of graduation. California residents seek dental education outside of California at the highest rate of any state.

There is a great need for dental schools due to what is considered a "hidden epidemic": dental disease is the greatest untreated and undertreated of all diseases in children, the elderly, disabled, special needs patients, the poor and medically compromised. California dental schools have an inadequate record in providing dentists to rural, mountain and central California cities. There are 30,772 dentists in California for a population of 38,441,747. Academic health centers benefit from the full array of health science education with dentistry integrated into the fabric of healthcare. Policy makers in California have awakened to oral health disparities and increased attention and support for oral health.

Additionally, this program is responsive to the needs within California and beyond for qualified dentists to fill the demand for dentists. According to the Bureau of Labor Statistics, the demand for dentists will continue to grow nationwide as the US populations continue to exponentially grow and age. The aging US populations are more likely to retain their teeth due to advancements in healthcare and the increased risk of oral cancer demands have created an increase in the demand for dental professionals. The projected employment change from 2016 to 2026 for dentists is a 19% growth, which was determined to be much faster than the projected average US job growth. Due to this exciting time of growth and possibility for innovation

within dentistry, it is important that CNU stays on the cutting edge in training the best and most competent future dentists.

2. Discuss the process and procedures used for initial program development. Identify the individuals responsible for program planning.

CNU is engaged in continuous assessment of the critical elements of the institution-- from assessing how well the college achieves its mission to assessing how effectively the institution's strategic thinking and planning advance the institutional mission, vision, values, and goals. Assessment drives programmatic improvements, which are subsequently incorporated into the institution's strategic planning and the budgeting process.

Strategy 6.3 of the University's Strategic Plan is to "research viability of new programs that are consistent with the Mission for implementation." The tactics for this plan include the following: conduct appropriate research to explore plans for potential growth, create plans for new program development, develop substantive change proposals for new programs, and implement new programs that are good matches.

Initial planning for the DMD program began in 2016 when California Northstate University was exploring the possibility of other doctoral programs within the healthcare professions that not only provided a good fit with the current program offerings but which also was greatly needed in California and beyond. The DMD program emerged as the best fit with the current offerings of CNU due to the mounting dental care needs of Californians.

On September 18, 2017, the Dental School Task Force was created in order to examine the need for a regional dental school in the Sacramento area, as well as the shortage of dentists nationwide. (See [Appendix D-1 Task Force Roster](#)) Cost and affordability were discussed within the initial meeting, as well as the responsibility of CNU to provide a quality education and reasonable costs to the students. On November 13, 2017, administration was given an update on the program in the President's Executive Council and further feedback and discussion was solicited.

- 1 The process used to establish need began with a review of oral health services nationally and in California, the number of current providers, and the projected deficit in dentists. According to a compilation of 2016-2017 admissions data retained by the American Dental Education Association, it was shown that 6,100 first year enrollees were accepted from a total of 12,058 applicants of completed applications through AADSAS(50.6% acceptance rate). The Pacific coast has an outsized representation among dental applicants. The report showed that the greatest number of applicants (per million population) to US dental schools were from Washington and Oregon and the total greatest number were from California. Wanchek, T., Cook, B. J., & Valachovic, R. W. (2017) US dental school applicants and enrollees, 2016 entering class. *Journal of Dental Education*, 81(11), 1373-1382. Doi: 10.21815/JDE.017.096

California has six schools that offer programs for dentistry – two are in San Francisco and four are in the Los Angeles area. There is a need to have an established dental school within California's Central Valley for prospective students living in the region and outlying locations. Of the 30 largest metropolitan areas in the nation, Sacramento and San Diego are the only ones without a single dental school associated to their region. A total of 13,637 applications were received by dental programs in California and within the entire Western US, a total of 1,031

were enrolled. By establishing more dental programs in this region, more qualified students may be able to attend dental programs.

Appendix D-2 Monitored Dental Programs shows all six monitored dental schools in California as well as information regarding CODA accreditation status, their applicant pools, and enrollment rates. These numbers indicate that student desire for dental program placements outnumbers current availability. Additionally, the quality of applicants has improved over the years, in spite of the limited number of programs available to them. The DAT average for applicants in 2000 was 17.8 and had risen to 19.3 by 2017. Similarly, GPAs grew from 3.2 in 2000 to 3.4 by 2017. This indicates a robust pool of qualified applicants are simply unable to enroll because the number of dental programs is insufficient.

According to the Commission on Dental Accreditation (CODA), there are six dental programs in California, the closest two being in San Francisco at University of the Pacific, Arthur A. Dugoni School of Dentistry (97mi) and UCSF School of Dentistry (101mi). In 2017, University of the Pacific had 2,364 applications and 142 enrollees (6% acceptance rate), and UCSF had 2,022 applications and 86 enrollees (4% acceptance rate). Due to the lower acceptance rate, coupled with the scarcity of dental programs within 50 miles of the Sacramento region, it can be determined that there is a need for a dental school in the region.

The planning process for the College of Dental Medicine also considered that dental disease is the greatest untreated and undertreated of all diseases in children, the elderly, disabled, special needs, the poor and medically compromised. Despite that, in 2016, there were only 1.8 dental school graduates for every 100,000 people in the United States. This is a significant decrease from 1977, when there were 2.4 dental school graduates for every 100,000 people. The need in California is particularly acute, with vast amounts of the population living in the central valley, mountains and rural areas.

Therefore, the Dental School Task Force identified a need for highly qualified candidates to be provided a dental school education who cannot be served by the current number of dental programs. There is also a shortage of both applicants and enrollees who are Latino and African American. This is of particular concern in California, a state whose population is roughly 40 percent Latino and 7 percent African American. Currently, dental college enrollment nationally is 5 percent African American and 9.1 percent Latino.

In planning the development of the College of Dental Medicine, the Task Force also recognized that employment prospects for dentists are excellent. According to the U.S. Bureau of Labor Statistics, the growth in the profession is projected to increase by 19.4 percent between 2016 and 2026. This is a significant increase over other job sectors which are expected to grow by only 7 percent during that same time period. The demand for dentists is increasing so dramatically because the US population continues to exponentially grow and age. The aging US population is more likely to retain their teeth due to advancements in healthcare. Additionally, the increased risk of oral cancer increases the demand on the number of dental professionals in the country. The 2019 U.S. News and World Report also indicates that dentists enjoy a profession in the top 5 of the 100 Best Jobs in the nation and is second most favorable in Health Care Jobs. It is also a lucrative profession, with the average salary of \$158,120.

At the February 10, 2018, meeting, the task force discussed the process of accreditation, including planning the timing for the WSCUC change and CODA accreditation processes.

Further, Dr. Leon Assael was referred to the group, the person who would eventually be hired as Dean of the College of Dental Medicine after a search conducted in the Fall of 2018.

On May 26, 2018, Dr. Leon Assael met with the task force as a consultant, and the group discussed the important goals and creation of curriculum, accreditation timeline, and overall cost. On August 4, 2018, a more detailed idea of the curriculum strategy was discussed, as well as the creation of the dental clinics and student education and training. On August 6, 2018, the DMD program was introduced to the full faculty and staff in a Town Hall meeting.

In the Fall of 2018 the Task Force requested a survey to be created and disseminated to CNU College of Health Sciences (CHS) undergraduate students. The survey contained questions regarding students' interest in the field of dentistry, their desire for more information about CNU's dental program, and whether and when they might wish to submit an application to CNU's dental program. It was found that 76% of CHS students wanted further information about the program, 51% were interested in pursuing dentistry as a career choice, and 50% would apply to CNU's dental program. The majority of respondents who indicated that they would apply to the dental program also indicated that they would desire to do so as soon as they have completed their undergraduate coursework at CHS. Multiple students have indicated that the dental program at CNU fits well within the scope of the University, which reflects CNU's mission, "to advance the art and science of healthcare." The CHS student interest survey results can be found in [Appendix D-3 CHS Student Interest Survey](#).

On October 30, 2018, Dr. Leon Assael addressed the Board of Trustees and gave a brief description of his background, and his plans on the timeline for accreditation and process for the creation of the dental program. The preparation of the self-study for WSCUC and subsequently for CODA was the responsibility of the leadership team. The individuals, administrative titles, and contact information are noted in [Exhibit A](#). The application for WSCUC was submitted November 29, 2018, and the substantive change review was held with a site visit team on April 25, 2019. The Faculty Senate reviewed and discussed the proposed program during their November 6, 2018, meeting, and final Faculty Senate approval was given on November 12, 2018. After completion of the search for the dental dean, Dr. Leon Assael was hired on a part-time basis on November 1, 2018, and as a full-time employee on December 1, 2018.

Refer to [Appendix D-4 DMD Development Meeting Minutes](#), [Appendix D-5 New Program Approval Process](#), [Appendix D-6 Program Announcement](#) and [Appendix D-7 Faculty Senate Approval Letter](#).

Wanchek, T., Cook, B. J., & Valachovic, R. W. (2017) US dental school applicants and enrollees, 2016 entering class. *Journal of Dental Education*, 81(11), 1373-1382. Doi: 10.21815/JDE.017.096

Commission on Dental Accreditation, *Search for Dental Programs*. Retrieved from <https://www.ada.org/en/coda/find-a-program/>

This is a very strong market so filling a class would not require marketing. However, there is a desire to mold a school tied to its mission statement and its goals and objectives. In the case of CNU we are desiring students with a social consciousness, a diverse student body and one of

high academic potential. Since the CDM is based upon a community service and primary care model, the marketing strategies are strongly influenced by that paradigm.

The elements are as follows:

1. Pipeline
 - a. Develop a program beginning in secondary school to stimulate interest in dentistry as a career. The CDM will work with local 9th -12th grade schools in the greater Sacramento area and the Delta that serve students with low socioeconomic status and reside in areas of need for health care resources.
 - b. A Dentist for a Day program will introduce students to dentistry. This is shown to schools via an onsite presentation by faculty, typically in Health classes
 - c. Girl Scout and Boy Scout badges can be earned related to oral health
 - d. Student projects in high school will be available that are directed to oral health in either science or social science courses
2. College level
 - a. Visit colleges, especially those with underrepresented minorities and social need to meet with pre-health societies and preprofessional counselors among others (The dental school maintains a list of those regional baccalaureate institutions for this purpose)
 - b. Summer research opportunities for baccalaureate and post baccalaureate students
3. Public
 - a. Participation in Health fairs and free health screenings, including those in interprofessional environments with medicine and pharmacy. While doing these events, volunteers from high school and college level will be recruited to help as volunteers. Among examples of this for CNU will be Celebracion de Salud (an inter-professional health fair program for migrant workers) and California Dental Association Mission of Mercy (CDA Cares), which would include CNU students and prospective students
 - b. Web site development will emphasize the features of the CDM
 - c. Interviews with the press and other communications resources
 - d. Social media presence on Facebook, Instagram
 - e. Print media and visual media: CNU presence at the airport and via its presence on Interstate 5 will produce valuable marketing for prospective students, staff, faculty and patients.
 - f. Patient care marketing will emphasize prevention and the value of oral health screening. When operational, the CDM clinics will be utilized for health screening and informational purposes

The Admissions officer will be a full-time position whose focus will be on class development and leading in this area. In-kind cost is based upon effort of existing faculty, staff and students. Travel and marketing budget for programs, IT, branding merchandise, etc. to ensure a diverse pipeline of applicants is \$50K per year.

The marketing goal for the first four years of the CDM is to have 80 students in each Year 1, with a total of 320 students by the 4th year in operation. The patient care marketing goal is for 5,000 new patients enrolled per year.

California Northstate is committed to gaining a student body from underserved communities, including rural California communities, immigrant and migrant communities, underrepresented minorities and other chronically underserved communities. Through our pipeline program we will identify, mentor, and support community members who will seek careers in the health professions broadly and dental medicine specifically. Refer to [Appendix D-8 CDM Marketing and Recruitment Plan](#).

3. Describe the process used for employing the program's chief administrative officer/dean. State the date the dean was employed. A dean must have been employed at the time the application is submitted or at least six (6) months prior to a projected accreditation site visit.

After approval by the CNU Board of Trustees for a College of Dental Medicine in June 2018, a job description and search process for the founding Dean was initiated. The Search committee headed by President Cheung included Dean John Silva of the College of Medicine, Dean Hieu Tran of the College of Pharmacy, and Wai Chen representing the Board of Trustees.

Leon A. Assael DMD was appointed Dean of the College of Dental Medicine on September 26, 2018 and immediately began work of the new college. On November 1, 2018, Dean Assael became an employee of the University, full-time, as of December 1, 2018. A brief bio is provided below and his full CV can be found in [Appendix 1-7 Assael CV 2018](#).

November 2018 BIO: Dr. Leon Assael DMD is volunteer Clinical Professor in Public Health, and Oral Maxillofacial Surgery at University of California San Francisco. He is the immediate past Chair of the Board of the American Dental Education Association. He is Dean Emeritus of the University of Minnesota School Of Dentistry. He holds an BA from Columbia University and earned a DMD from Harvard University School of Dental Medicine, as well as a Certificate in Medical Management from the University of Kentucky. He completed his residency in oral and maxillofacial surgery at Vanderbilt University.

Dr. Assael was in medical school/hospital based practice at the Mount Sinai School of Medicine until entering dental education at the University of Connecticut in 1989. He has served as residency program director in oral and maxillofacial surgery at Medical College of Wisconsin, Mount Sinai School of Medicine, the University of Connecticut and Oregon Health & Sciences University. Dr. Assael has served as an officer on medical boards at several hospitals and as acting chief of medical staff of John Dempsey Hospital. Dr. Assael served as Dean at the University of Kentucky, College of Dentistry until 2003, when he was appointed program director then chair of Oral and Maxillofacial Surgery and Medical Director Hospital Dentistry at the Oregon Health & Science University.

He is the past editor-in-chief of the Journal of Oral and Maxillofacial Surgery (2001-2011, current co-editor in chief of Oral and Maxillofacial Surgery, past chairman of the Council on Dental Education and Licensure of the American Dental Association, and a diplomate to the American Board of Oral and Maxillofacial Surgery. Dr. Assael is the past chair of the Council of Deans of the American Dental Education Association. In 2001, President George W. Bush awarded Dr. Assael the America's Promise Award for advancements in oral health in Appalachia achieved by the University of Kentucky

faculty. He is the recipient of the Donald Osborn award for outstanding educator in oral and maxillofacial surgery. In 2010, the American Association of Oral and Maxillofacial Surgeons awarded Dr. Assael the Board of Trustees special recognition award. Dr. Assael has clinical and research interests in value based health care, systems-based oral health education, Dental therapy, bone diseases and nerve injury

4. If a facility is not currently available for use by the dental education program, briefly describe the process for approving the physical facility. Identify the proposed date for facility completion.

The process for approving a facility occurred with the construction and planning group of CNU with an architectural firm, Kevin Pressey and Associates, for the dental college. Consideration as to whether a single model of onsite clinical education was considered or a multiple site clinical setting. In both cases needs of the college were discussed and options were considered. The first options to be considered was a temporary one in Elk Grove with a local conference center and shopping center owned by the University. The psychology department had recently constructed clinical facilities at that site which is adjacent to the campus. In addition, facilities were considered at the Health Sciences Campus in Rancho Cordova.

Discussions with the University leadership centered on the need for dental medicine to be integrated through interprofessional and collaborative practice experiences with the other health sciences particularly with the College of Medicine in Common Pathway courses. In addition, the need for dedicated space for simulation and for clinics attached to other ambulatory care series being developed by the University became an important consideration. On that basis, the University purchased the building at 2400 Maritime Drive as the dental college home. The building is an exceptionally well built bank headquarters building that is undergoing renovations to include a 32 unit clinic (9000 square feet), a simulation lab (3000 square feet), and learning spaces/classrooms (4000 square feet). This purpose-built construction is currently completing its planning stage and construction will commence immediately thereafter. Occupation of the building is anticipated by the end of this year.

This 16,000 square foot facility has a small campus setting, 40 parking spaces and ample room for permanent addition to the building. The campus space is now 250 acres and the adjacent land to the dental college building is also owned by the University and is now planned for additional dental medicine and other health science learning space as well as clinical facilities and parking.

In addition to common core facilities of the University for classroom, library, learning resources, laboratories and student life facilities at 9700 Taron Drive, the College of Dental Medicine now has a building on the master campus footprint at 2400 Maritime Drive in Elk Grove, as shown in [Appendix 4-5 CNUCDM Facilities Schematics](#). The Maritime Drive Site will include the primary clinic for the College for opening in Summer 2020.

Currently the college is working with community partners and the university leadership to consider options for an additional clinical site to be developed in 2020 for opening in 2021-2022 in the greater Sacramento, San Joaquin Valley region. Real estate negotiations for this second clinical site to be built one year subsequent to the first site in Elk Grove slated for 2019-2020.

5. Discuss how the projected size of the class was determined.

	2020-2021	2021-2022	2022-2023	2023-2024
Class 1	80	80	80	80
Class 2	N/A	80	80	80
Class 3		N/A	80	80
Class 4			N/A	80
TOTAL STUDENTS NEEDING PLACEMENT	80	160	240	320 80

The planned DMD class size of 80 will engage about 160 students in clinical care at all times beginning in 2021, which may include international dental graduates to the level of 80 or greater. The economies of scale in dental education have kept the average dental school class sizes between 80 and 110. The largest dental school in the US is NYU with 400 per year and the smallest is Harvard with about 45 per year. In assessing the workforce needs of California, the 31,000 dentists of California need to replace and add to their workforce at about 4% per year meaning 1240 dentists. Matriculating dentists in the six dental schools in California include the following:

	Number of First Year Dental Students
University of the Pacific	141
USC	148
Loma Linda	103
Western University	70
UCSF	90
UCLA	87

Thus the total matriculating dentists in California schools is 638 per year A DEFICIT of 600 dentists per year. Within the capacity of the University, CNU acceptance of 80 matriculates a year from this underserved region will address this issue.

To incorporate the DMD program, CNU will build a preclinical laboratory and a clinical simulation at the Elk Grove campus. For clinical facilities, CNU will work in two phases. The first phase will be the development of the two clinics in Elk Grove with 80 clinical treatment units in 2019-21. Both clinics will share and have access to core radiology, digital clinical facilities, operational electronic health record systems, sterilization and equipment management programs.

The College will also partner with primary care clinics, dental specialties and advanced practice clinics associated to health and hospital systems, and community health centers with a FQHC model. These partnerships will be a part of the clinical experience for Year 4 students (see MOU docs).

The DMD program at CNU will partner with health systems and the State of California to improve oral health access and oral health outcomes for Sacramento, the East Bay, the Central Valley, and mountain regions of California. The program will partner with community resources, foundations, charities for care for underserved Californians, and international dental schools.

Refer to [Appendix 1-6 MOUs Clinical](#).

6. Does the institution currently offer any other dental-related educational programs? Does the institution anticipate developing any other dental-related programs in the future?

California Northstate does not offer any other dental education programs at this time. Consideration of graduate programs that interface with the health system environment for necessary care for patients with illnesses that include essential oral health issues is under consideration. Future programs linked to this need in Sacramento to be considered include pediatric dentistry, oral and maxillofacial surgery and general practice residency.

STANDARD 1 - INSTITUTIONAL EFFECTIVENESS

STANDARD 1-1

- 1-1** The dental school **must** develop a clearly stated purpose/mission statement appropriate to dental education, addressing teaching, patient care, research and service.

Intent:

A clearly defined purpose and a mission statement that is concise and communicated to faculty, staff, students, patients and other communities of interest is helpful in clarifying the purpose of the institution.

A. Description:

1. List the dental schools purpose/mission statement, that addresses teaching, patient care, research and service. If a philosophy has been developed for the school, quote the philosophy.

The Mission of the College of Dental Medicine is to advance the art and sciences of health care through excellence in oral health education, practice, research, service, and social accountability

Education: Create skilled and knowledgeable clinicians who will constantly advance their capabilities throughout life

Practice: Produce clinical leaders in oral health who will serve in private practice, health systems practice, and in interprofessional settings

Research: Promulgate scientific inquiry throughout the curriculum and support student and faculty research that creates an environment of scientific curiosity and an evidence based foundation for clinical practice.

Service: Provide individual patient care services at all clinical sites under the auspices of CNUCDM that produces the very best oral health outcomes and clinical value.

Social Accountability: Advocate for and help build stronger communities in California and globally through improved oral health care, disease prevention, health promotion and protection from oral diseases through community-based approaches.

Our Values:

- Patient-centered didactic and clinical education that always puts improved health outcomes first.
- Foster a humanistic and character-developing environment for dental students
- Making better communities and a better world through improved oral health

- Understanding the professional responsibility of the dentist as the head of the oral health care team
- Practicing health promotion and disease prevention and protection
- Advancing California Northstate University through excellence in all we do

Supporting narrative: The integration of oral health into human health requires dentists who are capable of performing at the highest level in an ever more complex and demanding environment of emerging technology, social change, human disease management, and evolving health systems. The CNUCDM is developing a curriculum with four basic themes into which all didactic and clinical content will be served. These four themes are **Human Systems, Odontology, Oral and Maxillofacial Studies, and Behavioral and Social Sciences**. All four themes will be delivered in a diagonal curriculum

2. List the parent institution's purpose/mission statement. Describe how the dental school's purpose/mission statement supports and is related to the University's purpose/mission statement.

Mission: The Mission of California Northstate University is to advance the art and science of healthcare.

Vision: To provide innovative education and healthcare delivery systems

The dental school has a mission vision and values statement in direct support of the university mission statement. As noted in standard 1:1 above the CNUCDM commitment to education practice, service, research and social accountability match those of the university by advancing the art and science of healthcare. Especially the university emphasis on social accountability and interacting with communities and health systems are missions that will be well complemented by the mission and actions of the CNUCDM.

3. What are the planned methods to communicate the dental school's purpose/mission statement to the school's communities of interest. Examples may include plans to communicate through:
 - a. Patient information materials: This will be included with the printed materials received by all new patients
 - b. Student Handbook: The student handbook begins with the Mission, Vision and Values of the CNUCDM
 - c. Faculty Handbook: The faculty handbook begins with the university mission statement
 - d. Clinic Manual: The CNUCDM mission, vision and values statement is included in the clinic manual
 - e. Program website: Due to the accreditation status, the website is under development, so as to not prematurely announce the school to prospective students. Once accredited by CODA, the website will prominently communicate the CNUCDM mission, vision and values.

B. Supportive Documentation:

1. University's purpose and/or mission statement

Mission, Vision, Values

A. Mission: To advance the art and science of healthcare.

B. Vision: To provide innovative education and healthcare delivery systems.

C. Core Values

(WE CARE)

Working as a team

Embracing diversity and workplace excellence

Caring about our students, our staff, our faculty and our profession

Advancing our University, our goals, and our discipline

Responding to challenges that may impede our Mission

Enhancing communication and partnership

Core Principles

1. Education is our business.
2. Education is about teaching and learning.
3. Education is effective when students can solve problems, pass the board exam, and have gainful careers.
4. Educational affordability is about the least time and cost to obtain the degree.
5. Education is delivered by faculty who are committed to high-yield teaching, low-stress/stress-free learning, and outcome-based SLOs (CLOs, PLOs, ILOs, and CoCuLOs) assessment.
6. Education is delivered with a relevant curriculum characterized by integration of basic and clinical sciences, supported by technology, and taught by responsible and qualified faculty and staff who are loyal to the CNU's values, interests, and priorities.
7. Education should encompass not only cognitive and intellectual growth, but also social and emotional growth, moral development and character building.
8. Educational quality is maintained through governance oversight, program review, judicious use of resources, accountability, and administrative leadership.

Please also refer to the University's strategic plan in [Appendix 1-1 CNU Strategic Plan 2015-2020](#). This is also stated in the dental college's strategic plan and reprised in the Faculty Handbook as presented in [Appendix 1-2 CDM Strategic Plan](#) and [Appendix 3-1 Faculty Handbook](#). The alignment of the creation of the CDM and the priorities of CNU are explored in [Appendix 1-1 President Report On the Planning For Dental College 2018](#).

STANDARD 1-2

- 1-2** Ongoing planning for, assessment of and improvement of educational quality and program effectiveness at the dental school **must** be broad-based, systematic, continuous, and designed to promote achievement of institutional goals related to institutional effectiveness, student achievement, patient care, research, and service.

Intent:

Assessment, planning, implementation and evaluation of the educational quality of a dental education program that is broad-based, systematic, continuous and designed to promote achievement of program goals will maximize the academic success of the enrolled students. The Commission on Dental Accreditation expects each program to define its own goals and objectives for preparing individuals for the practice of general dentistry.

A. Description:

1. List the University and dental school goals.

The University goals are noted in the CNU Strategic Plan 2015-2020 and the dental school goals are noted in the CDM strategic plan, presented in [Appendix 1-1 CNU Strategic Plan 2015-2020](#) and [Appendix 1-2 CDM Strategic Plan](#). The Strategic Plan was informed, in part, by the ADEA Vision 2030, found in [Appendix 1-2 ADEA Vision 2030](#).

UNIVERSITY STRATEGIC GOALS

Goal 1. Student Success and Educational Effectiveness. Ensure student success and student learning outcomes.

Goal 2. Research & Other Scholarly Activities. Develop, support, and sustain innovative, collaborative approaches for research and scholarly activities in health and administrative sciences and education.

Goal 3. Patient Care and Service. Provide educational opportunities to enhance community health and patient care.

Goal 4. Workplace Excellence: Create and sustain an environment conducive to productivity, collegiality, professionalism, and respect that attracts and embraces diverse top-tier talent.

Goal 5. Infrastructure: Maintain an efficient infrastructure to support and sustain learning, teaching, communication, research and scholarship while keeping education affordable.

Goal 6. Financial Sustainability and Growth. Create a financially sustainable enterprise-wide growth model.

These are on page 2 of the plan and are developed over the subsequent pages. The College of Dental Medicine goals are noted in the CDM strategic plan, presented in [Appendix 1-2 CDM Strategic Plan](#). They are on page 7 of the plan and reprised here as follows:

COLLEGE OF DENTAL MEDICINE STRATEGIC GOALS

Tactics, development plan, critical success factors, and evidence of achievement

Goal 1. Educate effective practitioners of dental medicine

Recruit, retain, educate, and train the highest quality of DMD students

Goal 2. Develop a high quality faculty and staff

Develop and distribute resources to recruit, retain and promote the effective activities of faculty and staff. Promote research and scholarship in the college.

Goal 3. Achieve effective leadership in oral health care delivery

Provide patient care that becomes recognized as some of the best oral health care available anywhere. Gain the benefits of good oral health for the patients served and in our communities beyond.

Goal 4. Promote a diverse and inclusive environment in dental medicine and in the communities we serve

Create and sustain an environment that respects all its students, staff and faculty and the patients we serve. Promote multiculturalism and American values of equality and inclusiveness in the college and for community oral health.

Goal 5. Create exceptional facilities and infrastructure

Build an efficient infrastructure to support and sustain learning, teaching, communication, research and scholarship while keeping education affordable.

Goal 6. Ensure financial sustainability and growth

Build a financially sustainable budget that will provide effective support of existing programs while being poised for expansion through strategic growth of programs

2. Describe how the University and dental school goals relate.

Comparison of the University goals and those of the college indicate that the goals of both are inclusive of the other. As a component of the University, the college contributes through its goals to the University goals of student success, excellence in research and patient care, financial stability and workplace excellence. The goals of the University similarly to provide resources and sustenance to those of the college. These are mapped as follows indicating which college goals (columns) support those of the University (rows). Those that the college supports for the University are denoted as “D” and those that the University supports for the college are noted as “U”:

Dental/University	Student success	Research scholarship	Patient care	Workplace	Infrastructure	Financial Stability
Educate profess	UD		UD			UD
Develop people		U	UD	UD		UD
Lead healthcare	D	UD	UD	UD		UD
Diversity	UD		UD	UD		U
Facilities	U	U	UD	U	U	U
Financial Stabil.	U	D	UD		U	U

3. Describe plans for the review, evaluation and revision of the dental school goals, including how when and by whom the goals will be reviewed, evaluated and revised. To what degree will the University be involved with this process?

The review, evaluation and revision of the college goals are a process that is reviewed in [Appendix 1-2 Table 2](#) with the mechanism being a continuous one assigned to committees, not individuals. These are reported to the Dean and developed at the College executive committee for approval and resources from University components. The key committees that will assess goals are:

- **The Curriculum Committee:** to evaluate Course and Program Learning Objectives, headed by Associate Dean of Academic Affairs and Faculty Development.
- **The Clinic/Quality Assurance Committee:** to evaluate goals of the clinical program, headed by Assistant Dean of Clinical Affairs.
- **The Research Committee:** to evaluate goals of the research program, headed by Assistant Dean of Research.
- **The Institutional Effectiveness Committee:** To evaluate progress on the strategic plan/Table2 and make recommendations for revision, headed by the Dean.

As part of the syllabus review procedure, the **Curriculum Committee** will examine format as well as content, considering course learning outcomes, assessment rubrics, the mapping to program learning outcomes, a content outline based on the academic calendar, a schedule of all assignments, credit hours, necessary information about library resources, and all relevant University/departmental policies. The syllabi are also reviewed to ensure that content is appropriate to the level and goals of the DMD program. If significant changes are needed, the committee will provide guidance to the faculty and require resubmission of the syllabus before final approval.

The Associate Dean of Academic Affairs and Faculty Development will work with faculty course coordinators to ensure that mapping from courses up to Program Learning Outcomes (PLOs) and Institutional Learning Outcomes (ILOs) is appropriate, such that students are able to fully develop the learning outcomes at appropriate levels of learning over the course of the program. It is the responsibility of the faculty coordinating the course to ensure that appropriate learning outcomes have been created that map to the appropriate PLOs and ILOs and that student learning outcomes are assessed. Faculty are encouraged to review CNU's Assessment

Handbook for guidance in building their learning outcomes as well as for guidance in how to conduct direct assessments of student learning. Training in writing learning outcomes and developing rubrics is available to faculty through an annual training session and by appointment from the Office of Institutional Research and Assessment.

The **Clinic/Quality Assurance Committee** will review the goals of the clinical program and assess their success through a quality review process. These will be linked to clinical education goals and goals for patient-centered care.

The **Research Committee** will assess the progress of the research program towards achieving goals and objectives and make recommendations toward applying resources and other pathways towards achieving goals in scholarship and research.

The **Institutional Effectiveness Committee** will systematically review the program goals and assess the outcomes of the strategies employed to achieve those goals. Each year a report to the University of the IEC will incorporate the performance and action of the Curriculum Committee, the Clinic/Quality Assurance Committee and the Research Committee and make strategic recommendations regarding achieving or further advancing goals.

4. Describe the assessment methods/outcomes measures that are planned to determine the degree to which the stated goals and/or objectives are being met. Planned assessments must be continuous and ongoing, include defined formative and summative measures, involve a full range of relevant internal and external stakeholders, permit anonymous input, provide for collective analysis of findings and be used to evaluate trends over time.

These are summarized in the CDM Strategic Plan, Table 2, presented in **Appendix 1-2 CDM Strategic Plan**. The assessment methods are noted in the document as the “Critical Success Factors” and the outcome measures are noted as “Evidence of Achievement” in the document. These monikers were selected to be consistent with other CNU continuous improvement documentation. Each of the above noted committees will further develop the rubrics in Table 2 for the specific purposes of evaluating components of their area of responsibility and assign responsible individuals within their area to achieve the desired goals as stated in the PLOs.

B. Supportive Documentation:

1. Assessment schedule/timetable/plan including the planned outcome measures to be utilized by the program (Example exhibit B,C)

Exhibit B and **Exhibit C** are presented to indicate assessment timetable/plan consistent with the goals of the strategic plan. Each of the planned outcome measures has an assessment timetable that is based upon the guidance provided in the startup of academic programs, clinics, clinical affiliations, faculty hiring plan and research development programs. Also, see **Appendix 1-2 CNU Assessment Handbook**.

STANDARD 1-3

- 1-3** The dental education program **must** have a stated commitment to a humanistic culture and learning environment that is regularly evaluated.

Intent:

The dental education program should ensure collaboration, mutual respect, cooperation, and harmonious relationships between and among administrators, faculty, students, staff, and alumni. The program should also support and cultivate the development of professionalism and ethical behavior by fostering diversity of faculty, students, and staff, open communication, leadership, and scholarship.

Examples of evidence to demonstrate compliance may include:

- Established policies regarding ethical behavior by faculty, staff and students that are regularly reviewed and readily available
- Student, faculty, and patient groups involved in promoting diversity, professionalism and/or leadership support for their activities
- Focus groups and/or surveys directed towards gathering information on student, faculty, patient, and alumni perceptions of the cultural environment

A. Description:

1. Describe how the dental school plans to provide an environment and culture that promotes professional, harmonious, and ethical behavior among students, faculty, administrators and staff.

The Dean of the College is responsible for assuring that the culture of CNUCDM develops effectively towards one that is professional, harmonious, and ethical in every way. This is being done through the selection of a leadership team of members who have exhibited those qualities in their own dental educator careers and exhibits a strong awareness of the consequences of a lack of humanistic environment as a burden on the development of dental medicine as a healing profession. Many on the team have lectured and written about the critical need for dentistry to evolve as a caring and inclusive profession that sees oral diseases as a proper calling for those who wish to care for the sick. The visible face of the college presents an ethical and socially conscious program to prospective students and faculty.

The Honor Code of the college will emphasize the special role that health science education has in ensuring academic integrity, respect to patients, colleagues, teachers, students, and the health care team.

The Associate Dean of Academic Affairs and Faculty Development will develop a new faculty, many of whom will not have previously been dental educators, she is committed to developing a humanistic environment that promotes diversity and professionalism

The Assistant Dean of Student Affairs and Admissions is tasked with creating and sustaining a culture among the students, faculty and staff, and of potential students that supports the values of humanism in all respects.

The College will interface with the other colleges of the university which also have a strong commitment to a humanistic culture to support students, faculty, staff, and patients. The university sponsors activities and events to support this which the college will participate in: these include celebrations of student achievement, community achievements, holiday activities and those associated to transitions of faculty, staff and students.

2. Describe plans to regularly assess the dental school environment including plans to collect and analyze data and determine changes based on the data provided.

The Office on Institutional Research and Effectiveness in the University, in concert with Dean Simonsen, will develop surveys to be given periodically that are similar to those already employed in the Colleges of Medicine and Pharmacy, but directed towards the special needs of dental students. The humanistic culture will also be measured in focus groups of students and faculty and staff to monitor the developing culture.

The Diversity, Inclusion and Climate Committee will assess the findings of these and other methods of assessment and make recommendations to further develop a positive humanistic climate at CNUCDM.

3. Describe dental school policy on expected behaviors and consequences for deviation from the policy. How will students participate in formation, implementation and assessment of the effectiveness of the policy?

This is reprised in the student handbook, [Appendix 2-3 2020-2021 Student Handbook](#), which reviews the aspects of professionalism, academic integrity and policies on social media, bullying, respect and other related items in detail. Of note in the Handbook is that the Honor Board, and Student Officers/Student Council including student membership and leadership will report to the Dean their actions regarding the formation, implementation and assessment of these policies. The Dean's executive council will consider the actions of the Honor Board, and Student Officers/Student Council regarding policy development (formation and implementation) to assure their consistency with the goals and objectives of the college, university rules and regulations, WSCUC and CODA requirements, and the requirements of local and federal law and rules.

Regarding assessment of these policies, the Honor Council will be charged with providing an annual report to the Dean regarding the effectiveness of Honor Council activities per year and include any recommendations for policies.

4. Describe how faculty will be encouraged to serve as mentors and positive role models for students.

The faculty will lead colleges of 20 students per class that will serve as advisory organizations and personal mentorship vehicles for all students. In addition, students will be assigned

individual advisors by the Dean of Student Affairs and Admissions. Such advisors may come from the full- or part-time faculty.

As part of the faculty development process, the college will review best practices and best cultures in dental education of which there are several excellent examples as well as experiences that have derailed a positive humanistic culture in the past. They will also review case studies. Peer support for promulgating humanism in education will be promoted.

5. Describe plans for all-school events that bring together faculty, staff and students.

All College events that promote a culture of humanism, diversity and inclusion will include the following:

1. White Coat Ceremony: Each D1 class will convene for a program that will welcome them to our profession as Student Dentists and as members of a healing profession. Each class will have the opportunity to develop and amend their own Honor Code and Oath and will support it at the White Coat ceremony as a class project.
2. CNU has a history of cultural awareness Days, and events. The CNUCDM will continue both as plenary with the other Colleges as well as independently. These include celebration with food, health issues, cultural norms, and games associated with the culture. Some of these are India Day, Philippine Day, Korea Day, China Day, Persia Day, and Celebracion De Salud.
3. Diversity and Humanism Training: CNUCDM is planning annual half day retreats with facilitators with a formal program to support the developing humanistic environment.
4. Outreach programs to the community of Sacramento will help support the humanism that CNUCDM will be known for. The Dean has met with migrant communities in Yolo County, the Asian community leaders in Sacramento and Oakland, and Sacramento African American community leaders in this regard. It is planned to develop outreach to promote oral health and oral health careers to these communities which will advance the humanistic environments of CNUCDM.

6. Describe plans for the type and frequency of forums that will be available for faculty, students and staff to discuss issues of mutual concern. How will the issues that are revealed during these interactions be resolved?

The Dean has an open door policy that allows any member of the College community to engage on any issue immediately or in a timely manner. In addition, the leadership team will meet monthly with each class to discuss issues of mutual concern, to communicate, to listen, and to act on concerns.

Individual units will have meetings of students, staff and faculty and issues raised will be appropriately directed. The staff will form a council to meet regularly with the Dean's executive council. Monthly faculty meetings will address any issues of mutual concern.

In all of these cases, the appropriate administrator will be charged with addressing and resolving extant issues.

B. Supportive Documentation:

1. Dental school policy on professional behavior for faculty, staff and students

This is provided in the student and faculty handbooks in **Appendix 2-3 2020-2021 CNUCDM Student Handbook, Appendix 1-3 Employee Handbook Feb 2016 and Appendix 3-1 Faculty Handbook.**

STANDARD 1-4

- 1-4** The dental school **must** have policies and practices to:
- achieve appropriate levels of diversity among its students, faculty and staff;
 - engage in ongoing systematic and focused efforts to attract and retain students, faculty and staff from diverse backgrounds; and
 - systematically evaluate comprehensive strategies to improve the institutional climate for diversity.

Intent:

The dental school should develop strategies to address the dimensions of diversity including, structure, curriculum and institutional climate. The dental school should articulate its expectations regarding diversity across its academic community in the context of local and national responsibilities, and regularly assess how well such expectations are being achieved. Schools could incorporate elements of diversity in their planning that include, but are not limited to, gender, racial, ethnic, cultural and socioeconomic. Schools should establish focused, significant, and sustained programs to recruit and retain suitably diverse students, faculty, and staff.

A. Description:

1. Describe dental school goals and how the dental school will determine the appropriate level of diversity. Describe the planned strategies, programs, policies, and procedures to address the dimensions of diversity, including structure, curriculum, and institutional climate. Include a discussion of planned programs to recruit and retain suitably diverse students, faculty, and staff.

The College goals from the Strategic Plan are to build a diverse community in order for all in our society to gain the benefits of good oral health. Many participants of the task force, advisory committee and the leadership team of the University are themselves from minorities. Thanks to the diversity of our Sacramento community, where over 60 languages are spoken and where Latino, African American, and American Indian communities are robust, CNU students, faculty and staff have reflected this diversity. Both pharmacy and medicine have “majority-minority” student bodies and support multiculturalism and respect at every level.

Articulated in the marketing plan is a desire to mold a school tied to its mission statement and its goals and objectives. In the case of CNU, we desire students with a social consciousness, from diverse backgrounds who possess high academic potential. Since the CDM is based upon a community service and primary care model, the marketing strategies would be influenced by that paradigm. The elements are as follows:

1. Pipeline
 - a. Develop a program beginning in secondary school to stimulate interest in dentistry as a career. The CDM will work with local 9th -12th grade schools in the greater Sacramento area and the Delta that serve students with low socioeconomic status and reside in areas of need for health care resources.

- b. A Dentist for a Day program will introduce students to dentistry. This is shown to schools via an onsite presentation by faculty, typically in Health classes
 - c. Girl Scout and Boy Scout badges can be earned related to oral health
 - d. Student projects in high school will be available that are directed to oral health in either science or social science courses
- 2. College level
 - a. Visit colleges, especially those with underrepresented minorities and social need to meet with pre-health societies and preprofessional counselors among others (The dental school pro forma provides a list of those regional baccalaureate institutions)
 - b. Summer research opportunities for baccalaureate and post baccalaureate students
- 3. Public
 - a. Participation in Health fairs and free health screenings, including those in inter-professional environments with medicine and pharmacy. While doing these events, volunteers from high school and college level will be recruited to help as volunteers. Among examples of this for CNU will be Celebracion de Salud (an inter-professional health fair program for migrant workers) and California Dental Association Mission of Mercy (CDA Cares), which would include CNU students and prospective students
 - b. Web site development will emphasize the features of the CDM
 - c. Interviews with the press and other communications resources
 - d. Social media presence on Facebook, Instagram
 - e. Print media and visual media: CNU presence at the airport and via its presence on Interstate 5 will produce valuable marketing for prospective students, staff, faculty and patients.
 - f. Patient care marketing will emphasize prevention and the value of oral health screening. When operational, the CDM clinics will be utilized for health screening and informational purposes

2. Discuss how the diversity goals, strategies, programs, policies, and procedures interface with the University and the local/state community.

The College will enact its plans for diversity in concert with the CNU colleges and the leadership from the local and state community. This is being done via meetings with community leaders and development of programs to serve the community. The Vice President for Admissions, Student Affairs and Diversity and the Dental school leadership and faculty have met to develop goals and strategies to promote diversity in concert with the university.

3. Will there be an individual or group designated as the program or institutional leader for diversity efforts? Describe the planned role and responsibilities of the institutional leader.

The College plans to create a Diversity and Inclusion Committee to complement the University Diversity and Inclusion Committee. The committee will be charged with developing the humanistic environment with cultural competency as outlined earlier. Membership on the Diversity and Inclusion Committee will be by faculty, students, community and staff. An annual

budget for the committee will be used to support educational, awareness and college activities to promote our diverse and inclusive environment.

4. Describe any commitment to social justice criteria and/or community service criteria that is planned for:
 - a. admission of students
 - b. recruitment and retention of faculty
 - c. recruitment and retention of staff

Social Consciousness is critical to the mission of CNU and is included in its Mission, Vision and Values statements. Social justice in California, and specifically at CNU, means that all the people of the Delta, Valley, mountains and rural areas, including immigrants, migrants, many of whom are undocumented, DACA/dreamers, LGBTQ, minorities and all Californians are given the respect, access to education, access to care, access to employment, and access to good oral health that the CNUCDM can participate in providing. The College will monitor its outcomes with regard to admissions, access to care for a diverse community and hiring of faculty and staff.

5. Describe any plans for ongoing engagement with local and/or state stakeholders, especially in communities with unmet oral health-related needs.

CNUCDM has been in active community engagement since the College was announced. The Dean has had in person meetings with all the entities listed that include work on direct projects. The Dean of Research has community engagement projects pertaining to the Virtual Dental Home and other access to care improvement activities for oral health with many of the same organizations and communities. The CNUCDM will continue an active engagement with oral health efforts in the following communities as well as additional ones to be developed in the future:

1. South Sacramento and West Sacramento with HALO and Wellspace community clinics
2. Shingle Springs, Placerville, and the Sierra Foothills with the Shingle Springs Wellness Center, El Dorado Community Health.
3. Central Sacramento and West Sacramento with Sacramento Native American Health Services and the Sacramento District Dental Society, State Government with the Department of Health, Oral Health Division, statewide with the California Hospital Association, State wide with Children Now.
4. Oakland with Asian Health Services and La Clinica de la Raza
5. Yolo County agricultural district with the oral health initiative
6. San Mateo County with the oral health coalition
7. Rural San Joaquin valley with CDA Cares and with the San Joaquin dental society
8. Colusa Indian Community Dental Clinic for rural Colusa County
9. California section of the National Dental Association
10. West Health Foundation, San Diego,

B. Supportive Documentation:

1. Dental school policy on diversity

Included is the Diversity and Inclusion Policy in **Appendix 1-4 Diversity and Inclusion Policy.**

2. List of planned dental school sponsored outreach programs/pipeline programs, e.g. HCOP, targeted to underserved minority high school and college students

The CNUCDM is working in concert with the Sacramento District Dental Society to promote oral health careers to students in the Delta. The first such meeting was held in March 2019 with over 60 students from the diverse communities of the Sacramento region. See [Appendix 4-4 List of planned outreach](#). The need for this outreach was informed by data on the dental profession presented in [Appendix 1-4 Current Demographics and Future Trends](#).

3. List of plans for faculty and administration diversity training

As we are still in the pre-enrollment phase of the college, diversity training has not been completed. This will include online coursework required for all new faculty and annual in person training as described in the annual all school half day retreat. An example of University-wide diversity training is in [Appendix 1-4 Strategies for Developing a Culturally Competent Mindset in Healthcare](#).

4. Description of the planned school committee charged with coordinating diversity efforts

The Diversity and Inclusion Committee will be headed by the Assistant Dean of Student Affairs and Admissions. It will include membership from the faculty, student body staff and community. The charge to the committee is to develop a diverse and inclusive learning, work and clinical care environment. The committee will provide a member to all faculty search committees. The committee will receive progress reports on admissions. The committee will develop programs for Pipeline student recruitment into dental medicine as well as developing access to oral health care to diverse communities. This is also presented in [Exhibit T](#)

5. Description of planned Faculty Loan Repayment Programs (FLRP), or similar programs to provide funds to recruit and assist individuals from disadvantaged backgrounds who are willing to serve as faculty for at least two years in a dental or other health professions school or training program

The College and University does not administer loan repayment programs at this time.

STANDARD 1-5

- 1-5** The financial resources **must** be sufficient to support the dental school's stated purpose/mission, goals and objectives.

Intent:

The institution should have the financial resources required to develop and sustain the program on a continuing basis. The program should have the ability to employ an adequate number of full-time faculty, purchase and maintain equipment; procure supplies, reference material and teaching aids as reflected in annual operating budget. Financial resources should ensure that the program will be in a position to recruit and retain qualified faculty. Annual appropriations should provide for innovations and changes necessary to reflect current concepts of education in the discipline. The Commission will assess the adequacy of financial support on the basis of current appropriations and the stability of sources of funding for the program.

A. Description:

1. Describe/explain the process utilized to develop the program's budget. Include the time-frame, individuals involved, and final decision making body/individual(s).

This has, in part, been described in the program initiation section. To augment this section, the University CFO and Dean of the college met on several occasions to develop the program pro forma, including the startup plan, hiring plan and budget. This include expenditures of \$7.2 million preenrollment in payroll and capital costs for clinics, classrooms, and simulation. Additionally, University purchased real estate at 2400 Maritime drive for \$3.5 million to provide dedicated facilities for the CNUCDM. This was approved by President Cheung and the Board of Trustees. The college pro forma which is an iterative working document is included as **Appendix 1-5 Detailed Working Pro forma.**

2. Describe the long-range plan developed to assist the school in achieving stable and adequate funding. Append a copy of the pro forma financial statement used to develop the program.

The long-2 emrange plan for the school is developed in the pro forma (**Appendix 1-5 Detailed Working Pro forma**) indicating mature expenses at about \$21 million per year and income exceeding that into the future. It should be noted that the University commitment to the College ensures stable and adequate funding. As compared to many larger public universities, CNU has been successful in reducing the cost of education strongly in comparison to peer universities by using the principles of cost efficient expenditures for capital needs and personnel.

3. Using the example exhibit D format, identify the projected sources of fiscal support for each developmental year until the program is fully operational.

Exhibit D indicates the year by year sources of fiscal support for the program up to the point of full operations. Note that as a private University no state or government support is noted. This has also been submitted in the WSCUC report.

4. Using the example exhibit E format, provide information on the school's budget for the previous, current and ensuing fiscal years.

Exhibit E indicates the year by year support for the program up to the present and to the point of full operations. This has also been submitted in the WSCUC report.

5. Using the example exhibit F format, provide the actual expenditures for the developmental year(s).

Exhibit F indicates the actual expenditures for the program up to the present

6. Assess the allocations for faculty salaries and professional development to ensure that the program is in a competitive position to recruit and retain qualified faculty. If the program's faculty salary schedule differs from that of the institution, explain the rationale for the difference.

The faculty salaries are based upon the ADEA salary survey according to formulae developed by the University CFO. These are identical to the methodologies utilized for the initiation of the PharmD, MD and PsyD programs. California is a challenging region for the recruitment of employees due to the high taxes and high cost of living. As a result, this has presented challenges to date in attracting faculty from beyond the region. However, the successful recruitment of the Dean and Associate/Assistant Deans of Academic Affairs and Faculty Development, Research, Curriculum and Clinical Education, and Student Affairs/Admissions occurred within this salary framework. This demonstrates that the program is in a competitive position to recruit faculty and staff, despite the cost of living challenges in California.

B. Supportive Documentation:

1. Table of financial support (Example exhibit D)

Exhibit D

2. Budget information for the developmental, current and ensuing fiscal years (Example exhibit E)

Exhibit E

3. Expenditure information for the developmental fiscal year(s) (example exhibit F)

Exhibit F

4. A copy of the pro forma financial statement used to develop the program

Items 1, 2,3, and 4 are completed and attached as Exhibit D, Exhibit E, Exhibit F and Appendix 1-5 Detailed Working Pro forma.

STANDARD 1-6

- 1-6** The sponsoring institution **must** ensure that support from entities outside of the institution does not compromise the teaching, clinical and research components of the program.

Examples of evidence to demonstrate compliance may include:

- Written agreement(s)
- Contracts between the institution/ program and sponsor(s) (For example: contract(s)/agreement(s) related to facilities, funding, faculty allocations, etc.)

A. Description:

1. Describe the dental school and University policy, procedures, and safeguards in place to prevent conflict of interest related to the teaching, clinical and research components of the program.

The COI policy of the University is attached in **Appendix 1-6 Policy on Conflict of Interest**.

B. Supportive Documentation:

1. List of contract(s)/agreements(s) that are either currently in place or planned between the institution/program and sponsor(s) related to facilities, funding, and faculty financial support

CNU is an independent University. No contracts, agreements are in place related to facilities funding or faculty support. Affiliation agreements reprised elsewhere in the self-study and under **Appendix 1-6 MOUs Clinical** do not provide for any financial agreement. All faculty are VCF (volunteer community faculty) at the site and no payments are made by either party for students.

2. Other written agreements either currently in place or planned, as available

Only agreements with clinical rotation sites are relevant for which there is no financial relationship. Those agreements are noted in #1 above.

STANDARD 1-7

- 1-7** The authority and final responsibility for curriculum development and approval, student selection, faculty selection and administrative matters **must** rest within the sponsoring institution.

A. Description:

1. Describe the academic organization, identifying the individuals or groups responsible for curriculum development and approval, student selection, faculty selection and administrative matters.

The organization of the College of Dental Medicine is as a component of California Northstate University. The organizational chart of the university is attached as **Appendix 1-7 CNU Org Chart**. The organizational chart is attached as **Appendix 1-7 Dental School Organizational Chart**. The college is headed by the Dean who reports to the President of CNU. The President reports to the CNU Board of Trustees. The Dean of CNUCDM sits on the President's Executive Council (PEC) with the Dean of the College of Medicine and Vice President of Health Affairs, the Vice President and Chief Operating Officer, the Vice President of Academic Affairs, Vice President of Research, Vice President of Institutional Research and Quality Assessment, the Dean of Health Sciences, the Dean of Psychology and the Dean of Pharmacy.

The Dean of CNUCDM convenes, as the Dean's Executive Council, The Executive Assistant to the Dean, the Associate Dean of Academic Affairs and Faculty Development, the Associate Dean of Curriculum and Clinical Education, The Assistant Dean of Research, the Assistant Dean of Clinical Affairs, the Assistant Dean of Student Affairs and Admissions, and the head of the CNUCDM faculty council.

The College will have a single academic department in the University named the Department of Dental Medicine with the Dean as department chairperson. The purpose of the single department model is to facilitate a horizontal organization whereby each of the members can have a voice and be part of the same mission based activities. As the school will be based upon a generalist model and equal voice for all clinical faculty including generalists and specialists can best be carried out in a single department model.

The college will be organized into divisions with representatives from each of the clinical disciplines *and* each of the four curriculum themes. The Associate Dean of Academic Affairs and Faculty Development will head the Council of Divisions, which will address the functioning of these components in the academic environment as well as the Curriculum Committee.

Thus, the Council of Divisions will be represented by appointed individuals from Human Studies, Oral and Maxillofacial Studies, Odontology, Behavioral and Social Sciences, Operative Dentistry, Oral and Maxillofacial Surgery, Oral Medicine, Oral Pathology, Oral Radiology, Endodontics, Prosthodontics, Periodontology, Pediatric Dentistry, and Orthodontics.

The Curriculum Committee will be represented by Human Studies, Oral and Maxillofacial Studies, Odontology, Behavioral and Social Sciences, two representatives from the divisions, and two students (D3 and D4)

Student selection is described in detail in Standard 4 documentation, including construct and functions of the admissions committee. [Appendix 1-7 CNUCDM Admissions Process 2020](#) also discusses the process as planned for the first class especially with regard to not admitting student before CODA initial accreditation of the program is obtained.

2. Describe the school's participation in the governance of the University, in accordance with its policies and procedures.

The college is a component of the University and has proportionate representation at the Faculty Senate. Faculty have equal voting rights across colleges. As noted, the Dean reports to the President and also sits with vote at the PEC. Two of the 12 members of the Board of Trustees are dentists.

3. Describe University policies and procedures which ensure that the dental school is autonomous in matters related to curriculum development and approval, student selection, faculty selection and administration.

The policies of the University ensure that the curriculum in all colleges is the responsibility of the faculty through the governance mechanisms described above. All major program changes are reviewed by the University leadership for academic, administrative, quality, human resources and financial compliance. Thus the curriculum of the College is presented to the PEC and in this self-study is signed by the President, Chief academic officer of the University.

B. Supportive Documentation:

1. Dental school organizational chart

This is attached as [Appendix 1-7 College of Dental Medicine Organizational Chart](#).

2. University organizational chart

This is attached as [Appendix 1-7 CNU Org Chart](#).

3. Curriculum Committee membership roster, as available

This is attached in [Exhibit T](#). Note that the names of some members will be added after hiring is completed. Additionally, the Sacramento District Dental Society has been involved in the development of curricular priorities as demonstrated in the meeting minutes found in [Appendix 1-7 Task Force and Advisory Committee](#).

4. Admissions flowchart and committee membership

This is attached as [Appendix 1-7 CNUCDM Admissions Process 2020](#) and [Appendix 1-7 CNUCDM Admissions Flowchart](#). The Admissions Committee is attached in [Exhibit T](#). Note that the names of some members will be added after hiring is completed.

5. Faculty search committee membership, as available

Faculty search committees are under development as faculty positions become available in specific areas.

6. Job description for the Dean of the Dental School

This is attached as [Appendix 1-7 Job Description Dean CDM](#) and [Appendix 1-7 Assael CV 2019](#).

STANDARD 1-8

1-8 The dental school **must** be a component of a higher education institution that is accredited by a regional accrediting agency.

A. Description:

1. By what regional or national accrediting agency for higher education institutions is the institution accredited? Briefly describe the institution's accreditation history, including its current status and date of last evaluation.

California Northstate University (CNU) is a private proprietary institution of higher education dedicated to developing and training professionals who are leaders in healthcare science, education, and research. As an attempt to address the continued deficits faced by California in the production of healthcare professionals, the College of Pharmacy was founded in 2006 and gained approval to operate as a degree-granting college from the Bureau for Private Postsecondary Education (BPPE) on April 15, 2007, according to the standard operations as set forth in California Education Code 94705.

CNU's College of Pharmacy welcomed its inaugural class in the fall of 2008, and CNU was granted WSCUC accreditation in June 2012. In continuing the mission of CNU to advance the art and science of healthcare by providing innovative education and delivery systems, the College of Medicine was added through WSCUC's substantive change process in August 2013 and accepted its first class in fall of 2015. In May 2015 WSCUC approved the addition of an undergraduate program in Health Sciences. The College of Pharmacy and the College of Medicine offer a PharmD and MD respectively, and the college of Health Sciences offers a BS degree in Health Sciences. The College of Pharmacy is accredited by the Accreditation Council for Pharmacy Education (ACPE), and the College of Medicine is accredited (Preliminary Status) by the Liaison Committee on Medical Education (LCME).

The doctorate of psychology (PsyD) program was planned in 2016 and created in 2017 to further CNU's mission of advancing the art and science of healthcare by adding another important healthcare-related professional doctoral degree to the current offerings. The PsyD program teaches scientifically proven interventions and provide hands-on clinical experience to students who are educated to become solo practitioners or work within multidisciplinary treatment teams. Upon graduation, students will possess and demonstrate the knowledge and skills needed to treat diverse and complex mental health populations. This program was added through the Substantive Change process via a proposal in the fall of 2017 and approval in the spring of 2018, and a small class started in September 2018.

The CNU Graduate School was another natural extension of the University's mission *to advance the art and science of healthcare*. The MS in Pharmaceutical Sciences program was added to program offerings within the College of Pharmacy via a substantive change, approved in the summer of 2018. This program is strategically aligned with CNU's Vision to provide innovative

education and healthcare delivery systems for the Northern California region and beyond. The establishment of graduate courses in health sciences provides an opportunity for CNU to expand its range of scholarly activities and continue its development of an innovative, integrated curriculum; providing development opportunities for existing faculty from other colleges to contribute to another program that speaks to their expertise. The program serves as an additional venue for CNU to prepare a new workforce for a modern, fast-evolving healthcare sector, specifically in the areas of pharmaceutical discovery and development. It further helps the University expand and advance research opportunities.

Application to WSCUC for approval of the substantive change of the College of Dental Medicine was completed in the fall of 2018. The proposal and report was submitted in February 2019. A substantive change review, with site visit occurred April 25, 2019, the full WSCUC application/proposal report having been reviewed by the 2-member site visit team (from the Substantive Change Committee) as well as WSCUC staff. The Substantive Change site team recommended the DMD program for immediate **approval** while awaiting the meeting of the full Western Association of Schools and Colleges Commission. Commendations were received for the alignment of the program with the institutional mission, the responsiveness of the CNU team regarding commission queries and the organization of the proposal. A recommendation was made to improve the marketing document. ([Appendix 1-8 Substantive Change Action Report](#))

B. Supportive Documentation:

1. Copy of institution accreditation certification

The accreditation certification is found in [Appendix 1-8 CNU Action Accreditation Letter](#). The Substantive Change proposal for the addition of the DMD program can be found in [Appendix 1-8 WSCUC 2019 CNUCDM](#) and the Substantive Change Action Report found in [Appendix 1-8 Substantive Change Action Report](#).

STANDARD 1-9

1-9 The dental school **must** show evidence of interaction with other components of the higher education, health care education and/or health care delivery systems.

A. Description:

1. Describe all planned and/or existing interactions with other components of the higher education, health care education and/or health care delivery systems, including student, faculty and administration interaction. Specifically address teaching, clinical learning and research.

The higher education system at CNU includes the following components with the following participation of the College of Dental Medicine.

In the College of Health Sciences (CHS) , Dean Assael and Keating serve as pre-professional advisors and work with admissions, student affairs and academic affairs in CHS in this regard. IN addition, interaction with CHS is with regard to the development of a pathway to dental medicine program to complement the pathway to medicine program already in existence. This will allow CHS students who meet appropriate academic standards to begin the DMD program after 3 years at CHS and complete their Bachelors after the fourth year. This is achieved through the common pathways courses with the College of Medicine.

The Dean and Associate Dean of Academic Affairs and Assistant Dean of Clinical Affairs serve on the Curriculum Committee of the College of Medicine in order to strengthen the relationship of the units for interprofessional education and to ensure the needed collaboration in the Human Systems component of the common pathway courses.

In addition The Deans of Medicine and Dental Medicine serve with the Deans of Pharmacy and Psychology on the health sciences Deans council and the Presidents Executive Committee.

The Assistant Dean of Admissions and student affairs serves as a member of the university committees for supervising these areas headed by VP Xiong Feng.

The VP for Academic Affairs, Kathy Wong, head the CNU Academic Affairs Committee which includes representation from the Dean and Associate Dean of Academic Affairs.

The College of Dental Medicine has 3 seats on the university senate as faculty representatives, as well as planned participation in committees of the senate.

The Assistant Dean of Research serves on the Research Committee headed by VP for research, Philip Mack.

IN the planning for the university hospitals and clinics, The Dean of Dental Medicine will serve on the Executive Committee of the Hospital and as a standing member of the Medical Board.

Teaching and clinical education agreements (MOUs) for community-based education courses BSS 861 and BSS 862 have been completed and are under development for implementation in 2022-2023 rotations with Asian Health Services (Oakland), HALO Health (Sacramento), Indian Health Centers of Sacramento, Colusa County, Wellspace, and Shingle Springs.

Through Public health research and reprinted in Standard 6, are research agreements with governmental entities in California with regard to oral health research and program development.

In addition, initial plans are underway to develop the senior electives as noted in BSS 872

Discussion with Jay Kumar, the dental director for the Oral Health Program at the State of California Department of Public Health, center around the development of a state oral health/population health component in the senior public health seminar BSS 862

B. Supportive Documentation:

1. Formal agreement(s) with co-sponsored or affiliated institutions that are developed to date

These are included in **Appendix 1-6 MOUs Clinical**.

2. List of planned student inter-professional didactic and clinical instruction/rotations/assignments involving components of the higher education, health care education and/or health care delivery systems

All DS 1 and DS2 Human Systems courses are taught in interprofessional learning environments. In addition to these the following courses have interprofessional learning with primary care medicine and pharmacy:

Course #	Course Title	Credits	Year	Term
BSS 861	Clinical Clerkship: Community-based Education 4 weeks, 30 hours per week plus call CLIN	8	DS 4	Fall

Affiliated health systems based practices will accept CNU students into their care teams where senior students will provide clinical care under the supervision of Volunteer Community-Based Faculty in those sites. Suitable transportation and housing will be arranged for where needed. The purpose of the course is to provide community engagement with the constituencies served, to gain experience in community-based clinical care and to interact with the interprofessional and intraprofessional care team.

Course #	Course Title	Credits	Year	Term
BSS 862	Clinical Clerkship: Community-based Education 4 weeks, 30 hours per week plus call CLIN	8	DS 4	Spring

This course will be at a second community-based rotation site to elaborate on the activities of the first rotation and engage a new community and a new clinic. In addition to comprehensive care experience, the student will compare and contrast communities and clinical care entities and provide a reflective essay on their community care experience.

Course #	Course Title	Credits	Year	Term
BSS 871	Seminar in Dental Public Health SEM	2	DS 4	Fall

This weekly seminar develops through case-based discussions led by student teams the public health issues in oral health in California and globally including access to care, social determinants of oral health, scope of practice issues, insurance and payment systems for oral health, access to fluoride, immunizations especially for HPV, and health protection for vulnerable populations such as children and elderly.

Course #	Course Title	Credits	Year	Term
BSS 872	Senior Elective Clinical Clerkship CLIN	6	DS 4	Spring

DS 4 students will select from additional clerkships available at clinical sites either discipline based or comprehensive care in odontology, oral and maxillofacial studies or human studies. Examples include comprehensive care at a remote clinic (odontology), dental specialty clerkship in oral maxillofacial surgery (OMFS), clerkship in internal medicine (Human Studies), or population health study abroad or in US (BSS).

3. List of planned cross-disciplinary faculty development programs

The College is an active participant in the CNU Institute for Teaching and Learning Excellence (ITLE) developed in 2018. The Institute has biweekly faculty development programs (Interprofessional Education Programs – IPE) across disciplines. Examples of programs include:

3/4/19 Strategies for Developing a Culturally Competent Mindset in Health Science Education
2/7/19 Autism spectrum disorders, employment and health education issues.
1/18/19 Translational Science Day

The university also publishes a monthly IPE newsletter where additional ongoing IPE activities are highlighted.

The Strategic Plan for ITLE is in [Appendix 1-9 Strategic Plan ITLE](#). An example of a prior year's faculty development offerings is available in [Appendix 1-9 Faculty Development Series](#).

4. List of planned cross-disciplinary faculty research

The Vice President for Research and the Dean of Research are planning for potential research collaboration with the College of Medicine, College of Pharmacy and College of Psychology. As faculty have yet to be recruited with research portfolios, these specifics are not developed.

STANDARD 2 - EDUCATIONAL PROGRAM

STANDARD 2-1

Instruction

- 2-1** In advance of each course or other unit of instruction, students **must** be provided written information about the goals and requirements of each course, the nature of the course content and the method(s) of evaluation to be used and how grades and competency are determined.

A. Description:

1. Describe how this information will be provided at the initiation of instruction. Address each of the areas outlined in the standard: goals and requirements, nature of course content; methods of evaluation; and determination of grades and determination of competency.

At the initiation of instruction at the time of matriculation each student is provided the following information, as it was previously provided at time of application. It is contained in the Student Handbook and is presented in person to the class, by the Dean and the Associate Dean of Academic Affairs during the first year class orientation at the time of matriculation into the DMD program:

Goals and requirements

The dental program is a four-year program and culminates in a clinical doctoral degree: the Doctor of Dental Medicine (DMD).

The Mission of the College of Dental Medicine is to advance the art and sciences of healthcare through excellence in oral health education, practice, research, service, and social accountability.

Education: Create skilled and knowledgeable clinicians who will constantly advance their capabilities throughout life

Practice: Produce clinical leaders in oral health who will serve in private practice, health systems practice, and in interprofessional settings

Research: Promulgate scientific inquiry throughout the curriculum and support student and faculty research that creates an environment of scientific curiosity and an evidence-based foundation for clinical practice

Service: Provide individual patient care services at all clinical sites under the auspices of CNUCDM that produces the very best oral health outcomes and clinical value

Social Accountability: Advocate for and help build stronger communities in California and globally through improved oral health care, disease prevention, health promotion and protection from oral diseases through community-based approaches

The Vision of the College of Dental Medicine is to provide constructive innovation in its education programs and leadership in integrating oral health care into human health care systems.

Values:

- Providing patient-centered didactic and clinical education that always puts improved health outcomes first
- Foster a humanistic and character-developing environment for dental students
- Building stronger communities and creating a better world through improved oral health
- Understanding the professional responsibility of the dentist as the head of the oral health care team
- Practicing health promotion and disease prevention and protection
- Advancing California Northstate University through excellence in all we do

Nature of course content

The integration of oral health into overall human health requires dentists who are capable of performing at the highest level in an ever more complex and demanding environment of emerging technology, social change, human disease management, and evolving health systems. In response, the California Northstate College of Dental Medicine (CNUCDM) has developed a curriculum with four basic themes: Human Systems, Odontology, Oral and Maxillofacial Studies, and Behavioral and Social Sciences. All four themes will be delivered in a diagonal curriculum to provide both horizontal and vertical integration of clinical and basic sciences in order to build students' competency in both the art and science of dentistry. Patients' assessment and management decisions need to be made through consideration of individual patient's health status and selection of the most appropriate interventions. The curriculum therefore is reflective of the necessary integration of the biomedical, behavioral, and social sciences.

The DMD curriculum will include concurrent didactic, small group learning, simulation and clinical experiences at all phases of the curriculum with increasing clinical experiences and decreasing didactic experiences gradually through all four years. While basic clinical encounters begin in the fall of the first year, advanced clinical practice occurs in the fourth year.

While emphasis on didactic foundations is at a high level in the first year, some didactic components with seminars and case-based didactic experiences continue through the fourth year. Specific types of pedagogical methods during classroom learning include the following: presentation, demonstration, simulations, team-based learning, problem-based learning, and clinical case studies.

CNU's dental program will utilize a Common Pathway with the Colleges of Health Sciences, Medicine, Pharmacy, and Psychology to build a solid foundation in the medical sciences and to provide a rich interprofessional education for students who will be working in healthcare teams for the benefit of patients. The following principles will be employed throughout the DMD curriculum:

- Interprofessional education experiences
- Collaborative practice models in clinical education
- Strong basic medical sciences with systems-based block segments
- Immediate and continuous clinical correlation
- Patient-centered care with practitioner/faculty led care teams
- Education in health systems and community clinics integrated with CNU based clinical education

- A competency-based clinical practicum
- Eclectic curriculum with “selectives” (electives that students choose) to guide students towards areas of clinical, research and societal interests. Selectives are among an array of clinical experiential, research or didactic courses available as part of the academic calendar to be selected by students in the developed block time.

These principles and designated educational experiences are designed to provide a strong foundation for building competency in the practice of dentistry.

Methods of evaluation; and determination of grades and determination of competency.

Each course provides a syllabus in CNU format that includes the following elements: the goals and requirements of each course, the nature of the course content and the method(s) of evaluation to be used and how grades and competency are determined. In general, methods of evaluation include:

1. Written examination
2. OSCE
3. Case based presentations
4. Reflective essay
5. Laboratory exercise
6. Daily clinical evaluation
7. Competency assessments

Determination of competency in the curriculum is specific to the course as is noted as requested in commission format as a text response to Standard 2-5. It is included as well for reference below as [Appendix 2-1 Methods for Determination of Competency](#)

B. Supportive Documentation:

1. Course Syllabi completed to date and/or course syllabi template

The syllabus format of the College of Dental Medicine includes for each course the goals of the course, the requirements for student projects, tests and attendance, a description of the course content including the topics for each session, and the methods of evaluation and grading, including the rubrics used for assessment. These completed syllabi for all but 2, DS1 courses, and those completed for DS2 course are provided in [Appendix 2-1 Consolidated Course Syllabi](#).

For additional DS 2, 3, and 4 courses, titles, credit hours and descriptions of each course are provided which include course content. As a capstone course, the DS4 course Comprehensive Care Dentistry Syllabus with all of the components including the goals of the course, the requirements for student projects, tests and attendance, a description of the course content including the topics for each session, and the methods of evaluation and grading, including the rubrics used for assessment, are included in [Appendix 2-1 Consolidated Course Syllabi](#).

Regarding competency measurements they are included as [Appendix 2-1 Methods for Determination of Competency](#).

STANDARD 2-2

- 2-2** If students do not meet the didactic, behavioral and/or clinical criteria as published and distributed, individual evaluations **must** be performed that lead to an appropriate decision in accordance with institutional due process policies.

A. Description:

1. Describe planned policies and procedures for remediation of students who do not meet didactic or clinical skills criteria. How frequently will the student be made aware of his/her performance? What resources are planned to be made available to the student?

Regarding academic progression the College of Dental Medicine (CDM) at California Northstate University (CNU) has a rigorous academic progression policy to ensure students' progress through the curriculum in a timely manner and to ensure they become effective and safe practitioners. The typical curriculum schedule is found in the student handbook, presented in [Appendix 2-3 2020-2021 CNUCDM Student Handbook](#).

The purpose of this policy is to ensure students reach and maintain high standards of learning throughout their time in the CDM Program and accomplish all course learning objectives. A grade below 75% in a course (70% in Human systems common pathway courses) indicates a lack of understanding of the fundamental concepts of the course material necessary for progression. These students will require a structured remediation. A grade below 60% requires a repeat of the course or further academic action. This policy is intended to allow students an opportunity to remediate or repeat when they either do not have adequate mastery of a course or fail to pass the first time taking it. A student must complete the program within five (5) years (60 calendar months) from the time they initially registered and attended their first course session in the CDM Program.

This progression policy applies to all students (didactic and clinical) in the CDM program beginning in 2019 and following thereafter.

For a student to successfully progress through the CDM Program the student must pass all courses each semester and have a minimum grade point average (GPA) of 3.0 at the time of matriculation.

Students will have the opportunity to remediate a maximum of four (4) courses that resulted in a grade below 75% throughout the didactic program; hence more than 4 courses with a grade of 60-75% (before remediation) will require that additional courses resulting in that grade be repeated. Remediation is not available for a course that resulted in a score of 60% or below.

Courses with a grade of 75% or below which are not successfully remediated or a below 60% must be repeated. A particular course can be repeated only once. Failing more than two (2) courses (before repeating), below 60%, will result in dismissal.

The consequence if a student earns a letter grade lower than 75% in any course in the curriculum is shown in Table A below:

Grades Consequence			
Number of Times	Grade	Consequence	Further Consequence
2	60-75 percent*	Remediate All Courses	Academic Probation at College optional if remediation is unsuccessful
3 or 4	60-75 percent*	Remediate All Courses	Academic Probation mandatory if remediation is unsuccessful in 3 or more courses
5 or 6	60-75 percent*	Repeat all Courses	Academic Probation mandatory
1 or 2	Below 60 percent	Repeat all Courses	Academic Probation mandatory
3	Below 60 percent	Dismissal	

- *70% for Human Systems Courses

Students will be allowed to remediate a maximum of 4 courses over the duration of the CDM Program; students will be dismissed if cumulative GPA falls below 60%; GPA will be calculated on completion of remediation; failed courses must be repeated; a failed course can be repeated only once.

Students are not permitted to begin a course if prerequisite course(s) has/have not been successfully completed and passed. Consequently, if a prerequisite course is not passed, the student's academic progression may be delayed by at least one academic year.

The characteristics of remediation are the responsibility of the course director. While general remediation policies are in each course syllabus, the exact nature of remediation will depend upon the identified deficits to create a plan most likely to achieve successful remediation. Students with learning issues are given appropriate accommodation in consultation with the Deans of Academic Affairs and Student Affairs.

2. Describe the planned policy and procedures for students with behavioral problems. Specifically address:
 - a. Professionalism and ethics,
 - b. Substance abuse, and
 - c. Legal issues or ethical misconduct outside of the dental school setting.

a. Professionalism and ethics is addressed in the Honor Code in the student handbook, **Appendix 2-3 2020-2021 CNUCDM Student Handbook**, and in the Behavioral and Social Sciences in the

curriculum. This document outlines the policy and procedures including student problem identification, student assessments, remedial and action procedures related to professionalism and ethics.

b. CNU has a university-wide Wellness Committee that meets monthly, which will now include representatives from the College of Dental Medicine. The committee is new and its organizational meetings were in the last 3 months. Minutes of the last meeting included discussions and actions on the following items from its two meetings raised in a formative fashion by the committee. They are included here to demonstrate the extent of development in this area of behavior and wellness:

- Mental health stigma
- Helping students take care of themselves via a Multi-college presence
- Wellness events and workshops for a variety of topics
- How do we support students, faculty, and staff? Questionnaire and focus groups
- Anonymous complaints
- Identifies who is at risk so they can get the resources they need. How can we make accommodations for those who are struggling?
- One like this at virtually every University o Includes sworn in police officer
- Univ. Wellness Committee should not serve as CARE, rather it should be collaborative, advisory, hold trainings Goals as oversight/advisory committee
- Focus on mental health awareness for all of CNU
- Collaboration on wellness events between colleges and communication/possible coordination of individual college activities
- Needs assessment and advisory on other task force/mental health needs that can be established (such as crisis team, wellbeing committee, etc.)
- Coordination of campus wide events/programs/seminars, etc. Goal to have solely non-faculty as the University Wellness Committee
- Importance of being inclusive,
- We all have different degrees and specialties, we can be aspirational but how do we achieve our goals?

Professionalism and ethics is additionally addressed in the honor code and in the Behavioral and Social Sciences in the curriculum. The student handbook has components on substance abuse and social media that are supported in the curriculum as well.

c. Legal and ethical issues outside the dental school setting has been an item of development for the university over the past year. Policies related to social media, representation as a health professions student have been developed. Background checks on all applicants are completed with regard to legal issues and felonies. Enrolled students are expected to inform administration of changes in their legal status with regard to residency status, arrests, etc. Ethical conduct whether on campus or off can be investigated by the Honor Council as it could affect performance and professionalism in the clinical or academic setting.

It is a consideration in such matters that the purpose of the DMD curriculum is in part to have licensees in dental medicine. As such legal and ethical issues might affect subsequent licensure, consideration and consultation with the California Board of Dentistry is needed and required. The CBD requires all sites and all individuals providing oral health care to be appropriately licensed, credentialed, and supervised by individual and by site.

B. Supportive Documentation:

1. Appropriate document outlining institutional due process for students

These policies are covered in the Student Handbook: [Appendix 2-3 2020-2021 CNUCDM Student Handbook](#) and [Appendix 2-2 CNU General Catalog](#).

STANDARD 2-3

2-3 The curriculum **must** include at least four academic years of instruction or its equivalent.

A. Description:

1. Summarize the planned educational experiences and/or curricular themes of the didactic and clinical courses offered in each semester/trimester/quarter (as applicable) of the curriculum.

The curriculum themes are divided over the four years of the curriculum as follows

Students will be engaged in 45-week curriculum for the first 3 years beginning in September for each year and culminating in a DMD degree granted in June of the 4th year making the fourth year curriculum 40 weeks. Total curriculum weeks are 175.

The four themes of the curriculum are continuous in all categories over all four years and are integrated so as to provide content and assessment across the four domains of **Human Systems, Odontology, Oral and Maxillofacial Studies and Behavioral and Social Sciences.**

As noted below:

A continuous series of didactic, small group learning, and clinical courses in

Human Systems: Developing applied knowledge in the normal function and structure of human biology and the pathophysiology of diseases of human systems at all stages of life.

Understanding and applying the implications for oral health exerted by these human systems and their associated diseases.

Odontology: In depth knowledge of the normal structure and function of the teeth, alveolar bone, and masticatory system at all stages of life. In depth knowledge of the diseases of teeth, including caries, periodontal disease and masticatory disorders, the methods to diagnose, prevent, and treat odontologic diseases. Obtaining primary and advanced skills in the treatment of odontologic diseases

Oral and Maxillofacial Studies: In depth knowledge of the normal structure and function of the oral and maxillofacial region at all stages of life. In depth knowledge of the diseases of this region including those of growth and development, neoplasia, degenerative diseases, infectious diseases, and trauma. Emphasis on OMS systems include oral mucosa, cutaneous diseases, the jaws, neurologic disorders, salivary gland disorders, paranasal sinuses, airway, and musculoskeletal diseases

Behavioral and Social Sciences: Developing knowledge in human psychology and behavior impacting on oral health and the interventions that positively and negatively impact on oral health. Understanding the economic, regulatory and political environment for oral health practice. Understanding the sociologic, cultural, economic determinants of health and how to positively influence the health of communities and societies

Each of these themes is reflective of and adapted to the Curriculum Mission and Vision and the Institutional Learning Outcomes and Program Learning outcomes of the Curriculum as noted here:

Curriculum Mission and Vision

The Mission of the College of Dental Medicine is to advance the art and sciences of health care through excellence in oral health education, practice, research, service, and social accountability

Education: Create skilled and knowledgeable clinicians who will constantly advance their capabilities throughout life

Practice: Produce clinical leaders in oral health who will serve in private practice, health systems practice, and in interprofessional settings

Research: Promulgate scientific inquiry throughout the curriculum and support student and faculty research that creates an environment of scientific curiosity and an evidence based foundation for clinical practice.

Service: Provide individual patient care services at all clinical sites under the auspices of CNUCDM that produces the very best oral health outcomes and clinical value.

Social Accountability: Advocate for and help build stronger communities in California and globally through improved oral health care, disease prevention, health promotion and protection from oral diseases through community-based approaches.

The Vision of the College of Dental Medicine is to provide constructive innovation in its education programs, and leadership in integrating oral health care into human health care systems.

Our Values:

- Patient-centered didactic and clinical education that always puts improved health outcomes first.
- Foster a humanistic and character-developing environment for dental students
- Making better communities and a better world through improved oral health
- Understanding the professional responsibility of the dentist as the head of the oral health care team
- Practicing health promotion and disease prevention and protection
- Advancing California Northstate University through excellence in all we do

Supporting narrative: The integration of oral health into human health requires dentists who are capable of performing at the highest level in an ever more complex and demanding environment of emerging technology, social change, human disease management, and evolving health systems. The CNUCDM is developing a curriculum with four basic themes into which all didactic and clinical content will be served. These four themes **are Human Systems, Odontology, Oral and Maxillofacial Studies, and Behavioral and Social Sciences**. All four themes will be delivered in a diagonal curriculum

(Definition: the diagonal curriculum includes concurrent didactic, small group learning, simulation and clinical experiences at all phases of the curriculum with increasing clinical experiences and decreasing didactics gradually through all four years. While basic clinical encounters begin in the fall of the first year, advanced clinical practice occurs in the fourth year. While emphasis on didactic foundations is at

a high level in the first year, some didactic component with seminars and case-based didactics continues through the fourth year)

Program Learning Outcomes (PLOs)

Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy

Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry

Culturally competent, empathic communication: Demonstrate patient-centered, empathic, and culturally competent communication and interpersonal skills

Oral and Written Communication: Demonstrate sound oral and written communications in patient care

Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care

Ethics and Professionalism: Demonstrate professionalism and ethical decision making

Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare

Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

The four themes will be presented utilizing interprofessional education in part utilizing a **Common Pathway** for some courses. The **Common Pathway** consists of aspects of courses especially in human systems and behavioral and social sciences that can be taught alongside students in medicine, pharmacy and clinical psychology. Course that will be utilized in part or in whole a Common Pathway will be noted in the course list as **CP courses**.

The 4 themes These are yearly courses all in each of the four years named HS 5, 6, 7, 8; Odont 5, 6, 7, 8; OMFS 5, 6, 7, 8; and, BSS 5, 6, 7, 8

CREDIT HOURS

Analysis of credit hours. Credit hours are assigned consistent with CNU credit hour policy

CNU CREDIT HOUR POLICY

1. PURPOSE

The purpose of this policy is to define the credit hour policy of the California Northstate University.

2. SCOPE/COVERAGE

This policy governs the assignment of credit hours of lecture courses, practicum work, and internship assignments.

3. POLICY STATEMENT

Credit Hour Policy

For each 15-week semester, one (1) hour of credit is assigned per hour each week of classroom or direct faculty didactic instruction (that is, per hour of lecture or student in-class time) and a minimum of two (2) hours of out-of-class student work (homework). For practicum and internship time, one (1) hour of credit is assigned per three (3) hours each week of student time spent in this activity.

4. PROCEDURE

Credit Hours in accord with this policy are assigned to courses at the time of course creation and syllabus approval by the Curriculum Committee.

Consistent with this policy, 1 credit is assigned for each 15 lecture hours in a course and its associated 30 preparation/ homework hours. 1 credit is assigned for every 25 small group learning hours and its associated 25 preparation/homework hours, and 1 credit for every 30 laboratory hours and 30 preparation/labwork hours.

Codes	Course Type
LAL	LECTURE AND/OR ACTIVE LEARNING COURSE
SIM	CLINICAL SIMULATION COURSE
LAB	LABORATORY COURSE
SEM	SEMINAR
CLIN	CLINICAL EXPERIENTIAL LEARNING
HS	HUMAN SYSTEMS COURSE
Odont	ODONTOLOGY COURSE
OMFS	ORAL AND MAXILLOFACIAL STUDIES COURSE
BSS	BEHAVIORAL AND SOCIAL SCIENCES COURSE

GRADING

Utilizing a competency based grading system, all students must reach a threshold for clinical competency in knowledge and skill set at 75%, except as 70% for HS courses. Structured remediation activities for each didactic course will ensure a higher level of knowledge for the cohort of students earning a Y, 60-75%. Students earning below 60% receive an F requiring repeat of the course or further academic action. Students earning 90%-95% will earn a grade of Honors and students earning 96-100% will earn Highest Honors.

Clinical courses will be graded Pass/Fail with the opportunity to earn EPR's (exceptional performance reviews) that can be offered to up to 1/3 of enrollees to each course director at the conclusion of each term. EPR's will be recorded numerically in each transcript according to the course in which they were earned. EPR's are based upon patient-centered care and patient outcomes as well as application of the program learning outcomes. Each clinical course will develop defined rubrics for the achievement of EPRs.

Class rank will be based upon the students' performance in LAL, SIM and LAB courses for 60% of the class rank value and by rank based upon clinics EPRs for 40% of class rank value.

LAL, SIM AND LAB GRADING

HH	PASS WITH HIGHEST HONORS (96-100%)
H	pass with honors (90-95%)
P	pass (75-90%)
Y	no pass, requires remediation (60-75%) to earn P (Y is temporary grade)
F	fail (less than 60%)
I	Incomplete, course work at satisfactory quality but assignments completion delayed by circumstance (temporary grade)
IP	In progress grade given for multiple semester courses where final grade given in subsequent semester
W	Official withdrawal

CLIN GRADING

P	Clinical care demonstrates knowledge and skills and values commensurate with achieving the defined competencies of the curriculum. Clinical course outcomes will be linked to both Program learning outcomes and CODA defined clinical competencies through Competency Assessments (CAs). Passing of CAs integrated into a clinical course is required for a P in the course.
Y	No pass, requires remediation to earn a P (Y is temporary grade)
EPRs	Exceptional Performance Reviews based upon rubrics defined by the Program Learning Outcomes as accommodated in the clinical course

B. Supportive Documentation:

1. Dental School Bulletin, Student Handbook and/or electronic communications

This is attached in **Appendix 2-3 2020-2021 CNUCDM Student Handbook.**

2. Planned schedule of courses by class year

Please refer to [Exhibit G](#) and [Appendix 2-3 CDM Course Catalog, Appendix 2-3 Schedule of Courses](#) and the College of Medicine Academic Calendar for Common Pathway Courses in [Appendix 2-3 COM Academic Calendar 2019-2020](#).

STANDARD 2-4

- 2-4 The stated goals of the dental education program **must** be focused on educational outcomes and define the competencies needed for graduation, including the preparation of graduates who possess the knowledge, skills and values to begin the practice of general dentistry.

A. Description:

1. Describe the parameters and/or scope of the general practice of dentistry on which the institution is basing its educational program.

The parameters of the general practice of dental medicine include the ability to prevent, diagnose and develop treatment plans for the control and cure of diseases of the oral cavity and associated structures within the scope of the Dental Practice Act of California. The parameters include the performance of procedures of the oral soft and hard tissues to competently restore diseased teeth, replace missing teeth, address diseases of the periodontium, and assess diseases of the oral mucosa, maxillofacial region and jaws. Parameters for prevention include population-based oral health measures, homecare, and medical management of caries and periodontal diseases. The scope of practice of dentistry as defined by CNUCDM respects the eclectic and broad nature of dental practice in California as well as the general access to dental specialists. Competency at the time of graduation is meant to demonstrate a safe initial practitioner of dental medicine for whom additional training and experience in areas of need and interest will be promulgated through formal and informal graduate and continuing education, and lifelong learning.

The scope of the practice of general dentistry at CNUCDM is for the general dentist to be the key resource for patients to gain the benefits of good oral health. The state of oral health is defined as the optimal contribution of the oral and maxillofacial complex to the wellbeing of the patient. The general dentist applies a scope of practice to achieve the goal of oral health with the necessary, knowledge, skill and values to make complete and holistic diagnoses of conditions, to administer/deliver care within appropriate skill sets as credentialed in practice, to refer to dental and medical/surgical specialists appropriately for care beyond the capacity and credentialing of the general dentist, and to effectively lead/participate in interprofessional/intraprofessional teams to achieve the best oral health outcomes, at the lowest cost and with the best patient/clinical team experience.

2. Describe how the goals of the planned dental education program prepare graduates with the knowledge, skills and values to begin to practice general dentistry, as defined by the institution.

The curriculum outline provided is organized into the four areas of Human Studies, Odontology, Oral and Maxillofacial Studies, and Behavioral/Social Sciences and is designed to be integrated not just in the curriculum, but in the practice of dental medicine. This means that the graduate will apply the knowledge, skill and values to care for the patient with oral diseases within the scope of general dentistry as described above. By integrating the approach to the patient to include general health issues, behavioral and social sciences, a broad view of the oral and maxillofacial region as well as the odontologic needs of the patient, it is hoped that the professional identity of the graduate will be as a healer demonstrating the highest level of knowledge and skill in the care of the sick while supporting the values of good works and humanism.

The goals of the program as developed in the mission, vision and values represent this construct for the clinical education of CNUCDM students. The interprofessional environment for clinical care and education, including that of community service support this as well. The patient-centered care environment is also essential to achieving these goals.

The knowledge skills and values to practice dentistry as defined by CNUCDM are also stated in the college competency statement also included in [Appendix 2-4 Graduation Competencies](#) and the measures therein to achieve these competencies in [Appendix 2-1 Methods for Determination of Competency](#)

Competencies of the DMD curriculum:

The CNUCDM DMD graduate will:

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilizes all pertinent biomedical knowledge to influence and optimize the care of the patient
4. Able to apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
5. Demonstrates the ability to comfortably apply clinical skills for dental procedures in a fashion that promotes the continued development of skills, patient confidence, and consideration for applying more advanced skills when needed.
6. Applies the tenets of ethical behavior and professionalism with exemplary leadership empathy, clinical behavioral understanding customized to the patient's needs.

7. Integrates all aspects of the practice management, systems-based practice, legal and regulatory requirements of practice and consistently applies this knowledge as a skill in clinical practice.

B. Supportive Documentation:

1. Mission and Goals Document

This is included as **Appendix 1-2 CDM Strategic Plan**.

2. List of competencies needed for graduation

T

The specific competencies needed for graduation are noted in **Appendix 2-4 Graduation Competencies**, and **Appendix 2-1 Methods for Determination of Competency**.

The Curriculum Committee meeting during the course of 2019 and 2020 and prior to the D2, D3 and D4 years is likely to further evolve these assessments. However, the narrative to Standard 2-5, to follow, outlines the Summative and essential formative assessments agreed to at this time. Noted in standard 2-5 narrative are 19 competency assessments in Human Studies, 29 in odontology, 21 for oral and maxillofacial studies and 7 in behavioral and social sciences.

In addition, it can be noted that each clinical competency will cover the standards in 2-24 and be reflective of the additional requirements of other Standard 2 components. Thus, each competency and their evaluation will include the knowledge, skills and values needed for the competency. This will include a rubric not only on procedural performance but on patient interaction, professionalism, application of biomedical knowledge and evidence-based decision making

3. Plans for the process used to evaluate, revise and /or update the defined competencies, including relevant data to be collected

The development of the Program Learning Outcomes (PLOs) was informed by the Commission on Dental Accreditation (CODA) standards and are aligned with those expected learning outcomes for similar programs across the nation. The following PLOs represent the intellectual, practical, and professional knowledge and skills that students are expected to demonstrate by the time that they graduate:

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient-centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care

6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare
8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

Attached are detailed descriptions of institution learning outcomes, the program learning outcomes, and the co-curricular learning outcomes, presented in [Appendix 2-4 DMD ILO Rubric](#), [Appendix 2-4 DMD PLO Rubric](#), and [Appendix 2-4 DMD CoCuLO](#). The timeline and process for how these competencies and outcomes are reviewed are included in the comprehensive assessment of the DMD program found in [Appendix 2-4 DMD Assessment Plan](#).

STANDARD 2-5

- 2-5** The dental school **must** employ student evaluation methods that measure the defined competencies.

Intent:

Assessment of student performance should measure not only retention of factual knowledge, but also the development of skills, behaviors, and attitudes needed for subsequent education and practice. The education program should assess problem solving, clinical reasoning, professionalism, ethical decision-making and communication skills. The evaluation of competence is an ongoing process that requires a variety of assessments that can measure not only the acquisition of knowledge and skills but also assess the process and procedures which will be necessary for entry level practice.

Examples of evidence to demonstrate compliance may include:

- Narrative descriptions of student performance and professionalism in courses where teacher-student interactions permit this type of assessment
- Objective structured clinical examination (OSCE)
- Clinical skills testing

A. Description:

1. Provide a listing of the formative and summative competency assessments for:
 - a. clinical procedures
 - b. problem solving
 - c. clinical reasoning
 - d. professionalism
 - e. ethical decision-making
 - f. communication skills

Competency assessments with specific components are only able to be implemented by faculty assigned to future students. However, those processes and developing those competencies within the parameters of the curriculum are under very active development. To follow is **a listing** of formative and summative competency assessments for the domains noted.

Competencies will be implemented and continuously evaluated in the third and fourth year of the curriculum in that they are all clinical and they are summative and imply a readiness to apply the competency in dental practice. Under that estimation, they will undergo contemporaneous development along with the details of clinical courses in disciplines and comprehensive care in the third and fourth year. The Curriculum Committee is charged with monitoring the progress of developed competencies during this period

At this point in development, prior to enrollment, CNUCDM is able to provide the following list of summative competencies within the scope of general dentistry as defined by the institution.

Note that while each competency assessment is organized under the four curriculum themes, the assessment rubrics for each incorporate the ability to perform clinical procedures, to problem solve, to apply clinical reasoning, to exhibit professionalism, to apply ethical decision making principles, and to demonstrate good communication skills.

Also note that formative assessments will be embedded in every course in small group learning, daily encounter assessments, quizzes etc. Because of that circumstance, summative evaluations for competency assessment are presented here as the completion of the process of competency assessment. **ONLY LABORATORY-BASED FORMATIVE ASSESSMENTS**, (not the formative assessments from other courses), **ARE NOTED HERE** as they are prerequisites for subsequent patient- based summative assessments.

All competency assessments whether formative or summative are individual, high stakes (in that progression in the curriculum is dependent on achievement) and performed with academic integrity and with objective rubrics.

Human Studies Summative Competency Assessment (HSSCA)

Each of these competencies in HS will include the assessment of the medical condition noted, apply oral health treatment planning in and evidence based way applying clinical reasoning, and demonstrating ethics, professionalism and good communication skills. The following key is used to reflect on the utilization of the requested domains for Standard 2-5 response in the table below

- 1. Clinical Procedures (CP)**
- 2. Problem Solving (PS)**
- 3. Clinical Reasoning (CR)**
- 4. Professionalism (P)**
- 5. Ethical Decision Making (EDM)**
- 6. Communication Skills (CS)**

HS SCA	Course number	Assessment Method Domains	Prerequisites	Comments And Competency Statement Numerical links
Bleeding disorder	HS 526	OSCE PS,CR,CS	Didactic material HS 526	2 ,3, 4, 6, 7
Leukemia	HS 526	OSCE PS,CR,CS	Didactic material HS 526	2, 3, 4, 6, 7
Anemia	HS 526	OSCE PS,CR,CS	Didactic material HS 526	2, 3, 4, 6, 7

Arthritis	HS 511	OSCE PS,CR,CS	Didactic material HS 526	2, 3, 4, 6, 7
Osteoporosis	HS 511	OSCE PS,CR,CS	Didactic material HS 526	2, 3, 4, 6, 7
Stroke	HS 551	OSCE PS,CR,CS,ED M	Didactic material HS 551	2, 3, 4, 6, 7
Parkinson's Disease	HS 551	OSCE PS,CR,CS,ED M	Didactic material HS 551	2, 3, 4, 6, 7
Renal failure	HS 611	OSCE PS,CR,CS	Didactic material HS 641	2, 3, 4, 6, 7
Acid/base acute infection	HS 611	OSCE PS,CR,CS	Didactic material HS 641	2, 3, 4, 6, 7
Chronic hepatitis	HS 621	OSCE PS,CR,CS	Didactic material HS 621	2,3,4,6,7
Type 2 diabetes	HS 671	OSCE PS,CR,CS	Didactic material HS 671	2, 3, 4, 6, 7
Hyperthyroidism	HS 671	OSCE PS,CR,CS	Didactic material HS 671	2, 3, 4, 6, 7
Poly pharmacy	HS 642	OSCE PS,CR,CS, EDM	HS 642 and other HS courses	2, 3 ,4, 6, 7
Complex medical case assessment: Cardiovascular/pulmo nary	HS 721	Patient based PS,CR,CS, P, EDM	Concurrent medicine seminar	2, 3, 4, 6, 7 Patient selected from student's existing patients
Complex medical case assessment: Endocrine/oncology/O B/ GI or transplant	HS 722	Patient based PS,CR,CS, P, EDM	Concurrent medicine seminar	2, 3, 4, 6, 7 Patient selected from student's existing patients
Complex medical case assessment: Interdisciplinary/ hospital based	HS 821	Patient based PS,CR,CS, P, EDM	Concurrent medicine seminar	2, 3, 4, 6, 7 Patient selected from hospital

				consults while on rotation
Complex medical case assessment: preanesthetic/presurgical consult	HS 822	Patient based PS,CR,CS, P, EDM	Concurrent medicine seminar	2, 3, 4, 6, 7 Patient selected from preop pool evaluated by student
Complex medical case assessment: Special Needs Patient	HS 821 HS 822	Patient based PS,CR,CS, P, EDM	Concurrent medicine seminar	2, 3, 4, 6, 7 Patient selected from preop pool evaluated by student

Odontology Summative and Formative Competency Assessment (OSFCA)

OSFCA	Course number	Assessment method	Prerequisites	Comments
Infection Control	Odont 501	Operatory based CP, PS, CR, CS, P, EDM	Didactics and Lab on infection control	1, 2, 3, 4, 5, 6, 7 While comp assessment is in first year each clinical comp continues to assess
Caries risk assessment, app. CAMBRA	Odont 522	Case-based didactic exam PS, CR, P, EDM	didactics Odont 522	1, 2, 3, 4, 5, 6, 7
Operative Dentistry lab FORMATIVE assessment	Odont 621	Laboratory exercise X 4 (class 1,2,3,4) CP, PS, CR	Didactics and lab ODONT 621	2, 3, 4, 5 FORMATIVE
Periodont. Lab SRP formative assessment	Odont 621	Laboratory exercise x 1 CP, PS, CR	Didactics and lab Odon 631	2, 3, 4, 5 FORMATIVE
Periodont. Lab Surgery formative assessment	Odont 632	Laboratory exercise x 1 CP, PS, CR	Didactics and lab Odon 632	2, 3, 4, 5 FORMATIVE

Outcomes of periodontal therapy	Odont 752	Patient based CP, PS, CR, CS, P, EDM	Seminar participation	1, 2, 3, 4, 5, 6, 7 Patient selected from students existing patients
Integrated perio care (at least 3) perio/pros/endo/ortho/ oral medicine/ oral surgery assessment	Odont 841	Patient Based CP, PS, CR, CS, P, EDM	Seminar participation	1, 2, 3, 4, 5, 6, 7 Patient selected from students existing patients
Full denture laboratory	Odont 632	Laboratory exercise CP, PS, CR	Lecture and lab Odont 632	2, 3, 4, 5 FORMATIVE
Partial denture laboratory	Odont 632	Laboratory exercise CP, PS, CR	Lecture and lab Odont 632	2, 3, 4, 5 FORMATIVE
Indirect fixed restoration and replacement of teeth)	Odont 741	Laboratory exercise X3 (crown, FPD, CAD/CAM CP, PS, CR	Lecture and lab Odont 741	2, 3, 4, 5 FORMATIVE
Dental implant placement and restoration	Odont 841	Laboratory exercise CP, PS, CR	Lecture and lab Odont 841	2, 3, 4, 5 FORMATIVE
Endodontic therapy	Odont 532	Laboratory exercise X3 (incisor, premolar, molar) CP, PS, CR	Lecture and lab Odont 532	2, 3, 4, 5 FORMATIVE
Intake odontologic diagnosis and treatment planning	Odont 761	Patient based CP, PS, CR, CS, P, EDM	Daily participation	1, 2, 3, 4, 5, 6, 7
Comprehensive caries treatment	Odont 761	Patient based including comp evaluation of all restorations, application of CAMBRA and disease control	Daily participation in clinic and case completion	1, 2, 3, 4, 5, 6, 7

		CP, PS, CR, CS, P, EDM		
Demonstration of phase 1 therapy	Odont 762	Patient based CP, PS, CR, CS, P, EDM	Phase 1 therapy completed in at least 3 cases	1, 2, 3, 4, 5, 6, 7
Leading the dental team	Odont 861	Team based CP, PS, CR, CS, P, EDM	Odont 861 for at least 8 weeks	1, 2, 3, 4, 5, 6, 7
Completion of phase 1 and 2 therapy	Odont 861 Or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	Odont 862 for at least 8 weeks	1, 2, 3, 4, 5, 6, 7
Operative dentistry: class 2	Odont 861 Or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Operative dentistry: crown	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Endodontic therapy	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Scaling and root planing	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Full denture	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Partial Denture	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Fixed partial denture (either implant or tooth supported)	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Dental implant restoration	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7

Dental emergencies	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
--------------------	------------------------------	--	---	------------------------

**Oral and Maxillofacial Studies Summative and Formative Competency Assessment
(OMFSFSCA)**

OMFSFSCA	Course number	Assessment method	Prerequisites	Comments
Patient doctor communication	OMFS 511	OSCE CP, PS, CR, CS, P, EDM	Small group OMFS 511	1, 2, 3, 4, 5, 6, 7 FORMATIVE
Anatomy case presentation with clinical correlation	OMFS 532	Laboratory presentation PS, CR, CS	Anatomy lab	2, 3, 4, 5 FORMATIVE
Local anesthesia technique	OMFS 631	Clinical demonstration on subject X 4	OMFS 631 lab	1, 2, 3, 4, 5, 6, 7 FORMATIVE
Nitrous oxide administration	OMFS 632	Patient based CP, PS, CR, CS, P, EDM	OMFS 632 lab	1, 2, 3, 4, 5, 6, 7
Radiologic examination, exposure and interpretation	OMFS 651	Patient based periapical CP, PS, CR, CS, P, EDM	OMFS 651 lab and lecture	1, 2, 3, 4, 5, 6, 7
Radiographic examination exposure and interpretation	OMFS 751	Patient based Panoramic and Cone Beam CT CP, PS, CR, CS, P, EDM	OMFS 751 lab and lecture	1, 2, 3, 4, 5, 6, 7
Oral medicine/oral pathology case presentation	OMFS 862	Patient based CP, PS, CR, CS, P, EDM	OMFS 662,762 and in OMFS 862 seminar	1, 2, 3, 4, 5, 6, 7 Case selected preferably from student patient of record
Exodontia	OMFS 771	Laboratory CP, PS, CR	OMFS 771 lecture and lab	1, 2, 3, 4, 5, 6, 7 FORMATIVE
Pediatric operative dentistry	OMFS 771	Laboratory CP, PS, CR	OMFS 771 lecture and lab	2, 3, 4, 5 FORMATIVE

Space maintenance	OMFS 581	Laboratory CP, PS, CR	OMFS 581 AND OMFS 771 concurrent	2, 3, 4, 5 FORMATIVE
Exodontia simple extraction	OMFS 761	Patient based CP, PS, CR, CS, P, EDM	In OMS clerkship or Comp care clinic	1, 2, 3, 4, 5, 6, 7
Exodontia surgical extraction	OMFS 761	Patient based CP, PS, CR, CS, P, EDM	In OMS clerkship or Comp care clinic	1, 2, 3, 4, 5, 6, 7
Preprosthetic surgery	OMFS 761	Patient based CP, PS, CR, CS, P, EDM	In OMS clerkship or Comp care clinic	1, 2, 3, 4, 5, 6, 7
Implant placement	OMFS 761 or Odont 862	Patient based CP, PS, CR, CS, P, EDM	In OMS clerkship or Comp care clinic	1, 2, 3, 4, 5, 6, 7
Medical assessment for surgery	OMFS 761	Patient based CP, PS, CR, CS, P, EDM	In OMS clerkship or Comp care clinic	1, 2, 3, 4, 5, 6, 7
Pain and anxiety control	OMFS 761	Patient based CP, PS, CR, CS, P, EDM	In OMS clerkship or Comp care clinic	1, 2, 3, 4, 5, 6, 7
Head and neck exam, screening and risk assessment for head and neck cancer	OMFS 772	Patient based CP, PS, CR, CS, P, EDM	In OMS clerkship or comp care clinic	
Dental care of the child preschool	OMFS 752	Patient based CP, PS, CR, CS, P, EDM	In peds clerkship or in comp care clinic	1, 2, 3, 4, 5, 6, 7
Dental care of the child K-12	OMFS 752	Patient based CP, PS, CR, CS, P, EDM	In peds clerkship or in comp care clinic	1, 2, 3, 4, 5, 6, 7
Orthodontic Growth and development assessment	OMFS 872	Patient Based CP, PS, CR, CS, P, EDM	In orthodontic clerkship or comp care clinic	1, 2, 3, 4, 5, 6, 7

**Behavioral and Social Sciences Summative and Formative Competency Assessments
(BSSSFCA)**

BSSSFCA	Course number	Assessment method	Prerequisites	Comments
Student wellbeing	BSS 501	Case-based PS, CR, CS, P, EDM	none	2, 3, 4, 5, 6, 7 FORMATIVE
Ethics in dental practice	BSS 521	OSCE PS, CR, CS, P, EDM	BSS 521 small group	1, 2, 3, 4, 5, 6, 7 FORMATIVE
Psychiatric illnesses	BSS 662	Patient based CS, PS, CR, CS, P, EDM	none	1, 2, 3, 4, 5, 6, 7 Patients of record from D3, D4 teams
Practice management	BSS 821	Practice simulation PS, CR, CS, P, EDM	BSS 721 and enrolled in BSS 821	2, 3, 4, 5, 6, 7
Community assessment	BSS 862	Reflective essay PS, CR, CS, P, EDM	Enrolled in BSS 862 and in senior seminar in public health	2, 3, 4, 6, 7

2. Include the types of assessments planned for each of the above areas (i.e., Objective Structured Clinical Examination (OSCE) etc.

These are attached to the list above in side-by-side presentation. Note that these competency assessments (both formative and summative) include laboratory, desktop, clinical simulation, practice simulation, OSCE, patient based, oral case presentation, and reflective essays. The method of evaluation is based upon the following criteria:

- What is being measured
- What needs to be developed to assure objective and repeatable and consistent measurement across encounters
- What is a practical and cost effective means of assessment

Thus with those criteria extant, the plan to use the multiple array of assessments described in the above table was developed. For example, while laboratory evaluations provide a highest degree of consistency for evaluating Clinical Procedures, it has limited capacity in the other domains. OSCE's offer the ability to provide objective and repeatable, structured assessment in all domains, but is limited for procedural skills. Clinical patient based encounters serve to assess all 6 of the above domains, but can only provide limited objective and repeatable, consistent

assessments. Thus, the CNUCDM competency assessment construct, utilizes an appropriate array of assessments to optimize the evaluation of all domains.

3. Describe how students will be deemed ready to challenge (sit for, take) the competency assessments, including any specific prerequisites.

The ability to take a competency assessment is reprised in each of the course syllabi. Every competency assessment is attached to a course in the curriculum also noted in the list above by course number. While the criteria for taking the assessment will be noted in the syllabi, not all syllabi are complete at this point.

The ability to challenge a competency assessment will always depend upon a determination that the student demonstrates the requisite didactic knowledge, clinical skill and values to perform unaided in the clinical setting for the procedure being examined. In addition, the circumstances of the assessment must permit consistency and appropriate level of complexity when as part of a clinical procedure. This threshold will depend also upon patient needs and upon the complexity of the procedure being examined, and the needs and complexity of the patient.

4. Describe how faculty members will be calibrated to evaluate student performance. Will all faculty members (full-time and part-time) assess student performance, or will there be specific faculty who assess student performance? How will this determined?

Division heads, course directors and the Curriculum Committee are charged with providing effective calibration of new and existing faculty. The hallmarks of calibration will be the creation of rubrics to assess each of the defined competencies, the development of training materials for faculty to define the rubric criteria and assessment tools, and ongoing training of faculty.

Only trained faculty who are continuously assessed for their ability to provide competency assessment will perform these summative evaluations. Faculty performance review is the direct responsibility of the course director for which the competency assessment occurs. The academic affairs/curriculum and clinical education administrative components through the Curriculum Committee and the Student Performance Committee will monitor compliance and further develop the program. The Associate Dean of Academic Affairs and Faculty Development will provide leadership in the advancing of every faculty member's role in assessment at every level including summative assessments.

5. Describe any procedures that will be utilized to ensure that students receive an objective assessment of their skills.

The specificity of the rubrics will help ensure the objective assessment of students. Direct observation of these assessments, the analysis of faculty-specific data relative to assessments and 360 degree feedback on faculty and student performance are tools that will promote the objective assessment of student skills. Through the use of electronic grading, a data base of faculty performance in assessment will be made. The course director, clinical care and discipline leaders are also charged with assuring that competency assessment is consistent with the highest qualities associated with excellent patient care, objectively applied to all students.

B. Supportive Documentation:

1. All forms and criteria developed to date that will be used to determine if students have successfully achieved competency

Most forms for this purpose are under development as nearly all such assessments are in the D3 and D4 year for which syllabi remain under development. Some examples are included. The assessment forms and rubrics for dental anatomy, for infection control, for medical and dental history/intake, and for DS 4 capstone comprehensive care is attached as **Appendix 2-1 Consolidated Course Syllabi**.

STANDARD 2-6

- 2-6** Students must receive comparable instruction and assessment at all sites where required educational activity occurs through calibration of all appropriate faculty.

Examples of Evidence to demonstrate compliance may include:

- On-going faculty training
- Calibration Training Manuals
- Periodic monitoring for compliance
- Documentation of faculty participation in calibration-related activities

A. Description:

1. Describe the program's policies, procedures, and/or mechanisms that will assure students receive instruction and assessment at all sites where required educational activity occurs through calibration of all appropriate faculty.

A plan for ongoing faculty training, the development of calibration training manuals, a compliance monitoring plan and compliance documentation is the direct responsibility of the course directors attached to the competency assessments noted in Standard 2-5. In addition, the course director for BSS 861 and BSS 862, community based education and well as the clinical rotation course directors will liaise with the course directors in discipline specific areas to calibrate as to the instruction content, methods and assessments utilized in those settings, and communicate those to the site specific faculty. As part of the site assessment activity, the assessments provided by individual community based and clinic based faculty will be collated to determine consistency, value, and objectivity of assessments

As the program is under development this assigned responsibility is in process and will be completed as part of every course before its inauguration. It is the responsibility of the Division leaders and Associate Deans to monitor this development and compliance via the Curriculum Committee.

2. Describe how the program will monitor instruction and assessment at all sites where educational activity occurs to ensure comparability.

The course directors associated to activities at the affiliated sites will perform calibration exercises for community-based faculty. The Course Director for BSS 861 and 862 will continuously monitor activities to assure compliance for instruction and assessments at all sites where educational activity occurs. A record of those visits and findings will provide a continuous assessment and improvement mechanism. The course director will apply the site visit checklist ([Appendix 2-6 Site evaluation checklist](#)) at each scheduled site visit to assure that the calibration of faculty is up to date regarding instructional methods and assessment of DMD students.

3. Give examples of how students will receive comparable instruction and assessment at all sites where educational activity occurs.

To date, the Dean, who is the former Director of Community-Based Education and Practice at UCSF, has met with all confirmed and potential sites to review the relationship regarding meeting CNUCDM standards of instruction and assessment. Each faculty member based at a community site will be expected to attend calibration education, providing daily assessment and summative assessment of students. Specifically, required site specific calibration exercises are in place for the following topics and will be presented including an outcome assessment as CE for each site:

- Operative dentistry
- CAMBRA-
- Pediatric dentistry
- Oral surgery
- Endodontics

B. Supportive Documentation:

1. Formal/Informal faculty calibration activities, including planned meeting agendas and calibration materials. Provide information by program site.

Once these affiliations are ready to be activated in 2022-2023, planning calibration activities, updated meeting agendas and calibration materials will be available by site. Attached is a sample calibration exercise ([Appendix 2-6 Pediatric Pulp Therapy Calibration - R.Stewart](#)) previously performed for affiliated sites with UCSF to be performed under pending collaborative agreement at these sites and additional ones for CNU.

2. Training materials for faculty calibration training

These are discipline based and will be under development by content leaders/course directors specifically in operative dentistry, pediatric dentistry, endodontics, periodontics, oral surgery and prosthodontics. Included is an example of calibration training for oral surgery, presented in [Appendix 2-6 oral surgery exodontia calibration](#)

3. Planned outcomes of faculty calibration training; interval of assessment

Full integration of VCF faculty with concurrent and annual assessments through student evaluations, faculty evaluations, and BSS 861 and 862 course director assessment. In the first two years of operation of BSS 861 and BSS 862 (academic year 2023-2024) and (academic year 2024-2025) quarterly site visits and outcome assessment of faculty calibration at community sites will be carried out and will be performed at minimum per annum thereafter.

The planned outcome of this training is optimal compliance with CNU protocols and standards of care and adherence to assessment methods. Such assessments should be found to be consistent with those obtained from onsite evaluation of DMD students.

STANDARD 2-7

- 2-7** Biomedical, behavioral and clinical science instruction **must** be integrated and of sufficient depth, scope, timeliness, quality and emphasis to ensure the achievement of the curriculum's defined competencies.

A. Description:

1. Describe how biomedical, behavioral and clinical sciences will be integrated in the curriculum. Give examples of "team-taught" courses with biomedical, behavioral and/or clinical faculty.

The integration of biomedical, behavioral and clinical sciences is amply demonstrated in the curriculum and is a hallmark of the CNUCDM curriculum that integrates the curriculum throughout all four years and with the continuous involvement of the 4 themes of human studies, odontology, behavioral and social sciences and oral and maxillofacial disorders. A 4 year curriculum mapping, found in [Appendix 2-8 CDM Curricular Map Landscape](#), demonstrates this integration through the introduction of material and its mastery in an integrated fashion over the four years.

Also as noted in Standard 2-5 competency assessments, the biomedical behavioral and clinical aspects of competency assessments are included along with ethics and professionalism into assessment. Each competency assessment must include application of knowledge, skills and values and thus must integrate behavioral/social sciences, human studies and clinical sciences into the assessment.

Each Common Pathway course is led and taught by faculty in the College of Medicine. Pharmacology courses are led and taught by faculty in the College of Pharmacy, as well as faculty of the College of Dental Medicine. Behavioral science faculty will teach course components on major psychiatric disorders, trauma informed care, anxiety, pain control, and phobias. Each Common Pathway course engages clinical dental faculty into the small group, case-based learning sessions for dental students based upon the human systems studies occurring in Human Studies. Junior and senior medical seminars will engage College of Medicine and College of Pharmacy faculty into the case-based seminar format.

2. Describe the depth, scope, timeliness, quality, and emphasis of the planned biomedical, behavioral and clinical science courses. What criteria will be used to determine the depth, scope, timeliness, quality, and emphasis?

The CNUCDM curriculum is based upon the contention that dental medicine is the anatomically based practice of medicine and surgery and that the depth of biomedical knowledge and application needed by a dentist is equal to, or greater in some cases, to that which is needed by a physician. Dentists are expected to diagnose, prescribe, assess outcomes and have ongoing treatment planning that takes into account biomedical findings. Thus the Common Pathway courses were selected to be in the College of Medicine taught in an integrated format with

medical student colleagues in the major areas of hematology, musculoskeletal and integumentary, cardiovascular and pulmonary, renal, neurologic, endocrine.

The depth and scope of behavioral and social science is reflected by its prominent role as one of the four themes of the curriculum. That is based upon the understanding that health behaviors, the social determinants of health, the influence of culture and psychology on health outcomes, and the exigencies of population health, drive the need for greater engagement of DMD students in behavioral health. These aspects are well integrated through all four years of the curriculum.

The applied knowledge of dental practice in the care of diseases of the teeth, supporting structures, and oral and maxillofacial region are dependent on building blocks of knowledge and skill that cannot wait until years 3 and 4. CNUCDM has the philosophy that early clinical engagement, through a diagonal curriculum, and as noted in Foundations of Odontology and Foundations of Dental Medicine is key to developing knowledgeable and skilled clinicians who are also able to integrate biomedical science into practice.

The depth, scope, timeliness, quality and emphasis of our curriculum is a primary task of the Curriculum Committee. This committee will continuously determine these characteristics of the curriculum through outcomes assessments, surveys, direct observation, evidence-based pedagogic and clinical information, and the views of the committee.

B. Supportive Documentation:

1. Course syllabi, including content and instructional methods that support compliance with this standard

Course syllabi and the syllabi template for CNUCDM are attached in **Appendix 2-1 Consolidated Course Syllabi**.

2. Course list by year (Example exhibit G)

Exhibit G is attached.

3. Departmental course offerings (Example exhibit H)

Exhibit H is attached.

STANDARD 2-8

- 2-8** The dental school **must** have a curriculum management plan that ensures: (address separately)
- an ongoing curriculum review and evaluation process which includes input from faculty, students, administration and other appropriate sources;
 - evaluation of all courses with respect to the defined competencies of the school to include student evaluation of instruction; and
 - elimination of unwarranted repetition and outdated and unnecessary material;
 - incorporation of emerging information and achievement of appropriate sequencing.

A. Description:

1. Describe the planned curriculum review process. Describe how students, faculty, administration and other sources will have input into the process.

The planned curriculum review process is the responsibility of the Curriculum Committee. Formal student curriculum feedback is generated with each course evaluation. Scheduled meetings with student officers and whole class meetings will formally address curriculum review and assessment as an agenda item. Faculty divisional, course faculty and plenary meetings of faculty will address course review. In addition EACH course in the curriculum will undergo formal review by a three person Course Assessment Committee (CAC) reported to the Curriculum Committee every 2 years after first delivery of the course through the first cycle of students, and every 4 years thereafter. The Curriculum Committee will develop assessment forms to indicate the components of course review and rubrics to objectively assess course criteria. The schedule, flowchart, forms, and processes associated to course review are reprinted in the Appendices of Standard 2-8.

2. Will the school's course review process require an assessment to determine if the course is contributing to the schools competencies? How will the school's review process assess the learning outcomes of the course?

Each course review performed in the format described above will be referred to the competency assessments associated to each course in the tables provided under Standard 2-5. The course evaluation form will require an assessment of how the course contributes to the specific competencies of the course, its learning outcomes, the PLOs (Program Learning Outcomes) and the ILOs (Institution Learning Outcomes). Each of these are in the course syllabi template and will be assessed as part of formal course review. The learning outcome assessments for course, program and University will begin with the annual assessment of the course director, provided to the CAC for their appraisal.

3. Describe the process that the school will use to eliminate unwarranted repetition and outdated unnecessary material from the curriculum.

Curriculum mapping performed via CANVAS, key word search of didactic materials, as well as Curriculum Committee review, will develop the process whereby unnecessary repetition can be considered by the committee. Course directors and the CACs will be tasked with assessing courses for outdated material. The course review process will include queries as to the appropriate depth, contemporaneous nature of material and the need for any repetition associated to the course content.

4. Describe how the school will ensure that innovative methods and emerging information will be regularly added to the curriculum. Describe how the school will achieve the proper sequencing of courses.

As part of the syllabus review procedure, the Curriculum Committee will examine format as well as content considering course learning outcomes, assessment rubrics, the mapping to program learning outcomes, a content outline based on the academic calendar, a schedule of all assignments, credit hours, necessary information about library resources, and all relevant University/departmental policies. The syllabi are also reviewed to ensure that content is appropriate to the level and goals of the DMD program. If significant changes are needed, the committee will provide guidance to the faculty and require resubmission of the syllabus before final approval.

The Associate Dean of Academic Affairs will work with faculty course coordinators to ensure that mapping from courses up to Program Learning Outcomes (PLOs) and Institutional Learning Outcomes (ILOs) is appropriate, such that students are able to fully develop the learning outcomes at appropriate levels of learning over the course of the program. It is the responsibility of the faculty coordinating the course to ensure that appropriate learning outcomes have been created that map to the appropriate PLOs and ILOs. Faculty are provided CNU's Assessment Handbook ([Appendix 2-8 CNU Assessment Handbook](#)) for guidance in building their learning outcomes. Training in writing learning outcomes and developing rubrics is available to faculty through an annual training session and by appointment from the Office of IR and Assessment.

Participation in CNU Institute for Teaching and Learning and American Dental Association faculty section program "We Teach" will promote the use of advanced pedagogic methods. Innovative programs available through the National Library of Medicine, OVID, Science Direct, and UpToDate through the CNU Medical Library will be sources for faculty and students to access emerging information to bring to existing courses and add to the curriculum. Discipline-based expertise of board certified and AGD masters clinical faculty through continuing education will help build a contemporary forward thinking curriculum.

B. Supportive Documentation:

1. Planned curriculum/course review schedule

This is included as [Appendix 2-8 Course Review Schedule](#).

2. Detailed course review flowchart outlining the planned process of curriculum review

See below combined response. Also, see [Appendix 2-8 Course Review Flowchart](#).

3. Planned course evaluation form

See below combined response. Also, see [Appendix 2-8 Course Evaluation Form](#).

4. Intended curriculum management plan

The curriculum management plan beyond course review schedules, flowchart and review forms will be developed by the Curriculum Committee to closely meet the needs of the college when it is under active operations. Curriculum management will include a holistic assessment of emerging technology, evaluation of practice patterns, community need based upon socioeconomics and epidemiology of diseases, changes in payment systems, such as value-based care models and primary care models emerging in California, among others. Curriculum management for CNUCDM will be an active and organic process that will only be developed fully when the academic and clinical programs are fully active. The fully formed Curriculum Committee will commence work in in June 2019. It is anticipated that an inclusive approach to the creation of these [Appendices 2-8 Course Review Schedule, Flowchart and Evaluation Form](#) will be done by the Curriculum Committee in time for review prior to the first site visit. This is appropriate considering that these course reviews will commence after two years of operations and consideration of details of review that best meets the needs of effective review are best determined concurrently.

5. A summary table outlining planned courses and how each will contribute to each of the school's defined competencies

A linking of all courses to the Program Learning Outcomes and Institutional Learning Outcomes is provided in: [Appendix 2-4 DMD ILO Rubric](#), [Appendix 2-4 DMD PLO Rubric](#), [Appendix 2-4 DMD CoCuLO](#).

STANDARD 2-9

- 2-9** The dental school **must** ensure the availability of adequate patient experiences that afford all students the opportunity to achieve its stated competencies within a reasonable time.

A. Description:

1. Provide a description of the patient pool and the school's system for categorizing and assigning or managing patient care.

The patient pool was described in section “m” in the Foreword, and includes a plan for a marketing goal for the first four years of the CDM is to have 80 students in each Year 1 with a total of 320 students by the 4th year in operation. Dean Assael's experience in comprehensive care dentistry for students at Minnesota indicated an average of 6 patient visits per active enrolled patient per annum.

Thus, 160 clinically active DMD students at CNU will each require enrollment of 30 new active patients per annum in addition to episodic emergency and other special services patients.

This construct requires a patient care marketing goal of 5,000 new patients (5,000 patients X 6 visits = 30,000 patient visits) enrolled per year. Along with follow ups and the developing of other return services overall patient services should grow in the first 5 years of operations to 50,000 per year for the DMD students.

Patient care marketing will emphasize prevention and the value of oral health screening. When operational, the CDM clinics will also be utilized for health screening integrated into other CNU health services and informational purposes. The college will liaise with the California Denti-Cal system for the identification of populations of children for whom dental services in Sacramento are linked with the Medi-Cal provider. This will generate further cooperation with adult health systems as well.

For clinical facilities, CNU will work in two phases. The first phase will be the development of a clinic in Elk Grove with 32 clinical treatment units in 2019-20. A second clinic, also with 48 clinical treatment units, will be built at another adjacent location in Elk Grove and completed in 2022. Both clinics will share core radiology, digital clinical facilities, operational electronic health record systems, sterilization and equipment management programs. These two clinics will comprise a capacity in excess of 50,000 patient visits per year and will permit the achievement of the defined competencies for every student.

The College will also partner with primary care clinics, dental specialties and advanced practice clinics associated to health and hospital systems, and community health centers with a FQHC model. These partnerships will be a part of the clinical experience for Year 4 students (see MOU docs). The DMD program at CNU will partner with health systems and the state to improve oral health access and oral health outcomes for Sacramento, the East Bay, the Central Valley, and mountain regions of Northern California.

Regarding the assignment and management of care, the college will assign EVERY patient to an existing care team headed by a Team leader. CNU defines a Team Leader as a practicing dentist faculty member with responsibility for a cohort of dental patients to be treated under the Team Leaders leadership including dental students in the care team. The Team Leader is the responsible licensee for all care provided by the team. All general dental care in CNU clinics will be delivered under the Team Leader model. Only patients of complexity beyond the capability of the faculty of CNUCDM will be referred to appropriate tertiary and quaternary care facilities. Other patients often seen as “too complex” for dental students will be given the option for care in an integrated format with the Team leader and students.

2. Describe the marketing plan to recruit patients, including a marketing timeline and a description of the target market.

Marketing will be done via the CNU communications programs, consistent with the ethos of the University. All people able to be seen in the College will be the target market. In addition to print press, social media, and broadcast media, informational sessions with community resources will be employed. The marketing timeline will be developed as clinical facilities come on line in 2020. Concurrent with the availability of clinical operations, the communications and advertising plan will be implemented. Monitoring for the successful marketing of the program will be ongoing and the marketing plan will be adjusted to that environmental scan.

The target market is as described in Standard 2-9 and in section “m” of the Foreword.

3. Summarize the planned students' patient care experiences. What procedures and policies will be in place to assure that all students have sufficient experiences to successfully challenge the school's clinical competency assessments?

The Competency map including all competency assessments will be mapped to each student in a real time spreadsheet. The appropriate administration, team leaders, and the students themselves will be able to continuously map their performance in achieving the defined competencies of the curriculum. It is the responsibility of the team leaders, course directors, and students to assess progress and develop action plans. Each team leader who is a faculty dentist will have a team coordinator, (a staff individual assigned to the team), who will monitor the progress of every student in the team. Such progress will include experiential activities, completion of Competency assessments and the continuous fulfillment of patient centered care, in a case manager role. All patient appointments will be made by the team coordinator who will ensure patient-centered care while ensuring the completion of the defined competencies for every student team member.

B. Supportive Documentation:

1. Planned patient admissions process flow chart

As clinical staff are hired and the clinics are under active construction, patient admission processes and forms will be developed in conjunction with the development of clinical operations.

2. Goal for the number of patient visits per year

This is contained in the narrative above: 50,000 when both primary clinics are operational and students are in 3rd and 4th year. This is also included in the College's strategic plan, found in [Appendix 1-2 CDM Strategic Plan](#).

3. Goal for the number and demographic profile of patients that will seek and receive comprehensive care

This is contained in part in the narrative above. The demographic profile of patients will depend upon the strategic alliances for patient acquisition to be performed with health entities in the region. The Sacramento district has a carve-out for pediatric dental care under Medicaid. Discussions with HALO healthcare and the Department of Health should assure access to these patients. The college will work with geriatric facilities for ambulatory geriatric patients as in the Senior Center of Elk Grove, region with large retirement communities, as well as with facilities among the 91 regional sites for domiciled elderly patients such as Brookdale Elk Grove, the Meadows and Carlton Senior Living.

4. Goal for the number of patient procedures to be delivered per year

This is contained in the narrative above: 30,000 procedures among 50,000 visits, as described in the College's strategic plan in [Appendix 1-2 CDM Strategic Plan](#).

Critical Thinking

STANDARD 2-10

2-10 Graduates **must** be competent in the use of critical thinking and problem-solving, including their use in the comprehensive care of patients, scientific inquiry and research methodology.

Intent:

Throughout the curriculum, the educational program should use teaching and learning methods that support the development of critical thinking and problem solving skills.

Examples of evidence to demonstrate compliance may include:

- Explicit discussion of the meaning, importance, and application of critical thinking
- Use of questions by instructors that require students to analyze problem etiology, compare and evaluate alternative approaches, provide rationale for plans of action, and predict outcomes
- Prospective simulations in which students perform decision-making
- Retrospective critiques of cases in which decisions are reviewed to identify errors, reasons for errors, and exemplary performance
- Writing assignments that require students to analyze problems and discuss alternative theories about etiology and solutions, as well as to defend decisions made
- Asking students to analyze and discuss work products to compare how outcomes correspond to best evidence or other professional standards
- Demonstration of the use of active learning methods, such as case analysis and discussion, critical appraisal of scientific evidence in combination with clinical application and patient factors, and structured sessions in which faculty and students reason aloud about patient care

A. Description:

1. Describe plans to use any educational models, formats and/or pedagogy that are intended to promote critical thinking/problem solving.

The structure of nearly every course is to combine lecture, small group learning, laboratory and clinically applicable components into courses. This integrated curriculum is the hallmark of the College of Medicine as well. The College of Dental Medicine will continue that model in the Colloquium components of the Common Pathway biomedical courses. Case-based small group learning, active learning, group projects, student presentations, seminars in medicine, dental medicine, and comprehensive care will promote critical thinking and active learning. Students will all be adept at clinical problem solving utilizing peer reviewed literature and data based such as OVID and UpToDate in many courses.

The extension of the human studies program into seminar series in the 3rd and 4th year is designed to apply biomedical knowledge into the care of existing patients of record and to utilize critical thinking skills to coordinate the dental, medical social and behavioral aspects of patient care. Case based seminars as well in oral and maxillofacial studies and behavioral and social sciences will utilize adult active learning methods in the seminar rooms. These rooms are set up with library access to seamlessly inquire National Library of Medicine and proprietary Data bases such as OVID to compare patient care under the aegis of CNU with best practices.

2. Describe how students will be deemed competent in the use of critical thinking and problem-solving in the areas of:
 - a. comprehensive care of patients
 - b. scientific inquiry and research methodology

Students will begin comprehensive care clinics and clinical rotations each morning with group meetings many of which are devoted to case-based presentation of comprehensive care patients. The competency assessments of clinical knowledge and skills that are summative evaluations will include critical thinking, use of evidence based dentistry in care decisions and understanding of the biomedical basis of decisions.

Students will have instruction into the characteristics of valid bench and clinical research, with a focus on clinical research in basic sciences and the clinical curriculum. Specifically, beginning as part of Foundations of Dental Medicine OMFS 511, they will understand the CONSORT, PRISMA and STROBE documents and be expected to apply these criteria in seminars. For example, CONSORT check list applied to clinical research determines that comparative or control groups were randomized, that inclusion and exclusion criteria were specific, and that a patient flow chart determined whether there is structural bias in the study. Each clinical faculty member, as part of their faculty development, will also be educated in these areas and be expected to apply them in seminars and assigned group projects. Both the faculty and students will in an integrated care delivery environment apply the principles of critical thinking and clinical problem solving in the care of patients directly and in the supporting seminars.

B. Supportive Documentation:

1. List of planned courses that will utilize and evaluate:
 - a. application of critical thinking
 - b. questions by instructors that require students to analyze problem etiology, compare and evaluate alternative approaches, provide rationale for plans of action, and predict outcomes
 - c. prospective simulations in which students perform decision-making
 - d. retrospective critiques of cases in which decisions are reviewed to identify errors, reasons for errors, and exemplary performance
 - e. writing assignments that require students to analyze problems and discuss alternative theories about etiology and solutions, as well as to defend decisions made
 - f. asking students to analyze and discuss work products to compare how outcomes correspond to best evidence or other professional standards
 - g. demonstration of the use of active learning methods, such as case analysis and discussion, critical appraisal of scientific evidence in combination with clinical

application and patient factors, and structured sessions in which faculty and students reason aloud about patient care

Planned courses that will utilize application of items A, B, C, D, E, F and G are enclosed in **Appendix 2-10 Critical Thinking Rubric**. As they appear in this single Appendix, all courses that utilize and evaluate these criteria are listed.

These were selected by the following criteria:

A: Courses that employ case-based clinical decision making utilizing evidence-based approaches to learning.

B: Higher levels of Bloom's Taxonomy to analyze and evaluate

C: Simulations such as OSCE's are utilized

D: Look backs at completed or in-process care in the clinical setting is applied in seminars and during quality assurance by the clinical team

E: Courses with critical thinking writing assignments

F: Self-assessment, Compare preclinical and clinical work outcomes to evidence-based care and standards of care

G: Utilization of active learning methods

This review demonstrates that critical thinking is replete in the curriculum, but with regard to competency assessment, critical thinking is a Program Learning Outcome that is contained within the assessment domains of Competency Assessments (sample attached in **Appendix 2-15 Competency Assessment sample for biomedical science application**) as well as the evaluation of students in courses, most particularly seminars.

STANDARD 2-11

- 2-11** Graduates **must** demonstrate the ability to self-assess, including the development of professional competencies and the demonstration of professional values and capacities associated with self-directed, lifelong learning.

Intent:

Educational program should prepare students to assume responsibility for their own learning. The education program should teach students how to learn and apply evolving and new knowledge over a complete career as a health care professional. Lifelong learning skills include student assessment of learning needs.

Examples of evidence to demonstrate compliance may include:

- Students routinely assess their own progress toward overall competency and individual competencies as they progress through the curriculum
- Students identify learning needs and create personal learning plans
- Students participate in the education of others, including fellow students, patients, and other health care professionals, that involves critique and feedback

A. Description:

1. Describe plans for the self-assessment processes that students use in the preclinical laboratory and in the clinical portion of the curriculum.

Self-assessment will be part of the daily assessment form in the preclinical laboratory and it continues in the clinical setting. This will be set up in the grading form. The student will complete their self-assessment prior to the faculty assessment and, as part of the faculty assessment, the faculty member will review the self-assessment to compare their findings to that of the student so as to contribute to the student's ability to self-assess according to standardized and calibrated criteria.

The categories of self-assessment will be

Diagnosis/assessment

Patient communication

Professionalism

Application of biomedical knowledge

Critical thinking/evidence-based care

Psychomotor performance (with procedure-specific assessments)

Reflection/outcome assessment

4. Describe how students will demonstrate the ability to access and utilize resources independent of direct faculty input and direction.

Technology, peers, staff, patients, and data bases will provide feedback. The students will demonstrate this capacity/ability in their evaluations.

Technology such as scanning, haptic assessment, prep check and imaging programs, will be used to provide objective feedback on procedure performance. Patients, peers and staff will be given the opportunity to give feedback on individual student performance.

5. Describe how the dental school will encourage students to attend and critically evaluate continuing education programs.

All students will be attending portions of the meetings of the Sacramento District Dental Society as student members as well as those of the CDA and ADA. An active student chapter of the AADR, NDA, HDA and ADEA will permit students to take CE courses at those events. As a continuing education provider, CNU will sponsor events that, as available, will be attended by students. When students attend a scientific meeting as a participant or presenter, they will provide a report to their peers. Annually, before the Dentsply competition, AADR or ADEA, students who are presenting sessions or posters along with faculty presentations will also present at the Dean's research seminar/day.

B: Supportive Documentation:

1. Planned student self-assessment forms that illustrate how students
 - a. will routinely assess their own progress toward overall competency and individual competencies as they progress through the curriculum,
 - b. will identify their own learning needs,
 - c. will create personal learning plans, and
 - d. will participate in the evaluation of others, including fellow students, patients and other health care professionals that involves providing critique and feedback

A sample planned student self-assessment form is attached in **Appendix 2-11 Self Assessment Form**.

Further modifications in course specific student self-assessment forms will be discipline-based, the responsibility of the course director, and according to the criteria noted above. Each of these items reflect areas a, b, c, and d, noted above:

1. Diagnosis/assessment
2. Patient communication
3. Professionalism
4. Application of biomedical knowledge
5. Critical thinking/evidence based care
6. Psychomotor performance (with procedure specific assessments)
7. Reflection/outcome assessment
8. Student development assessment

These must be developed for each individual course and while they can be seen globally here, individual forms will be the responsibility of the course director. Each form will be submitted to

the Curriculum Committee for its approval and conformity with CNU's template before it is accepted.

STANDARD 2-12

2-12 Biomedical science instruction in dental education **must** ensure an in-depth understanding of basic biological principles, consisting of a core of information on the fundamental structures, functions and interrelationships of the body systems.

A. Description:

1. Summarize plans for providing students with core information presented on fundamental biologic structures, functions and interrelationships of the body systems.

Each of the Common Pathway courses in Human Systems is an integrated course that includes the normal development, anatomy, physiology, biochemistry, immunology, microbiology of the system as well as the congenital, degenerative, neoplastic, and traumatic pathologies of that organ system. These are thoroughly summarized in the course syllabi for the Human Systems courses with details in [Appendix 2-1 Consolidated Course Syllabi](#). While each of these disciplines is studied with medical students in lecture, laboratory and small group learning, the dental colloquium will apply these in a case-based fashion to oral diseases with assigned clinical dental faculty.

2. How will the school ensure that students have an in-depth understanding of basic biological principles?

The students in the College of Dental Medicine will take the same standardized examinations in basic medical sciences as the medical students including shelf examinations and released NBME Part 1 exams as well as quizzes and final exams. In depth knowledge is continuously ensured through the junior and senior seminar series and in clinical encounters where the continued application of basic medical science knowledge is required. In depth understanding is ensured through the competency assessments. Competency assessments are all linked to the competencies of the college and the PLOs of the College of Dental Medicine which is in [Appendix 2-4 Graduation Competencies](#) specifically stating that CA's will include the following competency statements:

Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains

B. Supportive Documentation:

1. Course syllabi for biomedical science courses

These are included in [Appendix 2-1 Consolidated Course Syllabi](#).

STANDARD 2-13

- 2-13** The biomedical knowledge base **must** emphasize that the oro-facial complex is an important anatomical area existing in a complex biological interrelationship with the entire body.

A. Description:

1. Describe how the oro-facial complex will be integrated and emphasized in the instruction of biomedical sciences.

Regarding Standards 2-13, 2-14 the following curriculum structure is reprised: The biomedical sciences are taught primarily in the Common Pathway in an interprofessional environment with students in the College of Medicine. These courses, noted in the curriculum outline and respective syllabi include blocks in the first and second year of hematology, connective tissue, cardiovascular, pulmonary, gastrointestinal, renal, neuroscience, and endocrinology. Each of these course in organized around plenary learning which integrate medical and dental students and small group case based learning (about half the course hours) which includes group projects, individual presentations and OSCE's currently organized around the "colleges" in the medical school. Each "college" is a group of 20 students organized in the small group teaching rooms daily after the plenary sessions.

The dental school will also divide its class of 80 into 4 "colleges" of 20 students. These will be each headed by a dental school faculty member who will serve as preceptor of the "college". These will employ dental medicine relevant case based studies, literature reviews, OSCE's, presentations and other small group exercises to ensure the proper understanding of the oral facial complex in the context of basic medical science education. This will continuously ensure that the oral facial complex is noted to be an essential component of complex human biologic systems.

The titles of OSCE's and case-based learning in the biomedical sciences related to oral health issues is presented in the course descriptions. These case based studies are devoted to oral health conditions and their relation to the specific biomedical science courses. For example, the Hematology block includes cases of bleeding in dental practice and the bleeding dyscrasias associated, the musculoskeletal block has cases on rheumatoid arthritis, osteoporosis, and muscular dystrophy related to oral health. The cardiovascular block has case-based learning on assessment of the dental patient with CV diseases like atherosclerotic heart disease, hypertension, and congestive heart failure. In addition, the Curriculum Committee of the College of Medicine is working with the College of Dental Medicine to create integrated small group exercises that contain BOTH medical and dental components as exercises. One of these cases is "the Wisdom of Phillip Head" regarding a patient with pericoronal infection of a third molar who sustained septic shock, cardiovascular compromise and renal failure.

B. Supportive Documentation:

1. Course syllabi for biomedical science courses

Course syllabi are in **Appendix 2-1 Consolidated Course Syllabi.**

STANDARD 2-14

- 2-14** In-depth information on abnormal biological conditions **must** be provided to support a high level of understanding of the etiology, epidemiology, differential diagnosis, pathogenesis, prevention, treatment and prognosis for oral and oral-related diseases.

A. Description:

1. Summarize the in-depth information that will be presented to students on abnormal biologic conditions, including etiology, epidemiology, differential diagnosis, pathogenesis, prevention, treatment and prognosis for oral and oral-related diseases.’

The curriculum ensures in depth understanding of abnormal biologic conditions of oral and oral related diseases. The chart below summarizes information on the in depth presentation in each course of the curriculum of:

1. Abnormal biologic conditions
2. Etiology of oral related disease
3. Epidemiology of oral related disease
4. Differential diagnosis of oral related disease
5. Pathogenesis of oral related disease
6. Prevention of oral related disease
7. Treatment of oral related disease
8. Prognosis of oral related disease

The chart demonstrates that oral and oral related pathologic conditions are replete in all areas of the curriculum that address abnormal biologic conditions. These are most directly related to oral diseases in the clinical dental medicine sciences and are directed in small group learning environments in the basic medical sciences towards oral health related issues.

Of note is that in a new curriculum, this list is not all inclusive and will be malleable. The chart is meant to demonstrate the in-depth information that permits a high level understanding of oral related diseases in each course in the curriculum.

B. Supportive Documentation:

1. Course syllabi for biomedical science courses

Course syllabi are in [Appendix 2-1 Consolidated Course Syllabi](#).

STANDARD 2-15

2-15 Graduates **must** be competent in the application of biomedical science knowledge in the delivery of patient care.

Intent:

Biological science knowledge should be of sufficient depth and scope for graduates to apply advances in modern biology to clinical practice and to integrate new medical knowledge and therapies relevant to oral health care.

A. Description:

1. Describe how new medical and biologic knowledge will be incorporated and integrated into the delivery of dental care.

The delivery of dental care occurs in the clinical practicum in courses including those in the sections of Odontology and Oral and Maxillofacial Studies. These clinical courses are where the delivery of dental care will occur as part of the curriculum. The correlation of medical and dental knowledge in a case based fashion will be accomplished and integrated into the care of active patients through the seminar series for DMD 3 and DMD 4 students that continues to carry Human Studies and Behavioral and Social Sciences into clinical practice through the majority clinical oral health care curriculum.

First, it is expected that new medical and biologic knowledge will be incorporated into the care delivery in a direct fashion such as in patient assessment, write ups, consideration of biologic and medical findings influencing care, among others. Group leaders will normally begin each clinic in comprehensive care dentistry with a review of the patients of the day and consideration of medical and biologic issues of importance in their care. This will include presentations by students and faculty in important issues in patient care among the team. Such presentations can focus on disease states (such as diabetes, osteoporosis, cardiovascular diseases) in patients of record and brief updates utilizing search tools such as Up To Date for briefs on critical issues.

Second, the formative and summative competency assessments in the clinic will include assessment of the application of biomedical knowledge in patient care. The competency assessments of clinical activities all link to the application of biomedical knowledge into clinical decision making.

Herein are the courses where dental care is delivered by DMD students, followed by the courses where medical and biologic knowledge is systematically, in an active case based fashion incorporated into the ongoing care of dental patients via patient care seminars.

A. Courses where oral health care is delivered and medical knowledge is incorporated

a. Comprehensive Care Dentistry: year 2, 3, and 4

Course #	Course Title	Credits	Year	Term
Odont 662	Comprehensive Care Family Dentistry <i>CLIN and LAB</i>	3	DS 2	Spring

Treatment of caries and periodontal disease with discipline based faculty from operative dentistry, prosthodontics, endodontology and periodontology is carried out with the DS 2 as an active participant in the care team that includes a DS3 and DS 4. Students will participate in case presentations, medical record assessment and recording, and other aspects of the clinic activities. The laboratory will include a simulated clinic visit including OSCE record and electronic health record.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

b. Clinical Clerkship in Oral Surgery

Course #	Course Title	Credits	Year	Term
OMFS 772	Clinical Clerkship: Oral and Maxillofacial Surgery <i>4 weeks, 30 hours per week plus call CLIN</i>	8	DS 3	Spring

The students will enter the oral and maxillofacial surgery care team for this clerkship including the care of patients for dentoalveolar surgery, major maxillofacial surgery and complex conditions of the head and neck. Clinical experience in ambulatory oral surgery and anesthesia and assisting for maxillofacial surgery in the operating room including emergency and trauma care occurs. Participation in hospital rounds and conferences occurs.

c. Clinical Clerkship in Pediatric Dentistry

Course #	Course Title	Credits	Year	Term
OMFS 771	Pediatric Dentistry <i>LAL and LAB</i>	3	DS 3	Fall

Child development and child management in the clinical setting will be developed from a holistic and family based perspective. Major diseases in growth and development of the oral cavity will be elucidated. The development of the deciduous and mixed dentition along with craniofacial development is presented. Caries diagnosis, treatment and prevention in the deciduous dentition is shown. The laboratory will provide simulated clinical experiences in caries treatment, deciduous crowns, space maintenance, and care of the pediatric patient.

d. Clinical clerkship orthodontics

Course #	Course Title	Credits	Year	Term
OMFS 872	Clinical Clerkship: Orthodontics <i>4 hours per week for 8 weeks</i> CLIN	2	DS 4	Spring

Students will enter the orthodontic care team providing diagnostic and treatment services for patients undergoing orthodontic care under the auspices of orthodontic faculty in College of Dental Medicine clinics.

e. Clinical Clerkship: Community-Based Education

Course #	Course Title	Credits	Year	Term
BSS 861	Clinical Clerkship: Community-based Education <i>4 weeks, 30 hours per week plus call</i> CLIN	8	DS 4	Fall

Affiliated health systems based practices will accept CNU students into their care teams where senior students will provide clinical care under the supervision of Volunteer Community-Based Faculty in those sites. Suitable transportation and housing will be arranged for where needed. The purpose of the course is to provide community engagement with the constituencies served, to gain experience in community-based clinical care and to interact with the interprofessional and intraprofessional care team

Course #	Course Title	Credits	Year	Term
BSS 862	Clinical Clerkship: Community-based Education <i>4 weeks, 30 hours per week plus call</i> CLIN	8	DS 4	Spring

This course will be at a second community-based rotation site to elaborate on the activities of the first rotation and engage a new community and a new clinic. In addition to comprehensive care experience, the student will compare and contrast communities and clinical care entities and provide a reflective essay on their community care experience.

- B. Furthermore, here are seminar courses concurrent with these clinical activities where biologic and medical issues to integrated knowledge application in patient care occurs.**

Course #	Course Title	Credits	Year	Term
OMFS 862	Oral Pathology/Oral Medicine Seminar SEM	2	DS 4	Spring

Concentration on oral medicine will include the risk assessment and management of complex systemic diseases related to dental medicine care in dental practice. Case-based discussion on the dental medicine patient with HIV, ongoing chemotherapy for malignancy, osteoporosis/osteopenia among others will be presented by students in seminar format.

Course #	Course Title	Credits	Year	Term
Odont 752	Periodontology Seminar SEM	2	DS 3	Spring

Using a case-based format, the treatment planning, outcome assessment, management of medical and dental comorbidities among others of the patient with diseases of the periodontium is presented. Patient-centered, health systems informed, and culturally aware aspects of care are discussed through the case-based format.

Course #	Course Title	Credits	Year	Term
Odont 841	Periodontology Seminar SEM	2	DS 4	Fall

Using case-based format, interdisciplinary problems especially with orthodontics, endodontics and prosthodontic consideration will be developed through patient presentations of patients of record or via the OSCE format. Further exploration of comorbidities in periodontal diseases will be developed.

Course #	Course Title	Credits	Year	Term
HS 721	Junior Year Medicine Seminar SEM	2	DS 3	Fall

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Cases will be selected from existing active patients as well as from standardized patients, for the D3 class with evidence based review of relevant medical findings and their impact on oral health and clinical interventions. This will be done with a purpose to mitigate risk and improve patient care outcomes.

Course #	Course Title	Credits	Year	Term
HS 722	Junior Year Medicine Seminar SEM	2	DS 3	Spring

Complex cases will be selected beyond the level of HS 721 including those commonly requiring medical surgical intervention in concurrence with oral health care. Examples such as oncology patients, obstetric patients, and transplant patients will be examined. Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities will be continued in the seminar as well.

Course #	Course Title	Credits	Year	Term
HS 821	Senior Year Medicine Seminar <i>SEM</i>	2	DS 4	Fall

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Continued development of advanced based cases including those on hospitalized patients.

Course #	Course Title	Credits	Year	Term
HS 822	Senior Year Medicine Seminar <i>SEM</i>	2	DS 4	Spring

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Development of advanced knowledge of cases presenting for medical treatment for which dental consultation is needed in the preanesthetic presurgical patient and in concurrence with major systemic disease including trauma, stroke, myocardial infarction.

2. Describe how students will be assessed in the application of biomedical knowledge in the treatment of patients.

Daily formative assessment of students in the clinical courses will include evaluation of knowledge values and skills in the provision of patient care. Competency assessments will similarly include the application of biomedical knowledge in the treatment of patients. The use of MedHub and E*Value for grading is currently planned for the clinical setting as the electronic health record (which will be integrated with the medical record) will not include a grading component. While this will eventually be in electronic format, [Appendix 2-24 OMFS 772 Summative Competency Assessment](#) includes a sample assessment form for a competency assessment for oral surgery that includes the application of biomedical knowledge in the assessment.

Also of note is that the monitoring of application of biomedical knowledge in the care of patients in preparation for ongoing and accreditation program review by CODA for the four year site visit and is collated in the PLO and ILO assessment plan presented in [Appendix 2-21 PLO and ILO assessment plan CNUCDM](#).

3. Describe plans for basic science and clinical faculty interactions to plan and evaluate the curriculum so that biomedical science knowledge will be applied in patient care.

The Curriculum Committee will serve as the primary venue for interactions to plan and evaluate the curriculum as that is the primary charge of that committee. The organization of the curriculum according to the four themes of Human Studies, Odontology, Oral and Maxillofacial Studies, and Behavioral and Social Sciences across the four years and with continuous interaction is designed in greatest part to accomplish this task.

Also of note is that the monitoring of application of biomedical knowledge in the care of patients in preparation for ongoing and accreditation program review is collated in the PLO and ILO assessment plan presented in [Appendix 2-21 PLO and ILO assessment plan CNUCDM](#). This serves as the template for this monitoring by the Curriculum Committee especially with regard to

program learning outcomes for critical thinking, evidence based care, and biomedical sciences knowledge

B. Supportive Documentation:

1. Student clinical assessment forms, as available

Attached in Appendix 2-24 OMFS 772 Summative Competency Assessment,
Appendix 2-24 Competency Assessment - General Rubric for Clinical Dentistry
Appendix 2-21 PLO and ILO assessment plan CNUCDM, and
Appendix 2-15 sample Clinical Competency assessment

STANDARD 2-16

2-16 Graduates **must** be competent in the application of the fundamental principles of behavioral sciences as they pertain to patient-centered approaches for promoting, improving and maintaining oral health.

A. Description:

1. Summarize the planned curriculum in behavioral sciences, especially the area of patient-centered approaches for promoting, improving and maintaining oral health. Describe the intended patient-centered approaches that will be presented to students.

The CNUCDM curriculum is exceptional in dental education in that one of the four themes of the curriculum is Behavioral and Social Sciences which encompasses courses in all four years of the DMD program comprising 36 of 240 DMD program credits. This theme of behavioral and social sciences emphasizes the role of behavioral health, community health, diversity, and cultural humility in the emerging practice of dental medicine in health systems. Highlights of behavioral science education with patient centered approaches include:

- In BSS 522, the fundamentals of dental and medical ethics will demonstrate to the student the intentional actions of beneficence and non-maleficence in dental practice. The protection of patient rights and research subject rights will introduce the student to essential concepts that can effect dental practice decisions such as when a novel procedure approaches the characteristics of human research. The role of the IRB and of the Helsinki statement will be reviewed.
- BSS 662 behavioral medicine will be under the course leadership of the College of Psychology, introduce the student to the minor and major psychiatric illnesses impacting on oral health and the provision of oral health care. This will include substance abuse, dental fear, phobias, and elder and child abuse. Patient centered care for individuals with identifiable psychiatric illnesses can be more effective and more intentional in approach in the practice of dental medicine. BSS 662 will provide the foundation for that consideration.
- BSS 701 dental public health will focus on the behavioral and social determinants of oral health and initiatives to positively influence behavior. Those initiatives can be at the population level including the use of PSA's, social media, entertainment, and even product placement among others.
- BSS 861, BSS 862 are community clerkships where engagement with communities in which developing cultural competency and effective provision of promotion of oral health in a new environment will permit the development of behavioral medicine skills in the student

The courses and descriptions are reprised here:

Behavioral and Social Sciences

Course #	Course Title	Credits	Year	Term
BSS 501	Managing Student Life <i>LAL and Lab</i>	1	DS 1	Fall

Resilience, sustainability as a student and future health professional will be presented. Managing student debt, stress management, effects of social media, interpersonal relationships, and ethics in student practice will be discussed. The problems of drug and alcohol abuse will be shown. Respect in the University including cultural, gender, and sexual conduct issues will be presented. Students will be made aware of resources to promote student wellbeing.

Course #	Course Title	Credits	Year	Term
BSS 522	Ethics in Dental Medicine and Health Care <i>LAL</i>	2	DS 1	Spring

The fundamentals of dental and medical ethics are presented including beneficence and non-maleficence. The Helsinki statement and other aspects of human research guidelines are presented including the role of Human Studies committees. The care of animals in biomedical research is discussed as well as the ethical use of human tissue in clinical care, transplant medicine etc. Ethical financial relationships and the underlying law behind them in clinical practice is discussed. The role of the criminal, tort system, the Board of Dentistry of California, and the ADA in dental ethics is presented.

Course #	Course Title	Credits	Year	Term
BSS 662	Behavioral Medicine (CP Course) <i>LAL, Clinical</i>	3	DS 2	Spring

In this course aspects of clinical psychology of importance in dental practice is presented. Cased base learning will include: minor and major psychiatric illnesses impacting on oral health and the provision of oral health care; elder, spousal and child abuse; dental fear; and, dental phobias.

Course #	Course Title	Credits	Year	Term
BSS 701	Dental Public Health <i>LAL</i>	2	DS 3	Fall

The fundamentals of public health are presented including health and public health measures for health protection, protection from disease and health promotion. The surgeon general's report, 2000, updated 2019, on the status of oral health in America is presented. WHO assessment of oral health globally is presented. Population based initiative to improve oral health are discussed with a focus on clean water and fluoride exposure.

Course #	Course Title	Credits	Year	Term
BSS 721	Practice Management 1 LAL	2	DS 3	Fall

Addressing issues of student debt, career path, and modes of practice will be presented. Operating a dental practice via solo or group practice model and in health systems based practice will be discussed. Issues including human resources management, the actions of the care team in practice and financial responsibility and accounting will be presented.

Course #	Course Title	Credits	Year	Term
BSS 861	Clinical Clerkship: Community-based Education 4 weeks, 30 hours per week plus call CLIN	8	DS 4	Fall

Affiliated health systems based practices will accept CNU students into their care teams where senior students will provide clinical care under the supervision of Volunteer Community-Based Faculty in those sites. Suitable transportation and housing will be arranged for where needed. The purpose of the course is to provide community engagement with the constituencies served, to gain experience in community-based clinical care and to interact with the interprofessional and intraprofessional care team

Course #	Course Title	Credits	Year	Term
BSS 871	Seminar in Dental Public Health SEM	2	DS 4	Fall

This weekly seminar develops through cased based discussions led by student teams the public health issues in oral health in California and globally including access to care, social determinants of oral health, scope of practice issues, insurance and payment systems for oral health, access to fluoride, immunizations especially for HPV, and health protection for vulnerable populations such as children and elderly.

Course #	Course Title	Credits	Year	Term
BSS 822	Practice Management 2 SEM and LAB	2	DS 4	Spring

The simulation of dental practices in various models will be developed by students in groups including addressing issues of hiring, overhead, interaction with vendors, staff development, marketing, accounting and all operations in dental practice. The regulatory environment for pricing, dental insurance, health insurance will be reviewed as well as all aspects of the operation of dental practices.

Course #	Course Title	Credits	Year	Term
BSS 862	Clinical Clerkship: Community-based Education <i>4 weeks, 30 hours per week plus call CLIN</i>	8	DS 4	Spring

This course will be at a second community-based rotation site to elaborate on the activities of the first rotation and engage a new community and a new clinic. In addition to comprehensive care experience, the student will compare and contrast communities and clinical care entities and provide a reflective essay on their community care experience.

Course #	Course Title	Credits	Year	Term
BSS 872	Senior Elective Clinical Clerkship CLIN	6	DS 4	Spring

D4 students will select from additional clerkships available at clinical sites either discipline based or comprehensive care in odontology, oral and maxillofacial studies or human studies. Examples include comprehensive care at a remote clinic (odontology), dental specialty clerkship in oral maxillofacial surgery (OMFS), clerkship in internal medicine (Human Studies), or population health study abroad or in US (BSS).

In addition to the BSS courses, clerkships in comprehensive care dentistry, oral and maxillofacial surgery and pediatric dentistry are especially focused on changing patient behavior to promote, improve and maintain oral health. Some components of this are behavioral modification in pediatrics, pain and anxiety control in oral surgery, and motivational interviewing in periodontology and comprehensive care dentistry

2. Describe how students will be assessed in the application of the fundamental principles of behavioral sciences as they pertain to patient-centered approaches for promoting, improving and maintaining oral health, including the ways by which students demonstrate effective interpersonal communication skills during patient interactions.

The daily formative assessments in clinics as well as the summative competency assessments will all include behavioral, ethical, professional, cultural, communication skills as applicable in the clinical setting. This is ensured as these components are part of the clinical competency assessment rubric. A sample rubric for competency assessment in oral surgery is included to demonstrate this is in [Appendix 2-15 Competency Assessment sample for biomedical science application](#).

Students will as well be evaluated for communication skills and patient interaction in OSCE's where patient communication and ability to elicit information and provide health information is assessed.

All clinical faculty will be educated and calibrated, and assessed for inter-rater reliability with regard to the assessment rubric including behavioral assessment.

B. Supportive Documentation:

1. Student clinical assessment forms, as available

Appendix 2-21 PLO and ILO assessment plan CNUCDM

Appendix 2-24 Competency Assessment - General Rubric for Clinical Dentistry

Appendix 2-15 sample Clinical Competency Assessment

Appendix 2-15 Competency Assessment sample for biomedical science application

2. List of planned student experiences:

a. at public health facilities

The College has developed many MOUs (Memorandums of Understanding) with the Dental Directors of Federally Qualified Health Centers, Native American Health Centers, and other Community Health Service providers in Sacramento County and surrounding counties. These MOUs were established for the purpose of developing multiple off campus clinical rotations through the various public health facilities to provide an enriching educational opportunity for students as well as providing quality care to the patients of these health centers. The College curriculum was designed to ensure students are prepared to practice at a level of skill that generates confidence in the patients, the Health Center's Attending faculty and the Health Center's administrators. The current model for student involvement at public health facilities is designed on an 8 week rotation at the assigned facility. This longer rotation period ensures the students, the health centers patients, and the health center staff serving as faculty have sufficient time to develop a clear understanding of the procedural requirements for providing care specific to the facility that care will be delivered in and that the rotation length provides ample time for the faculty to make outcome based decisions regarding the level of Professionally Entrusted procedures a student is able to undertake.

b. interacting with grade school students

Among the public health facilities we have formed MOUs for Community Based Care facilities are several that have a high level of utilization by families with grade school age children. The practicum training will include patient experiences at both the main campus clinical facilities as well as the Community Based Care facilities ensuring patient encounters with grade school aged children. We are currently developing relationships with Community Based Clinics that are participants in California's Department of Health Care Services Dental Transformation Initiative by developing a Virtual Dental Home for children in the counties that are in close proximity to the CNU College of Dental Medicine. We look forward to being a participant in establishing Dental Homes and/or Virtual Dental Homes through our main clinical services or through community based clinics our students rotate through.

Sacramento District Dental Society originated the Smiles for Kids program which was later adopted by the American Dental Association as Give Kids a Smile. This program relies on volunteers who currently screen 40,000 children in areas of need, provide the children and parents education on the oral health care needs, and provide information for those who qualify

for state or county assistance on options for obtaining care. For those in need who do not qualify for assistance but are unable to obtain care needed are then as part of the Smiles for Kids program taken care of by volunteer dentists. Students from the various hygiene and assisting programs aid the volunteer dentists do the screening and also help in patient care at the multiple clinics each year where up to 1000 children are treated under the Smiles for Kids program in the Sacramento region.

c. interacting with nursing home residents

For residents of nursing homes we are in the process of identifying and developing potential for MOUs for providing care to patients in nursing homes either through on site or referral based care. Currently, we are still in the earliest stages of both identifying possible participants and developing the MOU with the site under consideration. Of note is that Elk Grove is a regional center for senior living including all levels of functionality such as private senior communities, independent living, assisted living, stroke and memory care.

d. participation in health fairs

Regarding having our students participate in Health Fairs, there is clearly the opportunity to have our students participate in many health fairs on many levels. The California Dental Association Foundation provides oral health care to those in need through its CDA Cares free clinics. This event is a twice a year event providing oral health care to 4000 patients a year. Of the roughly 1500 volunteers for each of these two events, a significant number of those volunteers are dental students. It is clearly part of the strategic plan for CNU to develop a relationship with CDA Cares to provide an opportunity to participate in these events. The learning objective for students is understanding the level of need that is unmet in the state and to begin to appreciate the challenges associated with providing care to those in need. In addition there are many local health fairs targeting communities of need where we anticipate developing an opportunity for students to provide oral health education, screening, and explaining options for obtaining services that patients are often not aware they may be qualified to obtain.

3. Course syllabi for behavioral sciences courses

The course syllabi for DMD 1 and DMD 2 students in Behavioral and social Sciences are in the following appendices:

Appendix 2-16 BSS 501 Managing Student Life Syllabus

Appendix 2-16 BSS 522 Ethics Syllabus

Appendix 2-16 BSS 662 Behavioral Medicine Syllabus

STANDARD 2-17

- 2-17** Graduates **must** be competent in managing a diverse patient population and have the interpersonal and communications skills to function successfully in a multicultural work environment.

Intent:

Students should learn about factors and practices associated with disparities in health status among subpopulations, including but not limited to, racial, ethnic, geographic, or socioeconomic groups. In this manner, students will be best prepared for dental practice in a diverse society when they learn in an environment characterized by, and supportive of, diversity and inclusion. Such an environment should facilitate dental education in:

- *basic principles of culturally competent health care;*
- *recognition of health care disparities and the development of solutions;*
- *the importance of meeting the health care needs of dentally underserved populations, and;*
- *the development of core professional attributes, such as altruism, empathy, and social accountability, needed to provide effective care in a multi-dimensionally diverse society.*

A. Description:

1. Describe the planned patient population students will encounter in dental school clinics and extramural sites. How will the dental school ensure that students have experiences functioning in a multicultural work environment?

The greater Sacramento and Elk Grove community is amply described elsewhere in the document. To reprise its essence, the Delta is one of the most economically, socially, racially, religiously, lifestyle, national origin and culturally diverse communities in California and the world. Local schools have need for translation in over 60 major language groups. The current staff and student body at CNU is multicultural in its entirety. All staff faculty and students are immersed in a multicultural environment.

To develop students' knowledge skills and values intentionally in a multicultural way some of the following features of the program should be noted:

- On site student activities include weekly multicultural events and some major ones particularly highlighting the large Asian, Hispanic, and multiethnic communities of the region.
- Current members of the faculty are members of Asian Dental Society, Hispanic Dental Association, National Dental Association, Gay Straight Dental Alliance, Indian Dental Association, among other organizations that will be extended to student groups once enrollment begins.

- Patients will, by reason of clinic locations, be very diverse, but additionally welcoming activities by the above groups and the plenary college community will assure a working diverse environment for patients.
- Multilingual staff and clinical materials especially in Spanish, Mandarin, Vietnamese, and Korean will be offered.
- Clinical rotations include those to diverse clinics such as Asian Health, Shingle Springs Tribal Clinic and HALO health which serves Sacramento's Little Saigon community.
- Social accountability is a core value of CNU and is included in program and course learning objectives.

2. Describe how student interpersonal skills and communication skills will be assessed in a multicultural work environment.

The evaluation of every student in clinical competency assessments includes cultural competency, professionalism and ethics. The ethics course BSS 522 as well provides assessment of professionalism to include empathy and social accountability. The rubrics that assess interpersonal and communication skills noted in Standards 2-15.

Note that each of the competency assessments is linked to the Program Learning Outcomes which are noted as well in every syllabus. Of note in this context is that Program Learning outcome 3: culturally Competent, Empathetic Communication. Here is its rubric to be applied in the areas of professionalism and ethics for each competency assessment

PLO 3: Culturally Competent, Empathic Communication.

Demonstrate patient centered, empathic and culturally competent communication and interpersonal skills

Indicators	Initial	Developing	Developed	Proficient
3.1. Empathy. Demonstrates the ability to communicate with the patient empathically.	• Does not demonstrate the ability to communicate with the patient empathically.	• Demonstrates some ability, but experiences lapses in the ability to communicate empathically	• Demonstrates the ability to communicate empathically, with few lapses.	• Demonstrates an advanced ability, and never experiences lapses in communicating empathically.
3.2. Cultural competence. Demonstrates the ability to engage in communication with the patient that is culturally aware and accepting.	• Does not demonstrate communication and interactions that convey respect or concern for patients and the community.	• Demonstrates communication and interactions characteristic of a minimal level of respect, and little concern for patients and the community is apparent through use of some	• Demonstrates appropriate communication and interactions that are characteristic of a basic level of respect, and concern for patients and the community is apparent through use of appropriate communication,	• Demonstrates professional communication and interactions by showing empathy, respect, and concern for patients and the community through use of appropriate

	<ul style="list-style-type: none"> • Does not demonstrate an awareness of customs, beliefs, or perspectives in diverse patients • Does not demonstrate awareness of cultural and linguistic needs of patients in order to communicate health information 	<p>appropriate communication, but student does not employ follow-up questions for clarification, when necessary, and student provides inappropriate detail in responses</p> <ul style="list-style-type: none"> • Demonstrates a minimal level of awareness of customs, beliefs, or perspectives in diverse patients • Demonstrates minimal awareness of cultural and linguistic needs of patients; either does not or only attempt to adapt behaviors, but does so ineffectively, to communicate health information 	<p>where student uses some clear, but not necessarily relevant or detailed, follow-up questions and responses</p> <ul style="list-style-type: none"> • Demonstrates awareness of customs and beliefs, but may not clarify with patients about personal perspectives • Demonstrates awareness of the cultural and linguistic needs of diverse patients, and adapt behaviors to communicate health information, but communication may not be effective 	<p>communication where follow-up questions (as needed) and responses are clear, relevant, and detailed</p> <ul style="list-style-type: none"> • Demonstrates awareness of customs, beliefs, or perspectives in diverse patients; ask appropriate questions to clarify perspectives and perceptions in diverse patients • Demonstrates full awareness of and responsiveness to cultural and linguistic needs of diverse patients by adapting behaviors appropriately in order to effectively communicate health information
--	--	---	--	--

B. Supportive Documentation:

1. Student clinical assessment forms, as available

Appendix 2-24 Competency Assessment - General Rubric for Clinical dentistry
Appendix 2-21 PLO and ILO assessment plan CNUCDM.

2. Patient feedback surveys and questionnaires, as available

These are in the process of being developed with a plan to engage Press Ganey which will serve as a consistent administrator across CNU clinical programs from patient surveys of satisfaction and feedback including cultural issues. Press Ganey has been useful in the past in that it can provide comparative reports with blinded comparable clinical organizations and provide

longitudinal information to develop continuous improvement. In addition the university is embarking on a climate survey for the fall of 2020.

3. Relevant course syllabi in behavioral sciences, dental public health, and/or epidemiology, as available

Appendix 2-16 BSS 501 Managing Student Life Syllabus

Appendix 2-16 BSS 522 Ethics Syllabus

Appendix 2-16 BSS 662 Behavioral Medicine Syllabus

Practice Management

STANDARD 2-18

2-18. Graduates **must** be competent in applying legal and regulatory concepts related to the provision and/or support of oral health care services.

A. Description:

1. Describe planned student experiences in applying legal and regulatory concepts related to the provision and/or support of oral health care services.

Students will, in every clinical care setting where oral health services are carried out, apply legal and regulatory concepts related to the provision of oral health care services to which they are attached. Additionally in the group meeting and seminar setting, these legal and regulatory issues will be addressed as appropriate to case based presentation and in a didactic fashion.

PROGRAM LEARNING OUTCOMES

The PLOs of the CNUCDM ensure that legal and regulatory concepts are included and mapped to each course in its syllabus. All clinical courses and clinical rotation courses will map to this PLO. This is explicitly noted in program learning outcome #8

Program Learning Outcomes (PLOs): Outcome #8

Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

DIDACTIC

The didactic components of this educational experience to be applied in the clinic are delivered in a topic based fashion in the following courses, herein listed with their associated descriptions

Course #	Course Title	Credits	Year	Term
BSS 721	Practice Management 1 LAL	2	DS 3	Fall

Addressing issues of student debt, career path, and modes of practice will be presented. Operating a dental practice via solo or group practice model and in health systems based practice will be discussed. Issues including human resources management, the actions of the care team in practice and financial responsibility and accounting will be presented.

Course #	Course Title	Credits	Year	Term
BSS 822	Practice Management 2 SEM and LAB	2	DS 4	Spring

The simulation of dental practices in various models will be developed by students in groups including addressing issues of hiring, overhead, interaction with vendors, staff development, marketing, accounting and all operations in dental practice. The regulatory environment for pricing, dental insurance, health insurance will be reviewed as well as all aspects of the operation of dental practices.

In these courses, didactic information related to legal and regulatory issues will explicitly include the following subjects:

1. HIPAA and PHI (protected health information) rules
2. FERPA
3. Human resources including EEO rules
4. Business and taxation rules of dental practices in various forms
5. Dental services organizations (DSOs)
6. Dental insurance
7. Health insurance
8. Medicare and Medicaid, Tricare, federal/uniform services/VA rules
9. CDCP (centers for Disease Control and Prevention) recommendations and rules
10. OSHA
11. Licensure requirements

IN CLINICAL CARE

During the patient encounter the faculty will review each of these concepts with students to be sure they are being applied where appropriate in the care of individual patients. As noted below, these concepts must be reviewed in daily clinical activities, not just to assure proper patient care, but also in the evaluation of students. Specifically the grading rubric on all Standard 2-24 grading rubrics contains a section on legal and regulatory competency assessments

2. Describe how students will be assessed in applying legal and regulatory concepts related to the provision and/or support of oral health care services (e.g., HIPAA, immunization, Basic Life Support, MSDS, licensure requirements).

The assessment of competency in the area of legal and regulatory aspects of care is linked to CNU PLOs and competencies for all of clinical dental education evaluations in clinics where DMD students are engaged in clinical care.

The rubric used assures at the achievement of competency that the DMD student will:

1. Consistently apply appropriate compliance with HIPAA, documentation billing, informed consent and risk management aspects of practice
2. Integrate all aspects of the regulatory environment and consistently applies this knowledge as a skill in clinical practice

3. Reflect on regulatory issues, teach them, apply them proactively and develop supporting policies to assure compliance and improve quality.

B. Supportive Documentation:

1. Student clinical assessment forms, as available

Appendix 2-24 Competency Assessment - General Rubric for Clinical Dentistry

2. Course syllabi related to legal and regulatory concepts, as available

As the BSS courses 721 and BSS 821 in practice management are to be given in year 3 and year 4, these course syllabi have not yet been developed.

STANDARD 2-19

2-19 Graduates **must** be competent in applying the basic principles and philosophies of practice management, models of oral health care delivery, and how to function successfully as the leader of the oral health care team.

A. Description:

1. Describe how dental students will interact and collaborate with other dental care providers, including:
 - a. dental specialists
 - b. dental hygienists
 - c. dental assistants
 - d. dental laboratory technologists

The CNUCDM will include full and part time faculty in all dental specialties. Student will thus interact and collaborate in patient care with every CODA recognized dental specialty in all clinical care settings whether directly or indirectly as will occur in some community based education sites. DMD students will as well be members of the clinical care team with dental specialists while on rotation on clinical clerkships in OMFS 872 orthodontics clerkship, OMFS 752 pediatric dentistry clerkship, OMFS 761, oral and maxillofacial surgery clerkship.

CNUCDM is developing a relationship with regional dental hygiene, dental assisting programs for BSS 861 and 862 clerkships at community sites and additionally in concert with these programs. Implementation of this will not be before 2023,

Two local dental laboratories, one within 100 yards of the main CNUCDM clinical building, are in discussion with the college regarding the performance of clinical laboratory procedures for patients of the college, concurrent with the direct activity of DMD students in communicating and following their laboratory procedures directly with the laboratory. No comprehensive prosthetics laboratory fabrication by indirect analog means is planned within the college clinics, though digital prosthodontics within the college is planned. In the hiring plan is a staff dental laboratory technician to directly interface with DMD students. Every student will, as part of education and competency assessment, provide prescription and instructions to the laboratory technician.

2. Summarize the planned practice management curriculum.

Two courses comprise the subject specific aspects of didactic practice management BSS 721 and BSS 821. These will first be presented in Fall 2022 and Fall 2023 to third and fourth year DMD students.

In addition this knowledge is applied in every clinical setting and is measure in the competency assessments under the CNUCDM competency criteria #7:

Competency #7: Integrates all aspects of the practice management, systems-based practice, legal and regulatory requirements of practice and consistently applies this knowledge as a skill in clinical practice.

BSS 721 addresses issues of student debt, career path, and modes of practice. Operating a dental practice via solo or group practice model and in health systems based practice is discussed. Issues including human resources management, the actions of the care team in practice and financial responsibility and accounting are presented in BSS 721

BSS 822 provides a simulation of dental practices in various models developed by students in groups including addressing issues of hiring, overhead, interaction with vendors, staff development, marketing, accounting and all operations in dental practice. The regulatory environment for pricing, dental insurance, health insurance is reviewed as well as all aspects of the operation of dental practices.

3. Describe any planned student interactions with local or state government officials in relation to oral health care issues.

Fortunately, CNUCDM is located in the capital city of California, our largest state. Meetings have occurred with the state dental director Dr. Jay Kumar who is looking forward to being a resource to our students and speaking to our students. Paul Glassman continues to lead the state-wide initiative for the virtual dental home among other state initiatives which will bring our students and faculty towards activities with county leaders.

4. Describe how students will be assessed in applying the basic principles and philosophies of practice management, models of oral health care delivery, and how to function successfully as the leader of the oral health care team.

As noted in **Appendix 2-24 Mapping of all Competency Assessments**, all clinical competency assessments include evaluation of criteria #7 “Integrates all aspects of the practice management, systems-based practice, legal and regulatory requirement of practice and consistently applies this knowledge as a skill in clinical practice.”

Among the assessments that apply the basic principles and philosophies of practice management, models of oral health care delivery are assessments in the following domains noted in **Appendix 2-24 Mapping of all Competency Assessments** in clinical practice education

1. Infection control
2. CAMBRA
3. Periodontal therapy
4. Caries treatment
5. Comprehensive care
6. Leading the dental team
7. Operative dentistry
8. Endodontic therapy
9. Removable prosthodontics

10. Fixed prosthodontics,
11. Oral surgery
12. Pediatric dentistry
13. Public health

In each of these domains, didactic information, clinical and experiential activities, as well as competency assessments are included in the broad curriculum beyond practice management specific coursework.

B. Supportive Documentation:

1. Student clinical assessment forms, as available

Appendix 2-24 Competency Assessment - General Rubric for Clinical Dentistry

2. Course syllabi related to practice management, as available

Both practice management courses are in years 3 and 4 and are under development at this time.

STANDARDS 2-20

- 2-20** Graduates **must** be competent in communicating and collaborating with other members of the health care team to facilitate the provision of health care.

Intent:

Students should understand the roles of members of the health care team and have educational experiences, particularly clinical experiences that involve working with other healthcare professional students and practitioners. Students should have educational experiences in which they coordinate patient care within the health care system relevant to dentistry.

A. Description:

1. Describe how students will interact and collaborate with other health care providers, including but not limited to:
 - a. primary care physicians, nurses, and medical students
 - b. public health care providers
 - c. nursing home care providers
 - d. pharmacists and other allied health personnel
 - e. social workers

CNU currently has a well-established doctoral culture on campus with students enrolled in both the PharmD and MD programs and, more recently, in the PsyD program. The doctoral culture is pervasive across the University—with research opportunities and support for faculty and students. Research groups at the University have produced over 54 publications, 23 grants, 73 presentations, 37 scholarships and fellowships, four book chapters, and two patents. For the DMD program, establishment of a graduate culture will begin before students enter the program through appropriately rigorous admission requirements. These include a baccalaureate degree, demonstrated academic excellence and high GPA, evidence of scholastic engagement through letters of recommendation, and a driven desire to succeed in the profession as evidenced by their statement of purpose. Doctoral level course requirements are sequential and increase in difficulty and complexity as the student moves through the program gaining the skills and experience necessary to become a dentist. To ensure that students develop the skills and cultivate the attitudes and values needed for the profession, students will be mentored throughout the entire program.

Students in the DMD program will be integrated into the intellectual community of CNU in three fundamental ways. First, they will share the same semester schedule as the College of Pharmacy and the College of Medicine so that students are encouraged to interact through the same break times, vacations, and active class periods. Within this semester schedule, students in the DMD program will take Common Pathways courses with their fellow students in the College of Medicine. These courses in Human Systems will provide opportunities for collaboration in coursework and projects.

Students will also be sharing learning spaces in the library and study halls. Additionally, each college has dedicated laboratory spaces, serving various functions inside the spectrum of research and clinical training. For instance, the College of Medicine has approximately 2,100 square feet of dedicated research space for benchtop research applications for faculty and their student mentees. In addition, the COM possesses a 619 square feet simulation lab composed of two digital manikins, PC read outs and emergency response equipment (crash carts, blood pressure cuffs, pseudo-meds, etc.). This space is allocated for simulated emergency room, trauma applications and ultrasound equipment. The manikins are highly interactive and give the students the opportunity to practice their clinical skills without the guilt or stress of potentially injuring a live patient. . CNUCOP has 3 classrooms of 5,000 square feet each, one sterile compounding lab, an IV sterile compounding lab. It shares the manikin lab with COM as well as an interprofessional education program. The COP has an Advanced Pharmacy Practice Simulation Lab and a new lab with 700 square feet finished in 2018 for drug discovery, pharmacology and virology.

CNU recognizes and promotes appropriate linkages among scholarship, teaching, assessment, student learning, and service. Each college of the University allots a percentage of faculty's time for pursuit of research and/or scholarly activities, including mentoring students in these. The institution clearly defines expectations for research, scholarship, and creative activity for its students. In the COM, students participate in a self-directed scholarly project. In the College of Pharmacy, students participate in scholarly activities, create scientific posters, participate in research with faculty mentors, participate in the CNUCOP Summer Research Fellowship Program, and receive travel assistance to represent the college at professional organization conferences. Additionally, students and faculty participate in a multitude of healthcare-related community service events each year. In fact, the COP students participated in 58 health fairs, health education and related health events from July of 2015 to July of 2016.

Students from the dental program also share certain courses and study groups with the students from the other graduate programs. These include sessions covering Statistics, pharmacology, and the yearlong Leadership in Health Professions course in the senior medicine seminar. Each of the Common Pathway courses in hematology, musculoskeletal/cutaneous, cardiovascular, pulmonary, neurology, gastroenterology and nephrology will have common small group learning sessions. While on clinical rotations in clinics and hospitals, dental students will have interprofessional learning experiences with students in medicine, pharmacy, psychology and allied health programs from affiliated schools.

The College of Dental Medicine is integrated into the fabric of the academic health center most principally with the College of Medicine. Fully 58 of 2140 credits are taught by MD faculty from the COM in Human Systems Studies. Pharmacology is taught in part by COM and College of Pharmacy Faculty and Behavioral Sciences is taught in part by Psychology faculty. In each of these courses a clinical case based learning method is used that will acculturate DMD students into the essential role that the interprofessional team plays in the practice of dental medicine.

Health systems based clinical rotations include sites where primary care medicine, pediatrics, social work, pharmacy, public health leaders, nurses, medical students and others in the clinical care team interact with DMD students on a daily basis. As examples, Asian Health in Oakland has MSW counselors in the dental clinic with appointed patients to manage issues related to mental health and the social determinants of health. In this innovative program under the leadership of Huong Le DDS, these are patients of record in the dental clinic so that the dental

team including CNUCDM students will engage in that care. As another best practice, Colusa Tribal Health has in common patients in the dialysis clinic and transplant clinic who integrate their oral health care at the same site as their medical care. DMD students will interface with the health team in the holistic management of these patients' needs.

Collaboration with three Sacramento regional geriatric domiciliaries and nursing homes is underway to develop a point of service activity at those sites as well as interaction with the care team with regard to improving oral health at those sites. This would be planned for implementation during the clinical years of the first class in 2022-2023.

2. Describe any planned clinical experiences students will have outside of dental school clinics, where medical care or long-term care is the primary focus.

BSS 861 and BSS 862 are the community based education courses which are all in sites where primary medical care occurs. As examples, Halo Health and Shingle Springs share electronic health records, clinical staff, registration etc. Under the State of California authority, pediatric patients of record at those sites and at Wellspace clinics have their dental home at those sites as well and are engaged in a value based payment system. El Dorado Community Health only treats dental patients who also have primary care at the site. Sites such as these have staff case conferences where dental, medical, behavioral and social work teams optimize the care plans for individual patients. It is expected that DMD student will participate in those conferences as do other health professions learners at those sites.

3. Describe how the student will be assessed, including any assessment mechanism made by non-dental school faculty, for:

- communication
- collaboration

Non-dental faculty in the College of Medicine will be providing formative and summative assessments of students in the following courses:

1. Hematology HS 526
2. Musculoskeletal HS 511
3. Neuroscience HS 551
4. Renal HS 611
5. Gastrointestinal HS 621
6. Endocrine HS 631

And in the following case-based seminars:

1. HS 722
2. HS 821
3. HS 822

The CNUCDM competency statements include four of the seven that focus most directly on Communication and Collaboration. These are:

Statement 1: Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion.

Statement 2: Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.

Statement 6: Applies the tenets of ethical behavior and professionalism with exemplary leadership empathy, clinical behavioral understanding customized to the patient's needs.

Statement 7: Integrates all aspects of the practice management, systems-based practice, legal and regulatory requirements of practice and consistently applies this knowledge as a skill in clinical practice.

Each of these competency statements are addressed in the assessment mechanisms (ASSESSMENT METHODS) associated to the Human Systems Summative Competency Assessments (HS SCA) as reprised below in the right column for each assessment.

HS SCA	Course number	Assessment Method Domains	Prerequisites	Comments And Competency Statement Numerical links
Bleeding disorder	HS 526	OSCE PS, CR, CS	Didactic material HS 526	2, 3, 4, 6, 7
Leukemia	HS 526	OSCE PS, CR, CS	Didactic material HS 526	2, 3, 4, 6, 7
Anemia	HS 526	OSCE PS, CR, CS	Didactic material HS 526	2, 3, 4, 6, 7
Arthritis	HS 511	OSCE PS, CR, CS	Didactic material HS 526	2, 3, 4, 6, 7
Osteoporosis	HS 511	OSCE PS, CR, CS	Didactic material HS 526	2, 3, 4, 6, 7
Stroke	HS 551	OSCE PS, CR, CS, EDM	Didactic material HS 551	2, 3, 4, 6, 7
Parkinson's Disease	HS 551	OSCE PS, CR, CS, EDM	Didactic material HS 551	2, 3, 4, 6, 7
Renal failure	HS 611	OSCE	Didactic material HS 641	2, 3, 4, 6, 7

		PS, CR, CS		
Acid/base acute infection	HS 611	OSCE PS, CR, CS	Didactic material HS 641	2, 3, 4, 6, 7
Chronic hepatitis	HS 621	OSCE PS, CR, CS	Didactic material HS 621	2, 3, 4, 6, 7
Type 2 diabetes	HS 671	OSCE PS, CR, CS	Didactic material HS 671	2, 3, 4, 6, 7
Hyperthyroidism	HS 671	OSCE PS, CR, CS	Didactic material HS 671	2, 3, 4, 6, 7
Poly pharmacy	HS 642	OSCE PS, CR, CS, EDM	HS 642 and other HS courses	2, 3, 4, 6, 7
Complex medical case assessment: Cardiovascular/pulmonary	HS 721	Patient based PS, CR, CS, P, EDM	Concurrent medicine seminar	2, 3, 4, 6, 7 Patient selected from student's existing patients
Complex medical case assessment: Endocrine/oncology/OB/ GI or transplant	HS 722	Patient based PS, CR, CS, P, EDM	Concurrent medicine seminar	2, 3, 4, 6, 7 Patient selected from student's existing patients
Complex medical case assessment: Interdisciplinary/hospital based	HS 821	Patient based PS, CR, CS, P, EDM	Concurrent medicine seminar	2, 3, 4, 6, 7 Patient selected from hospital consults while on rotation
Complex medical case assessment: preanesthetic/pre surgical consult	HS 822	Patient based PS, CR, CS, P, EDM	Concurrent medicine seminar	2, 3, 4, 6, 7 Patient selected from preop pool evaluated by student

B. Supportive Documentation:

1. Student assessment forms, as available, which will assess, at a minimum:
 - a. ability to identify that consultation is required
 - b. ability to articulate reason for interaction which is correct and accurate
 - c. ability to integrate recommended medical treatment into dental treatment plan

Please refer to [Appendix 2-8 CNU Assessment Handbook](#) and [Appendix 2-24 Competency Assessment - General Rubric for Clinical Dentistry](#) which includes identification of need for consultation, critical thinking reasoning and biomedical integration with dental treatment plan.

2. List of extramural clinics and sites planned to date that are intended to provide interaction and collaboration with other members of the health care team

Teaching and clinical education agreements (MOUs) for community-based education courses BSS 861 and BSS 862 have been completed and are under development for implementation in 2022-2023 rotations with Asian Health Services (Oakland), HALO Health (Sacramento), Indian Health Centers of Sacramento, Colusa County, Wellspace, El Dorado Community Health , and Shingle Springs Indian Health.

3. Course syllabi for behavioral sciences courses

[Appendix 2-16 BSS 501 Managing Student Life Syllabus](#)

[Appendix 2-16 BSS 522 Ethics Syllabus](#)

[Appendix 2-16 BSS 662 Behavioral Medicine Syllabus](#)

STANDARD 2-21

Ethics and Professionalism

2-21 Graduates **must** be competent in the application of the principles of ethical decision making and professional responsibility.

Intent:

Graduates should know how to draw on a range of resources, among which are professional codes, regulatory law, and ethical theories. These resources should pertain to the academic environment, patient care, practice management and research. They should guide judgment and action for issues that are complex, novel, ethically arguable, divisive, or of public concern.

A. Description:

1. Summarize the planned curriculum in ethics and professionalism. Address the areas of academic environment, patient care, practice management and research.

Ethics and professionalism is a discipline based course BSS 522 and is also included in every aspect of the curriculum, academic environment, patient care and scholarly environment.

BSS 522 given in the first year, addresses the didactic aspects of professionalism and ethics to delineate the components and even the nomenclature of ethics. It includes sections on patient autonomy, justice, veracity, beneficence, and non-maleficence. Application of these principles in the patient interview, treatment planning informed consent, and the administration of dental care is addressed in this course. A case based approach to address the ethical dilemmas of solo and group practice, and systems-based practice and in licensure are reviewed in the course. The students are broken into small groups with faculty for salons where free and unstructured discussion is used tied to specific ethical considerations in practice to elucidate the parameters of ethics as applied in practice.

The principles developed in BSS 522 are augmented throughout the curriculum in the clinical practicum. The linked program learning outcomes to ethics include PLO #6 Ethics and Professionalism and PLO #3 culturally competent, empathic communication.

The assessment of the PLOs regarding ethics and professionalism as the program is developed in 2022 and 2023 is shown in [Appendix 2-21 PLO and ILO assessment Plan CUNCDM](#). It demonstrates that for the clinical clerkships in comprehensive care dentistry and oral maxillofacial surgery a reflection paper, presentations of clinical case demonstrating ethical issue as well as formative and summative evaluation that address the PLOs and competencies associated to ethics are utilized.

The guidelines for applications of the principles of ethics in these endeavors is contained within the Honor Code of CNU CDM [Appendix 2-20 Honor Code](#). This Honor code is based upon the

principles of Respect, Honesty and Integrity, Legal Standards and Ethical Behavior, Professionalism.

Each student is presented the Honor Code at the time of acceptance to the program for signature. It is again reviewed and signed concurrently by the entire class at the White Coat Ceremony at the summer of the first year at which time the Hippocratic Oath (as revised by the Class of 2024 prior to the White Coat Ceremony) is also made by the Class.

2. Describe the intended role of students in the school's disciplinary board.

The honor code of the CNUCDM describes the student involvement in the Honor Board, the Office of Academic Affairs, and Office of Student Affairs. Please refer to [Appendix 2-20 Honor Code](#) and [Appendix 2-3 2020-2021 CNUCDM Student Handbook](#).

In this document it is noted that 3 student members, two faculty members and members of student affairs committee will serve on the Honor Council to review potential violations of the Code and make recommendations for rectification.

It is intended that a high level of student engagement in this task will further promote student understanding of their professional responsibility and of the essential role of ensuring ethics in all clinical care teams and academic clinical environments.

3. Describe how students will be assessed in the application of the principles of ethical decision making and professional responsibility.

Competency assessments and formative assessments as linked to the program learning outcomes and the competencies for the CNUCDM.

CNUCDM graduation Competency #6 is: Apply the tenets of ethical behavior and professionalism with exemplary leadership empathy, clinical behavioral understanding customized to the patient's needs.

CNUCDM PLOs are also linked to the assessment rubrics for measurement of specific and global competencies. Those pertaining to ethics and professionalism are in [Appendix 2-4 DMD PLO Rubric](#) specific to PLO 1, 3 and 6 and noted here;

PLO 1: Patient-Centered Care

Demonstrate understanding of healthcare disparities and cultural awareness and capability in patient counseling and providing appropriate patient advocacy

Indicators	Initial	Developing	Developed	Proficient
1.1. Education. Demonstrates ability to educate all audiences through effectively communicating	<ul style="list-style-type: none">• Does not appropriately counsel patients• Does not check for	<ul style="list-style-type: none">• Counsels patients but leaves out pertinent information needed by patient	<ul style="list-style-type: none">• Generally demonstrates empathy, communicates accurate information clearly, checks	<ul style="list-style-type: none">• Consistently demonstrates empathy, communicates accurate information clearly, checks

information and assessing learning	<p>understanding, ask questions, and/or asks inappropriate questions.</p> <ul style="list-style-type: none"> • Does not demonstrate the ability to find and utilize appropriate resources and references necessary for providing accurate counseling, consultation and education 	<ul style="list-style-type: none"> • Communicates with basic level of clarity but does not always check for understanding or rephrase when confusion occurs. • Demonstrates the ability to find a one or two resources, yet the resources are not the best or most appropriate for providing accurate counseling, consultation and education 	<p>for understanding</p> <ul style="list-style-type: none"> • Seeks to ensure understanding and generally asks questions. • Frequently demonstrates the ability to find and utilize appropriate resources and references necessary for providing accurate counseling, consultation and education 	<p>for understanding</p> <ul style="list-style-type: none"> • Ensures understanding and asks appropriate questions. • Consistently demonstrates the ability to find and utilize appropriate resources and references for providing accurate patient counseling, consultation and education
<p>1.2. Patient advocacy. Represents the patient's best interests</p>	<ul style="list-style-type: none"> • Does not demonstrate the ability represent a patient's best interest 	<ul style="list-style-type: none"> • Demonstrates awareness of issues that impact a patient • Demonstrates minimal ability to articulate these issues but does not demonstrate ability to sufficiently advocate on a patient's behalf 	<ul style="list-style-type: none"> • Demonstrates sufficient awareness of issues that impact a patient • Demonstrates ability to articulate these issues • Demonstrates ability to sufficiently advocate on a patient's behalf 	<ul style="list-style-type: none"> • Demonstrates full awareness of the most important issues that impact a patient • Demonstrates ability to clearly and effectively articulate these issues • Demonstrates ability to effectively advocate on a patient's behalf

PLO 3: Culturally Competent, Empathic Communication.

Demonstrate patient centered, empathic and culturally competent communication and interpersonal skills

Indicators	Initial	Developing	Developed	Proficient
3.1. Empathy. Demonstrates the ability to communicate with the patient empathically.	<ul style="list-style-type: none">• Does not demonstrate the ability to communicate with the patient empathically.	<ul style="list-style-type: none">• Demonstrates some ability, but experiences lapses in the ability to communicate empathically	<ul style="list-style-type: none">• Demonstrates the ability to communicate empathically, with few lapses.	<ul style="list-style-type: none">• Demonstrates an advanced ability, and never experiences lapses in communicating empathically.
3.2. Cultural competence. Demonstrates the ability to engage in communication with the patient that is culturally aware and accepting.	<ul style="list-style-type: none">• Does not demonstrate communication and interactions that convey respect or concern for patients and the community.• Does not demonstrate an awareness of customs, beliefs, or perspectives in diverse patients• Does not demonstrate awareness of cultural and linguistic needs of patients in order to communicate health information	<ul style="list-style-type: none">• Demonstrates communication and interactions characteristic of a minimal level of respect, and little concern for patients and the community is apparent through use of some appropriate communication, but student does not employ follow-up questions for clarification, when necessary, and student provides inappropriate detail in responses• Demonstrates a minimal level of awareness of customs, beliefs, or perspectives in diverse patients• Demonstrates minimal awareness of cultural and linguistic needs of patients; either does not or only attempt to adapt	<ul style="list-style-type: none">• Demonstrates appropriate communication and interactions that are characteristic of a basic level of respect, and concern for patients and the community is apparent through use of appropriate communication, where student uses some clear, but not necessarily relevant or detailed, follow-up questions and responses• Demonstrates awareness of customs and beliefs, but may not clarify with patients about personal perspectives• Demonstrates awareness of the cultural and linguistic needs of diverse patients, and adapt behaviors to communicate health	<ul style="list-style-type: none">• Demonstrates professional communication and interactions by showing empathy, respect, and concern for patients and the community through use of appropriate communication where follow-up questions (as needed) and responses are clear, relevant, and detailed• Demonstrates awareness of customs, beliefs, or perspectives in diverse patients; ask appropriate questions to clarify perspectives and perceptions in diverse patients• Demonstrates full awareness of and responsiveness to cultural and linguistic needs of diverse patients by adapting behaviors

		behaviors, but does so ineffectively, to communicate health information	information, but communication may not be effective	appropriately in order to effectively communicate health information
--	--	---	---	--

PLO 6: Ethics and Professionalism.

Demonstrating professionalism and ethical decision making

Indicators	Initial	Developing	Developed	Proficient
6.1. Professionalism. Demonstrates behaviors and values that are consistent with the trust given to the profession by patients, other healthcare providers, and society	<ul style="list-style-type: none"> Does not consistently demonstrate professional attitudes and behaviors (altruism, excellence, duty, accountability, honesty, and integrity) Demonstrates frequent lapses in accountability or quality of work 	<ul style="list-style-type: none"> Demonstrates some professional attitudes and behaviors yet there is inconsistency that may impede on the quality of work or treatment of patients and other healthcare team members (altruism, excellence, duty, accountability, honesty, and integrity) 	<ul style="list-style-type: none"> Generally demonstrates most of the professional attitudes and behaviors (altruism, excellence, duty, accountability, honesty, and integrity) that are required in the profession Demonstrates ability to use these behaviors and values to improve healthcare 	<ul style="list-style-type: none"> Consistently demonstrates the professional attitudes and behaviors that uphold the integrity and competence of the work and the treatment of patients and other healthcare team professionals (altruism, excellence, duty, accountability, honesty, and integrity) Consistently uses these behaviors and values to improve healthcare
6.2. Ethics. Demonstrates the ability to make decisions consistent with the values of practitioners and scholars of oral healthcare.	<ul style="list-style-type: none"> Does not make ethical decisions consistent with the values of practitioners and scholars of oral healthcare. 	<ul style="list-style-type: none"> Demonstrates the ability to exercise ethical decision making, and a rudimentary knowledge of ethics within oral healthcare. 	<ul style="list-style-type: none"> Demonstrates the ability to exercise clear and ethical decision making, and a sufficient knowledge of ethics within oral healthcare. 	Demonstrates the ability to exercise clear and ethical decision making, and an advanced knowledge of ethics within oral healthcare.

These evaluations are included in the rubrics that match the evaluations to the PLOs and the Competencies. In these evaluations and in self-evaluations by the students performed in E*Value, those domains are addressed.

In addition, a PCR report is completed for any professional concern that is raised in the academic or clinical setting. This report includes the description of the incident and the evaluation of the student with regard to the application of principles of ethical decision making and professional responsibility: [Appendix 2-21 Professionalism Concern Report Fillable CDM](#).

4. Describe the resources students will be exposed/referred to in considering ethical decision-making.

B. Supportive Documentation:

1. Student assessment forms, as available

[Appendix 2-20 Honor Code](#)

[Appendix 2-4 DMD PLO Rubric](#)

[Appendix 2-3 2020-2021 CNUCDM Student Handbook](#)

[Appendix 2-21 Professionalism Concern Report Fillable CDM](#)

2. Course syllabi related to ethics and professionalism, as available

[Appendix 2-16 BSS 522 Ethics Syllabus](#)

[Appendix 2-16 BSS 662 Behavioral Medicine Syllabus](#)

STANDARD 2-22

- 2-22** Graduates **must** be competent to access, critically appraise, apply, and communicate scientific and lay literature as it relates to providing evidence-based patient care.

Intent:

The education program should introduce students to the basic principles of clinical and translational research, including how such research is conducted, evaluated, applied, and explained to patients.

A. Description:

1. Summarize the planned curriculum concerning the basic principles of clinical and translational research.

Students are gaining didactic knowledge into the investigative process, scientific method and clinical research design throughout the curriculum. The tools for **Accessing** scientific literature are developed first in orientation to the medical library in which medical librarians present the resources available. These include Ovid, Science Direct, the full resources of the National Library of Medicine including Medline, OMIM, oncology, and other specific data bases such as for HIV. In addition, the in print and electronic reserve are presented and demonstrated.

The following databases are available through the Library webpage for all the University community:

- **AccessMedicine** - from McGraw-Hill is an online resource containing electronic copies of major medical and health related textbooks.
- **AccessPharmacy** – from McGraw-Hill is an online curricular resource designed to meet the changing demands of pharmacy education. Containing electronic copies of major pharmacy textbooks. AccessPharmacy allows students to select a core curriculum topic, browse by organ system, review textbooks, or search across leading pharmacy online references.
- **APhA PharmacyLibrary** – features content from a selection of APhA’s authoritative textbooks, an interactive NAPLEX® review, case studies, and a variety of news sources.
- **Bates Visual Guide** – A collection of physical examination videos for different systems.
- **Clinical Pharmacology** – a complete drug and toxicology information solution for improved decisions and prevention of clinical quality shortfalls at any point of care.

- **EBSCO Academic Search Premiere** – A bibliographic multi-disciplinary full-text database, with more than 8,500 full-text periodicals, including more than 7,300 peer-reviewed journals.
- **Micromedex** – a suite of databases including Drugdex which provides evidence-based, unbiased, fully referenced information and independently reviewed data from major drug centers and pharmacology services worldwide; Identidex which identifies pharmaceuticals by the imprint code and secondary characteristics such as color, size and shape; and Poisindex which identifies ingredients for hundreds of thousands of commercial, biological, and pharmaceutical products.
- **Natural Standards** – is a database founded by clinicians and researchers to provide high quality, evidence-based information about complementary and alternative therapies.
- **OVID** – A collection of approximately 50 full-text journals from the American Journal of Cardiovascular Drugs to Therapeutic Drug Monitoring. An additional 3000+ journals have indices and abstracts available here.
- **Resources A-Z** – A searchable electronic listing of all our current electronic journals over all our platforms.
- Online public access card catalog for books and other physical items.
- Interlibrary Loan Request form

The course **Foundations of Dental Medicine OMFS 511** specifically presents a systematic approach to the **assessment, critical appraisal and communication** of all clinical peer reviewed scientific studies which are the foundation of all clinical scientific knowledge. OMFS 511 presents:

CONSORT: Consolidated standards of reporting Trials: the international standards for reporting clinical comparative and placebo controlled studies, along with its 25 item checklist that assesses items such as the use of a valid control group, case flow charts, and inclusion and exclusion criteria and how to check for their validity.

PRISMA: Preferred reporting items for systematic reviews and Meta-Analyses: the international standards for reporting reviews of multiple studies for assessment of conclusions that can be validly asserted across multiple investigations.

STROBE: Strengthening the reporting of observational studies in epidemiology: the international standards for reporting case controlled studies, case series and population based clinical studies.

Most courses offer the opportunity and many have the requirement for **Critical Appraisal, Application and Communication** of the scientific literature.

In the first and second year biomedical sciences Human Studies course, all courses rely on peer reviewed literature, searching biomedical data bases and applying them to group and individual projects that utilized biomedical research to inform and illustrate solutions to biomedical questions. This is particularly utilized method in the small group learning components CCMP.

All seminars in the third and fourth year in periodontology, medicine, oral medicine and those associated to comprehensive care dentistry and rotations include case based presentations in

which accessing and utilizing scientific literature appropriately vetted for validity using the above standards will be carried out.

Lay literature is reviewed in the Behavioral and Social Sciences section of the curriculum where issues related to lay understanding of oral and human diseases are associated to life choice decisions made by patients, the social determinants of health and others. All courses refer to lay literature including social media, the press, television, internet and public forums are noted in the chart below.

All courses with such group presentations are noted in the following chart and highlighted for active presentations utilizing the above criteria.

CNUCDM Courses that apply the basic principles of Clinical Translational Research in Active Learning for **Access, Appraisal, Application** and **Communication** follow:

Year 1

Course	Access	Appraise	Apply	Communication	Lay literature
Hematology	x	x	x	x	
Integumentary and Musculoskeletal Systems	x	x		x	
Foundations of Odontology	x	x	x	x	x
Dental Anatomy					
Foundations of Dental Medicine	x	x	x	x	x
Managing Student Life					
Neuroscience	x	x	x	x	
Cardiovascular and Pulmonary Systems	x	x	x	x	
Cariology	x	x	x		
Oral Microbiology/Immunology	x	x			
Surgical Anatomy of the Head and Neck					
Ethics in Dental Medicine and Health Care	x	x	x	x	

Year 2

Course	Access	Appraise	Apply	Communicate	Lay literature
Renal System	x	x	x	x	
Gastroenterology	x	x	x	x	
Endocrine System	x	x	x	x	
Clinical Pharmacology 1	x	x			
Operative Dentistry					
Periodontology (Fall and Spring)	x	x			
Dental Anesthesiology 1, Local Anesthesia					
Oral Radiology 1					
Clinical Pharmacology 2/Oral Pharmacology					
Prosthodontics and Implant Dentistry: Removable Prosthodontics					
Comprehensive Care Family Dentistry	x	x	x	x	
Endodontology, Diseases of the Pulp and Pathways of Odontogenic Infection					
Dental Anesthesiology 2: Pain and Anxiety Control,					
Oral Pathology/Oral Medicine 1					
Orthodontics and Craniofacial Growth and Development					
Behavioral Medicine	x	x	x	x	x
Dental Medicine at all Stages of Life	x	x	x	x	x

Year 3

Course	Access	Appraise	Apply	Communicate	Lay literature
Junior Year Medicine Seminar (fall, spring)	x	x	x	x	
Prosthodontics and Implant Dentistry: Fixed Prosthodontics	x	x	x	x	
Comprehensive Care Family Dentistry	x	x	x	x	
Oral Radiology 2	x	x	x	x	
Principles of Oral Surgery	x	x	x	x	
Pediatric Dentistry	x	x	x	x	
Dental Public Health	x	x	x	x	x
Practice Management 1					
Periodontology Seminar	x	x	x	x	
Oral Pathology/Oral Medicine 2	x	x	x	x	
Clinical Clerkship: Oral and Maxillofacial Surgery	x	x	x	x	
Clinical Clerkship: Pediatric Dentistry	x	x	x	x	

Year 4

Course	Access	Appraise	Apply	Communicate	Lay literature
Senior Year Medicine Seminar	x	x	x	x	
Periodontology Seminar	x	x	x	x	
Prosthodontics and Implant Dentistry: Implant Surgery and Prosthodontic Reconstruction	x	x	x	x	
Comprehensive Care Family Dentistry	x	x	x	x	
Oral Radiology Seminar	x	x	x	x	
Clinical Clerkship: Community-Based Education					
Seminar in Dental Public Health	x	x	x	x	x
Oral Pathology/Oral Medicine Seminar	x	x	x	x	
Clinical Clerkship: Orthodontics	x	x	x	x	
Advanced Topics in Oral and Maxillofacial Surgery	x	x	x	x	
Practice Management 2					x
Clinical Electives	x	x	x	x	

- Describe how students will be assessed in their ability to access critically appraise, apply, and communicate scientific and lay literature as it relates to providing evidence-based patient care.

Each of the course syllabi completed to date include the assessment of student performance in individual and group based presentations of relevant scientific and lay literature as it pertains to its communication in seminars and in group plenary presentations. Application of these principles in evidence-based care is a component of the rubrics utilized for Competency Assessments in the clinical setting.

B. Supportive Documentation:

- Student assessment forms, as available

Appendix 2-24 Competency Assessment - General Rubric for Clinical Dentistry

2. Course syllabi related to clinical and translational research, as available

Appendix 2-22 ODONT 511 Foundations of Odontology Syllabus

Appendix 2-24 OMFS 511 Foundations of Dental Medicine Syllabus

Appendix 2-1 Consolidated Course Syllabi

STANDARD 2-23

2-23 Graduates **must** be competent in providing oral health care within the scope of general dentistry to patients in all stages of life.

A. Description:

1. Describe the dental school's definition/parameters of the scope of general dentistry.

The parameters of the practice of dental medicine

The parameters of the general practice of dental medicine include the ability to prevent, diagnose and develop treatment plans for the control and cure of diseases of the oral cavity and associated structures within the scope of the Dental Practice Act of California. The parameters include the performance of procedures of the oral soft and hard tissues to competently restore diseased teeth, replace missing teeth, address diseases of the periodontium, and assess diseases of the oral mucosa, maxillofacial region and jaws. Parameters for prevention include population-based oral health measures, homecare, and medical management of caries and periodontal diseases. The scope of practice of dentistry as defined by CNUCDM respects the eclectic and broad nature of dental practice in California as well as the general access to dental specialists. Competency at the time of graduation is meant to demonstrate a safe initial practitioner of dental medicine for whom additional training and experience in areas of need and interest will be promulgated through formal and informal graduate and continuing education, and lifelong learning.

Definition of the scope of general dentistry

The scope of the practice of general dentistry at CNUCDM is for the general dentist to be the key resource for patients to gain the benefits of good oral health. The state of oral health is defined as the optimal contribution of the oral and maxillofacial complex to the wellbeing of the patient. The general dentist applies a scope of practice to achieve the goal of oral health with the necessary, knowledge, skill and values to make complete and holistic diagnoses of conditions, to administer/deliver care within appropriate skill sets as credentialed in practice, to refer to dental and medical/surgical specialists appropriately for care beyond the capacity and credentialing of the general dentist, and to effectively lead/participate in interprofessional/intraprofessional teams to achieve the best oral health outcomes, at the highest efficiency of resource utilization, and with the best patient/clinical team experience.

2. Discuss the school's definition/categorization of the stages of life and how treatment will be modified to reflect the stages of life.

The stages of life are described in the interprofessional colloquium entitled "Stages of Life" given now as a course in the College of Medicine headed by Dr. Louise Glaser MD. It is planned that this will be an interprofessional colloquium beginning in 2021 with participation of the DMD, D Pharm, and D Psych students. It is listed in the Dental course listing now as OMFS 621. The description follows (though the syllabus for administration in 2021/2022 will be developed as an IPE course)

Course #	Course Title	Credits	Year	Term
OMFS 621	Dental Medicine at All Stages of Life	3	DS 2	Fall

Growth, development, function and the human experience from birth to death will be presented including the impact of oral health and oral health interventions, prevention, disease promotion and treatment at all stages. This topic is developed from the biologic, social, economic and cultural aspects of the human experience.

The CDM has begun work on this IPE component at the time of this submission which is based on the College of Medicine course included as: [Appendix 2-23 COM 591 Stages of Life Course Syllabus 2018-19](#). In its description:

- This course spans the human life cycle beginning with birth and infancy and concluding with the dying patient and elders. We will discuss normal growth and development at each stage as well as common challenges.
- Course Content is intended to be high yield both for important basic science and medicine of the first two years of medical school as well for entering clerkships and caring for patients. Material will be presented via a variety of formats including but not limited to: Clinical presentations, Clinical cases, CCBLs, faculty – student interactive sessions, and small and large group activities.

The categories are as following:

1. Birth
2. Infancy
3. Childhood
4. Adolescence
5. Adulthood
6. Old age
7. Moribund

Course content will be directed to each of these ages affected by the human biology education provided, by the odontologic needs of each of these stages of life, by oral and maxillofacial considerations at all stages of life, and by the behavioral and social sciences issues arising during these stages. The considerations for each of these as provided didactically and applied clinically in the care of patients is mapped for each of the courses to follow:

If the component is in the didactic phase of the curriculum (THOUGH CLINICAL CASES ARE PRESENTED IN THE DIDACTIC CURRICULUM AS WELL) it is marked with a D and if in the clinical part of the curriculum it is marked with a C

3. Describe how students will be assessed in providing oral health care based on the school's definition of scope of general dentistry and the school's definition/categorization of the stages of life.

Student assessment in providing oral health care will be by the following means depending upon the course.

Competency assessments (both formative and summative) include laboratory, desktop, clinical simulation, practice simulation, OSCE, patient based, oral case presentation, and reflective essays. All of these are clinical assessments regarding oral health care. The method of evaluation is based upon the following criteria:

- What is being measured
- What needs to be developed to assure objective and repeatable and consistent measurement across encounters
- What is a practical and cost effective means of assessment

Attached to each assessment is the demographics of the patient being treated which can be matched with regard to stage of life. It is labeled on the evaluation form as follows in [Appendix 2-24 Competency Assessment – General Rubric for Clinical dentistry](#)

Competency Assessment: Grading Rubric
Including application of biomedical sciences, behavioral sciences, ethics and professionalism

Stage of life of patient (circle one)

1. Birth
2. Infant
3. Childhood
4. Adolescence
5. Adulthood
6. Old age
7. Moribund

It is not intended that every student would do every procedure on patients in all stages of life since that is not needed in clinical care. It is intended that for the clinical care being provided for that stage of life that is appropriate to the patient's needs, the students will gain experience and be assessed.

As a practical matter, the treatment needed for patients at stages 1 "birth" and 7 "moribund" will occur with great inconsistency in the curriculum of CNUCDM as it would with every dental and medical school. Thus all students will not have that experience. However, some students will still have clinical experiences related to these stages of life and they can serve as guideposts in seminar to other students. These include perinatal oral health care, and palliative oral health care in hospice and other end of life settings.

All students will have clinical experience and be assessed in stages 2, 3, 4, 5, 6 which includes infancy, childhood, adolescence, adulthood and old age. Assessment rubrics for these areas will include the student's biomedical, behavioral and social accommodations to the stage of life in the competency assessment.

B. Supportive Documentation:

2. Student assessment forms, as available

Appendix 2-24 Competency Assessment - General Rubric for Clinical Dentistry

Appendix 2-24 parameters and scope of general dentistry at CNUCDM

STANDARD 2-24

Standard 2-24 Clinical Sciences Education

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

- a. patient assessment, diagnosis, comprehensive treatment planning, prognosis, and informed consent;
- b. screening and risk assessment for head and neck cancer;
- c. recognizing the complexity of patient treatment and identifying when referral is indicated;
- d. health promotion and disease prevention;
- e. local anesthesia, and pain and anxiety control, including consideration of the impact of prescribing practices and substance use disorder;
- f. restoration of teeth;
- g. communicating and managing dental laboratory procedures in support of patient care;
- h. replacement of teeth including fixed, removable and dental implant prosthodontic therapies;
- i. periodontal therapy;
- j. pulpal therapy;
- k. oral mucosal and osseous disorders;
- l. hard and soft tissue surgery;
 - m. dental emergencies;
- n. malocclusion and space management; and
- o. evaluation of the outcomes of treatment, recall strategies, and prognosis

Intent:

Graduates should be able to evaluate, assess, and apply current and emerging science and technology. Graduates should possess the basic knowledge, skills, and values to practice dentistry, independently, at the time of graduation. The school identifies the competencies that will be included in the curriculum based on the school's goals, resources, accepted general practitioner responsibilities and other influencing factors. The comprehensive care experiences provided for patients by students should be adequate to ensure competency in all components of general dentistry practice. Programs should assess overall competency, not simply individual competencies in order to measure the graduate's readiness to enter the practice of general dentistry.

A. Description:

1. For each of the areas (a. through o.) provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.
2. Describe how the school will ensure that comprehensive care experiences provided for patients by students are adequate to ensure competency in all components of general dentistry practice.

3. Describe how students will be assessed in each of the areas (a. through o.)
4. Describe how students overall competency will be assessed to determine the graduate's readiness to enter the practice of general dentistry.
5. Describe how competency for each of the areas (a. through o.) will be met and ensured for all graduates.

FORMATTING NOTE TO CODA:

CNUCDM is addressing the 1, 2, 3, 4 and 5 components (above) of Standard 2-24 in the following format. Items 2 and 4 are addressed in this introductory section as they do not request formatting a. through o., while items 1, 3, and 5 do require an assessment a. through o. and are placed within each section to follow in each section (a. through o.) titled NARRATIVE SUPPORTING STANDARD.

INTRODUCTION

CNUCDM defined the general dentist as the key resource for patients to gain the benefits of good oral health. The state of oral health is defined as the optimal contribution of the oral and maxillofacial complex to the wellbeing of the patient. The general dentist applies a scope of practice to achieve the goal of oral health with the necessary, knowledge, skill and values to make complete and holistic diagnoses of conditions, to administer/deliver care within appropriate skill sets as credentialed in practice, to refer to dental and medical/surgical specialists appropriately for care beyond the capacity and credentialing of the general dentist, and to effectively lead/participate in interprofessional/intraprofessional teams to achieve the best oral health outcomes, at the lowest cost and with the best patient/clinical team experience.

CNUCDM sees its future graduating dentists as having achieved the level of global competency in all facets of clinical dentistry that can be applied in conjunction and holistically for the benefit of the patient.

Regarding the individual competencies for Standard 2-24 it is believed that substantial clinical experience in all facets of care must be the cornerstone to the development of competency.

However the pedagogic aspects of competency assessment require a variety of tools including simulation, machine/computer assessments, OSCE's, or laboratory based assessment. The assessment of competency is not a one-time activity but is based importantly on formative assessments, daily observations, evaluation of experiential volume, as well as the competency assessment itself.

Ensuring comprehensive care experiences are adequate to ensure competency

Description #2: Describe how the school will ensure that comprehensive care experiences provided for patients by students are adequate to ensure competency in all components of general dentistry practice.

All dental students will begin clinical training in their first year, utilizing the preclinical laboratory and clinical simulation labs, as well as with initial clinical experiences as part of the care team in the clinic. The clinical training will be linked to the Program Learning Outcomes and Institutional Learning Outcomes of the university, including such outcomes as professionalism and ethics, patient care, practice management, and biomedical sciences knowledge. The clinical labs will be located near the main campus at an acquired facility.

Second-year dental students will undergo supervision in the clinical labs while learning how to practice clinical dentistry, including periodontics, restorative dentistry, orthodontics, and endodontics. Second year students will practice within the labs for 12 hours, under 12 hours of supervision per week. Third year students will also undergo supervision as well and will gain competency in key areas of practice such as oral diagnosis and treatment planning, operative dentistry, and emergencies. Third year students will practice within the labs for six hours, under six hours of supervision per week (see Sample CDM MOU doc).

Another required element of the CNUCDM is the community based clinical practicum, in which each of 80 students per cohort will have 10 encounters per week in general dentistry at CNUCDM operated sites for 12 months. Each clinical site will accommodate 1-3 students for the entire year based on a rotation schedule of 8-week rotations, meaning CNUCDM will partner with as many as 12 clinical sites. Each student will have four months of selectives in other health care settings or in a dental specialty setting, including but not limited to radiology, primary care medicine, community health, oral pathology, orthodontics, and mobile units.

Clinical faculty will monitor student performance to ensure competency at expected performance levels, articulated in the learning outcomes' rubrics and published in course syllabi. Additionally, students must maintain satisfactory academic progress, as stated below and articulated in the SAP Policy (doc).

The consequence if a student earns a letter grade lower than 75% in any course in the curriculum is as follows:

Grades	Consequence
2 60-75%*	Remediate all courses; Academic Probation at College's option if remediation is unsuccessful
3 or 4 60-75%*	Remediate all courses; mandatory Academic Probation if remediation is unsuccessful in three or more courses
5 or 6 60-75%*, 1 or 2 below 60%	Repeat both course(s); mandatory Academic Probation
3 below 60%	Dismissal

*70% for College of Medicine HS courses

Students will be allowed to remediate a maximum of 4 courses over the duration of the CDM Program; students will be dismissed if cumulative GPA falls below 60%; GPA will be calculated on completion of remediation; failed courses must be repeated; a failed course can be repeated only once.

Structure of Clinical Education at CNUCDM

CNUCDM will have two clinical education sites where full and part time calibrated faculty will educate DMD students in clinical dental medicine, one in the primary dental medicine building on Maritime Drive in Elk Grove where 4 teams of 8 students per class will operate and one in the ambulatory care building of the California Northstate University Hospital and Clinics where 6 teams of 8 students per class will operate.

In addition clinical dental education will occur during rotations in oral and maxillofacial surgery, pediatric dentistry, orthodontics as well with calibrated full and part time faculty. These will also occur onsite at the CNUCDM Elk Grove location at the CNU hospital and clinics under development or construction in 2020-2022.

Also, community-based education in BSS 861 and BSS 862 as well as in electives are carried out with faculty who are as well calibrated by CNUCDM. However, while experiential thresholds, and overall competency are developed at those sites, no competency assessments are performed in community based sites.

Generalist Model

CNUCDM is to be a dental medicine program under the generalist model. While separate clinics will exist for oral surgery, orthodontics, and pediatric dentistry, comprehensive care dentistry will include all oral diagnosis for comprehensive care, restorative, prosthodontic, periodontic, endodontic, care. There are no graduate programs such that all comprehensive care dentistry under the aegis of CNUCDM clinics will be performed within clinical care teams. Students will be organized into 8 students per class Teams, headed by a team leader.

Team leader

The team leader is a fulltime general dentist who will be the licensee responsible for all care delivered to patients associated to the team. Patients will identify with the Team leader as their

dentist and with the Team itself as their dental home. The team leader is responsible for patient centered care provided according to the highest quality standards while also ensuring the clinical progress of every student to achieve competency in the curriculum within the parameters of the academic schedule. To further ensure the achievement of these purposes, a team coordinator, who is a full time non-dentist staff member, will make all patient appointments to ensure progress of patient centered care and the achievement of excellent clinical experiences, progress towards competencies, and competency assessments for each student.

The entire care team including the team leader, team coordinator, and student will be aware of the experiential thresholds required for the ability to challenge the competency assessment for a discipline and will be developing in concert the achievement of comprehensive care experiences that are adequate to ensure competency in all components of general dentistry practice and those required to achieve the CNUCDM competencies and program learning outcomes. This process will be managed through timely and continuous monitoring as well as biannual audit of team and individual student experience and performance.

The team leader will interface with the Assistant Dean of Clinics, and the Associate Dean of Academic Affairs to ensure the application of the curriculum in the clinical practicum as well as adherence to clinical standards. The team leader will as well be a mentor and a role model for students.

With organization of the student body into teams of 8 by class, students will be introduced to their teams vertically beginning with first year students learning infection control and throughout the curriculum from initial clinical experiences as DMD2 students on to comprehensive care dentistry in years 3 and 4. It is expected that students will have achieved competencies and can be entrusted to continue patient care with EPA's entrusted Professional Activities, after the completion of a Competency Assessment. In this role, the team leader remains the responsible licensee for all care but can provide direct supervision while giving greater autonomy to the student while preparing them for being an independent responsible licensee on the day of graduation.

Competency Assessments

The event termed a "competency assessment" or CA by CNUCDM is a culmination event that provides a summative assessment. It is performed individually, without assistance, is high stakes in that it is required for progression and graduation from the professional program. While the assessment of competency includes the CA it must also include a holistic evaluation over time of the students' knowledge, skill and values applied to the clinical area under evaluation. The stage of life of the evaluation (birth, infant, child, adolescent, adult, old age, moribund) is noted in each CA.

The formative and summative rubrics associated to this assessment all include the following categories:

1. Patient interaction
2. Patient presentation
3. Application of biomedical Knowledge
4. Critical thinking

5. Clinical Skills
6. Ethical behavior/professionalism
7. Practice management/systems based practice/
Legal regulatory

While each CA develops specific criteria related to the clinical performance of the procedure, appropriate critical thinking aspects of the procedure and appropriate application of biomedical knowledge for the procedure, areas such as patient interaction, patient presentation, ethics and professionalism have common application across disciplines.

The formative assessment of students at CNU includes self-assessment and peer assessment. CNUCDM is currently working with an assessment model in E*value/MedHub, customized to our college that will incorporate the rubric in **Appendix 2-24 Competency Assessment – General Rubric for Clinical Dentistry**. The features of this under development is that it is structured to permit 360 degree evaluation of the student with blinding. It will permit measurements of any reviewer and students to assess performance characteristics. It will provide continuous current information on students and their pathways towards competency assessments as well as their outcomes.

Global Competency Assessment

Description #4: Describe how students overall competency will be assessed to determine the graduate's readiness to enter the practice of general dentistry.

Global competency will be evaluated in concert with the competency assessments as delineated in Standard 2-24 a-o as well as in concert with comprehensive care dentistry. To accomplish this each of the competency assessments will use the common rubric utilizing the 6 common components listed above of patient interaction, patient presentation, application of biomedical knowledge, critical thinking, clinical skills, and ethical behavior/professionalism. In addition to that aspect of measuring global competency, the courses in comprehensive care family dentistry, Odont 86, Odont 862 will include a senior comprehensive case presentation, competency assessment presented by each student, each semester of the senior year. This will be presented by the student in seminar format as a formal case presentation with discipline based faculty, biomedical science faculty and the group leader to hear the presentation, ask questions regarding the care decisions and underlying knowledge, skill and values applied to the care, and to provide a grade on this global competency assessment.

The following address all of Standard 2-24 including descriptions 1, 3 and 5.

STANDARD 2-24 (a)

- 2-24** At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:
- a. patient assessment, diagnosis, comprehensive treatment planning, prognosis, and informed consent;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24a

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
4. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
6. Apply the tenets of ethical behavior and professionalism with exemplary leadership empathy, clinical behavioral understanding customized to the patient's needs.
7. Integrate all aspects of the practice management, systems-based practice, legal and regulatory requirements of practice and consistently applies this knowledge as a skill in clinical practice.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24A

Program Learning Outcomes (PLOs) DMD Program

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making

7. **Biomedical Sciences Knowledge:** Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare
8. **Practice Management:** Apply legal, regulatory and business management concepts related to provision of oral healthcare services

COURSES SUPPORTING STANDARD 2-24a

The following courses support the development of competency in patient assessment, diagnosis, comprehensive treatment planning, prognosis, and informed consent. While all of the curriculum forms a general background for this standard, each of these courses form a key portion of the underpinnings required for patient assessment and treatment planning.

Course #	Course Title	Credits	Year	Term
HS 511	Hematology (CP Course)	4	DS 1	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences will include: dental care in the hemophilia patient, acquired bleeding disorders in the dental patient, oral effects of anemia, and dental care for the hematology oncology patient.

Course #	Course Title	Credits	Year	Term
HS 521	Integumentary and Musculoskeletal Systems (CP Course)	7	DS 1	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences will include vesiculobullous disease of the oral mucosa, oral manifestations of muscular dystrophy, oral cancer, myofascial pain dysfunction syndrome, arthritis in dental practice, osteoporosis and oral health.

Course #	Course Title	Credits	Year	Term
HS 512	Neuroscience (CP Course)	9	DS 1	Spring

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences will include maxillofacial nerve injury, oral manifestations of Parkinson's disease, oral and maxillofacial movement disorders, trigeminal neuralgia, migraine and facial migraine, oral care of the stroke and spinal cord injured patient.

Course #	Course Title	Credits	Year	Term
HS 522	Cardiovascular and Pulmonary Systems (CP Course)	9	DS 1	Spring

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences include: prevention, diagnosis, and immediate treatment of acute myocardial ischemia in dental practice, oral health aspects of obstructive sleep apnea, managing asthma in dental practice, congestive heart failure implications in oral health care, valvular heart disease implications in dental practice, Marfan's syndrome.

Course #	Course Title	Credits	Year	Term
HS 611	Renal System (CP Course)	5	DS 2	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences include oral manifestations of renal failure/renal osteodystrophy/HPTH, dehydration and oliguria in odontogenic infection, acid/base considerations in fever and dental infection.

Course #	Course Title	Credits	Year	Term
HS 621	Gastroenterology (CP Course)	5	DS 2	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences include oral effects of chronic liver failure, oral surgical considerations in Vitamin K dependent factor depletion in chronic hepatitis, oral manifestations of bulimia, Salivary gland disorders, concomitant disorders of the GI and oral microbiome, effects of mastication/salivary health on GI health, oral manifestations of patients with colonic polyps.

Course #	Course Title	Credits	Year	Term
HS 631	Endocrine System (CP Course)	5	DS 2	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences include , oral health considerations in obesity, oral health impact of type 1 and type 2 diabetes, oral findings in endocrine disorders, e.g. multiple endocrine neoplasia, hyperthyroidism/hypothyroidism.

Course #	Course Title	Credits	Year	Term
HS 641	Clinical Pharmacology LAL	3	DS 2	Fall

This course will review the basics of pharmacokinetics and drug development and review the important clinical characteristics of the major drug categories including cardiac, pulmonary, GI, GU, endocrine, musculoskeletal, psychotropic, neurologic, dermatologic drugs, antibiotics,

Course #	Course Title	Credits	Year	Term
HS 642	Clinical Pharmacology 2/Oral Pharmacology LAL	3	DS 2	Spring

This course will review the major drugs used in dental practice. Emphasis on analgesics, pain and anxiety control, antibiotics. Other drugs of oral diseases including oral mucosal diseases, diseases of the dental pulp and periodontium, paranasal sinuses, and those for musculoskeletal problems of the head and neck. Correlation of drugs in the general pharmacopeia with oral health impact for HS 641 will concentrate on side effects of the oral region including examples of xerostomia, superinfection with thrush, tardive dyskinesia, among others.

Course #	Course Title	Credits	Year	Term
HS 721	Junior Year Medicine Seminar SEM	2	DS 3	Fall

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Cases will be selected from existing active patients as well as from standardized patients, for the D3 class with evidence based review of relevant medical findings and their impact on oral health and clinical interventions. This will be done with a purpose to mitigate risk and improve patient care outcomes.

Course #	Course Title	Credits	Year	Term
HS 722	Junior Year Medicine Seminar SEM	2	DS 3	Spring

Complex cases will be selected beyond the level of HS 721 including those commonly requiring medical surgical intervention in concurrence with oral health care. Examples such as oncology patients, obstetric patients, and transplant patients will be examined. Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities will be continued in the seminar as well.

Course #	Course Title	Credits	Year	Term
HS 821	Senior Year Medicine Seminar SEM	2	DS 4	Fall

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Continued development of advanced case-based patient presentations including those on hospitalized patients.

Course #	Course Title	Credits	Year	Term
HS 822	Senior Year Medicine Seminar SEM	2	DS 4	Spring

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Development of advanced knowledge of cases presenting for medical treatment for which dental consultation is needed in the preanesthetic presurgical patient and in concurrence with major systemic disease including trauma, stroke, myocardial infarction.

Course #	Course Title	Credits	Year	Term
Odont 522	Cariology LAL	3	DS 1	Spring

The biology, phenotype, epidemiology, anatomical changes from caries is presented. The prevention of caries through CAMBRA is developed as well as strategies for management at all stages of the disease. The course introduces the pathways of caries as a regional and systemic disease.

Course #	Course Title	Credits	Year	Term
Odont 621	Periodontology LAL and LAB	3	DS 2	Fall

The normal structure and function of the periodontium is presented. The pathology, microbiology, immunology, and pathophysiology of diseases of the periodontium is presented. Prevention, chronic disease management, and nonsurgical/minimally invasive procedures for periodontal diseases is emphasized. Laboratory session focus on the development of procedures and psychomotor skills using surgical armamentarium in a simulated clinical setting for the treatment of diseases of the periodontium.

Course #	Course Title	Credits	Year	Term
Odont 622	Periodontology LAL and LAB	3	DS 2	Spring

In-depth understanding of the etiology and progression of chronic periodontal diseases is developed in this course. The influence of systemic diseases such as HIV, diabetes mellitus, and obesity on the health of the periodontium is explored. Surgical interventions for the treatment of diseases of the periodontium is presented. The laboratory is focused on advanced techniques including flap surgery, guided tissue regeneration, socket preservation among others, as well as continued development of skills in curettage.

Course #	Course Title	Credits	Year	Term
Odont 752	Periodontology Seminar SEM	2	DS 3	Spring

Using a case-based format, the treatment planning, outcome assessment, management of medical and dental comorbidities among others of the patient with diseases of the periodontium is presented. Patient-centered, health systems informed, and culturally aware aspects of care are discussed through the case-based format.

Course #	Course Title	Credits	Year	Term
Odont 841	Periodontology Seminar SEM	2	DS 4	Fall

Using case-based format, interdisciplinary problems especially with orthodontics, endodontics and prosthodontic consideration will be developed through patient presentations of patients of record or via the OSCE format. Further exploration of comorbidities in periodontal diseases will be developed.

Course #	Course Title	Credits	Year	Term
Odont 662	Comprehensive Care Family Dentistry CLIN and LAB	3	DS 2	Spring

Treatment of caries and periodontal disease with discipline based faculty from operative dentistry, prosthodontics, endodontology and periodontology is carried out with the DS 2 as an active participant in the care team that includes a DS 3 and DS 4. Students will participate in case presentations, medical record assessment and recording, and other aspects of the clinic activities. The laboratory will include a simulated clinic visit including OSCE record and electronic health record.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry CLIN	8	DS 3	Fall

This daily clinic will focus on students developing their family of patients in conjunction with other members of their team headed by the faculty team leader. Emphasis on diagnosis and treatment planning and completion of initial urgent procedures will be carried out.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry CLIN	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry CLIN	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

Course #	Course Title	Credits	Year	Term
Odont 862	Comprehensive Care Family Dentistry CLIN	8	DS 4	Spring

The final semester of comprehensive care family dentistry will focus on the completion of phase 2 care for patients of record, increasing facility in providing initial evaluation and care of the dental patient, and addressing complex issues in care including those associated to overall health, stages of life, cultural awareness among others.

COMPETENCY ASSESSMENTS (CA's) SUPPORTING STANDARD 2-24a

Each of these is mapped to

- 1. Clinical Procedures (CP)**
- 2. Problem Solving (PS)**
- 3. Clinical Reasoning (CR)**
- 4. Professionalism (P)**
- 5. Ethical Decision Making (EDM)**
- 6. Communication Skills (CS)**

ii.

OMFSFSCA	Course number	Assessment method	Prerequisites	Comments
Patient doctor communication	OMFS 511	OSCE CP, PS,CR,CS, P, EDM	Small group OMFS 511	FORMATIVE
Caries risk assessment, app. CAMBRA	Odont 522	Case-based didactic exam PS, CR, P, EDM	didactics Odont 522	
Ethics in dental practice	BSS 521	OSCE PS, CR, CS, P, EDM	BSS 521 small group	FORMATIVE
Outcomes of periodontal therapy	Odont 752	Patient based CP, PS,CR,CS, P, EDM	Seminar participation	Patient selected from students existing patients

Integrated perio care (at least 3) perio/pros/endo/ ortho/ oral medicine/ oral surgery assessment	Odont 841	Patient Based CP, PS,CR,CS, P, EDM	Seminar participation	Patient selected from students existing patients
Intake odontologic diagnosis and treatment planning	Odont 761	Patient based CP, PS, CR, CS, P, EDM	Daily participation	
Medical assessment for surgery	OMFS 761	Patient based CP, PS, CR, CS, P, EDM	In OMS clerkship or Comp care clinic	

NARRATIVE SUPPORTING STANDARD 2-24a

[Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.](#)

CNUCDM will operate its clinical practicum in a group practice, comprehensive care model. Without a separate oral diagnosis department or clinic, students will with their care teams and team leaders perform all patient intake including patient assessment, diagnosis, comprehensive treatment planning prognosis and informed consent. This has the advantage of having the consequences of those actions visible to the whole care team throughout the course of treatment. It will as well afford the opportunity for reassessment and continuous improvement of care and education based upon the actions of the team during the course of intake and subsequent treatment. This comprehensive care model is critical to the CDNUCDM parameters and scope of general dentistry in which the general dentist takes responsibility over the decisions and action of care throughout the course of treatment.

The volume of student experiences will not require experiential thresholds to challenge the competency assessment, since patient assessment, diagnosis, treatment planning, assessment of prognosis and informed consent and related areas is ubiquitous in the clinical curriculum. These domains will be at the heart of daily activity in the comprehensive care model clinic in the team format. These experiences are integral to the scope of general practice at CNU CDM which includes that CNU graduates will be THE key resource for patients to gain the benefits of good oral health. As the lead diagnostician and treatment planned of the oral health team, the CNU general dentist graduate will be applying the scope of general dentistry as defined by the institution.

Describe how students will be assessed in each of the areas

Assessments noted above in the section titled, Competency Assessments Supporting standard 2-24a are divided among the following categories:

- 1. Clinical Procedures (CP)**
- 2. Problem Solving (PS)**
- 3. Clinical Reasoning (CR)**
- 4. Professionalism (P)**
- 5. Ethical Decision Making (EDM)**
- 6. Communication Skills (CS)**

Of note is that that patient assessment, diagnosis and treatment planning component is included in all clinical competency assessments as demonstrated in the rubric for clinical dentistry which includes patient presentation, application of biomedical knowledge and critical thinking which are all linked to patient assessment.

Prognosis and informed consent is further linked into the rubric with regard to ethical behavior and professionalism as well as the domains noted above.

Describe how competency will be met and ensured for all graduates.

Competency in patient assessment, diagnosing comprehensive treatment planning prognosis and informed consent is ensured in that every dental graduate must complete the competency assessments noted in **Appendix 2-24 Mapping of all Competency Assessments** which are summarized as related to 2-24a in the listing above showing those CA's.

Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates

STANDARD 2-24 (b)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

- b. screening and risk assessment for head and neck cancer;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24b

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
4. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24b

Program Learning Outcomes (PLOs) DMD Program

Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy

Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry

Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills

Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare

COURSES SUPPORTING STANDARD 2-24b

Course #	Course Title	Credits	Year	Term
OMFS 642	Oral Pathology/Oral Medicine 1 LAL and LAB	3	DS 2	Spring

The significant tumors, anomalies, oral manifestations of systemic disease and other pathologies of the oral and maxillofacial region are presented. The laboratory will focus on the gross pathology and microscopic pathology of the oral and maxillofacial region

Course #	Course Title	Credits	Year	Term
OMFS 742	Oral Pathology/Oral Medicine 2 LAL	3	DS 3	Spring

Further development of the oral manifestations of systemic disease is presented with emphasis on diabetes, hematologic bleeding disorders, hematologic malignancies, lymphomas, myeloma, xerostomic diseases, autoimmune disease, maxillofacial movement disorders, other neurologic diseases such as Parkinson's, with oral manifestations.

Course #	Course Title	Credits	Year	Term
OMFS 862	Oral Pathology/Oral Medicine Seminar SEM	2	DS 4	Spring

Concentration on oral medicine will include the risk assessment and management of complex systemic diseases related to dental medicine care in dental practice. Case-based discussion on the dental medicine patient with HIV, ongoing chemotherapy for malignancy, osteoporosis/osteopenia among others will be presented by students in seminar format.

Course #	Course Title	Credits	Year	Term
OMFS 762	Advanced Topics in Oral and Maxillofacial Surgery LAL	2	DS 3	Spring

Understanding of major conditions of the oral and maxillofacial region requiring surgical intervention is presented. This includes diagnostic features, techniques for corrective surgery and outcome assessment. Categories include the treatment of facial trauma, ablative tumor surgery of the head and neck, cleft lip and palate surgery, craniofacial surgery, orthognathic surgery, reconstructive surgery of the jaws and face, and surgical treatment of temporomandibular disorders.

Course #	Course Title	Credits	Year	Term
OMFS 772	Clinical Clerkship: Oral and Maxillofacial Surgery 4 weeks, 30 hours per week plus call CLIN	8	DS 3	Spring

The students will enter the oral and maxillofacial surgery care team for this clerkship including the care of patients for dentoalveolar surgery, major maxillofacial surgery and complex conditions of the head and neck. Clinical experience in ambulatory oral surgery and anesthesia and assisting for maxillofacial surgery in the operating room including emergency and trauma care occurs. Participation in hospital rounds and conferences occurs.

COMPETENCY ASSESSMENTS SUPPORTING STANDARD 2-24b

1. Clinical Procedures, (CP)
2. Problem Solving (PS)
3. Clinical Reasoning (CR)
4. Professionalism (P)
5. Ethical Decision Making (EDM)
6. Communication Skills (CS)

OMFSFSCA	Course number	Assessment method	Prerequisites	Comments
Oral medicine/oral pathology case presentation	OMFS 862	Patient based CP, PS,CR,CS, P, EDM	OMFS 662,762 and in OMFS 862 seminar	Case selected preferably from student patient of record
Head and neck exam, screening and risk assessment for head and neck cancer	OMFS 772	Patient based CP,PS, CR, CS, P, EDM	In OMS clerkship or comp care clinic	

NARRATIVE SUPPORTING STANDARD 2-24b

Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.

Students will develop foundational knowledge related to head and neck cancer in the Human Studies portion of the curriculum under pathobiology, oncogenesis, general epithelial tumors, sarcomas, including those of the head and neck and cutaneous malignancies such as squamous cell carcinoma and melanoma. In Foundations of dental medicine, student will learn the head and neck exam and understand the key areas for assessment of malignancy such as floor of mouth pharyngeal fauces, and posterior third of the tongue. Subsequently in oral and maxillofacial surgery and in oral medicine/ oral pathology student will develop understanding of the risk assessment for oral cancer particularly HPV, alcohol, drug abuse and tobacco. In the clinical rotations and in comprehensive care dentistry every patient will receive a head and neck exam initially and as indicated based upon risk during the course of treatment.

Describe how students will be assessed

Formative and summative assessments will both require that cancer as well as all diseases of the head and neck are taken into account in the patient assessment. IN OMFS 772, a competency for head and neck exam, screening and risk assessment for head and neck cancer is a patient based CA in which the student performs anamnestic ally a risk assessment for those factors increasing risk for oral cancer, performs a head and neck exam, and accurately reports their findings verbally and in writing. Competency is additionally assessed by examination of students in oral

pathology and oral medicine in which the characteristics of visual inspection of oral lesions including cancer are assessed.

Describe how competency will be met and ensured for all graduates.

Competency in screening and risk assessment for head and neck cancer is ensured in that every dental graduate must complete the competency assessments noted in **Appendix 2-24 Mapping of all Competency Assessments** which are summarized as related to 2-24b in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates

STANDARD 2-24 (c)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

- c. recognizing the complexity of patient treatment and identifying when referral is indicated;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24c

1. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
2. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
3. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
4. Apply the tenets of ethical behavior and professionalism with exemplary leadership empathy, clinical behavioral understanding customized to the patient's needs.
5. Integrate all aspects of the practice management, systems-based practice, legal and regulatory requirements of practice and consistently applies this knowledge as a skill in clinical practice.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24c

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare
8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

COURSES SUPPORTING STANDARD 2-24c

Referral may be needed to physicians in various capacities, dental specialists or other health professionals. Each of these courses provide the underpinnings for development of this competency.

Course #	Course Title	Credits	Year	Term
HS 721	Junior Year Medicine Seminar <i>SEM</i>	2	DS 3	Fall

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Cases will be selected from existing active patients as well as from standardized patients, for the D3 class with evidence based review of relevant medical findings and their impact on oral health and clinical interventions. This will be done with a purpose to mitigate risk and improve patient care outcomes.

Course #	Course Title	Credits	Year	Term
HS 722	Junior Year Medicine Seminar <i>SEM</i>	2	DS 3	Spring

Complex cases will be selected beyond the level of HS 721 including those commonly requiring medical surgical intervention in concurrence with oral health care. Examples such as oncology patients, obstetric patients, and transplant patients will be examined. Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities will be continued in the seminar as well.

Course #	Course Title	Credits	Year	Term
HS 821	Senior Year Medicine Seminar <i>SEM</i>	2	DS 4	Fall

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Continued development of advanced case-based patient presentations including those on hospitalized patients.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Fall

This daily clinic will focus on students developing their family of patients in conjunction with other members of their team headed by the faculty team leader. Emphasis on diagnosis and treatment planning and completion of initial urgent procedures will be carried out.

Course #	Course Title	Credits	Year	Term
Odont 752	Periodontology Seminar SEM	2	DS 3	Spring

Using a case-based format, the treatment planning, outcome assessment, management of medical and dental comorbidities among others of the patient with diseases of the periodontium is presented. Patient-centered, health systems informed, and culturally aware aspects of care are discussed through the case-based format.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry CLIN	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 841	Periodontology Seminar SEM	2	DS 4	Fall

Using case-based format, interdisciplinary problems especially with orthodontics, endodontics and prosthodontic consideration will be developed through patient presentations of patients of record or via the OSCE format. Further exploration of comorbidities in periodontal diseases will be developed.

Course #	Course Title	Credits	Year	Term
Odont 851	Prosthodontics and Implant Dentistry: Implant Surgery and Prosthodontic Reconstruction LAL and LAB	3	DS 4	Fall

The replacement of missing teeth utilizing dental implants is presented. This course includes the biomechanics of implants, concepts of osseointegration, restoration options for implants, implant systems and the placement of implants. The laboratory will teach the placement of implants including appropriate assessment and osteotomies, and the restoration of implants using indirect and direct techniques.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry CLIN	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

Course #	Course Title	Credits	Year	Term
Odont 862	Comprehensive Care Family Dentistry CLIN	8	DS 4	Spring

The final semester of comprehensive care family dentistry will focus on the completion of phase 2 care for patients of record, increasing facility in providing initial evaluation and care of the dental patient, and addressing complex issues in care including those associated to overall health, stages of life, cultural awareness among others.

NARRATIVE SUPPORTING STANDARD 2-24c

[Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.](#)

In the human studies component of the curriculum in D1 and D2 systems based education will provide foundational knowledge regarding the capacity of referring medical surgical specialties for which the student will refer or receive patients. The clinical medical faculty in these settings include internists, pediatricians, radiologist, pathologists, surgeons, endocrine, cardiac, pulmonary, renal, and oncology medical specialists among others. The Behavioral and social sciences program interaction with psychologists will provide foundational knowledge about the capabilities of those health professional. Pharmacology is taught in part by pharmacists who will provide foundational knowledge of the capacity of pharmacists regarding referral for reasons such as compounding, prescription and over the counter drugs.

The odontology and oral and maxillofacial studies components of the curriculum will include foundational education from all CODA recognized dental specialties. The dental clinical curriculum includes advanced understanding of the scope of the dental specialties beyond the capacity of every general dentist and thus the ability and need to refer. Each of these student didactic experiences will form the foundation for their understanding of the expertise of these health professionals and the role that they can play in referral.

This knowledge is then applied in the clinical courses. Junior and senior medical seminars, HS 721, HS 722, and HS 821 use and case based approach, utilizing patients of record which recognizes the complexity of patient treatment and identifies the need for and subsequently

employs medical referral. This includes referral for psychiatry psychology, as well as medical surgical specialties.

Describe how students will be assessed

The competency assessments related to recognizing the complexity of patient treatment and identifying when referral is indicated are noted above in the Competency assessments for Standard 2-24c. Each of the medical assessment competency assessments will include the role and opinions of both the patients dentist and physician who in the complex case management have worked in a referral relationship to develop treatment plans and planned outcomes consistent with the patients overall medical needs.

Interaction with the dental specialties including for periodontal surgery, dental implants, surgical extractions, pain and anxiety control, and for dental growth and development among others will include assessment as to the role of the general dentist vis a vis the specialist in the complex care of the patient and understanding the role of referral.

Describe how competency will be met and ensured for all graduates.

Competency in recognizing the complexity of patient treatment and identifying when referral is indicated t is ensured in that every dental graduate must complete the competency assessments noted in **Appendix 2-24 Mapping of all Competency Assessments** which are summarized as related to 2-24c in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates.

STANDARD 2-24 (d)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

- d. health promotion and disease prevention;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24d

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24d

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare

COURSES SUPPORTING STANDARD 2-24d

All HS courses demonstrating human diseases and all clinical dentistry didactic courses offer foundational knowledge to understand the prole of health promotion and disease prevention.

Course #	Course Title	Credits	Year	Term
BSS 662	Behavioral Medicine (CP Course) <i>LAL, Clinical</i>	3	DS 2	Spring

In this course aspects of clinical psychology of importance in dental practice is presented. Cased base learning will include: minor and major psychiatric illnesses impacting on oral health and the provision of oral health care; elder, spousal and child abuse; dental fear; and, dental phobias.

Course #	Course Title	Credits	Year	Term
BSS 701	Dental Public Health <i>LAL</i>	2	DS 3	Fall

The fundamentals of public health are presented including health and public health measures for health protection, protection from disease and health promotion. The surgeon general's report, 2000, updated 2019, on the status of oral health in America is presented. WHO assessment of oral health globally is presented. Population based initiative to improve oral health are discussed with a focus on clean water and fluoride exposure.

COMPETENCY ASSESSMENTS SUPPORTING STANDARD 2-24d

- 1. Clinical Procedures, (CP)**
- 1. Problem Solving (PS)**
- 2. Clinical Reasoning (CR)**
- 3. Professionalism (P)**
- 4. Ethical Decision Making (EDM)**
- 5. Communication Skills (CS)**

Intake odontologic diagnosis and treatment planning	Odont 761	Patient based CP, PS, CR, CS, P, EDM	Daily participation	1, 2, 3, 4, 5, 6, 7

Head and neck exam, screening and risk assessment for head and neck cancer	OMFS 772	Patient based CP, PS, CR, CS, P, EDM	In OMS clerkship or comp care clinic	
Community assessment	BSS 862	Reflective essay PS, CR, CS, P, EDM	Enrolled in BSS 862 and in senior seminar in public health	2, 3, 4, 6, 7

NARRATIVE SUPPORTING STANDARD 2-24d

Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.

Foundational knowledge regarding health promotion and disease prevention is included in human studies course in which prevention issues such as smoking, alcohol, diet, lifestyle, drug abuse, social determinants of health and their impact are discussed. The results of interventions to mitigate those risks are presented. In the caries, periodontal diseases, oral and maxillofacial surgery, pediatric dentistry, oral pathology/oral medicine, and orthodontics courses among others offer the foundational knowledge to support preventive dentistry measures and health promotion. BSS 701 dental public health provides understanding to apply disease protection, promotion and prevention to the dental clinical environment

These elements are applied during the clinical practicum courses as part of the intake, which includes CAMBRA assessment, during the course of treatment which includes counseling on lifestyle choices such as smoking, and in assessing the outcomes of treatment and recall strategies.

The scope of practice at CNUCDM for the new dental practice is to provide health promotion, protection and prevention for patients under the purview of the practicing dentist.

Describe how students will be assessed

Specific competency assessments are required to achieve Standard 2-24d.

The CA for CAMBRA will assess the students' ability to provide individualized risk assessment and a prevention plan that includes the medical management of caries prevention strategies.

Outcomes of periodontal therapy will assess the student's capacity to recognize the outcome of periodontal care prevention, promotion and protection strategies.

Intake diagnosis and treatment planning CA will assess the student's ability to ascertain home care utilization and make intake preventive dentistry recommendations in the CA.

The CA in head and neck cancer screening includes how the patient communicates with the patient regarding cancer prevention strategies, specifically the roles of tobacco, and alcohol, HPV.

On a population basis, prevention and health promotion is addressed in the public health competency assessment where the students write a reflective essay on the community to which they are assigned to assess and make recommendations regarding the community's oral health prevention and promotion activities.

Describe how competency will be met and ensured for all graduates.

Competency in health promotion and disease prevention is ensured in that every dental graduate must complete the competency assessments noted in **Appendix 2-24 Mapping of all Competency Assessments** which are summarized as related to 2-24d in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates

STANDARD 2-24 (e)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

- e. local anesthesia, and pain and anxiety control, including consideration of the impact of prescribing practices and substance use disorder;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24e

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
4. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
5. Demonstrate the ability to comfortably apply clinical skills for dental procedures in a fashion that promotes the continued development of skills, patient confidence, and consideration for applying more advanced skills when needed.
6. Apply the tenets of ethical behavior and professionalism with exemplary leadership empathy, clinical behavioral understanding customized to the patient's needs.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24e

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare

COURSES SUPPORTING STANDARD 2-24e

Local anesthesia, pain and anxiety control is taught in the following course included here with their course descriptions

Course #	Course Title	Credits	Year	Term
OMFS 631	Dental Anesthesiology 1: Local Anesthesia <i>LAL and LAB</i>	3	DS 2	Fall

The pharmacology of local anesthesia, armamentarium for administration and technique for administration is presented. Local and systemic complications of administration, contraindications and comorbidities are presented. The laboratory will demonstrate and practice technique of local anesthesia administration on analogy and haptic simulators.

Course #	Course Title	Credits	Year	Term
OMFS 632	Dental Anesthesiology 2: Pain and Anxiety Control, Analgesia, Medical Management of Local Anesthesia Patients <i>LAL and LAB</i>	3	DS 2	Spring

The risks of local anesthesia detection and management are presented. Understanding pain and anxiety in dental practice through assessment methods is presented. The pharmacologic and nonpharmacological means of mitigating pain and anxiety in dental care is presented. This includes the use of nitrous oxide, oral anxiolysis, and parenteral drugs.

Course #	Course Title	Credits	Year	Term
HS 641	Clinical Pharmacology <i>LAL</i>	3	DS 2	Fall

This course will review the basics of pharmacokinetics and drug development and review the important clinical characteristics of the major drug categories including cardiac, pulmonary, GI, GU, endocrine, musculoskeletal, psychotropic, neurologic, dermatologic drugs, antibiotics,

Course #	Course Title	Credits	Year	Term
HS 642	Clinical Pharmacology 2/Oral Pharmacology <i>LAL</i>	3	DS 2	Spring

This course will review the major drugs used in dental practice. Emphasis on analgesics, pain and anxiety control, antibiotics. Other drugs of oral diseases including oral mucosal diseases, diseases of the dental pulp and periodontium, paranasal sinuses, and those for musculoskeletal problems of the head and neck. Correlation of drugs in the general pharmacopeia with oral health impact for HS 641 will concentrate on side effects of the oral region including examples of xerostomia, superinfection with thrush, tardive dyskinesia, among others.

Course #	Course Title	Credits	Year	Term
BSS 662	Behavioral Medicine (CP Course) <i>LAL, Clinical</i>	3	DS 2	Spring

In this course aspects of clinical psychology of importance in dental practice is presented. Cased base learning will include: minor and major psychiatric illnesses impacting on oral health and the provision of oral health care; elder, spousal and child abuse; dental fear; and, dental phobias.

COMPETENCY ASSESSMENTS SUPPORTING STANDARD 2-24e

1. Clinical Procedures, (CP)
2. Problem Solving (PS)
3. Clinical Reasoning (CR)
4. Professionalism (P)
5. Ethical Decision Making (EDM)
6. Communication Skills (CS)

Competency assessment	Course number	Assessment method	Prerequisites	Comments
Local anesthesia technique	OMFS 631	Clinical demonstration on subject X 4	OMFS 631 lab	1, 2 ,3, 4, 5, 6, 7 FORMATIVE
Nitrous oxide administration	OMFS 632	Patient based CP, PS, CR, CS, P, EDM	OMFS 632 lab	1, 2, 3, 4, 5, 6, 7
Pain and anxiety control	OMFS 761	Patient based CP, PS, CR, CS, P, EDM	In OMS clerkship or Comp care clinic	1, 2, 3, 4, 5, 6, 7
Medical assessment for surgery	OMFS 761	Patient based CP, PS, CR, CS, P, EDM	In OMS clerkship or Comp care clinic	1, 2, 3, 4, 5, 6, 7

NARRATIVE SUPPORTING STANDARD 2-24e

[Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.](#)

The primary courses supporting Standard 2-24e are listed above and include OMFS 631 and OMFS 632, which reviews the pharmacology, clinical procedures risks and benefits of local anesthesia, nitrous oxide, oral and parenteral sedation. These are also inclusive clinical laboratory experience to develop skills associated to these tasks. HS 641 and HS 642 provide foundational knowledge on the uptake and distribution of drugs and the specific pharmacology of drugs used in local anesthesia, pain and anxiety control. BSS 662 provides foundational

knowledge on the underlying issues, of pain, anxiety, drug abuse and behavioral/nonpharmacologic interventions to mitigate these behaviors. Each clinical practicum course utilizes these techniques on a daily basis and this is part of the clinical education provided in the clinical setting.

The scope of general practice at CNUCDM is inclusive of the requirement to provide excellent pain and anxiety control for every patient.

Describe how students will be assessed

Daily formative assessments of students assess their ability to provide a comfortable experience for the patient and to demonstrate good listening skills empathy and professionalism which are essential to achieving good pain and anxiety control. The competency assessments for clinical skills for all clinical procedures include the administration and quality of local anesthesia, and patient comfort through pain and anxiety control. In addition to these area, the CA's listed above provide specific assessment of Standard 2-24e. These include CA's on:

Local anesthesia technique, a formative assessment in the preclinical laboratory for ability to translate this skill into the clinical care setting. Though formative it is listed here as the first competency assessment of the student in this area.

The Nitrous oxide CA includes the knowledge, skills and behaviors needed for effective use of this analgesic method

Pain and anxiety control CA is a patient based one in which the assessment of the need for PAC methods, risk assessment regarding substance use/abuse of psychotropic drugs, and the application of sedation by pharmacologic and nonpharmacological means is assessed for competency.

Medical assessment for surgery CA includes the selection of anesthesia techniques and means to mitigate risk through pain and anxiety control.

Describe how competency will be met and ensured for all graduates.

Competency in local anesthesia pain and anxiety control including consideration of the impact of prescribing practices and substance use disorder is ensured in that every dental graduate must complete the competency assessments noted in **Appendix 2-24 Mapping of all Competency Assessments** which are summarized as related to 2-24e in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates.

STANDARD 2-24 (f)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

f. restoration of teeth;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24f

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
4. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
5. Demonstrate the ability to comfortably apply clinical skills for dental procedures in a fashion that promotes the continued development of skills, patient confidence, and consideration for applying more advanced skills when needed.
6. Apply the tenets of ethical behavior and professionalism with exemplary leadership empathy, clinical behavioral understanding customized to the patient's needs.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24f

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare
8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

COURSES SUPPORTING STANDARD 2-24f

Course #	Course Title	Credits	Year	Term
Odont 611	Operative Dentistry <i>LAL and LAB</i>	6	DS 2	Fall

The surgical treatment of caries and degenerative and congenital diseases of the enamel and dentin is presented through the development of technical skills to remove diseased portions of the teeth and to provide anatomical functional direct restorations of teeth. Prevention and minimally invasive procedures for caries management is emphasized. Laboratory session focus on the development of procedures and psychomotor skills using surgical armamentarium in a simulated clinical setting for the treatment of caries and other diseases of the enamel and dentin.

Course #	Course Title	Credits	Year	Term
Odont 662	Comprehensive Care Family Dentistry <i>CLIN and LAB</i>	3	DS 2	Spring

Treatment of caries and periodontal disease with discipline based faculty from operative dentistry, prosthodontics, endodontology and periodontology is carried out with the DS 2 as an active participant in the care team that includes a DS 3 and DS 4. Students will participate in case presentations, medical record assessment and recording, and other aspects of the clinic activities. The laboratory will include a simulated clinic visit including OSCE record and electronic health record.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Fall

This daily clinic will focus on students developing their family of patients in conjunction with other members of their team headed by the faculty team leader. Emphasis on diagnosis and treatment planning and completion of initial urgent procedures will be carried out.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

Course #	Course Title	Credits	Year	Term
Odont 862	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Spring

The final semester of comprehensive care family dentistry will focus on the completion of phase 2 care for patients of record, increasing facility in providing initial evaluation and care of the dental patient, and addressing complex issues in care including those associated to overall health, stages of life, cultural awareness among others.

Course #	Course Title	Credits	Year	Term
BSS 861	Clinical Clerkship: Community-based Education <i>4 weeks, 30 hours per week plus call</i>	8	DS 4	Fall

Affiliated health systems based practices will accept CNU students into their care teams where senior students will provide clinical care under the supervision of Volunteer Community-Based Faculty in those sites. Suitable transportation and housing will be arranged for where needed. The purpose of the course is to provide community engagement with the constituencies served, to gain experience in community-based clinical care and to interact with the interprofessional and intraprofessional care team

Course #	Course Title	Credits	Year	Term
BSS 862	Clinical Clerkship: Community-based Education <i>4 weeks, 30 hours per week plus call</i>	8	DS 4	Spring

This course will be at a second community-based rotation site to elaborate on the activities of the first rotation and engage a new community and a new clinic. In addition to comprehensive care experience, the student will compare and contrast communities and clinical care entities and provide a reflective essay on their community care experience.

COMPETENCY ASSESSMENTS SUPPORTING STANDARD 2-24f

1. Clinical Procedures, (CP)
2. Problem Solving (PS)
3. Clinical Reasoning (CR)
4. Professionalism (P)
5. Ethical Decision Making (EDM)
6. Communication Skills (CS)

Competency assessment	Course number	Assessment method	Prerequisites	Comments
<i>Intake odontologic diagnosis and treatment planning</i>	Odont 761	Patient based CP, PS, CR, CS, P, EDM	Daily participation	1, 2, 3, 4, 5 ,6, 7
<i>Comprehensive caries treatment</i>	Odont 761	Patient based including comp evaluation of all restorations, application of CAMBRA and disease control CP, PS, CR, CS, P, EDM	Daily participation in clinic and case completion	1, 2, 3, 4, 5, 6,7
<i>Demonstration of phase 1 therapy</i>	Odont 762	Patient based CP, PS, CR, CS, P, EDM	Phase 1 therapy completed in at least 3 cases	1, 2, 3, 4, 5, 6, 7
Operative dentistry: class 2	Odont 861 Or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Operative dentistry: crown	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7

NARRATIVE SUPPORTING STANDARD 2-24f

Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.

Cariology and dental anatomy provide foundational knowledge for student embarking on clinical education in operative dentistry. The preclinical operative dentistry course Odont 621 will provide knowledge and skills in the preparation of teeth and restoring teeth by both direct and indirect restorations. Each of the 5 semesters in comprehensive care dentistry will have continuous and progressive development of higher levels of understanding, improving skills and greater self-assessment in operative dentistry. BSS 861 and BSS 862 community based education also includes daily experience in operative dentistry. During all these clinical practicum experiences, student will get daily feedback from faculty and grading.

Describe how students will be assessed

During the CA for intake diagnosis and treatment planning, the competency assessment will include the student's assessment of the operative dentistry needs of the patient via accurate diagnosis as well as the direct and indirect restoration methods and materials selected by the student during the CA in the treatment plan.

As part of the CA for comprehensive caries treatment, this patient based CA assesses the outcomes of operative dentistry interventions performed and how they are presented by the student in the CA.

The CA on the completion of phase 1 therapy includes the caries status of the patient and how the selected restorative methods in operative dentistry impacted on the outcome of phase 1 care.

The Class 2 restoration of a carious tooth is a patient based CA in which the student demonstrates the knowledge skills and behaviors expected in direct restoration of a diseased tooth.

The crown CA restoration of a carious tooth is a patient based CA in which the student demonstrates the knowledge skills and behaviors expected in indirect restoration of a diseased tooth.

Describe how competency will be met and ensured for all graduates.

Competency in restoration of teeth is ensured in that every dental graduate must complete the competency assessments noted in [Appendix 2-24 Mapping of all Competency Assessments](#) which are summarized as related to 2-24f in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates.

STANDARD 2-24 (g)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

- g. communicating and managing dental laboratory procedures in support of patient care;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24g

1. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
2. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
3. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
4. Demonstrate the ability to comfortably apply clinical skills for dental procedures in a fashion that promotes the continued development of skills, patient confidence, and consideration for applying more advanced skills when needed.
7. Integrate all aspects of the practice management, systems-based practice, legal and regulatory requirements of practice and consistently applies this knowledge as a skill in clinical practice.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24g

Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy

Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry

Oral and Written Communication: Demonstrate sound oral and written communications in patient care

Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care

Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare

Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

COURSES SUPPORTING STANDARD 2-24g

The following courses support the communication and managing of dental laboratory procedures in support of patient care.

Course #	Course Title	Credits	Year	Term
Odont 632	Prosthodontics and Implant Dentistry: Removable Prosthodontics <i>LAL and LAB</i>	6	DS 2	Spring

The anatomic and pathophysiologic aspects of partial and full edentulism is presented. Development, construction, placement and maintenance of full and partial removable prosthodontic restorations is presented. The laboratory will include impressions, jaw occlusal registrations, gnathology, cast development and mounting, development of wax rims and occlusal scheme and teeth mounting.

Course #	Course Title	Credits	Year	Term
Odont 741	Prosthodontics and Implant Dentistry: Fixed Prosthodontics <i>LAL and LAB</i>	6	DS 3	Fall

The indirect restoration of teeth and the indirect replacement of missing teeth with crowns and bridges is presented. Treatment planning for these restorations including occlusal, periodontal, caries assessment is presented. Other methods for indirect restoration including partial coverage indirect restoration is presented. The introduction of digital techniques for impression and CadCam restoration development is presented. The laboratory will provide practice with the surgical armamentarium for tooth preparation for fixed prosthetic restoration, for impressions with analog and digital methods and for the construction of fixed indirect restorations. The laboratory will also teach methods for provisional restoration of the fixed prosthodontic patient.

Course #	Course Title	Credits	Year	Term
Odont 851	Prosthodontics and Implant Dentistry: Implant Surgery and Prosthodontic Reconstruction <i>LAL and LAB</i>	3	DS 4	Fall

The replacement of missing teeth utilizing dental implants is presented. This course includes the biomechanics of implants, concepts of osseointegration, restoration options for implants, implant systems and the placement of implants. The laboratory will teach the placement of implants including appropriate assessment and osteotomies, and the restoration of implants using indirect and direct techniques.

Course #	Course Title	Credits	Year	Term
Odont 662	Comprehensive Care Family Dentistry CLIN and LAB	3	DS 2	Spring

Treatment of caries and periodontal disease with discipline based faculty from operative dentistry, prosthodontics, endodontology and periodontology is carried out with the DS 2 as an active participant in the care team that includes a DS 3 and DS 4. Students will participate in case presentations, medical record assessment and recording, and other aspects of the clinic activities. The laboratory will include a simulated clinic visit including OSCE record and electronic health record.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry CLIN	8	DS 3	Fall

This daily clinic will focus on students developing their family of patients in conjunction with other members of their team headed by the faculty team leader. Emphasis on diagnosis and treatment planning and completion of initial urgent procedures will be carried out.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry CLIN	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry CLIN	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

Course #	Course Title	Credits	Year	Term
Odont 862	Comprehensive Care Family Dentistry CLIN	8	DS 4	Spring

The final semester of comprehensive care family dentistry will focus on the completion of phase 2 care for patients of record, increasing facility in providing initial evaluation and care of the dental patient, and addressing complex issues in care including those associated to overall health, stages of life, cultural awareness among others.

COMPETENCY ASSESSMENTS SUPPORTING STANDARD 2-24g

1. Clinical Procedures, (CP)
2. Problem Solving (PS)
3. Clinical Reasoning (CR)
4. Professionalism (P)
5. Ethical Decision Making (EDM)
6. Communication Skills (CS)

Competency assessment	Course number	Assessment method	Prerequisites	Comments
Full denture	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Partial Denture	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Dental implant restoration	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7

NARRATIVE SUPPORTING STANDARD 2-24g

Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.

No dental laboratory for the final construction of fixed, removable or implant born prosthesis will be available onsite. The preparation of treatment records, impressions and casts on site as well as the writing of the laboratory prescription will be done by the student with clinical faculty as well as with the communication with onsite staff. This will also be done in the digital environment and with cases associated to nonprosthetic needs in space maintenance, orthodontics and for surgical stents. Students will design restorations and prostheses with faculty and write instructions and prescription to the dental laboratory. It is the goal of the college to have a local dental laboratory as its resource that would permit student direct on site communication with the laboratory technologists as well. This is consistent with the schools defined scope of the practice of general dentistry in that the dentist is the leader of the oral health care team that includes laboratory technologists.

Describe how students will be assessed

Competency assessments in full denture, partial denture and implant restoration noted above are all patient based and in all cases the plan developed by the student in the CA must be communicated to the laboratory.

Describe how competency will be met and ensured for all graduates. “

Competency in communicating and managing dental laboratory procedures in support of patient care is ensured in that every dental graduate must complete the competency assessments noted in **Appendix 2-24 Mapping of all Competency Assessments** which are summarized as related to 2-24g in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates.

STANDARD 2-24 (h)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

- h. replacement of teeth including fixed, removable and dental implant prosthodontic therapies;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24h

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
4. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
5. Demonstrate the ability to comfortably apply clinical skills for dental procedures in a fashion that promotes the continued development of skills, patient confidence, and consideration for applying more advanced skills when needed.
6. Apply the tenets of ethical behavior and professionalism with exemplary leadership empathy, clinical behavioral understanding customized to the patient's needs.
7. Integrate all aspects of the practice management, systems-based practice, legal and regulatory requirements of practice and consistently applies this knowledge as a skill in clinical practice.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24h

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making

7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare
8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

COURSES SUPPORTING STANDARD 2-24h

Course #	Course Title	Credits	Year	Term
Odont 632	Prosthodontics and Implant Dentistry: Removable Prosthodontics <i>LAL and LAB</i>	6	DS 2	Spring

The anatomic and pathophysiologic aspects of partial and full edentulism is presented. Development, construction, placement and maintenance of full and partial removable prosthodontic restorations is presented. The laboratory will include impressions, jaw occlusal registrations, gnathology, cast development and mounting, development of wax rims and occlusal scheme and teeth mounting.

Course #	Course Title	Credits	Year	Term
Odont 851	Prosthodontics and Implant Dentistry: Implant Surgery and Prosthodontic Reconstruction <i>LAL and LAB</i>	3	DS 4	Fall

The replacement of missing teeth utilizing dental implants is presented. This course includes the biomechanics of implants, concepts of osseointegration, restoration options for implants, implant systems and the placement of implants. The laboratory will teach the placement of implants including appropriate assessment and osteotomies, and the restoration of implants using indirect and direct techniques.

Course #	Course Title	Credits	Year	Term
Odont 662	Comprehensive Care Family Dentistry <i>CLIN and LAB</i>	3	DS 2	Spring

Treatment of caries and periodontal disease with discipline based faculty from operative dentistry, prosthodontics, endodontology and periodontology is carried out with the DS 2 as an active participant in the care team that includes a DS 3 and DS 4. Students will participate in case presentations, medical record assessment and recording, and other aspects of the clinic activities. The laboratory will include a simulated clinic visit including OSCE record and electronic health record.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Fall

This daily clinic will focus on students developing their family of patients in conjunction with other members of their team headed by the faculty team leader. Emphasis on diagnosis and treatment planning and completion of initial urgent procedures will be carried out.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

Course #	Course Title	Credits	Year	Term
Odont 862	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Spring

The final semester of comprehensive care family dentistry will focus on the completion of phase 2 care for patients of record, increasing facility in providing initial evaluation and care of the dental patient, and addressing complex issues in care including those associated to overall health, stages of life, cultural awareness among others.

COMPETENCY ASSESSMENTS SUPPORTING STANDARD 2-24h

1. Clinical Procedures, (CP)
2. Problem Solving (PS)
3. Clinical Reasoning (CR)
4. Professionalism (P)
5. Ethical Decision Making (EDM)
6. Communication Skills (CS)

Competency assessment	Course number	Assessment method	Prerequisites	Comments
Full denture	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Partial Denture	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Dental implant restoration	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7
Fixed partial denture (either implant or tooth supported)	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7

NARRATIVE SUPPORTING STANDARD 2-24h

Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.

The comprehensive clinical care model and community based education are sites where students will have extensive experiences in fixed and removable replacement of missing teeth. California is fortunate in that the adult dental benefit under Medi-Cal now includes both fixed and removable replacement of missing teeth. The waiting lists for such services in regional health centers with which the CNUCDM has MOUs is several hundred patients per site. Indeed, one site El Dorado community health would like to both have our students on site for the purpose of managing this prosthetic backlog, and to also refer to our CNU operated site as it is within reasonable distance from that clinic. The scope of general dentistry as defined at CNUCDM clearly included the rehabilitation of function and esthetics for patients with missing teeth.

Describe how students will be assessed

Full denture, partial denture, fixed partial denture (either implant or tooth supported) and dental implant restoration competency assessments are all patient based and all administered in Odont 861 or 862 in the fourth year. Of note is that the utilization of dental implants in addressing edentulous spaces has superseded the tooth born restoration of bounded edentulous spaces and thus is a more likely option for the CA for fixed partial denture. Though tooth born restoration is acceptable for this standard, the student also will take a CA specific to implant born restoration.

Describe how competency will be met and ensured for all graduates.

Competency in replacement of teeth including fixed removable and dental implant prosthodontic therapies is ensured in that every dental graduate must complete the competency assessments noted in [Appendix 2-24 Mapping of all Competency Assessments](#) which are summarized as related to 2-24h in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates.

STANDARD 2-24 (i)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

- i. periodontal therapy;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24i

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
4. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
5. Demonstrate the ability to comfortably apply clinical skills for dental procedures in a fashion that promotes the continued development of skills, patient confidence, and consideration for applying more advanced skills when needed.
6. Apply the tenets of ethical behavior and professionalism with exemplary leadership empathy, clinical behavioral understanding customized to the patient's needs.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24i

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare
8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

COURSES SUPPORTING STANDARD 2-24i

Course #	Course Title	Credits	Year	Term
Odont 621	Periodontology <i>LAL and LAB</i>	3	DS 2	Fall

The normal structure and function of the periodontium is presented. The pathology, microbiology, immunology, and pathophysiology of diseases of the periodontium is presented. Prevention, chronic disease management, and nonsurgical/minimally invasive procedures for periodontal diseases is emphasized. Laboratory session focus on the development of procedures and psychomotor skills using surgical armamentarium in a simulated clinical setting for the treatment of diseases of the periodontium.

Course #	Course Title	Credits	Year	Term
Odont 622	Periodontology <i>LAL and LAB</i>	3	DS 2	Spring

In-depth understanding of the etiology and progression of chronic periodontal diseases is developed in this course. The influence of systemic diseases such as HIV, diabetes mellitus, and obesity on the health of the periodontium is explored. Surgical interventions for the treatment of diseases of the periodontium is presented. The laboratory is focused on advanced techniques including flap surgery, guided tissue regeneration, socket preservation among others, as well as continued development of skills in curettage.

Course #	Course Title	Credits	Year	Term
Odont 752	Periodontology Seminar <i>SEM</i>	2	DS 3	Spring

Using a case-based format, the treatment planning, outcome assessment, management of medical and dental comorbidities among others of the patient with diseases of the periodontium is presented. Patient-centered, health systems informed, and culturally aware aspects of care are discussed through the case-based format.

Course #	Course Title	Credits	Year	Term
Odont 841	Periodontology Seminar <i>SEM</i>	2	DS 4	Fall

Using case-based format, interdisciplinary problems especially with orthodontics, endodontics and prosthodontic consideration will be developed through patient presentations of patients of record or via the OSCE format. Further exploration of comorbidities in periodontal diseases will be developed.

Course #	Course Title	Credits	Year	Term
Odont 662	Comprehensive Care Family Dentistry <i>CLIN and LAB</i>	3	DS 2	Spring

Treatment of caries and periodontal disease with discipline based faculty from operative dentistry, prosthodontics, endodontology and periodontology is carried out with the DS 2 as an active participant in the care team that includes a DS 3 and DS 4. Students will participate in case presentations, medical record assessment and recording, and other aspects of the clinic activities. The laboratory will include a simulated clinic visit including OSCE record and electronic health record.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Fall

This daily clinic will focus on students developing their family of patients in conjunction with other members of their team headed by the faculty team leader. Emphasis on diagnosis and treatment planning and completion of initial urgent procedures will be carried out.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

Course #	Course Title	Credits	Year	Term
Odont 862	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Spring

The final semester of comprehensive care family dentistry will focus on the completion of phase 2 care for patients of record, increasing facility in providing initial evaluation and care of the dental patient, and addressing complex issues in care including those associated to overall health, stages of life, cultural awareness among others.

Course #	Course Title	Credits	Year	Term
BSS 861	Clinical Clerkship: Community-based Education <i>4 weeks, 30 hours per week plus call</i>	8	DS 4	Fall

Affiliated health systems based practices will accept CNU students into their care teams where senior students will provide clinical care under the supervision of Volunteer Community-Based Faculty in those sites. Suitable transportation and housing will be arranged for where needed. The purpose of the course is to provide community engagement with the constituencies served, to gain experience in community-based clinical care and to interact with the interprofessional and intraprofessional care team

Course #	Course Title	Credits	Year	Term
BSS 862	Clinical Clerkship: Community-based Education <i>4 weeks, 30 hours per week plus call</i>	8	DS 4	Spring

This course will be at a second community-based rotation site to elaborate on the activities of the first rotation and engage a new community and a new clinic. In addition to comprehensive care experience, the student will compare and contrast communities and clinical care entities and provide a reflective essay on their community care experience.

NARRATIVE SUPPORTING STANDARD 2-24i

Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.

Student experiences in periodontal therapy are presaged by foundational knowledge first obtained in foundations of odontology and foundations of dental medicine course in the first year where essential foundational issues such as infection control, intake evaluation of patients, the construct of the health care team and introduction to the dental clinic occur.

The students' first exposure to periodontology as a discipline occurs in Odont 621 and Odont 622 in the second year where the supporting knowledge and laboratory based clinical skills are developed for translation of that knowledge and skill into the clinical setting. The D2 student also enter the clinical care team in Comprehensive care Dentistry at the same time so that seamless advancement of didactic knowledge and laboratory based skill in clinical periodontology can be progressively translated to the clinical setting where the group leader, also with D3 and D4 students can appropriately assign, develop and assess clinical periodontal therapy capacity in the student.

While comprehensive care dentistry advances in the D3 and D4 level, so will the level of clinical case involvement and interventions by the student, to included comprehensive care of the patient with periodontal disease utilizing medical, surgical, behavioral means to improve periodontal health. Periodontology seminar 752 and periodontology seminar 852 are case based seminars where students present discuss and using evidence based dentistry and critical thinking develop further understanding of the efficacy of periodontal care and its outcomes. Also in the fourth year students will perform periodontal therapy in Clinical clerkships community based education BSS 861 and BSS 862.

With regard to scope of practice, it is intended that students at the D4 level will carry out periodontal therapy including leadership by the team leader in a generalist model but with the assignment of faculty from periodontology who are periodontists as well as dental hygienists. Periodontists will include students in the performance of periodontal surgery of hard and soft tissues and the placement of implants. Dental hygienists will further develop student skills in the

clinic with regard to preventive and prophylactic procedures, motivational interviewing and oral hygiene instruction.

Describe how students will be assessed

Examinations including quizzes and final exams are associated to the foundational knowledge courses for periodontal therapy. Competency assessments in the application of periodontal therapy in the clinic includes both formative and summative assessments. Formative assessments include laboratory CA for scaling and root planning and for periodontal surgery (hard and soft tissue) that must be completed before clinical experiences in those areas.

Summative assessments in periodontology are planned to be in clinical settings. As noted in the above section they include:

- Outcomes of periodontal therapy: This is a patient-based CA where the student presents one of their cases to defend diagnostic, treatment and outcomes of care in a patient with periodontal disease.
- Integrated periodontology care: a patient-based CA in which the student presents and defends the outcomes of care in a periodontology patient with additional restorative, prosthodontic, surgical orthodontic or oral medicine co-factors.
- Scaling and root planning: The knowledge, clinical skills and values associated to the scaling and root planning of a patient with periodontal disease is assessed in this patient based CA.

Describe how competency will be met and ensured for all graduates.

Competency in periodontal therapy is ensured in that every dental graduate must complete the competency assessments noted in [Appendix 2-24 Mapping of all Competency Assessments](#) which are summarized as related to 2-24i in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates.

STANDARD 2-24 (j)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

- j. pulpal therapy;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24j

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
4. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
5. Demonstrate the ability to comfortably apply clinical skills for dental procedures in a fashion that promotes the continued development of skills, patient confidence, and consideration for applying more advanced skills when needed.
6. Apply the tenets of ethical behavior and professionalism with exemplary leadership empathy, clinical behavioral understanding customized to the patient's needs.
7. Integrate all aspects of the practice management, systems-based practice, legal and regulatory requirements of practice and consistently applies this knowledge as a skill in clinical practice.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24j

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare

8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

COURSES SUPPORTING STANDARD 2-24j

Course #	Course Title	Credits	Year	Term
Odont 522	Cariology <i>LAL</i>	3	DS 1	Spring

The biology, phenotype, epidemiology, anatomical changes from caries is presented. The prevention of caries through CAMBRA is developed as well as strategies for management at all stages of the disease. The course introduces the pathways of caries as a regional and systemic disease.

Course #	Course Title	Credits	Year	Term
Odont 642	Endodontology: Diseases of the Pulp and Pathways of Odontogenic Infection, Endodontic Therapy and Technique <i>LAL and LAB</i>	3	DS 2	Spring

The diagnosis and treatment of the diseases of the dental pulp throughout life is presented. The biologic basis for treatment of diseases of the pulp is developed as well as the rationale for these methods. The laboratory will introduce students to the ortho-endodontic therapy methods including the use of magnification, access the pulp canals, instrumentation of the canals and obliteration of the pulpectomy site to clinical standards.

Course #	Course Title	Credits	Year	Term
Odont 662	Comprehensive Care Family Dentistry <i>CLIN and LAB</i>	3	DS 2	Spring

Treatment of caries and periodontal disease with discipline based faculty from operative dentistry, prosthodontics, endodontology and periodontology is carried out with the DS 2 as an active participant in the care team that includes a DS 3 and DS 4. Students will participate in case presentations, medical record assessment and recording, and other aspects of the clinic activities. The laboratory will include a simulated clinic visit including OSCE record and electronic health record.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Fall

This daily clinic will focus on students developing their family of patients in conjunction with other members of their team headed by the faculty team leader. Emphasis on diagnosis and treatment planning and completion of initial urgent procedures will be carried out.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Fall

- 1. Clinical Procedures, (CP)**
- 2. Problem Solving (PS)**
- 3. Clinical Reasoning (CR)**
- 4. Professionalism (P)**
- 5. Ethical Decision Making (EDM)**
- 6. Communication Skills (CS)**

Competency assessment	Course number	Assessment method	Prerequisites	Comments
Endodontic therapy	Odont 532	Laboratory exercise X3 (incisor, premolar, molar) CP, PS, CR	Lecture and lab Odont 532	2, 3, 4, 5 FORMATIVE
Endodontic therapy	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	1, 2, 3, 4, 5, 6, 7

NARRATIVE SUPPORTING STANDARD 2-24j

Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.

Foundational knowledge in endodontology will occur in basic medical sciences that support knowledge of immunology, microbiology, inflammation and related basic sciences. The cariology course, Odont 522 described how caries affects the pulp and the pathways of infection.

Odont 642 in the D2 year is the didactic and laboratory course in which applied knowledge and skill in endodontology in preparation for clinical activity occurs. All student experiences in endodontology subsequently occur in the clinical practicum in Comprehensive care dentistry D2, D3, and D4 and in community based education.

Of note in the planned clinical experiences is that California now includes endodontic therapy in its MediCal benefit package, and that CNUCDM will not have a graduate program in endodontology. Supervision for endodontic therapy in the comprehensive care clinic will be performed by both the team leader and by endodontist faculty members. Use of microscopes, rotary instrumentation where appropriate is planned. Students will as well perform pulpal therapy in pediatric dentistry and in community based education.

The comprehensive experience in pulpal therapy at CNUCDM that is planned is consistent with developing the desired scope of practice for the general dentist as defined by the institution.

Describe how students will be assessed

In addition to didactic examination in the endodontology course, Odont 642, the students will complete a formative competency assessment in Odont 642 in preparation for patient based care. This consists of three laboratory exercises.

Assessment of the student for pulpal therapy as a summative assessment is performed on a patient. A case is selected from a patient of record in which the diagnosis, treatment and outcome assessment of care for a patient with pulpal disease is presented by the student and is observed by the calibrated reviewer. This must include the extirpation and obturation of the pulpal tissue in a succedaneous tooth either single or multirrooted and the subsequent assessment of the outcome of treatment.

Describe how competency will be met and ensured for all graduates.

Competency in pulpal therapy is ensured in that every dental graduate must complete the competency assessments noted in [Appendix 2-24 Mapping of all Competency Assessments](#) which are summarized as related to 2-24j in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates.

STANDARD 2-24 (k)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

k. oral mucosal and osseous disorders;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24k

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
4. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
5. Demonstrate the ability to comfortably apply clinical skills for dental procedures in a fashion that promotes the continued development of skills, patient confidence, and consideration for applying more advanced skills when needed.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24k

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare
8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

COURSES SUPPORTING STANDARD 2-24k

Course #	Course Title	Credits	Year	Term
HS 521	Integumentary and Musculoskeletal Systems (CP Course)	7	DS 1	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences will include vesiculobullous disease of the oral mucosa, oral manifestations of muscular dystrophy, oral cancer, myofascial pain dysfunction syndrome, arthritis in dental practice, osteoporosis and oral health.

Course #	Course Title	Credits	Year	Term
OMFS 751	Oral Radiology 2 LAL and LAB	3	DS 3	Fall

The understanding of Panoramic, planar films, CT, MRI. Nuclear medicine, and non-ionizing methods of image acquisition is presented. Comparison of these methods and appropriate case selection for these studies is presented. The utility in treatment planning and integration with other digital treatment planning methods is shown. The diagnosis of pathology via these methods is developed.

Course #	Course Title	Credits	Year	Term
OMFS 851	Oral Radiology Seminar SEM	2	DS 4	Fall

This case-based seminar will present findings using all methods in OMFS 641 and OMFS 751 to demonstrate through active learning the radiographic findings in key diseases of the oral and maxillofacial region.

Course #	Course Title	Credits	Year	Term
OMFS 642	Oral Pathology/Oral Medicine 1 LAL and LAB	3	DS 2	Spring

The significant tumors, anomalies, oral manifestations of systemic disease and other pathologies of the oral and maxillofacial region are presented. The laboratory will focus on the gross pathology and microscopic pathology of the oral and maxillofacial region

Course #	Course Title	Credits	Year	Term
OMFS 742	Oral Pathology/Oral Medicine 2 LAL	3	DS 3	Spring

Further development of the oral manifestations of systemic disease is presented with emphasis on diabetes, hematologic bleeding disorders, hematologic malignancies, lymphomas, myeloma, xerostomic diseases, autoimmune disease, maxillofacial movement disorders, other neurologic diseases such as Parkinson's, with oral manifestations.

Course #	Course Title	Credits	Year	Term
OMFS 862	Oral Pathology/Oral Medicine Seminar SEM	2	DS 4	Spring

Concentration on oral medicine will include the risk assessment and management of complex systemic diseases related to dental medicine care in dental practice. Case-based discussion on the dental medicine patient with HIV, ongoing chemotherapy for malignancy, osteoporosis/osteopenia among others will be presented by students in seminar format.

Course #	Course Title	Credits	Year	Term
Odont 662	Comprehensive Care Family Dentistry CLIN and LAB	3	DS 2	Spring

Treatment of caries and periodontal disease with discipline based faculty from operative dentistry, prosthodontics, endodontology and periodontology is carried out with the DS 2 as an active participant in the care team that includes a DS 3 and DS 4. Students will participate in case presentations, medical record assessment and recording, and other aspects of the clinic activities. The laboratory will include a simulated clinic visit including OSCE record and electronic health record.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry CLIN	8	DS 3	Fall

This daily clinic will focus on students developing their family of patients in conjunction with other members of their team headed by the faculty team leader. Emphasis on diagnosis and treatment planning and completion of initial urgent procedures will be carried out.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry CLIN	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry CLIN	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

Course #	Course Title	Credits	Year	Term
Odont 862	Comprehensive Care Family Dentistry CLIN	8	DS 4	Spring

The final semester of comprehensive care family dentistry will focus on the completion of phase 2 care for patients of record, increasing facility in providing initial evaluation and care of the dental patient, and addressing complex issues in care including those associated to overall health, stages of life, cultural awareness among others.

Course #	Course Title	Credits	Year	Term
OMFS 772	Clinical Clerkship: Oral and Maxillofacial Surgery 4 weeks, 30 hours per week plus call CLIN	8	DS 3	Spring

The students will enter the oral and maxillofacial surgery care team for this clerkship including the care of patients for dentoalveolar surgery, major maxillofacial surgery and complex conditions of the head and neck. Clinical experience in ambulatory oral surgery and anesthesia and assisting for maxillofacial surgery in the operating room including emergency and trauma care occurs. Participation in hospital rounds and conferences occurs.

--	----------	--	--------------------------	---------------------

NARRATIVE SUPPORTING STANDARD 2-24k

Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.

Foundational knowledge in oral mucosal and osseous disorders occurs as noted in the courses in the previous section to include the human studies course in Integumentary and Musculoskeletal Systems, HS 521, which will include case based studies of patients with osseous and mucosal diseases. Oral radiology OMFS 751 and oral radiology seminar OMFS 851 will present osseous pathology correlated to clinical findings as seen on planar films, CT, Cone beam CT and Panoramic radiographs. Oral medicine, oral pathology OMFS 662 and OMFS 772 will present knowledge and active/laboratory learning on oral mucosal and osseous diseases. These are further augmented in a case based fashion using where possible patients of record in Oral pathology/oral medicine seminar OMFS 862. Student experiences in Comprehensive care dentistry and in rotations in oral and maxillofacial surgery and community based education will on a daily basis demonstrate the presence of osseous and mucosal pathology. This will allow the student to gain extensive experience and is consistent with the definition of general dentistry as defined by the institution.

Describe how students will be assessed

Competency assessments in support of Standard 2-24 k are summarized above. They include:

- Osteoporosis: a case-based CA in which the student diagnoses, develops treatment strategy and assesses the potential outcomes of care for a patient with osteoporosis including the oral health considerations.
- Oral medicine/oral pathology case-based CA: A patient of record is selected with oral mucosal or osseous disease for observed assessment, diagnosis and treatment planning. Outcomes of therapy or anticipated outcomes are also assessed in the patient base exam.

Describe how competency will be met and ensured for all graduates.

Competency in oral mucosal and osseous disorders is ensured in that every dental graduate must complete the competency assessments noted in **Appendix 2-24 Mapping of all Competency Assessments** which are summarized as related to 2-24k in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates

STANDARD 2-24 (I)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

1. hard and soft tissue surgery;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24I

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
4. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
5. Demonstrate the ability to comfortably apply clinical skills for dental procedures in a fashion that promotes the continued development of skills, patient confidence, and consideration for applying more advanced skills when needed.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24I

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare
8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

COURSES SUPPORTING STANDARD 2-24I

Course #	Course Title	Credits	Year	Term
OMFS 761	Principles of Oral Surgery <i>LAL and LAB</i>	3	DS 3	Fall

The principles of aseptic technique, flap design, surgical access, surgical hemostasis, infection prevention, and wound healing are presented. Technique for the removal of erupted and non-erupted teeth, both surgically and via forceps and elevator is presented. Preprosthetic surgical technique and minor soft tissue surgery including biopsy is presented. The laboratory will focus on the surgical and nonsurgical removal of teeth and on soft tissue surgery and biopsy.

Course #	Course Title	Credits	Year	Term
OMFS 762	Advanced Topics in Oral and Maxillofacial Surgery <i>LAL</i>	2	DS 3	Spring

Understanding of major conditions of the oral and maxillofacial region requiring surgical intervention is presented. This includes diagnostic features, techniques for corrective surgery and outcome assessment. Categories include the treatment of facial trauma, ablative tumor surgery of the head and neck, cleft lip and palate surgery, craniofacial surgery, orthognathic surgery, reconstructive surgery of the jaws and face, and surgical treatment of temporomandibular disorders.

Course #	Course Title	Credits	Year	Term
OMFS 772	Clinical Clerkship: Oral and Maxillofacial Surgery <i>4 weeks, 30 hours per week plus call</i> <i>CLIN</i>	8	DS 3	Spring

The students will enter the oral and maxillofacial surgery care team for this clerkship including the care of patients for dentoalveolar surgery, major maxillofacial surgery and complex conditions of the head and neck. Clinical experience in ambulatory oral surgery and anesthesia and assisting for maxillofacial surgery in the operating room including emergency and trauma care occurs. Participation in hospital rounds and conferences occurs.

Course #	Course Title	Credits	Year	Term
Odont 621	Periodontology <i>LAL and LAB</i>	3	DS 2	Fall

The normal structure and function of the periodontium is presented. The pathology, microbiology, immunology, and pathophysiology of diseases of the periodontium is presented. Prevention, chronic disease management, and nonsurgical/minimally invasive procedures for periodontal diseases is emphasized. Laboratory session focus on the development of procedures and psychomotor skills using surgical armamentarium in a simulated clinical setting for the treatment of diseases of the periodontium.

Course #	Course Title	Credits	Year	Term
Odont 622	Periodontology <i>LAL and LAB</i>	3	DS 2	Spring

In-depth understanding of the etiology and progression of chronic periodontal diseases is developed in this course. The influence of systemic diseases such as HIV, diabetes mellitus, and obesity on the health of the periodontium is explored. Surgical interventions for the treatment of diseases of the periodontium is presented. The laboratory is focused on advanced techniques including flap surgery, guided tissue regeneration, socket preservation among others, as well as continued development of skills in curettage.

Course #	Course Title	Credits	Year	Term
Odont 662	Comprehensive Care Family Dentistry <i>CLIN and LAB</i>	3	DS 2	Spring

Treatment of caries and periodontal disease with discipline based faculty from operative dentistry, prosthodontics, endodontology and periodontology is carried out with the DS 2 as an active participant in the care team that includes a DS 3 and DS 4. Students will participate in case presentations, medical record assessment and recording, and other aspects of the clinic activities. The laboratory will include a simulated clinic visit including OSCE record and electronic health record.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Fall

This daily clinic will focus on students developing their family of patients in conjunction with other members of their team headed by the faculty team leader. Emphasis on diagnosis and treatment planning and completion of initial urgent procedures will be carried out.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

Course #	Course Title	Credits	Year	Term
Odont 862	Comprehensive Care Family Dentistry CLIN	8	DS 4	Spring

The final semester of comprehensive care family dentistry will focus on the completion of phase 2 care for patients of record, increasing facility in providing initial evaluation and care of the dental patient, and addressing complex issues in care including those associated to overall health, stages of life, cultural awareness among others.

COMPETENCY ASSESSMENTS SUPPORTING STANDARD 2-24I

1. Clinical Procedures, (CP)
2. Problem Solving (PS)
3. Clinical Reasoning (CR)
4. Professionalism (P)
5. Ethical Decision Making (EDM)
6. Communication Skills (CS)

NARRATIVE SUPPORTING STANDARD 2-24I

Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.

The courses supporting the development of knowledge and skills to support the performance of osseous and soft tissue surgery include Principles of oral surgery in which aseptic technique, flap design, surgical access, hemostasis, infection prevention and wound healing are presented. In this course surgical technique is reviewed and applied in a laboratory setting in Advanced Topic further presentation of complex osseous and soft tissue surgery is developed. The foundational knowledge of osseous and soft tissue surgery applied to periodontology is also presented in those course related to Standard 2-24i.

Clinical experience in comprehensive care dentistry clinical practicum and community based education as well as in the clinical clerkship in oral and maxillofacial surgery will include clinical experience in exodontia, biopsy, alveoplasty, osseous recontouring, bone grafting among other hard and soft tissue procedures. The rotation in oral and maxillofacial surgery will be at hospital based practices in the new CNU Hospital and Clinics beginning in 2023 as well as in regional hospitals and clinics, and regional health centers such as El Dorado Health and Shingle Springs Indian Health which are all ambulatory settings with OMS faculty based at those sites.

Describe how students will be assessed

All competency assessments for osseous and soft tissue surgery are patient based assessments. These include, as listed in the section above:

- Simple exodontia: in which the handling of soft and hard tissue is a component of the evaluation.
- Surgical extraction: Includes the removal and recontouring of bone associated to the removal of a tooth
- Preprosthetic surgery: The CA evaluates the recontouring of bone and soft tissue for the purpose of constructing a prosthesis
- Implant placement: Flap development and osteotomy are essential elements of the CA
- Outcomes of periodontal therapy: The results of osseous and soft tissue surgery are examined in this patient based CA

Describe how competency will be met and ensured for all graduates.

Competency in hard and soft tissue surgery is ensured in that every dental graduate must complete the competency assessments noted in **Appendix 2-24 Mapping of all Competency Assessments** which are summarized as related to 2-24I in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates.

STANDARD 2-24 (m)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

m. dental emergencies;

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24m

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
4. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
5. Demonstrate the ability to comfortably apply clinical skills for dental procedures in a fashion that promotes the continued development of skills, patient confidence, and consideration for applying more advanced skills when needed.
6. Apply the tenets of ethical behavior and professionalism with exemplary leadership empathy, clinical behavioral understanding customized to the patient's needs.
7. Integrate all aspects of the practice management, systems-based practice, legal and regulatory requirements of practice and consistently applies this knowledge as a skill in clinical practice.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24m

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare

8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

COURSES SUPPORTING STANDARD 2-24m

Course #	Course Title	Credits	Year	Term
OMFS 772	Clinical Clerkship: Oral and Maxillofacial Surgery <i>4 weeks, 30 hours per week plus call CLIN</i>	8	DS 3	Spring

The students will enter the oral and maxillofacial surgery care team for this clerkship including the care of patients for dentoalveolar surgery, major maxillofacial surgery and complex conditions of the head and neck. Clinical experience in ambulatory oral surgery and anesthesia and assisting for maxillofacial surgery in the operating room including emergency and trauma care occurs. Participation in hospital rounds and conferences occurs.

Course #	Course Title	Credits	Year	Term
OMFS 752	Clinical Clerkship: Pediatric Dentistry <i>4 weeks, 30 hours per week plus call CLIN</i>	8	DS 3	Spring

The student will engage in clinical experiences in the pediatric dentistry clinic as a member of the care team, treating patients under the supervision of pediatric dentistry faculty. Consultation on pediatric patients referred for oral conditions via pediatric medicine will occur.

Course #	Course Title	Credits	Year	Term
Odont 662	Comprehensive Care Family Dentistry <i>CLIN and LAB</i>	3	DS 2	Spring

Treatment of caries and periodontal disease with discipline based faculty from operative dentistry, prosthodontics, endodontology and periodontology is carried out with the DS 2 as an active participant in the care team that includes a DS 3 and DS 4. Students will participate in case presentations, medical record assessment and recording, and other aspects of the clinic activities. The laboratory will include a simulated clinic visit including OSCE record and electronic health record.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Fall

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry CLIN	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry CLIN	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

Course #	Course Title	Credits	Year	Term
Odont 862	Comprehensive Care Family Dentistry CLIN	8	DS 4	Spring

The final semester of comprehensive care family dentistry will focus on the completion of phase 2 care for patients of record, increasing facility in providing initial evaluation and care of the dental patient, and addressing complex issues in care including those associated to overall health, stages of life, cultural awareness among others.

COMPETENCY ASSESSMENTS SUPPORTING STANDARD 2-24m

1. Clinical Procedures, (CP)
2. Problem Solving (PS)
3. Clinical Reasoning (CR)
4. Professionalism (P)
5. Ethical Decision Making (EDM)
6. Communication Skills (CS)

Competency assessment	Course number	Assessment method	Prerequisites	Comments
Dental emergencies	Odont 861 or Odont 862	Patient Based CP, PS, CR, CS, P, EDM	When ready per group leader assessment	Competencies 1, 2, 3, 4, 5, 6, 7

NARRATIVE SUPPORTING STANDARD 2-24m

Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice.

Dental emergencies, including mostly those caused by infection and trauma, will be seen by students as an integrated aspect of patient care within their teams in comprehensive care dentistry, in community clinics and whole on rotation especially in pediatric dentistry and in oral and maxillofacial surgery. While it is anticipated that all students will have a strong experience in dental emergencies, it is by its nature that each dental emergency has with it some unique characteristics. Thus the comprehensive care group will have scheduled time daily for the team to see dental emergencies and assign students as needed to the care of patients. These cases as well will be part of case conference and part of the competency assessment of students in dental emergencies as part of a competency assessment case presentation.

Describe how students will be assessed

The competency assessment for dental emergencies is noted in the above section. It is planned to be a case based presentation of a patient treated with the dental student either individually under direct supervision, or if more complex with consultant(s) from medicine, surgery, and/or dental specialists. The case defense will be with regard to the successful assessment, appropriate treatment and/or referral, assessment of outcome and consistent with the rubric measuring all aspects of the patient interaction including assessment, communication, knowledge, clinical skills, reflection and professionalism.

Describe how competency will be met and ensured for all graduates.

Competency in dental emergencies is ensured in that every dental graduate must complete the competency assessments noted in [Appendix 2-24 Mapping of all Competency Assessments](#) which are summarized as related to 2-24m in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates.

STANDARD 2-24 (n)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

n. malocclusion and space management; and

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24n

1. Demonstrate patient interaction that provides able and personable communication with the patient that addresses all clinical issues and addresses concerns in an empathetic and culturally aware fashion
2. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
3. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
4. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
5. Demonstrate the ability to comfortably apply clinical skills for dental procedures in a fashion that promotes the continued development of skills, patient confidence, and consideration for applying more advanced skills when needed.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24n

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare
8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

COURSES SUPPORTING STANDARD 2-24n

Course #	Course Title	Credits	Year	Term
OMFS 652	Orthodontics and Craniofacial Growth and Development <i>LAL and LAB</i>	3	DS 2	Spring

Principles of craniofacial growth and development will be presented. Abnormalities leading to malocclusion and dentofacial deformities will be shown. Methods of diagnosing disorders of dental facial growth and development will be understood and utilized by students. Orthodontic interventions for these conditions including methods, and outcomes will be shown. The laboratory will concentrate on diagnosis and orthodontic treatment methods.

Course #	Course Title	Credits	Year	Term
OMFS 771	Pediatric Dentistry <i>LAL and LAB</i>	3	DS 3	Fall

Child development and child management in the clinical setting will be developed from a holistic and family based perspective. Major diseases in growth and development of the oral cavity will be elucidated. The development of the deciduous and mixed dentition along with craniofacial development is presented. Caries diagnosis, treatment and prevention in the deciduous dentition is shown. The laboratory will provide simulated clinical experiences in caries treatment, deciduous crowns, space maintenance, and care of the pediatric patient.

Course #	Course Title	Credits	Year	Term
OMFS 752	Clinical Clerkship: Pediatric Dentistry <i>4 weeks, 30 hours per week plus call</i> CLIN	8	DS 3	Spring

The student will engage in clinical experiences in the pediatric dentistry clinic as a member of the care team, treating patients under the supervision of pediatric dentistry faculty. Consultation on pediatric patients referred for oral conditions via pediatric medicine will occur.

Course #	Course Title	Credits	Year	Term
OMFS 872	Clinical Clerkship: Orthodontics <i>4 hours per week for 8 weeks</i> CLIN	2	DS 4	Spring

Students will enter the orthodontic care team providing diagnostic and treatment services for patients undergoing orthodontic care under the auspices of orthodontic faculty in College of Dental Medicine clinics.

COMPETENCY ASSESSMENTS SUPPORTING STANDARD 2-24n

1. Clinical Procedures, (CP)
2. Problem Solving (PS)
3. Clinical Reasoning (CR)
4. Professionalism (P)
5. Ethical Decision Making (EDM)
6. Communication Skills (CS)

Competency assessment	Course number	Assessment method	Prerequisites	Comments
Orthodontic Growth and development assessment	OMFS 872	Patient Based CP, PS, CR, CS, P, EDM	In orthodontic clerkship or comp care clinic	1, 2, 3, 4, 5, 6, 7

NARRATIVE SUPPORTING STANDARD 2-24n

Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice

Foundational knowledge in growth and development, malocclusion and space management occur in OMFS 652 and in pediatric dentistry OMFS 771. Student clinical experiences will be predominantly during rotations to orthodontics OMFS 862 and pediatric dentistry OMFS 752. In these rotations the student will engage in clinical experiences in the pediatric dentistry clinic as a member of the care team, treating patients under the supervision of pediatric dentistry faculty. Consultation on pediatric patients referred for oral conditions via pediatric medicine will occur. In the orthodontic rotation, students will enter the orthodontic care team providing diagnostic and treatment services for patients undergoing orthodontic care under the auspices of orthodontic faculty in College of Dental Medicine clinics.

Describe how students will be assessed

As noted above, a patient based competency assessment is performed while the student is on orthodontic rotation in which the student must assess and present the salient craniofacial and malocclusion findings, the treatment plan, interventions completed to the point of the CA and the outcomes or anticipated outcomes of care. This presentation is developed with a full orthodontic data base consisting of clinical photographs, models, cephalometric evaluation and other imaging.

Describe how competency will be met and ensured for all graduates

Competency in malocclusion and space management is ensured in that every dental graduate must complete the competency assessments noted in **Appendix 2-24 Mapping of all Competency Assessments** which are summarized as related to 2-24n in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates.

STANDARD 2-24 (o)

2-24 At a minimum, graduates must be competent in providing oral health care within the scope of general dentistry, as defined by the school, including:

- o. Evaluation of the outcomes of treatment, recall strategies, and prognosis.

COMPETENCY STATEMENTS SUPPORTING STANDARD 2-24o

1. Provide verbal and written patient presentation that demonstrates the ability to present key findings and organize them in a fashion to make appropriate care decisions.
2. Utilize all pertinent biomedical knowledge to influence and optimize the care of the patient
3. Apply knowledge with critical thinking developed in the care of patients across all pertinent multiple domains.
6. Apply the tenets of ethical behavior and professionalism with exemplary leadership empathy, clinical behavioral understanding customized to the patient's needs.
7. Integrate all aspects of the practice management, systems-based practice, legal and regulatory requirements of practice and consistently applies this knowledge as a skill in clinical practice.

PROGRAM LEARNING OUTCOMES SUPPORTING STANDARD 2-24o

Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy

Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry

Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills

Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care

Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare

COURSES SUPPORTING STANDARD 2-24o

While the outcomes of care and prognosis and recall are components of all clinical courses, these areas are most principally addressed in the course of care of comprehensive care patients and in junior and senior year seminars which are evidentiary and case based. Case conference and assessment of global competency during these student presentations in Odont 861 and 862 are the leading areas for this activity

Course #	Course Title	Credits	Year	Term
Odont 522	Cariology LAL	3	DS 1	Spring

The biology, phenotype, epidemiology, anatomical changes from caries is presented. The prevention of caries through CAMBRA is developed as well as strategies for management at all stages of the disease. The course introduces the pathways of caries as a regional and systemic disease.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry CLIN	8	DS 3	Fall

This daily clinic will focus on students developing their family of patients in conjunction with other members of their team headed by the faculty team leader. Emphasis on diagnosis and treatment planning and completion of initial urgent procedures will be carried out.

Course #	Course Title	Credits	Year	Term
Odont 752	Periodontology Seminar SEM	2	DS 3	Spring

Using a case-based format, the treatment planning, outcome assessment, management of medical and dental comorbidities among others of the patient with diseases of the periodontium is presented. Patient-centered, health systems informed, and culturally aware aspects of care are discussed through the case-based format.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry CLIN	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 841	Periodontology Seminar SEM	2	DS 4	Fall

Using case-based format, interdisciplinary problems especially with orthodontics, endodontics and prosthodontic consideration will be developed through patient presentations of patients of record or via the OSCE format. Further exploration of comorbidities in periodontal diseases will be developed.

Course #	Course Title	Credits	Year	Term
Odont 851	Prosthodontics and Implant Dentistry: Implant Surgery and Prosthodontic Reconstruction LAL and LAB	3	DS 4	Fall

The replacement of missing teeth utilizing dental implants is presented. This course includes the biomechanics of implants, concepts of osseointegration, restoration options for implants, implant systems and the placement of implants. The laboratory will teach the placement of implants including appropriate assessment and osteotomies, and the restoration of implants using indirect and direct techniques.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry CLIN	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

Course #	Course Title	Credits	Year	Term
Odont 862	Comprehensive Care Family Dentistry CLIN	8	DS 4	Spring

The final semester of comprehensive care family dentistry will focus on the completion of phase 2 care for patients of record, increasing facility in providing initial evaluation and care of the dental patient, and addressing complex issues in care including those associated to overall health, stages of life, cultural awareness among others.

Course #	Course Title	Credits	Year	Term
OMFS 752	Clinical Clerkship: Pediatric Dentistry 4 weeks, 30 hours per week plus call CLIN	8	DS 3	Spring

The student will engage in clinical experiences in the pediatric dentistry clinic as a member of the care team, treating patients under the supervision of pediatric dentistry faculty. Consultation on pediatric patients referred for oral conditions via pediatric medicine will occur.

Course #	Course Title	Credits	Year	Term
OMFS 872	Clinical Clerkship: Orthodontics 4 hours per week for 8 weeks CLIN	2	DS 4	Spring

Students will enter the orthodontic care team providing diagnostic and treatment services for patients undergoing orthodontic care under the auspices of orthodontic faculty in College of Dental Medicine clinics.

COMPETENCY ASSESSMENTS SUPPORTING STANDARD 2-24o

Outcomes of periodontal therapy	Odont 752	Patient based CP, PS, CR, CS, P, EDM	Seminar participation	Patient selected for students' existing patients
Integrated perio care (at least 3) perio/pros/endo/ortho/oral medicine/oral surgery assessment	Odont 841	Patient based CP, PS, CR, CS, P, EDM	Seminar participation	Patient selected from students' existing patients
Comprehensive caries treatment	Odont 761	Patient based including comp evaluation of all restorations, application of CAMBRA and disease control CP, PS, CR, CS, P, EDM	Daily participation in clinic and case completion	
Demonstration of phase 1 therapy	Odont 762	Patient based CP, PS, CR, CS, P, EDM	Phase 1 therapy completed in at least 3 cases	

Completion of phase 1 and 2 therapy	Odont 861 or Odont 862	Patient based CP, PS, CR, CS, P, EDM	Odont 862 for at least 8 weeks	
Dental care of the child preschool	OMFS 752	Patient based CP, PS, CR, CS, P, EDM	In peds clerkship or in comp care clinic	
Dental care of the child K-12	OMFS 752	Patient based CP, PS, CR, CS, P, EDM	In peds clerkship or in comp care clinic	
Orthodontic growth and development assessment	OMFS 872	Patient based CP, PS, CR, CS, P, EDM	In orthodontic clerkship or comp care clinic	

NARRATIVE SUPPORTING STANDARD 2-24o

[Provide a description of planned student experiences. Relate these experiences to the school's defined scope of general practice](#)

Student experiences in the evaluation of the outcomes of treatment, recall strategies, and prognosis are given their foundation in the didactic aspects of courses in clinical dental medicine most principally in the Odontology and Oral and Maxillofacial Studies theme of the curriculum. Regarding specific diseases for which interventions are carried out:

Caries outcomes of treatment, recall strategies and prognosis are based with foundational knowledge in the Dental Caries course Odont 522. This foundational knowledge is applied in Comprehensive Care Dentistry in the D2, D3 and D4 year whereby patients present form initial caries assessment through assessment of caries risk, actions based upon that assessment and recall strategies. Students perform case presentations upon completion of phase one therapy that assesses these same issues. The senior global competency assessment for phase two comprehensive care as well integrates caries outcomes of treatment into the assessment.

Regarding periodontal disease, pulpal disease, and edentulism outcomes of treatment, recall strategies and prognosis, foundational knowledge is presented in didactic discipline based courses and each clinical component is as well presented in comprehensive care dentistry as a component of the case presentation format described above

Describe how students will be assessed

The competency assessment for outcomes of treatment is ubiquitous in all clinical competency assessments. However those most principally directed towards this are reprised to follow:

- **Outcomes of periodontal care:** a patient-based CA where the student presented the results/outcomes of treatment, presents recall strategies and prognosis.
- **Integrated periodontology care**
(at least 3) perio/pros/endo/ortho/ oral medicine/ oral surgery assessment: This is a patient based CA where the student has developed integrated care with at least two other disciplines that interface with periodontology outcomes to assess overall outcomes in all oral health domains
- **Comprehensive caries treatment:** a patient based CA where the student presents the outcomes of caries treatment and utilizing CAMBRA develops risk assessment and recall strategies
- **Demonstration of phase 1 therapy**
- **Completion of phase 21 and phase 2 therapy:** These patient based CA's demonstrate the students' ability to assess the outcomes of treatment across disciplines of a patient of record in Odont 861 Odont 862
- **Dental care of the child preschool**
- **Dental care of the child K-12**
- **Orthodontic growth and development:**
The outcomes of treatment of the preschooler, K-12 and orthodontic patient are presented by the student in a case-based CA including assessment for follow-up and prognosis

Describe how competency will be met and ensured for all graduates.

Competency in evaluation of the outcomes of treatment, recall strategies and prognosis is ensured in that every dental graduate must complete the competency assessments noted in [Appendix 2-24 Mapping of all Competency Assessments](#) which are summarized as related to 2-24o in the listing above showing those CA's. Completion of all CA's are linked to the courses where they occur and are required for passing the course and thus required for all graduates.

B. Supportive Documentation:

1. Student clinical assessment forms, as available

[Appendix 2-24 Competency Assessment - General Rubric for Clinical Dentistry](#)
[Appendix 2-24 Mapping of all Competency Assessments](#)

STANDARD 2-25

2-25 Graduates **must** be competent in assessing the treatment needs of patients with special needs.

Intent:

An appropriate patient pool should be available to provide experiences that may include patients whose medical, physical, psychological, or social situations make it necessary to consider a wide range of assessment and care options. The assessment should emphasize the importance of non-dental considerations. These individuals include, but are not limited to, people with developmental disabilities, cognitive impairment, complex medical problems, significant physical limitations, and the vulnerable elderly. Clinical instruction and experience with the patients with special needs should include instruction in proper communication techniques and assessing the treatment needs compatible with the special need.

A. Description:

1. Describe planned student experiences in assessing the treatment of patients with special needs.

The university is planning a CNU Hospital and clinics in Elk Grove to be completed in the next 4 years. The CNUCDM has requested that the inpatient service include two dental operating rooms for the care of ambulatory oral surgery, dental and pediatric dental patients especially those with special needs. This is an acute resource need in northern California where patients who require anesthesia services, behavioral management or are physically unable to have care in a traditional setting are given options. It is the university plan to highlight all health care including dental health care for patients with special needs.

In addition patients with special needs who can be mainstreamed into care in clinical activities will do so as well with the accommodations needed to carry out that care including room access, lifts and behavioral care.

2. Describe how students will be assessed in assessing the treatment needs of patients with special needs.

Students will, as noted in the standard, not be competent to treat patients with special needs at the time of graduation. However it is critical that students demonstrate the ability to assess and appropriately treat and/or refer patients for their oral health needs. The students will as part of the courses below: Senior medicine seminar, present one of their case based presentations on a patient with special needs approved by the faculty

Course description

Course #	Course Title	Credits	Year	Term
HS 821	Senior Year Medicine Seminar <i>SEM</i>	2	DS 4	Fall

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Continued development of advanced based cases including those on hospitalized patients.

Course #	Course Title	Credits	Year	Term
HS 822	Senior Year Medicine Seminar <i>SEM</i>	2	DS 4	Spring

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Development of advanced knowledge of cases presenting for medical treatment for which dental consultation is needed in the preanesthetic presurgical patient and in concurrence with major systemic disease including trauma, stroke, myocardial infarction.

Competency assessment description for special needs patient

1. Clinical Procedures, (CP)
2. Problem Solving (PS)
3. Clinical Reasoning (CR)
4. Professionalism (P)
5. Ethical Decision Making (EDM)
6. Communication Skills (CS)

Competency assessment	Course number	Assessment Method Domains	Prerequisites	Comments And Competency Statement Numerical links
Complex medical case assessment: Special Needs Patient	HS 821 HS 822	Patient based PS, CR, CS, P, EDM	Concurrent medicine seminar	2, 3, 4, 6, 7 Patient selected from preop pool evaluated by student

B. Supportive Documentation:

1. Student assessment forms, as available

An assessment form particular to this competency is not developed. The general rubric for assessing clinical dental competency assessment is in [Appendix 2-24 Competency Assessment - General Rubric for Clinical Dentistry](#).

2. List of planned rotations or sites intended to give students experience with special needs patients

Comprehensive Care Dentistry CNUCDM

Pediatric dental clinic CNUCDM

CNU Hospitals and Clinics

Community Based education sites

STANDARD 2-26

- 2-26** Dental education programs **must** make available opportunities and encourage students to engage in service learning experiences and/or community-based learning experiences.

Intent:

Service learning experiences and/or community-based learning experiences are essential to the development of a culturally competent oral health care workforce. The interaction and treatment of diverse populations in a community-based clinical environment adds a special dimension to clinical learning experience and engenders a life-long appreciation for the value of community service.

A. Description:

1. Describe plans for service-learning and/or community-based learning experiences, including the types of patient interactions and any planned requirements/prerequisites for students to participate. What criteria will be used to determine whether the experiences aid in the development of a culturally competent oral healthcare provider?

Service learning attached to academic courses occur in the following courses:

Course #	Course Title	Credits	Year	Term
BSS 861	Clinical Clerkship: Community-based Education 4 weeks, 30 hours per week plus call	8	DS 4	Fall

Affiliated health systems based practices will accept CNU students into their care teams where senior students will provide clinical care under the supervision of Volunteer Community-Based Faculty in those sites. Suitable transportation and housing will be arranged for where needed. The purpose of the course is to provide community engagement with the constituencies served, to gain experience in community-based clinical care and to interact with the interprofessional and intraprofessional care team

Course #	Course Title	Credits	Year	Term
BSS 862	Clinical Clerkship: Community-based Education 4 weeks, 30 hours per week plus call	8	DS 4	Spring

This course will be at a second community-based rotation site to elaborate on the activities of the first rotation and engage a new community and a new clinic. In addition to comprehensive care experience, the student will compare and contrast communities and clinical care entities and provide a reflective essay on their community care experience.

In the above courses the student will engage the communities they serve including the health system, the populations specific to the clinics as well as a direct participant in community

activities. This service learning environment includes the migrant worker Hispanic community, Asian immigrants, African American, American Indian and rural communities. All students are required to participate in service learning as BSS 861 and BSS 862 are required courses.

The development of a culturally competent oral health care provider is an aspirational goal. CNUCDM believes that cultural humility is the demonstration of an understanding of the essential role of culture in health and wellness, but does not imply abilities to manage all cultural issues. It should give the students the tools to be of assistance to all patients from all cultures utilizing the tools of cultural humility.

In that vein, the students must write a reflective essay at the completion of BSS 862 that describes their experiences with service learning in the community they serve and asks for recommendations on how to positively impact the health of patients they served during their 8 weeks of rotation

Community assessment	BSS 862	Reflective essay PS, CR, CS, P, EDM	Enrolled in BSS 862 and in senior seminar in public health	2, 3, 4, 6, 7
----------------------	---------	--	--	---------------

2. Describe how students will be informed of these opportunities.

BSS 861 and BSS 862 are in the course catalogue. In addition to this, student and faculty led service learning opportunities are replete in the CNU academic health center and include oral health opportunities. These exist as well with the California Dental Association and the Sacramento District Dental Society.

3. If all students will not participate in service-learning and/or community-based learning experiences, how does the school intend to expose these students to community service or ensure that all students are culturally competent?

All students will participate in service learning

B. Supportive Documentation:

1. List of planned sites and experiences for students, as available

Sacramento Native American Health Center
Asian Health Services
HALO Health community clinics
Wellspace community clinics
El Dorado community health
Shingle Springs Indian Health

Colusa Indian Health
CDA cares events

2. School's policies and procedures for service learning

Appendix 2-3 2020-2021 CNUCDM Student Handbook

STANDARD 3 - FACULTY AND STAFF

STANDARD 3-1

- 3-1** The number and distribution of faculty and staff **must** be sufficient to meet the dental school's stated purpose/mission, goals and objectives, at all sites where required educational activity occurs.

A. Description:

1. Describe the hiring plan for the dental school for each year until the school is fully operational, and at all sites where required educational activity will occur including:
 - a. the planned distribution and balance of academic titles and experience within each department of the dental school,
 - b. the planned faculty/student instructional ratios during laboratory, preclinical and clinical sessions
 - c. the number of full-time equivalent faculty positions planned to be allocated to the dental program,
 - d. The percentage of full-time equivalent positions assigned to the school that will be filled by part-time faculty.

The hiring plan for the faculty of the CNUCDM is included in **Appendix 3-1 Faculty Hiring Plan**. The plan includes a pre-enrollment faculty of 15 with an increase of 15 FTE's per annum for a mature faculty of 60 by year 4. Among these 60 faculty, 42 will be FTE's assigned to the CDM budget. These 42 faculty are those responsible for the curriculum in dental medicine. The remainder will be basic science faculty, assigned to Common Pathway courses, paid by the College of Medicine at the agreed to rate of \$400,000 per annum and reimbursed through the dental medicine budget to the College of Medicine. Additionally, volunteer Community faculty will be salaried by their health systems entity while CNU students rotate on clerkships to those sites.

The plan is undergoing implementation at the current time with the completion of hiring as employees:

Dean, Leon Assael,

Associate Dean of Academic Affairs : Interim ADAA Rosemary Wu DMD MS

(This position was filled until April 25,2019 at which time it was vacated and reported to the ADEA Website. One in person and two phone interviews have taken place and a second in person interview is scheduled for June 10, 2019. An interim ADAA, Rosemary Wu DMD MS has been appointed as interim ADAA.)

Assistant Dean of Clinical Affairs, Kevin Keating,

Assistant Dean of research, Paul Glassman,

The Assistant Dean of Student Affairs and Admissions, Richard Simonsen.

Also discipline based leaders have been selected for hiring as needed 120 days ahead of

coursework. These include:

Periodontology, Rosemary Wu,
Prosthodontics, Jeffrey Nordlander
Oral maxillofacial surgery, Michael Cadra
Operative Dentistry/Preclinical: Nejleh Abed, David Graham
Endodontics: Kevin Keating
Public Health Dentistry: Huong Le

Pending leadership discussions are underway for hiring oral and maxillofacial radiology, oral and maxillofacial pathology, pediatric dentistry, and orthodontics. This will result in leadership positions identified for all dental specialties.

Some faculty whose start date has not yet arrived are currently under consulting engagement for the preparation of the self-study and will have start dates subsequently. This is summarized in [Appendix 3-1 Hiring Plan for Faculty Years 1 and 2](#) as well as in the President's project management timetable in [Appendix 1-1 President Report On the Planning For Dental College 2018](#).

As of April 15, 2019, 73 prospective full and part time faculty to provide didactic, laboratory and simulation education and experiential patient care education have committed to joining the College of Dental Medicine as clinical faculty as noted in [Appendix 3-1 SDDS Faculty Spreadsheet](#).

	Year 1	Year 2	Year 3	Year 4
Research Faculty	1	2	2	2
Teaching Faculty	14 (includes 5 administrator leaders)	28	43	58
Total	15	30	45	60

CNUCDM anticipates 42 FTE salaried faculty, 30 of whom will be full-time, making the salaried faculty make-up of 71% full-time. Our target is to have at least 50% of the faculty full-time and the other 50% part-time up to .8. 18 FTE non-salaried Volunteer Community Faculty will be utilized at health systems for which we have or are developing MOUs.

Teaching faculty will provide instruction for two classes per semester, while research faculty will teach one course per semester. Each class will be taught for 3-12 hours a week.

Faculty will also develop curriculum, with their focus on developing student learning outcomes, and faculty will be responsible for assessing student learning. Additionally, faculty will mentor students and serve on research project/dissertation committees. Faculty members will serve as academic advisors for a maximum of ten students. Research faculty are allotted 30 hours a week for research.

The Associate/Assistant Deans of Academic Affairs, Curriculum, Student Affairs and Clinical Affairs will lead the assessment of educational effectiveness by monitoring set norms and developing programs to address ongoing issues.

Supervision of students while at practicums and internships will occur on site. It is the responsibility of the training locations to have a clinical supervisor on staff to provide supervision and mentorship to the students. Separate faculty are not hired by the University for this purpose, though the Associate Dean of Clinical Education and the Field Placement Office will monitor placements to ensure that students are being trained in the key areas of the practice of dentistry and at the expected level proficiency.

Types of Faculty

- Basic Medical Sciences educators (in addition to COM Common Pathway educators)
- Preclinical educators
- Clinical educators - general dentistry
- Clinical educators - dental specialties
- Part-time clinical educators
- Volunteer Clinical Adjunct Faculty (no cost) associated to affiliated sites

A breakdown of faculty duties into hours per week, including a list of responsibilities will be noted in the annual effort statements for individual faculty against which they will be assessed. This is discussed further in Standard 3-4. The number and type of all CNUCDM faculty are outlined in **Exhibit R**.

The College of Dental Medicine at CNU will provide didactic, laboratory and simulation education and experiential patient care education with a team of primarily full-time faculty. Our target is to have at least 50% of the faculty full-time and the other 50% part-time for up to eight full time equivalent salaried positions. While the part-time faculty will include the administrative team and content experts across the spectrum of dental medicine, its disciplines and its specialties, part-time clinical educators from the Northstate region will provide clinical preceptorship/education, mentorship, lecture and small group learning seminars at the primary campus and in community-based education sites.

A planning group of over 70 future faculty associated to the Sacramento District Dental Society has met several times to develop curriculum. The 12 original members of the planning group for the College of Dental Medicine will also serve in part-time faculty capacity. The hiring plan calls for 60 FTEs comprised of full- and part-time faculty; this plan provides a comprehensive mix to accommodate instructional, clinical, service and scholarly needs of the college.

CNUCDM will utilize a cohort registration model. All students will be admitted as full-time only. The program will initially admit 80 students to the program and 80 in each subsequent year of the program. Class attendance and attendance in laboratories and clinics is required. Incomplete is offered as a grade per policy as contained in the student handbook and each syllabus.

Year	BMS Educator	Preclinical Ed	Clinical Ed (gen)	Clinical Ed (spec)	Total Teaching Faculty	Cohort Size	Enrollment	Total Classes Covered (yr)	Student: Teacher Ratio
1	6	5	2	2	15	80	80	20	6:1
2	6	8	10	6	30	80	160	36	6:1
3	6	8	20	11	45	80	240	62	6:1
4	6	8	30	16	60	80	320	76	6:1
5	6	8	30	16	60	80	80	76	6:1

*Fifth year in this chart represents our ability to accommodate students who fall behind cohort and need to make up coursework

Hiring Plan for CDM Faculty: 2020-21 and 2021-22

Academic Year	Position	Course	Name	Hire Date
2020-21	*Assistant Professor of Pathology	Hematology	Nazila Hejazi	5-1-2020
	*Associate Professor of Anatomy	Integumentary and Musculoskeletal	Nripendra Dhillon	5-1-2020
	Professor	Foundations of Odontology	Kevin Keating	3-1-2019
	Professor	Dental Anatomy	Wai Chen	6-1-2020
	Professor	Dental Anatomy Foundations of Dental Medicine Surgical Anatomy of the Head and Neck	Leon Assael	12-1-2018
	Professor	Managing Student Life Ethics in Dental Medicine and Health Care	Richard Simonsen	2-14-2019
	*Professor of Clinical Neurology	Neuroscience	Forshing Lui	5-1-2020
	*Associate Professor of Emergency Medicine	Cardiovascular and Pulmonary Systems	Darilyn Falck	10-1-2020
	*Associate Professor of Physiology	Cardiovascular and Pulmonary Systems	Tracy Yarbrough	10-1-2020
	Professor	Cariology	Kevin Keating	3-1-2020
	Assistant Professor	Oral Microbiology/Immunology	Pending	10-1-2020

Academic Year	Position	Course	Name	Hire Date
2021-22	*Associate Professor of Physiology	Renal System	Tracy Yarbrough	5-1-2021
	*Professor of Molecular Biology, Immunology and Microbiology	Gastroenterology	Nehad El-Sawi	5-1-2021
	*Associate Professor of Physiology, Endocrinology and Clinical Skills	Endocrine System	Mark Sheffield	5-1-2021
	Assistant Professor	Clinical Pharmacology 1	Pending	5-1-2021
	Assistant Professor	Operative Dentistry	David Graham	5-1-2021
	Assistant Professor	Periodontology	Rosemary Wu	5-1-2021
	Assistant Professor	Dental Anesthesiology 1: Local Anesthesia Dental Anesthesiology 2: Pain and Anxiety Control, Analgesia, Medical Management of Local Anesthesia	Michael Cadra	5-1-2021
	Assistant Professor	Oral Radiology 1	Shikha Rathi	5-1-2021
	Assistant Professor	Clinical Pharmacology 2/Oral Pharmacology	Jagdev Heir	5-1-2021
	Associate/Assistant Professor	Prosthodontics and Implant Dentistry: Removable Prosthodontics	Jeffrey Nordlander	10-1-2021
	Professor	Comprehensive Care Family Dentistry Endodontology, Diseases of the Pulp and Pathways of Odontogenic Infection	Kevin Keating	3-1-2019
	Associate/Assistant Professor	Oral Pathology/Oral Medicine 1	Pending	10-1-2021
	Associate/Assistant Professor	Orthodontics and Craniofacial Growth and Development	Pending	10-1-2021
	Associate/Assistant Professor	Behavioral Medicine	Bret McGlaughlin	10-1-2021
	Associate/Assistant Professor	Dental Medicine at all Stages of Life	Pending	10-1-2021

3. * Faculty shared with College of Medicine

2 Describe criteria that will be used to assign faculty job responsibilities and workload, including at all sites where required educational activity will occur.

Faculty assignments, job responsibilities and workload depend upon the following criteria:

1. Needs of the college of dental medicine
 - i. Pedagogic
 - ii. Student life
 - iii. Patient care

- iv. Service
 - v. Research
 - vi. Advancement
2. Capacity of the faculty member to achieve those needs
 - i. Each year assignments are made taking into account the overall capacity and abilities of the faculty member
 3. Faculty retention and development
 - i. Faculty education and development that promotes success
 - ii. Work/life balance

Assignments of faculty in these areas are made on an annual basis and are included in the annual review of each faculty member to assess the utility of the assignment with the above criteria, the capacity of the faculty member to achieve that assignment and the extent to which it contributes to the faculty member's success and retention. Resources, faculty development, staffing, and educational needs associated to those tasks are reviewed to ensure that the assignment is appropriate in the environment and is consistent with institutional capacity.

While the above assignments are for the Elk Grove primary campus site, beginning in 2023-2024, community based faculty will have students on rotation for BSS 861 and BSS 862, community based education as well as in rotations on Oral surgery and pediatric dentistry. The teaching assignments in those locations are clinical and associated to the patient care ongoing at those sites. It is expected that the calibrated faculty at those sites will provide clinical education for patients being treated by students chairside and provide mentorship, understanding of systems based practice and related activities at the site, as well as participate in appropriate case based conferences.

3. Specify the number of full-time equivalent faculty positions allocated to the dental program, including all sites where required educational activity will occur. Comment on the percentage of full-time equivalent positions assigned to the school and all sites where required educational activity will occur that are filled by part-time faculty.

The FTE allocated to the dental program is noted in the above section and is reprised her. Equivalent of 8 FTE faculty in the Humans systems component in the college of medicine consists of a mix of full and part time faculty. The course directors of each of the courses noted above are full time faculty. Of the 60 FTE's associated to the CNUCDM directly, the pro forma has \$7 million for full time faculty salary which is for 45 full time faculty. This is noted in [Appendix 1-5 Detailed Working Pro forma](#). The remaining 15 FTE's will be for part time faculty most of whom will be 20% at \$20,000 per year, producing positions for 50 part time salaried faculty. In addition, all community based faculty will be salaried by the health system to which they are associated and not by CNUCDM.

4. List all vacant full-time faculty positions along with current disposition of the vacant positions.

This is noted earlier in this section. As of April 2019, the key position meant to be hired and is vacant at this time is for Associate Dean of Academic Affairs. While this position was filled, the job offer was eventually denied and as of April 19, 2019 the position was reopened. Since

reopening the position, 4 more candidates have applied and interviews have been scheduled for two.

Other positions that are not yet hired are consistent with the hiring plan. While many have been identified, the hiring dates will be determined based upon CODA status with regard to start date of the DMD program which is intended for the fall of 2020.

5. In the context of the dental school's stated purpose/mission, goals and objectives, describe how the number and distribution of the full-time faculty will ensure time for:
 - a. course preparation and teaching
 - b. mentoring of fellow faculty
 - c. student advising and counseling
 - d. research/scholarly activities
 - e. faculty development, including calibration instruction for sites where required educational activity will occur,
 - f. participation in faculty clinical practice
 - g. participation in dental school and University committees
 - h. professional presentations (continuing education), and contributions to professional organizations

A: The mission of the College of Dental Medicine is to advance the art and science of health care through excellence in oral health education, practice, research service and social accountability. To accomplish this mission, the number and distribution of faculty in the plan is based upon the needs of the university to provide instruction, faculty development, student services, research and scholarship, development of the clinical program, university service and contributions to dental practice and dental education in the region and nationally.

Specifically, in order to achieve proper course preparation including the development of course materials, lectures, active learning, laboratory materials, student projects, among others, hiring for course faculty is anticipated 120 days prior to the beginning of each course. This is why the hiring plan extends from 15 to 30 to 45 and 60 faculty by year 4. At that point faculty will have developed all aspects of their teaching, practice, research and service roles.

B: Once hired, each faculty will communicate with and mentor or be mentored by existing faculty.

C: All faculty will be engaged in student life as advisors, mentors, counselors, academic and clinical resources. Appropriate time and resources to accomplish student life roles will be made available.

D: Every full time faculty member is granted time for research and scholarship at a minimum of 10% time and for active career path faculty members, a minimum of 20% time. During this time, faculty members will develop research projects with the discipline leaders in their area, with the Dean of Research and with the aid of mentors.

E: Time is allocated on a regular basis for faculty development and education. The faculty development seminar series occurs during time in which no other instruction occurs. Mandatory calibration of faculty in their discipline is scheduled during normal work days and clinical activities will adjusted to accommodate those schedules. Typically this will be done by

performing calibration on a discipline by discipline basis so that general clinical activities will be able to continue.

F: All clinical full time faculty are granted one day a week to perform clinical dental practice in CNUCDM clinics wherever possible or as agreed to by the Dean, in outside practice approved by CNUCDM.

G: Every full time faculty member will periodically be asked to serve o committees of the CDM and of the university.

H: It is the goal of the CNUCDM that every full time faculty member participate in professional organizations that are discipline based, advance biomedical research, and advance dental education. Faculty travel funds will be made available each year as well as time for this endeavor to assure CNUCDM is recognized as an active , capable, and meaningful participant in professional organizations.

Additional: The mission of the College of Dental Medicine - to advance the art and science of health care through excellence in oral health education, practice, research service and social accountability - is clearly addressed in this query 5 a-h, above with the exception of our mission to be socially accountable. The CNUCDM mission to be socially accountable must be addressed by every full time faculty member as part of their job responsibility. This can be accomplished through health related community service, clinical care, education to the public, inspiring pipeline applicants among other means. An individual plan for social accountability will be developed as in all other areas noted above for every full time faculty member. It is expected that this will support the mission of the university and the college.

6. Describe how the planned faculty/student instructional ratios during laboratory, preclinical and clinical sessions will be adequate to provide individualized instruction, guidance, and evaluative supervision, including sites where required educational activity will occur.

Each active learning environment, laboratory, small group active learning, preclinical and clinical education has needs individual to that environment with regard to access to faculty that needs to be addressed in the needs assessment for each course. The course director will propose for each session what the faculty needs are and the administration and discipline leaders will provide those faculty resources necessary for the task. The basis for those needs will be what is needed for individualized instruction, guidance and evaluation/assessment. Additionally, clinical settings require adequate supervision for the clinical care activity as well.

In principle it is expected that the following radios will be needed as a minimum, though specific sessions might require greater support. These ratios are based upon the leadership teams experience in dental education.

1. Small group learning CCMP in Human studies: 20:1
2. Human anatomy laboratory: 10:1
3. Dental anatomy laboratory 8:1
4. Operative dentistry laboratory 8:1
5. Periodontology laboratory 16:1
6. Oral surgery laboratory 16:1

7. Behavioral health clinic 1:1
8. Local anesthesia laboratory 4:1
9. Prosthodontic laboratory 8:1
10. Endodontic laboratory 8:1
11. Pediatric dentistry clinic 4:1
12. Oral surgery clinic 6:1
13. Special needs clinic 1:1
14. Comprehensive care clinic 4:1 (one group leader and one discipline based faculty for each 8 student pod)
15. Community based education 2:1

7. In the context of the dental school's stated purpose/mission, goals and objectives describe the planned staff resources that will be available to the dental school and describe the adequacy of staff, including sites where required educational activity will occur:
 - a. administrative assistants
 - b. secretaries
 - c. student services personnel
 - d. teaching assistants
 - e. dental laboratory technicians
 - f. dental assistants
 - g. information technology personnel

The staff salaries to support activities of the college are planned for an overall staffing of 60 FTE's to support the 60 full time faculty, students and patients

Here is the anticipated staff and roles associated to those staff to be completed by 2024. The above categories are coded with the categories below which are inclusive of the CODA provided list above. Note that categories for administrative assistants, secretaries and student services personnel are noted in category "a" below. No teaching assistants in the university sense as in graduate student who teach will be utilized however teaching specialists are noted in category A also.

Note that these positions are those added to existing positions for the service of the entire university in areas such as IT, security, admissions, and institutional effectiveness among others.

- a. **administrative** (includes a, b and c above from CODA query)
- b. **Clinics** (includes e and f above from CODA query)
- c. **Technical, buildings and grounds** (includes G from CODA query above)

CATEGORY	TITLE	SUPERVISOR	FTE
Deans office a	Admin officer	Dean	1
Deans office a	Institutional research/institutional effectiveness/ accreditation	Dean	1
Deans office a	College business and finance officer (CBFO)	Dean	1

8. Indicate those individuals who have additional teaching and/or administrative responsibilities within the institution, and at sites where educational activity will occur, and describe the extent of these responsibilities.

All faculty with administrative appointments will have the responsibility to teach, practice, provide service and perform scholarly work. This will support the culture of the college and develop the engagement of faculty and administrators in a more horizontal organization.

B. Supportive Documentation:

1. Departmental listing of faculty (Example exhibit K)

See Exhibit K.

2. Alphabetical listing of faculty (Example exhibits L through N)

See Exhibits L, M, N.

3. Summary of faculty (Example exhibits O, P, Q)

See Exhibit O, P, Q and Appendix 3-1 SDDS Faculty Spreadsheet. Exhibit S is also included with Faculty BioSketches.

4. Yearly hiring plan for faculty and staff (Example exhibit R)

Exhibit R, Appendix 3-1 Hiring Plan for Faculty Years 1 and 2, Appendix 3-1 Faculty Hiring Plan and Appendix 3-1 Secretarial and Clerical Support for CDM

5. List the secretarial and clerical support provided for the dental program, including at sites where required educational activity will occur. List the number and provide a brief description of full-time positions that are designated solely for the school. List the number and provide a brief description of any support, provided by a centralized clerical/duplicating service.

This is shown above in the context of all staff hires and in Appendix 3-1 Secretarial and Clerical Support for CDM as a detailed report

6. List the support secretarial and clerical services provided by the institution to the dental program, including at sites where required educational activity will occur.

The College's secretarial and clerical services will be provided by dedicated College of Dental Medicine employees. Detailed response in Appendix 3-1 Secretarial and Clerical Support for CDM.

7. List current faculty/student instructional ratios during all laboratory, preclinical and clinical sessions.

Year	BMS Educa tor	Precli nical Ed	Clinical Ed (gen)	Clinical Ed (spec)	Total Teaching Faculty	Cohort Size	Enroll ment	Total Classes Covered (yr)	Student: Teacher Ratio
1	6	5	2	2	15	80	80	20	6:1
2	6	8	10	6	30	80	160	36	6:1
3	6	8	20	11	45	80	240	62	6:1
4	6	8	30	16	60	80	320	76	6:1
5	6	8	30	16	60	80	80	76	6:1

*Fifth year in this chart represents our ability to accommodate students who fall behind cohort and need to make up coursework

8. Policy document for faculty activities such as administrative duties, research, advising and counseling students, supervision of clinical experiences (including clinical experiences at sites where educational activity occurs) and committee assignments.

See Faculty Handbook, [Appendix 3-1 Faculty Handbook](#).

9. Faculty recruitment and retention policies and procedures

See [Appendix 3-1 Faculty Retention Report 2019](#) and [Appendix 3-1 Faculty and Staff Retention Policy and Procedures](#).

10. Policies and procedures for faculty use of any centralized administrative service.

Faculty will use dedicated College of Dental Medicine administrative services.

STANDARD 3-2

3-2 The dental program **must** show evidence of an ongoing faculty development process.

Intent:

Ongoing faculty development is a requirement to improve teaching and learning, to foster curricular change, to enhance retention and job satisfaction of faculty, and to maintain the vitality of academic dentistry as the wellspring of a learned profession.

Examples of evidence to demonstrate compliance may include:

- Participation in development activities related to teaching and learning
- Attendance at regional and national meetings that address education
- Mentored experiences for new faculty
- Scholarly productivity
- Maintenance of existing and development of new and/or emerging clinical skills
- Documented understanding of relevant aspects of teaching methodology
- Curriculum design and development
- Curriculum evaluation
- Student/Resident assessment
- Cultural Competency
- Ability to work with students of varying ages and backgrounds
- Use of technology in didactic and clinical components of the curriculum
- Records of Calibration of Faculty

A. Description:

1. Describe the planned faculty development program sponsored by the dental school, including any procedures faculty must follow to participate. In particular, give a brief description of the policy, procedures and criteria that will be used to select faculty development programs.

The faculty handbook describes the features of faculty development at CNUCDM as follows:

Faculty development is an ongoing process designed to enhance the teaching and research skills of academics throughout the careers of University faculty. The goal is to increase both teaching effectiveness and scholarly productivity. The success of the program is highly dependent on the sustained commitment of the administration to provide the appropriate space and resources and the faculty's commitment to continuous development of their skills. The purpose is to provide an academic environment that stimulates innovation in teaching, research, and scholarly activity, and encourages University faculty to develop and grow intellectually and professionally and maximize their academic productivity.

Basic resources needed for a successful faculty development program include:

- ☐ Encouragement and support from administration for developmental activities
- ☐ Release time away from certain faculty and patient care responsibilities when necessary and appropriate subject to the discretion of the Dean
- ☐ Funds for travel, research expenses, and equipment consistent with the University's Policies and budget
- ☐ appropriate space and routine equipment to conduct research

Programmatic responsibility for the Faculty Development Program is shared between the Department Chairs and the individual faculty. It is the responsibility of the Department Chair to provide the guidance and counseling necessary to assist the faculty member in focusing on specific needs and facilitating activities to address those needs. Ultimate success of a Faculty Development Program rests with the individual faculty member. Each faculty member should address his or her own needs, and through discussions with the Department Chair, focus on and address those needs through the Faculty Development Program.

Additionally the CNUCDM has developed with CNU a faculty mentoring program. The goal of the Mentoring Program is to assist faculty in becoming accomplished, productive, and successful in their chosen endeavors of teaching, research, patient care, or administration. Mentoring relationships have proven to be an excellent way to enhance professional growth and the University strongly supports such activities. When you meet with your supervisor throughout the year, we encourage you to use these activities as a resource to assess your mentoring needs as they relate to your professional development.

CNU departments support the mentorship process. When faculty are first hired they will be assigned a mentor. This relationship may remain, but after three months the mentee has attended University functions and interacted with other faculty enough to make their own selection. During these initial three months of mentoring, all new faculty should meet with their mentor monthly and document their interaction at each meeting. It is the mentee's responsibility to keep and maintain the Mentoring Form as it may be reviewed during their annual evaluation.

The Associate Dean of Academic Affairs for the DMD program will be reviewing the mentor/mentee pairings using two forms for the evaluation: the assessment form for mentees and the assessment form for mentors. They will also periodically provide faculty with the "Could I Benefit or be a Mentor?" form to monitor need and demand of the program.

The mentoring program helps faculty to:

- Determine if they are in a position to be a mentor
- Describe the rewards associated with mentoring
- Offer direction on how and why to seek a mentor
- Provide a checklist of qualities to look for when seeking a mentor or a mentee
- Offer alternatives to traditional mentoring
- Offer suggestions for colleges, departments, and divisions in devising mentoring programs

- Point out potential obstacles to mentoring
- Provide template forms to assess need and monitor mentoring relationships
- Offer additional resources for more detailed information on mentoring

Importance of Mentoring

The following are possible relationships between a junior and a senior professional in an academic setting:

- Advisor, tutor, or preceptor (assigned by the institution)
- Role model or mentor (chosen by the learner)

Institutionally assigned roles are professional: the senior ensures that the junior completes institutional requirements, is progressing appropriately in his or her field of study, and has the knowledge necessary to achieve career success. Relationships chosen by the learner often involve a personal element in addition to professional guidance: a role model or a practicing professional who may not be at a senior level but can provide a perspective of professional employment. A role model can be a professional equal, but mentors are senior representatives in their fields. They are chosen specifically for their positions and experience in developing early careers.

Benefits to Mentors:

Mentoring is a developmental stage in one's professional life and by becoming a mentor you have the opportunity to affect the future. Mentors often gain:

- A sense of self-worth
- An opportunity to shape careers
- A deeper connection with colleagues
- A further contribution to the school
- An increase in future Productivity
- Career satisfaction and rejuvenation
- Organizational recognition

Although there are a number of benefits to be gained from the role of a mentor, there are also quite a few responsibilities. Before entering such a relationship it is important that faculty consider the following expectations.

Mentors Will:

- Encourage and demonstrate confidence in mentee
- Recognize mentee as an individual with a private life
- Value them as a person
- Recognize own limitations
- Provide feedback
- Encourage independent behavior
- Provide accessibility and exposure to mentee
- Stress importance to mentee of networking

- Allow mentee to assist in projects
- Give appropriate credit to mentee
- Make sure the mentee has your contact information
- Tell mentee about your expectations
- Ask mentee what they expect from you
- Develop a checklist concerning mentee career goals
- Set up a regular time to meet
- Write out one and three year goals
- Facilitate mentee's membership in committees
- Offer assistance in publications
- Never see the mentee as a threat

Characteristics That Should be Sought in a Mentee

When trying to determine if a mentee is ready to begin the mentoring relationship, consider the following traits and interests:

- Eagerness to learn
- Understanding of the seriousness required in a mentoring relationship
- Flexibility and an understanding
- Acceptance in giving and receiving feedback
- Interest in the process
- Mutual respect
- Ability to maintain confidentiality
- Ability to seek out additional mentors as needed
- Willingness to explore new areas of interest

As a mentor, you need to ensure that your mentee maintains productivity; has protected research time; understands the requirements for promotion; and receives exposure via local, national, and international organizations. You also need to be aware and sensitive to obstacles that may be present in the mentee's life and have the potential to interfere with his/her professional demands.

When Mentees are Seeking a Mentor

When Mentees are deciding whom to approach as a potential mentor, they should keep the following questions in mind:

- Of those in my department junior to me, who is pursuing work or has strengths similar to my own?
- Who appears to be struggling in an area that is my strength?
- To whom do I gravitate before and after staff meetings or at social functions?
- The most effective mentoring experience occurs where the seeker and the sought mutually agree to the relationship
- Familiarize yourself with the department's senior faculty, their publications, their

practice, and research areas

- Closely observe the senior staff during department meetings
- Match the professional expertise you admire with the personal qualities that would make for a collegial relationship
- Personal “fit” should be considered
- The mentor – mentee relationship is always a dynamic one

Evaluate the Relationship

Both the mentor and mentee should monitor and evaluate the relationship to ensure that it is mutually beneficial to both parties.

- Has your mentor continued to be academically successful?
- Are you still interested in their areas of research or teaching?
- Is the mentor easy to approach and have a conversation?
- Does your mentor advise and encourage your independent goals?
- Do you meet regularly?
- Do you receive feedback and constructive criticism?
- Does the mentor facilitate professional opportunities?
- Does the mentor facilitate opportunities within the university?

Particular to the CNUCDM, development will focus on the development of pedagogic skills for clinical faculty, many of whom have not had formal training as educators.

The Faculty Handbook and Faculty mentorship program contain further information on the program to improve faculty performance and career path. [Appendix 3-2 Faculty Mentoring Program](#), and [Appendix 3-1 Faculty Handbook](#).

[2. In what ways will members of the faculty be encouraged to attend meetings of professional organizations?](#)

The college will support faculty participation in ADEA activities through institutional membership which was obtained in 2019 at the ADEA House of Delegates meeting. This permits all faculty of CNUCDM to fully participate in ADEA activities. All faculty will be encouraged to be members of the CDA and ADA for which there is an educator rate and to participate in activities of these organizations. All faculty will be encouraged to be active in the AADR and in the faculty discipline based scientific specialty activities.

[3. Describe the availability of continuing education courses for faculty in the community.](#)

CNUCDM is a continuing education provider with the AEGD. Course will be given for CE credit with the college. In addition, the Sacramento District Dental Society has extensive CE offerings in Sacramento. The CDA has extensive online offering and an annual northern California meeting.

4. How will faculty maintain and improve their clinical skills? What will the institution do to encourage clinical skills improvement and calibration, including at sites where required educational activity occurs? If faculty members will be located at distance sites, explain how faculty members will be provided the same opportunities as faculty at the primary program location.

In house workshops to develop clinical skills, for clinical collaboration and for calibration both in performance and clinical decision making is planned for faculty development. While this will be used for competency assessment, it will also serve as valuable support for clinical practice development. Community based faculty will have on site calibration and continuing education and Web based conferencing for these faculty is also planned.

B. Supportive Documentation:

1. List of meetings/seminars/courses which dental faculty attended during the last calendar year, as available.

See **Appendix 3-2 Seminar Attendance.**
Appendix 1-9 Faculty development series

2. List examples of dental school sponsored in-service programs/meetings/seminars/courses that will be presented to full- and part-time dental faculty including, but not limited to, the following categories:
 - a. pedagogy (the art and science of teaching) and learning
 - b. curriculum design and innovation
 - c. mentored experiences
 - d. scholarly productivity
 - e. clinical skills development
 - f. other education-related
 - g. records of calibration of faculty

Also, see **Appendix 3-2 Faculty Mentoring Program.**

3. List all financial resources that will be used to support the faculty development program.

Appendix 1-5 Detailed Working Pro forma shows an annual budget of 100,000 for faculty development. Dues for institutional membership in ADEA are paid at \$27,000 per annum.

STANDARD 3-3

3-3 Faculty **must** be ensured a form of governance that allows participation in the school's decision-making processes.

A. Description:

1. Describe how faculty governance process allows for effective faculty input in organizational decision-making.

Faculty governance in the College of Dental Medicine will have the following layers: the university senate, the CNUCM faculty council, The President's executive committee, and the Dean's executive committee

All faculty are now represented by the **California Northstate University Faculty Senate**. Three voting positions on the senate are reserved for dental faculty who will be elected by their peers consisting of all full and part time faculty of the CDM. **Appendix 3-3 Faculty Senate Bylaws**

Shared governance is defined by the Senate as follows: "Shared governance" as applied to the University community in general is defined as the process of the council, committee, or person responsible for making a decision obtaining input and feedback when appropriate from various other constituencies of the University community, so that an informed decision can be made; shared governance does not necessarily mean that a particular constituency is part of the actual final decision making process.

The charge to the faculty senate is in shared governance to review academic and faculty policies, procedures, and regulations, and seek consensus, provide input, or recommend actions regarding these issues as they affect the Faculty in the following areas:

- Educational standards
- Academic standards and student achievement
- Faculty qualifications
- Faculty recruitment, rank and promotion, and retention
- Faculty development and career progression
- Academic resources and staffing
- Scholarly activities including research
- Policies relating to standing committees, *ad hoc* committees, task forces, and faculty search committees
- Long range strategic planning and development regarding the University

The President of the Faculty Senate sits as a voting member of the President's Executive Council (PEC) where the actions of the Senate are brought for consideration and action by the university. The PEC presents any actions that require Board action to the Board of Trustees for

final approval.

2. Describe and assess the roles planned for faculty, department chairs, and administrators in the decision-making process.

The actions of the faculty senate will as well be reviewed by each college council including the Faculty Council of the College of Dental Medicine for their input and actions pertaining to the activities of the respective college.

The Faculty Council of the College of Dental Medicine will be a deliberative and voting body consisting of all full and part time faculty with equal vote. It will consider the actions of the DEC the PEC and the university Senate as well as consider items for their agenda regarding any aspect of College activities. The chair of the of the CDM faculty council will sit as a voting member of the Deans Executive Committee.

The Dean's executive committee will meet weekly to consider the concurrent operational issues in the execution of policies related to academic, clinical, research affairs, outreach, community relations and business operations.

B. Supportive Documentation:

1. List committees and the intended membership (Example exhibit T)

See **Exhibit T**.

2. Institutional policies and procedures governing faculty

See Faculty Handbook in **Appendix 3-1 Faculty Handbook**.

3. Diagram outlining the planned dental school's decision-making process.

Appendix 3-3 Diagram outlining CDM decision making

STANDARD 3-4

3-4 A defined process **must** exist that ensures objective measurement of the performance of each faculty member in teaching, patient care, scholarship and service.

A. Description:

1. Describe the criteria that will be used to evaluate full- and part-time faculty. Who will determine the criteria? What input will faculty have in the process?

The criteria for faculty evaluation are noted in the Faculty Handbook and include sections on supervisor evaluation, peer review of teaching, criteria for promotion, and student reviews.

Appendix 3-1 Faculty Handbook

Each faculty member upon hiring will have a full job description that will be reviewed annually as part of annual review by their discipline based leader or as appropriate for supervisory personnel. The criteria for evaluation will be based upon the job description and the relative effort applied to each component. Components typically in a job description will include a percentage of time for each component. Components will include:

- Teaching didactic
- Teaching: active learning
- Teaching laboratory
- Clinical Education
- Clinical practice
- Faculty development
- Mentoring
- University service
- Community service
- Research
- Professional activities

Annually a percentage time will be assigned to each of these components. Included under these designations will be goals for the year. This form will be attached to the annual review in a form as follows:

Faculty effort form CNUCDM

Name:

Academic year:

Narrative statement of faculty effort:

Category	Percent effort	Course numbers/grant numbers or other designations	Goals for year
Teaching: didactic			
Teaching: active learning			
Teaching: laboratory			
Clinical education			
Clinical practice			
Faculty development			
Mentoring			
University service			
Community service			
Research			
Professional activities			

The criteria for these components will be specific to the tasks assigned and will generally include:

Self-evaluation
Student evaluation
Peer evaluation

Supervisor evaluation
 Assessment of work product by knowledgeable colleagues
 Course evaluation for course directors

Input from the faculty will include their opportunity to self evaluate, their ability to answer queries and formulate replies on evaluations and to provide any additional information to support the review.

These are reprised in the faculty evaluation form found in [Appendix 3-4 Faculty Evaluation Form](#)

The criteria specific to the review are reprised in this table which describes the assessment rubric for faculty review.

Scoring Rubric

CATEGORY	POOR	DEVELOPING	ADEQUATE	SUPERIOR	EXCEPTIONAL
TEACHING DIDACTIC	Poor communication or outcomes of teaching	Students with deficits in didactic education	Students consistently perform as expected	Inspires extra effort in students	A didactic leader who creates a learning community
TEACHING ACTIVE LEARNING	Unable to engage students in active learning	Developing skills to have students engage one another and be inquisitive	Has a successful learning community of active learners	Develops synthesis and discovery among active learners	Has a self-sustaining community of learners that will be sustained
TEACHING LABORATORY	Unable to demonstrate or assess skills	Can show and assess some aspects of laboratory exercise	Can consistently apply objective measures toward assessment and is an understandable demonstrator and teacher in the laboratory	Is a sought after resource in the teaching laboratory for expertise and nuance of skills	Supports a team of students in the laboratory to further develop their skills and can be relied upon as an expert resource
CLINICAL EDUCATION	Cannot demonstrate or assess clinical care	Is developing ability to demonstrate and assess clinical care and understand calibration requirements	Has the ability to demonstrate and assess clinical care and understand calibration requirements	Is a sought after resource who can bring students to the level of initial competency and further	Is a mentor an role model for students in the clinic as an exceptional clinical educator

			and the integration of knowledge and values with skills in the clinic	develop their skills	
CLINICAL PRACTICE	Unable to diagnose, treat, apply evidence based care or perform care needed	Developing clinical skills but with cognitive or psychomotor gaps in development	Capable of proper diagnosis, treatment, applying evidence based care and necessary care	High level of knowledge and skills to provide superior patient care	A sought after clinician who is a resource to peers and leaders in their discipline. A clinical thought leader
FACULTY DEVELOPMENT	Not carrying out faculty development activities	Does inadequate amount of faculty development	Participating in internal and external faculty development opportunities	Has a FD plan and is adhering to it to advance their capacity as an academic	Is a leader in faculty development recognized as both a participant and a presenter of faculty development programs
MENTORING	Not providing mentoring	Learning about mentoring program	Actively providing mentoring utilizing CNU criteria	Demonstrates exceptional outcome of mentorship for CNU faculty students or staff.	Is a recognized leading mentor both at CNU and nationally in their area of expertise.
UNIVERSITY SERVICE	Not providing university service	Beginning service on committees and taskforces	Is an active participant in CNU committees, council, senate or taskforce	Is chairing or providing other necessary leadership in CNU service	Is a sought after leader in providing service at multiple levels at CNU
COMMUNITY SERVICE	Not providing community service	Has participated in community service	Is actively engaged in community service	Provides leadership in community service	Provides inspirational leadership in community service that has been recognized
RESEARCH	Not performing research	Is developing ideas for research	Is successfully performing research	Has gained external funding or other	Is a known research content expert and has gained national

				equivalent peer recognition for performance of research	recognition for their excellence in research
PROFESSIONAL ACTIVITIES	Not participating in professional activities	Is beginning to participate in organized professional activities	Is an active participant in professional activities	Demonstrate s leadership in organized professional activities	Demonstrates local, national and international leadership in professional activities that have advanced their field.

2. How often and by whom will faculty be evaluated and how will the evaluative data used? Will the evaluation include clinical as well as didactic teaching evaluation criteria?

Reviews is performed as described above annually. As described above the discipline chief or supervisor is assigned to the evaluation and those providing reviews include the faculty member under review, students, peers, supervisors, colleagues, and discipline expert fellow faculty.

Clinical evaluation is part of the quality assurance process and the appointment and credentialing process in the clinics. Every faculty member is appointed based upon adequate credentials such as licensure, board certification, continuing education, measures of continued competence and peer recommendation. Clinical privileges are offered based upon those findings. Clinical privileges are reviewed annually utilizing objective information on case volume, quality care indicators and 360 degree evaluation in the clinic.

3. If the intended criteria used to evaluate administrators will be different than that used to evaluate faculty members, please explain.

Evaluation is the same for administrators who will undergo evaluation in the same manner as all faculty. Additionally, the President will provide an annual review of the Dean and the Dean will provide annual review regarding administrative responsibilities only for administrative component while all faculty (including administrator) who teach treat patients perform service or research will be evaluated in the same fashion

4. How often and by whom will administrators be evaluated, and how will the evaluative data used?

Evaluation of administrators is also annually as for all faculty and by the means described above.

The data from all evaluations will be used to support the advancement and retention of faculty and the development of tasking appropriate to their success and consistent with the needs of the university.

5. How will results of the evaluation be communicated to the faculty members?

The annual review of faculty is communicated verbally and in the review form by faculty member responsible for the review. This includes a conversation about its content and the ability of the faculty being reviewed to provide additional information.

B. Supportive Documentation:

1. Evaluation Forms planned for:
 - a. full-time faculty
 - b. part-time faculty, if different from above
 - c. administrators, if different from above

Appendix 3-4 Faculty Evaluation Form

STANDARD 3-5

- 3-5** The dental school **must** have a stated process for promotion and tenure (where tenure exists) that is clearly communicated to the faculty.

A. Description:

1. Describe the schools' promotion and, if applicable, tenure policy and process. How will the policy be communicated to the faculty? Provide non-tenure and tenure track promotion policies, guidelines and norms.

A key component of creating a doctoral level culture is the appointment of appropriately qualified faculty members. The Rank and Promotion Committee of CNU will examine the CV of each candidate for examples of accomplishments in the areas of teaching, scholarly activity, and professional service to determine their placement in one of four academic ranks: Instructor, Assistant Professor, Associate Professor, and Professor.

At the Instructor level the applicant must have a DDS or DMD and they must have teaching or extensive professional experience. Applicants will need to have experience in the areas of teaching, research, and professional service. Those faculty who were previously hired as Instructors must have at least one year of experience at that rank. An Associate Professor must meet all the qualifications for an Assistant, with the addition of significant accomplishments in teaching, research, and professional service. They must have at least five years of experience as an Assistant Professor at CNU. This timeframe may be amended by the Rank and Promotion Committee due to previous time and service as determined by the Dean and awarded by the President. They must excel in two of three core competencies: teaching, research, or service. To reach the rank of Professor, a candidate must meet all the requirements for Associate Professor at CNU with the addition of a significant and outstanding record of teaching, research, and professional service. They must have spent a minimum of five years at the rank of Associate, though they may apply for early promotion (

B. Supportive Documentation:

1. Institution's promotion and tenure policy guidelines and norms
Appendix 3-1 Faculty Handbook

STANDARD 4 - EDUCATIONAL SUPPORT SERVICES

Admissions

STANDARD 4-1

- 4-1** Specific written criteria, policies and procedures **must** be followed when admitting predoctoral students.

A. Description:

1. List the admission criteria for the dental program. Are the criteria weighted? If so, explain.

Students seeking admission to the DMD program will use the centralized application service for dental school admission called ADSAS, administered through WebAdmit and the American Dental Education Association. Minimum requirements for entrance to the program are: undergraduate minimum GPA of 2.8 (preferred 3.2), DAT score of 17 or greater with a preferred DAT of 19.

Minimum Requirements

California Northstate University College of Dental Medicine prefers a baccalaureate degree from a regionally accredited, four-year institution within the United States; or a non-U.S. equivalent institution. Required minimum coursework:

- ☐ 2 semesters, 3 quarters, or 1 year of college level English (*IB or AP credits may be considered if they are accepted by the undergraduate program*)

IB or AP credits not accepted for the following:

- ☐ 2 semesters, or 3 quarters, or 1 year of Biology with Laboratory
- ☐ 2 semesters, or 3 quarters, or 1 year of Inorganic (General) Chemistry with Laboratory
- ☐ 2 semesters, or 3 quarters, or 1 year of Organic Chemistry with Laboratory
- ☐ 2 semesters, or 3 quarters, or 1 year of Physics
- ☐ 2 semesters, or 3 quarters, or 1 year of college level Math (*Statistics and/or Calculus preferred*)
- ☐ 1 semester, 1 quarter, or 3 units of Biochemistry

Recommended Coursework, but not required:

- Social sciences
- Anatomy
- Microbiology
- Behavior Sciences

- Physiology
- Immunology
- Foreign languages

Standards in five areas must be met by all candidates: Observation, Communication, Motor Function, Cognitive, and Professional.

Further information regarding academic admission goals.

Course Credits

Most students complete a bachelor's degree before entering a dental school. However, a minimum of 90 semester credits or 135 quarter credits from an officially accredited US or Canadian College, or equivalent foreign institution, is required.

Admission Requirements:

1. At a minimum, an applicant must possess both a science and a total GPA over 2.80 (although 3.40+ will be the likely mean for each class) on a 4.00 scale as well as a bachelor's degree. A minimum science and overall GPA of 2.80 on a 4.00 scale is required to receive a supplemental application.
2. To be competitive, an applicant should complete a bachelor's degree at an accredited North American college or University prior to matriculation. Applicants participating in special affiliated programs with the College and other exceptions to this policy will be considered on an individual basis.
3. The prerequisite courses have been noted above:

In addition to those noted it is advantageous for applicants to have course credit in cellular, molecular biology and histology. To augment the social sciences and holistic admissions course in sociology, psychology, history, arts, ethics and humanism are of value.

Written documentation and explanation is required concerning any academic difficulties, such as grades of I (Incomplete), W (Withdraw), D or F grades. Only under unusual circumstances with credits graded on a Pass/No Pass evaluation process be accepted for required courses. Applicants may submit a maximum of 15% of the minimum total credits for other-than-required courses.

4. Dental Admission Test

The DAT (Dental Aptitude Test) is a requirement for admission. The DAT is scored from 1-30 with 18 being the national average.

An applicant must submit competitive scores on the Dental Aptitude Test (DAT). An Academic Average score of 18 or above and a Perceptual Ability score of 17 or above is desired. The DAT test must have been taken no more than three years prior to application.

Each application will be thoroughly reviewed by the Admissions Committee and all areas of the application will be carefully considered. The AADSAS application has a required personal statement and a required section that asks whether the student is from a disadvantaged background. The personal statement prompt pertains to a student's community engagement and community service background.

It is important that the student body of the DMD program represents the best of future clinicians, and the Admissions Committee will pay particular attention to professional, research, education, and life experiences. Along with academic excellence, the committee will be looking for students with diverse cultural, socioeconomic, work, and educational backgrounds. CNU has a diverse faculty and student body and it is the admissions policy of the University that no applicant will be discriminated against on the basis of race, religious creed, color, national origin, ancestry, citizenship status, sex, gender, gender identity, sexual orientation, mental disability, medical condition, genetic information, age, military or veteran status, physical appearance, or any other consideration made unlawful by federal, state, or local laws.

In the interview, we are looking for demonstration of each of the following: 1) Demonstrated academic ability/capacity, 2) critical thinking skills, 3) interpersonal and social skills, 4) commitment to diversity, 5) commitment to community service, 6) a candidate's match in terms of the culture and expectations of CNUCDM (i.e., commitment to the profession and to becoming a healer).

Refer to [Appendix 4-1 DMD Admission Requirements.pdf](#).

The type of student targeted, profile and qualifications required for the program is described further as follows:

The DMD program admits students who demonstrate sufficient preparation, potential for professional education, and ability to perform the essential functions needed to practice as a licensed dentist.

Proposed Student Body Profile for California Northstate University College of Dental Medicine

Public and private dental education in the United States has not served the needs of the emerging demographics of American citizens. Current dental students are weighted heavily into those who have family members who are dentists or physicians, students from the most densely populated urban and coastal centers, those from the most competitive public and private universities and those with incomes more than two times the national average. Nearly all dental schools are located in the major population areas of their regions and generate more than substantial workforce for the major cities and suburbs, while inner city communities and rural areas and small cities are left behind. These are referred to as Dental Health Professional Shortage Areas (DHPSA) by HRSA. Inner city California and most of interior California, the Sierras, desert and Northstate are all heavily represented as DHPSA shortage areas.

Students applying from underserved communities, from these areas have usually attended regional universities and though qualified, do not perform as highly on the DAT, the Dental Admissions Test. While over 6000 of the 13,000 applicants to dental school will gain admission, those who do not get in or must travel hundreds to thousands of miles to attend are disproportionately from these areas, and nowhere more so than in California where over ten million people live in these areas.

In addition, as a health profession dentistry is unable to keep pace with peer professions such as medicine in the recruitment of underrepresented minorities, especially black, Hispanic and American Indian students. For example, California's dental schools bring fewer dentists to rural and/or economically distressed communities than any other state system (4-6% as compared to over 30% for states such as Minnesota and Oregon) DHPSA areas are also heavily represented by the immigrant and migrant communities for whom the barriers to health services are the greatest.

California Northstate is committed to being a California school committed to gaining a student body from underserved communities, including rural California communities, immigrant and migrant communities, underrepresented minorities and other chronically underserved communities. Through our pipeline program we will identify, mentor, and support community members who will seek careers in the health professions broadly and dental medicine specifically. These programs are presented elsewhere in these documents regarding admissions.

In addition, we are committed to having a faculty that broadly reflects the communities we serve. Partnerships with Asian Health, Indian Health, La Clinica de la Raza, West Oakland Community Health, San Diego homeless Veterans clinic, and rural sites in Shasta Lakes will produce community-based faculty to serve as role models for our students while assisting in developing the pipeline for future community health leaders. These efforts will have inestimable benefits in advancing the lives of patients and improve the health related quality of life in populations impacted by these programs.

Special efforts will be made to recruit and select a diverse set of candidates from Sacramento and its surrounding counties.

HPSA Find (<https://data.hrsa.gov/tools/shortage-area/hpsa-find>)

Additional Information at time of admissions

Admissions Committee: The College of Dental Medicine Admissions Committee will be appointed by the Dean and will function as a standing committee. It will be charged with the responsibility of evaluating applicants and making recommendations to the Dean.

The Admissions Committee accepts applicants based on scholarship, Dental Admission Test scores, a personal interview, a personal essay, recommendation letters and the applicant's overall suitability for the study and practice of dentistry.

Admissions criteria are weighted with an emphasis on academic performance, which includes science GPA, non-science GPA, total GPA, number of hours completed per quarter and institution(s) attended. DAT scores, documented community service, motivation, experience, recommendations, and the interview evaluation also contribute to the candidates rank. Ongoing

efforts will be made to recruit minorities by visiting schools and programs with a high percentage of minority students.

5. Letters of Recommendation

The California Northstate University College of Dental Medicine requires applicants to submit three (3) letters of recommendation—all three (3) letters should be from people who can speak to your character and life experience. All three (3) letters must be submitted before your application can be considered to be complete.

Before asking someone to write about you:

- consider who can best describe your character and experiences
- choose people with strong written communications skills who will submit letters in a timely fashion
- be sure authors can meet AADSAS deadline
- tell them why you have asked them to write on your behalf
- tell them why you are applying to dental school and why you believe you are a good candidate

Letters can be submitted to the Associated American Schools Application Service (AADSAS) or directly to CNU. (ADDRESS) Letters written by immediate family members will not be accepted. All letters of evaluation must be submitted directly from the evaluators. The Office of Admissions does not accept letters submitted by students.

6. Applicants must demonstrate a sincere understanding of, and interest in, the humanitarian ethos of health care and particularly dental medicine.
7. Applicants should reflect a people/service orientation through community service or extracurricular activities.
8. Applicants should reflect proper motivation for and commitment to health care as demonstrated by previous work, volunteer, or other life experiences.
9. Applicants must possess the oral and written communication skills necessary to interact with patients and colleagues.
10. Applicants must pass a criminal background check.
11. Applicants must be drug free and agree to abide by California Northstate University Policy.

Dental office shadowing

“Shadowing” is a term in common use to indicate an observational experience that demonstrates and understanding of the role, capacity and activities of another. It should be noted that these are observational, not experiential activities in that the student is not expected to have experience in the provision of any oral health services. “Shadowing” is a fruitful exercise in determining ones suitability and desires for a career in dental medicine. The CNUCDM does not require a

minimum number of hours of shadowing experience in general dentistry clinics or other oral health settings. However, applicants are encouraged to shadow more than one dentist and to experience different practice settings. Specialty practice shadowing is also acceptable.

Diversity essay concerning how you will contribute positively to the program

As described in AADSAS, Applicants must submit a written essay about how they will contribute to the overall dental program and its diversity. In evaluating an applicant's potential contribution to diversity, the CDM Admissions Committee considers the following factors: geographic diversity (e.g. rural), first generation college student, financial need, disadvantaged educational background, racial and ethnic diversity, evidence of outstanding leadership, special talents, high academic potential, unique work or service experience, community involvement, career goals, experience and/or interest in research or teaching, and interest in providing dental services to underserved areas. The School of Dental Medicine is committed to enrolling and graduating a diverse student body of thought, interest, background, and intellect. Diversity enhances the educational experience of all students and better prepares our graduates to practice dentistry in today's world. The essay has a limit of 6000 characters with spaces.

Official Transcripts

Upon acceptance and prior to matriculation, official transcripts must be sent directly to the CDM from each undergraduate and graduate institution attended, and must verify sufficient credits and correct courses. Basic science coursework that is older than five years may be considered obsolete. Dental Admissions Test scores must be less than three (3) years old to be evaluated.

Weighting of Admissions Criteria

The various criteria for admission are weighted accordingly:

Initial “paper” Evaluation:

Overall GPA	15
BCP GPA	15
DAT	15
Letters	05
Essay	05
Interpersonal skills	05
Score out of 60 to determine interview (unless all applicants are offered interview)	

Personal Interview 40

Final score out of 100

2. Describe the planned process for selecting dental students. Indicate names and titles of individuals who will participate in the process.

The College of Dental Medicine Admissions Committee accepts applicants based on scholarship, Dental Admission Test scores, a personal interview, a personal essay, recommendation letters and the applicant's overall suitability for the study and practice of dentistry.

Process: All applicants must apply through the American Dental Schools Application Service. Application materials will be reviewed by the committee and decisions made regarding eligibility for an interview. The completed applications are received from AADSAS and reviewed and given an initial evaluation and given a weighted score on a rubric based around the DAT scores, the overall GPA, the BCP GPA, the letters of recommendation and the personal essay. Candidates will be interviewed during the fall and winter, spending 30 minutes with the Assistant Dean and one or two members of the committee. The interview day, always conducted in Elk Grove, California, also includes time to talk with other CNU students and staff, a one-hour tour of the facilities, a 45-minute slide and video tape presentation, a one-hour lunch with students and faculty and a discussion regarding financial matters.

The students will be welcomed to the CNU campus and the CDM. A presentation (from Dean or Assist Dean) will follow highlighting the plans for the school, the history of CNU, with time for questions and answers. A Financial Aid presentation will be made. The applicants will then be interviewed by one or two members of the Admissions Committee with one medical/pharmacy student as an observer/participant. The goal will be to adopt the Multiple Mini-Interview process as the number of available interviewers and space available grows with the size of the faculty, but this will not be possible in the first year for the inaugural class.

The Dental Admissions Interview team consists of:

Chair: Assist Dean for Student Affairs and Admissions
Members: Dental Basic Science faculty member, Dental Clinical faculty member, Dentist from community, Medical or Pharmacy student. Lay Person

3. To what extent will the administration and faculty participate in the modification of admission criteria and procedures?

Each year, the Admissions Committee will meet to review the past year's activities and establish minimum threshold standards for GPAs and DAT scores for applications in the coming year. The committee will review the ranking formula, and make adjustments as required. The Dean and Admissions Committee, in consultation with the University Vice President of Admissions and Student Services, will set the policy for the admissions process within the guidelines of the University. There will be a variety of options for other administration members and faculty members to participate in modification of the admissions criteria and procedures. At the annual review meeting of the Admissions Committee, the meeting will be open to anyone with input to the process (including students, faculty, administration and staff). Additionally, admissions criteria and procedures will be on the agenda at each annual faculty retreat with the opportunity for constructive input from all attendees. Finally, anyone with input on criteria and procedures is invited to send such comments to the Admissions Committee Chair at any time. This option will be communicated regularly at faculty and staff meetings.

4. How will applicants be informed about the program's criteria and procedures for admission and the program's goals?

All changes and notifications are continually updated and posted to the ADEA web site and to the ADEA *Official Guide to Dental Schools*. Also the California Northstate College of Dental Medicine web site, under *Admissions*, will be continually updated. Applicants will find the Student Handbook (attached) online and individual mailing to applicants selected for the interview process will be carried out.

5. If students are admitted who do not meet the program's admission criteria what are the school's intended policies and procedures for providing remediation to those students?

All admitted students must meet the program's admission criteria.

6. Describe how the program will monitor and evaluate both attrition rates and performance of students in relation to admission criteria.

Attrition rates are expected to be small, but will be carefully monitored and will include exit interviews (where possible) with all students who leave the program. Reasons for leaving will be analyzed by the Assistant Dean for Admissions and Student Affairs and corrective action will be recommended to the Dean where warranted and improvements to the Admissions criteria will be put into place as necessary.

B. Supportive Documentation:

1. Sample rating sheets for student selection

Appendix 4-1 Sample Rating Sheet for Student Selection

CNUCDN rating sheets are identical to those contained in AADSAS, the ADEA administered common application service and will be used without alteration.

2. Application form and/or packet

CNUCDM application form will be identical to the AADSAS form without any alterations.

STANDARD 4-2

- 4-2** Admission of students with advanced standing **must** be based on the same standards of achievement required by students regularly enrolled in the program.

A. Description:

1. If applicable, describe the policies and procedures that will be used to award advanced standing credit. Indicate the type of courses for which advanced standing will be granted and the maximum number of credits that can be awarded.

This would only be performed on a special needs basis at the present time and a request would be made to CODA prior to accepting any transfer student. This has occurred in the past at other dental schools during a national emergency such as Hurricane Katrina and with the closing of dental schools unexpectedly when there became a need to find students new educational opportunities.

Transfer students can generally only be considered for EXTRAORDINARY REASONS DESCRIBED IN PART ABOVE and transfer at the start of year three between preclinical and clinical programs due to the differences in programs. At that time, all requests for advanced standing by newly admitted, transfer, or enrolled students are processed on a course-by-course basis by the Office of the Dean. To request such consideration, a student should submit a letter of request to the Office of the Dean in which the student lists the course(s) previously taken, which might be similar in content to a professional course(s) that he/she is scheduled to take. The student is advised to provide an official course description(s) and a syllabus (syllabi) of the course(s) previously taken, as well. All requests must be submitted prior to the start of year three. If a request is internally approved submission to CODA will be required that will include description of extraordinary circumstance.

B. Supportive Documentation:

1. Policies and procedures on advanced standing, if applicable

This is not applicable at the present time and would be submitted if such a program/individual for transfer were proposed.

2. Course equivalency or other measures to demonstrate equal scope and level of knowledge

This is not applicable at the present time and would be submitted if such a program/individual for transfer were proposed.

STANDARD 4-3

- 4-3** Transfer students with advanced standing **must** receive an individualized assessment and an appropriate curriculum plan that results in the same standards of competence for graduation required by students regularly enrolled in the program.

***Intent:** Advanced standing refers to applicants that may be considered for admission to a training program whose curriculum has been modified after taking into account the applicant's past experience. Examples include transfer from a similar program at another institution, completion of training at a non-CODA accredited program, or documented practice experience in the given discipline. Acceptance of advanced standing students/residents will not result in an increase of the program's approved number of enrollees. Applicants for advanced standing are expected to fulfill all of the admission requirements mandated for students/residents in the conventional program and be held to the same academic standards. Advanced standing students/residents, to be certified for completion, are expected to demonstrate the same standards of competence as those in the conventional program.*

Examples of evidence to demonstrate compliance may include:

- Policies and procedures on advanced standing
- Results of appropriate qualifying examinations
- Course equivalency or other measures to demonstrate equal scope and level of knowledge

A. Description:

1. If applicable, describe the planned policies and procedures for awarding transfer credit.

N/A

B. Supportive Documentation:

1. Policies and procedures on transfer students with advanced standing, if applicable
2. Course equivalency or other measures to demonstrate equal scope and level of knowledge

N/A

N/A

STANDARD 4-4

- 4-4** Admission policies and procedures **must** be designed to include recruitment and admission of a diverse student population.

Intent 4-1 to 4-4:

The dental education curriculum is a scientifically oriented program which is rigorous and intensive. Admissions criteria and procedures should ensure the selection of a diverse student body with the potential for successfully completing the program. The administration and faculty, in cooperation with appropriate institutional personnel, should establish admissions procedures that are non-discriminatory and ensure the quality of the program.

A. Description:

1. Describe how the dental school's recruitment program will be evaluated in terms of providing a pool of well-qualified and diverse applicants for the available positions. Include the planned measures and outcomes that will be used to determine whether diversity is being achieved.

California Northstate University does not discriminate on the basis of race, color, national and ethnic origin, gender, sexual preference, or handicap in the administration of educational policies, admission policies, financial aid, employment, or any other University program or activity. It admits qualified students to all the rights, privileges, program and activities generally accorded or made available to students.

All applicants must meet the criteria stated in the Student Handbook and Admissions criteria in order to be considered for admissions. The CNUCDM Admissions staff will participate in annual recruitment events and the CDM will be an integral and important part of these activities in the future. These events consist of predoctoral career fairs, graduate fairs, speaking to pre-dental students and visiting health care advisors. During each academic year, Admissions will host fall and spring Open Houses.

Recruitment is a vital component of the admissions process. Admissions criteria are weighted with an emphasis on academic performance, which includes science GPA, non-science GPA, total GPA, number of hours completed per semester and institution(s) attended. DAT scores, motivation, experience, recommendations, community service and the interview evaluation also contribute to the candidate's rank.

Ongoing efforts will be made to recruit minorities by visiting schools and programs with a high percentage of minority students.

Concurrent planning and outcomes assessment of these programs will be linked to Goal 1 Strategy 2 of the Strategic Plan and linked to Table 2 as follows:

Goal 1: Strategy 1.2 Recruit and retain exceptional dental students

Tactics:

- Recruit a qualified class ensuring scientific clinical ability with a holistic approach to promote social consciousness and action
- Retain all these qualified students with timely completion of the DMD program

Tactic	February 2019 Status	Development Plan	Critical Success Factors	Party responsible for report	Evidence of Achievement
Recruit a qualified class ensuring scientific clinical ability with a holistic approach to promote social consciousness and action	The college has begun to integrate into university recruitment and admissions processes. Participation in the university wide admissions and student affairs retreat in January 2019	Implement the admissions marketing plan as in the CODA self-study Appendix D-8 CDM Marketing and Recruitment Plan	Application pool from the region (central valley, delta, Shasta, Humboldt, Sierras) in excess of applicants to other California dental programs. Social science majors represented. Students from universities of the Delta, Central Valley, mountains and Northern California HPSA shortage areas represented Immigrants and underrepresented minorities exceed the region	Dean of admissions and student affairs	More than 50% of students from the underserved region and colleges associated to the region 20% social science majors Immigrants and underrepresented minorities in excess of other regional dental programs

B. Supportive Documentation:

1. Mission statement/goals/purpose of admission committee that recognizes the institutional and educational benefits of admitting a diverse student body

See [Appendix 4-4 Mission Statement Admissions](#).

2. List of planned dental school sponsored outreach programs/pipeline programs targeted to underserved minority high school and college students

See [Appendix 4-4 List of planned outreach](#).

3. Qualifications for serving on the admissions committee, including a commitment to diversity and diversity-related issues

See [Appendix 4-4 Admissions committee membership criteria/qualifications](#)

STANDARD 4-5

4-5 The dental school **must** provide adequate and appropriately maintained facilities and learning resources to support the purpose/mission of the dental school and which are in conformance with applicable regulations.

A. Description:

1. Describe all existing and planned facilities in which didactic and/or clinical teaching will occur and describe how both the existing and planned facilities are (or will be) adequate for the teaching, research and service activities of the dental school. Include in the description of facilities:
 - a. the year the facility was (or will be) constructed;
 - b. a description of any renovations that will occur in existing facilities to make them available for the dental education program;
 - c. the number, location and layout of existing or planned classrooms, biomedical laboratories, lecture halls, and student work rooms that will be available to the dental school;
 - d. the number, location and layout of planned preclinical instruction areas; and
 - e. the number, location and layout of planned treatment areas in the dental clinic.

The CNU campus currently encompasses more than 200,000 square feet and includes the Elk Grove and Rancho Cordova facilities. Renovations (b) of existing facilities in Elk Grove include the division of 2 of the 5 classrooms built for 240 students into rooms that will accommodate pods of 80 students. These spaces are also built for active learning and can be configured as theatre, round table bench or groups of 4-8 with audiovisual access across all sites that can be individualized to the working group or as a plenary audiovisual display. Thus the number, location and layout of classrooms(c) will be in excess of what is needed to support the dental program. In addition, facilities in the library are being expanded to seat 120 students and small group learning sites in the Elk Grove site will support small group learning. 29 individual carrels for study are also now in place.

Constructed in 2012 (a) the DMD program will be housed in 2400 Maritime Drive as well, a building of 16,000 square feet to house the preclinical laboratories and the first teaching clinic of the college. There will be two dedicated classrooms additional CNU class space, two laboratories, (c) a library, distributed study rooms in both Elk Grove buildings, a cafeteria, and various offices. With this addition, the physical impact of the additional students will be minimal.

All dental students will begin clinical training in their first year, utilizing the preclinical laboratory and clinical simulation labs that are planned to be built on campus as well as with initial clinical experiences as part of the care team in the clinic. The clinical labs will be located near the main campus at an acquired facility. Students will also be able to practice their clinical

skills on the main College of Dental Medicine campus. A classroom on the main campus will contain 40 dental simulation units (d) where the students will be able to practice the skills taught within the classroom. The unit will contain instruments and configurations, compartments to store instruments, a torso with adumbrated arms and shoulders, height adjustment. The unit will be on wheels and have the ability to fit comfortably under workstations.

The main clinical practicum of the CNUCODM program will be in two clinics operated by the university (e). The first of 32 operatories is under contract for construction in Elk Grove. Like other dental school based clinics, CNU's clinics will feature faculty and students working side by side and providing the highest level of clinical care while completing competency assessments and gaining clinical experience for the DMD students.

The second clinic is under architectural planning and will be part of 1,000,000 square feet of ambulatory medical and surgical clinics led by the California Northstate University College of Medicine and attached to the 250 bed first phase teaching hospital to be completed in 2022-23. It is expected that the first two years of the program will operate with D1 and D2 students in the Maritime drive clinic and that rising D3's will be the first to access the second clinic in the ambulatory care facilities of the hospital. This is planned as a 48 operatory clinic to accommodate 6 teams of 8 students per class and additionally pediatric dentistry and oral and maxillofacial surgery clinic and support services including patient spaces, business operations sterilization and radiology.

2. Describe the procedures that have been established for assessing program facilities and equipment in relation to current concepts of dental practice and dental education? What is the program's long-range plan for maintaining, replacing and adding equipment?

The College is working closely with A-dec and Patterson to assure that all facilities and equipment achieve the highest levels of current dental practice and are suitable to the dental education environment. After working with several vendors in discussion over the last year, these two were chosen due to their extensive track record in dental education environments. The dental chairs are ADEC 511 the most ergonomic, delivery system will include both air and electric attachments. Recommendations with regard to the adding and replacing of equipment in the coming years will be based upon concurrent technology assessment and recommendations of thought leaders in the college of dentistry to be brought to the Dean's executive committee where the annual budget request including capital budget items will be considered for proposal to the university. These request will be linked to the strategic plan and to the PLOs and defined competencies of graduates in dental medicine at CNU.

3. If the clinic is shared with other program(s), how many hours per week is it used by each program? How many treatment areas are used each session? What procedures have been established for scheduling utilization of the clinic?

The clinical facilities are not being shared with any other program

B. Supportive Documentation:

1. Blue-print, schematic or line drawing detailing the shape and dimensions of the facilities

See **Appendix 4-5 CNUCDM Facilities Schematics**

2. Certification that from appropriate authorities that all building regulations pertaining to access for disabled persons is met

The building certificate for 9700 W Taron Drive and for 2400 Maritime Drive includes an assessment that they are ADA compliant. Both have broad hallways and doors and are inclusive of ramp access.

Written Agreements

STANDARD 4-6

- 4-6** Any site not owned by the sponsoring institution where required educational activity occurs must have a written agreement that clearly defines the roles and responsibilities of the parties involved.

A. Description:

1. Describe the extent to which the program will use sites not owned by the sponsoring institution where required educational activity will occur.

The sponsoring institution owns and operates all sites where patient care, didactic, laboratory and clinical education will occur with the exception of two courses BSS 861 and BSS 862 in the fourth year entitled Community Based Education and Practice. This 8 week period will be for sites previously listed in Standard 2-26 as follows:

Sacramento Native American Health Center
Asian Health Services
HALO Health community clinics
Wellspace community clinics
El Dorado community health
Shingle Springs Indian Health
Colusa Indian Health
CDA cares events

2. Define the expected roles and responsibilities of the parties involved in use of the educational activity site. If roles and responsibilities vary by site, provide information on the variance.

The institution operating the site is responsible for the quality of care, staffing, credentialing, clinical operations at the above sites. CNUCDM is responsible for the appointment of faculty at the site as VCF (volunteer clinical faculty) assignment of teaching responsibility, calibration of faculty, faculty development, faculty service and engagement with full time faculty.

B. Supportive Documentation:

1. Provide a list of all sites where required educational activity will occur, identifying whether the site is owned by the sponsoring institution, and how the site is used for educational activities (didactic, laboratory, preclinical, clinical).

See [Appendix 4-6 Educational Sites](#)

2. Provide written agreements for any site not owned by the sponsoring institution where required educational activity will occur, including within the agreement the defined roles and responsibilities of the parties involved.

See [Appendix 1-6 MOUs Clinical](#)

Student Services

STANDARD 4-7

- 4-7** Student services **must** include the following: (address separately)
- personal, academic and career counseling of students;
 - assuring student participation on appropriate committees;
 - providing appropriate information about the availability of financial aid and health services;
 - developing and reviewing specific written procedures to ensure due process and the protection of the rights of students;
 - student advocacy;
 - maintenance of the integrity of student performance and evaluation records; and
 - Instruction on personal debt management and financial planning.

Intent:

All policies and procedures should protect the students as consumers and provide avenues for appeal and due process. Policies should ensure that student records accurately reflect work accomplished and are maintained in a secure manner. Students should have available the necessary support to provide career information and guidance as to practice, post-graduate and research opportunities.

A. Description:

1. Describe each area of student services separately. Include specific description of the planned services provided.
 - personal, academic and career counseling of students;
 - assuring student participation on appropriate committees;
 - providing appropriate information about the availability of financial aid and health services;
 - developing and reviewing specific written procedures to ensure due process and the protection of the rights of students;
 - student advocacy;
 - maintenance of the integrity of student performance and evaluation records; and
 - Instruction on personal debt management and financial planning.

- a. Personal, academic and career counseling of students

California Northstate University has a variety of student services including advising programs, alumni and career services, disability accommodations, mental health counseling, leadership

organizations, wellness committees, financial aid assistance, library services, and centers for research. All formal counseling is an independent function of the Office of Student Services.

Students have access to a broad range of personal, academic and career counseling services provided through the CNUCDM office of student services. Personal counseling services are provided on a referral basis. The office of student services maintains a list of counselors that are available in the community. Additionally, the office of student services maintains a list of, and appropriate contact information for, support groups that may be required by students or their families.

In addition, the Dean, and the assistant dean of students, a full-time on-campus counselor are available to assist students 24/7. Academic and career counseling, will be provided by the CDM Dean and designated faculty. All students will be assigned faculty and student (from higher classes) mentors to provide first-line counseling and assistance with academic and personal issues. The Assistant Dean of Students is available to meet with any student who has questions or problems related to student life, or academics.

Personal Counseling

The Office of Student Affairs and Admissions manages programs that promote student health and wellness. Services include providing information regarding alcohol and drug awareness and prevention and assisting with referrals to local agencies, treatment facilities, and clinical professionals. The OSAA staff are available for confidential referral assistance on a walk-in basis or by appointment. The office also provides guest presentations from health practitioners, and referral information to assist students with healthy lifestyle practices throughout the year. Information regarding programming is sent via campus email to all students at least two weeks in advance or posted on the campus information boards. Examples of programming include time management skills, nutrition guidance, stress reduction strategies, and work/life balance practices. Brochures offering guidance and tips for managing and understanding student focused problems are available from the OSAA. Assessment and evaluation of offerings through surveys and usage statistics enables the OSA to adapt to current program demands and develop new initiatives to better serve students.

Any student requiring disability assistance may apply for services through the Dean of Student Affairs. The University is committed to promoting equal access to programs and facilities, thereby insuring that students with disabilities experience the opportunity to participate fully in all academic experiences. Specialized services and academic accommodations are provided to meet the individual needs of students with disabilities to help them achieve successful completion of their professional degree.

Two of three licensed therapists provide personal counseling to students and are on campus every day of the week, with varying hours to accommodate students' schedules. This is an active and highly engaged program. Among the current student body over 200 students are currently availing themselves of these services. These counselors do not teach any classes nor evaluate students' academic performance. Along with individual therapy, the counselors have made available to students a variety of group sessions and workshops covering topics such as stress, depression, and healthy relationships. The counselors are also available for faculty consultations and behavioral assessments and have also been active participants in CNU events, including student orientation, club day, suicide awareness and prevention programs, wellness day, and time

management events. Due to increasing usage of counseling services and attendance at counseling-developed workshops and events, counseling hours available to students have increased this year, and the number of counselors working with CNU students has increased from two to three. **Appendix 4-11 Counseling Usage** details the presenting issues for which students utilize the counseling services.

California Northstate University provides students with a full-time, on-campus licensed clinical social worker for counseling issues that may arise while enrolled at CNUCDM.

- The Director of Student Financial Services is available to help students seeking assistance in managing his/her finances. The Residence Life staff members are available to assist students with issues pertaining to housing.
- California Northstate University understands many students have personal concerns that may affect his/her academic and personal lives. In most instances, the student can overcome such issues independently. In other instances, normal peer-to-peer, student-faculty, or student-administrative assistance can serve either as motivation or guidance to the student helping to resolve problems.
- California Northstate University believes it is in the interest of the student, the student's family, and the University to provide on-campus counseling to help students deal with a variety of personal concerns.

The Student Counseling Services will handle such problems in the following way:

1. The University recognizes that almost any human concern can be successfully treated provided it is identified in the early stages and referral is made to an appropriate modality of care.
2. The purpose of the policy is to assure students that if they have personal concerns that are affecting their academic and personal lives, they will receive assistance to help resolve their problem in an effective and confidential manner.
3. Students are assured that utilizing the student counseling service will not jeopardize their status as a student, their future or their reputation.
4. Concerns will be handled in a forthright manner.
5. Students who have a problem that they feel may affect academic performance are encouraged to voluntarily seek counseling and information on a confidential basis by contacting the student counseling service.
6. It is strongly encouraged that the students comply with referrals and recommendations of the student counseling service.

Academic Counseling

The principal source of academic counseling for students is the faculty. CNUCDM has established faculty and peer mentor programs. It is anticipated that the dental school will use the model provided by the other disciplines to establish a similar faculty and peer mentoring program. Should it be required, the office of student services can link students to community-

based professionals who specialize in learning disabilities and/or learning enhancement programs.

Instructional services

The Learning Resource Center is available for students, faculty, and staff. It includes 800 square feet of space devoted to the following: the library facility and its collection, the computer lab, classroom resources, the interlibrary loan program, and the career resources center. Space is also provided for individual and group study. Library staff and schedules are addressed in C.5.

The Learning Resource Center also maintains an Electronic Learning Resources System. Its purpose is to provide library and learning resources to students, faculty, and staff, and serve as an entry point for all users to meet their academic and research needs. A designated area of the learning resource center is also dedicated as a computer lab. The computers in the lab are available to students, where they can access the electronic resources and library materials. Additionally, the lab provides students with general PC software, access to the internet, and the ability to print desired materials.

Library systems

The Learning Resource Center subscribes to approximately 1,000 scholarly electronic journals and uses an integrated library system, "Library World," that contains modules for acquisition, cataloging, circulation, and inventory of physical library resources such as print books, print journals, models, kits, assessment tools, etc. The library's webpage contains a link to the online public access catalog (OPAC) which links to the ILS catalog records. For accessing electronic material, the library provides six public access terminals and wireless internet throughout the facility. Using a single sign-on, University users can access the library's electronic databases. These currently include the journal databases ScienceDirect, LifeSciences, OVID journals, electronic book collections, AccessMedicine, the Cochrane Database, PsychInfo, and PsychArticles. CNU is also a member of the National Network of Libraries of Medicine which allows students and faculty to obtain books and articles from numerous other universities. The DMD program has budget items for purchasing additional journals and assessment tools.

CNU is both a wired and wireless institution with computers and data ports available to students and faculty for access to the internet and academic portals.

Information resource instruction and staffing

At the beginning of each semester, a Learning Resource Center orientation session by the Library is scheduled to accommodate all interested students and faculty. The attendance is mandatory for all first-year students and optional for others. During this orientation, students are introduced to the learning resources available as well as the policies and procedures relevant to their usage. The library staff is also available to assist students in further instruction as needed and to provide individual instruction assistance.

The CNU library is managed and operated by a combination of a full-time health sciences librarian and a part-time library assistant. An information technology specialist works with the librarian to update, maintain, and operate electronic systems in the resource center. The librarian is available from 9 a.m. to 5 p.m. Monday through Friday. The library assistant is available from

12:30 p.m. through 9 p.m. Monday through Thursday and 9 a.m. through 5 p.m. on Friday. Both may be contacted through email, in person, or by telephone.

The library currently supports the doctoral research of the MD and PharD doctoral programs. In the proposed budget for DMD program, there is additional funding for library resources including assessment materials and yearly subscriptions to all major scientific and clinical journals

Technologic Capacity

CNU's IT infrastructure includes fully networked classrooms, each having data and power ports. Many of the labs are outfitted with individual workstations. A state-of-the-art media center sends and receives signals throughout the campus.

There are currently faculty and staff training sessions hosted by the IT department to ensure proficiency with University applications, including Canvas, Examsoft, and Mediasite. In addition, the Director of IT ensures that a software program specialist is available to provide continuous assistance to faculty and staff in their use of University applications.

The information technology department provides computer, CANVAS, email, and system assistance to all faculty, staff, and students. CANVAS is the University's learning management system which contains course information, assignment grades, and class documents and assignments. An introductory session to CANVAS is provided to new students during orientation. All students are assigned a unique campus email address for use during the program. The IT department offers assistance to students who experience problems with their account during normal business hours.

The informational technology support for students and faculty includes a minimum of one help desk staff member on site between the hours of 8 a.m. though 5 p.m. The IT team includes an IT Director, Systems Administrator, Network Administrator, Academic and Special Projects Administrator, Help Desk Administrator, Database and Web Administrator, and a Systems and Server Room Administrator.

Career Counseling

The Career Services Coordinator directs professional career planning and career counseling services. Information about career opportunities at various companies can also be found in the Career Resource section of the library or on the CNU website. In-class and extracurricular workshops are conducted throughout the program to assist students in analyzing their strengths and weaknesses. A job exposition is hosted on campus during the Fall semester to provide students with direct contacts for obtaining part-time employment during the summer months and possible post-graduation opportunities. Students are also encouraged to attend seminars and workshops in writing resumes, developing interview skills, and preparing for career placement. The Career Services Coordinator, in collaboration with the Alumni Coordinator, also follows up with graduates for the first 5 years after graduation through phone interviews and surveys to monitor how graduates' careers are progressing, and to solicit solutions for improvement in their respective programs and in the University as a whole.

Working with ADEA, the CNUCDM will develop career days for dental medicine to include information on the dental specialties, uniformed services, public health, dental education careers among others. The dental medicine faculty through their mentorship will also offer career counseling to DMD students. As well as students across the university.

Alumni Services maintain graduates' relationship with the faculty, staff, and student body at CNU by building lifelong connections with the alma mater community. They sponsor alumni social events, continuing education course information, career resources and services, fundraisers, speaking engagements, e-newsletters, news about what fellow classmates are doing, and the current faculty research.

b. Assuring student participation on appropriate committees

At CNUCDM, student representation is provided on appropriate college and University committees. The CDM will set up committees in accordance with prevailing University policies that include student participation. Any full-time student in good academic and professional standing is qualified to seek appointment or election to serve in a representative capacity on college and University committees. Interested students must apply by the posted deadlines to the respective college's Student Council for consideration.

Students participate in the admissions process but not as voting members of the respective college admissions committees. Rather, students participate on prospective student interview panels as observers where they can answer applicant questions, as tour guides, and as student ambassadors.

Students also serve on a multitude of student-based committees related to the student senate, student government and to our many student clubs and organizations. The *Student Handbook* has a listing and full description of all student government offices, clubs, and organizations for the various colleges and programs.

Students are selected for committees based upon recommendations from the Assistant Dean of Student Affairs and Admissions and appointments are made by the Dean. For college committees these include, the admissions committee, the curriculum committee, the institutional effectiveness committee and the honor council. The dental school administration additionally will meet on a scheduled basis with the class officers of each class and will select students as needed to serve on ad hoc committees and task forces. For example, a student will serve as a member of the search committee for the position of Dean of the College.

- c. providing appropriate information about the availability of financial aid and health services

Student Financial Services

The Elk Grove Campus has an Office of Student Financial Services. The office staff services the needs of students in all facets of financial aid counseling (debt management, financial literacy and financial planning) and provides them with information regarding available private, state, institutional and federal funding sources. The office has an open door policy regarding student counseling. Students are seen on a first-come, first-served basis. However, students may schedule an appointment with an administrator, if necessary.

CNU offers two installment options and two private education loan programs. They are available through the Financial Aid Office along with a list of scholarships, grants, and loan repayment programs.

The director is responsible for the overall administration of Federal Title IV, Federal Title VII, and institutional and private funding sources for the Elk Grove Campus. The director also supervises and oversees the functions and responsibilities of two full-time accounts receivable representatives. The accounts receivable representatives provide electronic billing and payment services to all enrolled students.

Processes and systems have been implemented to allow students to apply for financial aid electronically. The students can also view their financial aid award letter, level of indebtedness and their tuition statement of account electronically at any time. In addition, the student financial services office has a very comprehensive financial aid web site for the matriculating students as well as the continuing students.

Formal financial aid presentations are given to all applicants. Presentations are also given to enrolled students during orientation. Every student who receives financial aid is required to participate in an exit interview near the time of program completion. Presentations regarding federal regulatory updates and internal office policy and procedure revisions are also given as the need arises. All student financial services policies and procedures are publicized each academic year in the CNU Student Handbook.

Health Services

All students are required to acquire health insurance and provide evidence of coverage at the beginning of every semester. The University offers a group plan for students to purchase, or students can purchase health insurance on their own. The University provides mental health support through LCSW counselors on a drop-in or appointment basis on campus. The University's policy on health insurance is provided as follows:

Policy of Mandatory Student Health Insurance

Policy Statement

California Northstate University (CNU) requires all students to have health insurance coverage meeting certain standards. An active health insurance is required due to the nature of the health care educational programs at CNU, in addition to the wellbeing of the students.

Purpose

To state the requirements of student health insurance coverage as a condition of enrollment for CNU.

Scope/Coverage

This policy is applicable to all enrolled CNU students.

Procedure

- A. The health insurance coverage must include:
 - 1. Inpatient Care and Outpatient Care
 - 2. Urgent Care and Emergency Care
 - 3. Mental Health Care

- B. International students are required to subscribe to and maintain their enrollment with the school designated health insurance plan.

- C. New enrolled students are required to provide proof of health insurance coverages to the Student Affairs Office no later than **5 calendar days** before the start of orientation. Failure to provide proof of health insurance coverages by the deadline, students will not be allowed to attend orientation, the White Coat Ceremony, and may lose their seats if requirement is not met.

- D. Continuing enrolled students are required to provide proof of health insurance coverages to the Student Affairs Offices no later than **14 calendar days** before the first day of classroom instruction each semester. Failure to provide proof of health insurance coverages by the deadline, students will be subject to the following consequences:
 - 1. Students will be emailed with information of insurance carriers.
 - 2. Failure to enroll and pay the cost of the insurance premium in full will result in transcript hold, progression hold, registration hold, and library hold (student will not be able to check any materials out from the library).

- E. Students are expected to maintain health insurance coverages at all times as a student of CNU. If a student's health insurance coverage is lapsed, the student is required to contact the Student Affairs Office within 72 hours and must provide proof of insurance.
- F. Students will be randomly selected throughout the academic year to provide proof of health insurance coverage verification.
- G. When student is selected for health insurance coverage verification, student(s) will have 5 days to provide proof of insurance.

d. developing and reviewing specific written procedures to ensure due process and the protection of the rights of students;

These procedures are completed. All specific written procedures to ensure due process and protection of the rights of students are noted in the student Handbook: [Appendix 2-3 2020-2021 Student Handbook](#) and in the General Catalogue, [Appendix 2-2 General Catalogue](#).

The review of these procedures will be ongoing at the university through the President's Executive Council and with the University Attorney which review the status of university functions including due process.

Student Judicial System

This student judicial system is designed so that a student may have the opportunity to be fairly and justly treated when his/her personal academic or professional conduct allegedly violates the Bylaws and Regulations of the Code of Responsibilities and Rights of the Students of California Northstate University that are stated below in this section. This section does not apply with respect to infractions related to student academic and professional performance that are dealt with by the appropriate faculty, in regards to the filing of Student Academic and Professional Incident Report Forms or in terms of dealing with unsatisfactory academic performance issues that are stipulated in either the Academic Section of the college catalog or the student's respective course syllabi. Although faculty and college administrators have the option to deal with such issues within their respective colleges, they must still provide students the opportunity to be fairly and justly treated and to be given the fundamental right to address any issues related to unsatisfactory academic progress or allegations of misconduct.

Student Complaints

Any student or group of students may initiate a complaint procedure on any student concern, including complaints against faculty, staff, or other students. Guidelines for filing student complaints are listed in the *Student Handbook*.

e. student advocacy;

The Assistant Dean of Students and the Office of Student Services is committed to serving all of CNUCDM's students. The mission is to minimize student stress and maximize student academic and professional successes – including their social, medical and emotional well-being. This is

primarily accomplished through the University's open-door policy. Students are always welcome and are encouraged to discuss their concerns, particularly with the faculty, the administration and especially the Assistant Dean of Students who routinely counsels students on academic and non-academic issues. The Assistant Dean of Students also works closely with the academic deans on establishing academic and non-academic student policies as well interdisciplinary education for our students. The Assistant Dean of Students and his staff also serve as advisors to the student council and will provide yearly training sessions on student leadership to student leaders. In addition, the Assistant Dean of Students acts as a student's advocate on all academic issues through serving as an *ex officio* member of each Student Academic Review/Promotion and Graduation Committee for students who are in academic difficulty.

f. maintenance of the integrity of student performance and evaluation records;

The uncompromised integrity of all student grades, assessments and evaluations is the shared responsibility of all faculty, staff and students of the College of Dental Medicine and most directly by the office of the registrar and the office of the Associate Dean of Academic Affairs where such information is collected, used and archived.

In that regard, all faculty, students and staff will have FERPA training to ensure that academic performance information is not released without the individual student approval. Policies for posting grades are noted in the student handbook.

Transcripts, grades evaluations in the college and university are kept as electronic files and are password protected. Written release by the student is required before the release of transcripts or other protected information.

g. Instruction on personal debt management and financial planning.

The Office of Student Financial Aid will provide for the needs of students in all facets of financial aid counseling (debt management and financial planning) and will provide them with information regarding available funding sources. The office has an open door policy regarding student counseling. Students will be seen on a first-come, first-served basis. However, students may schedule an appointment with an administrator, if necessary.

Formal financial aid presentations will be given to all applicants. Presentations will also given to enrolled students during orientation. Every student who receives financial aid will be required to participate in an exit interview near the time of program completion. Presentations regarding internal office policy and procedure revisions will also be given as the need arises. All student financial services policies and procedures will be publicized each academic year in the CNU College of Dental Medicine Student Handbook.

Instruction on student debt and financial planning is also contained in BSS 501 given in the D1 year.

Course #	Course Title	Credits	Year	Term
BSS 501	Managing Student Life LAL, Lab	1	DS 1	Fall

Resilience, sustainability as a student and future health professional will be presented. **Managing student debt**, stress management, effects of social media, interpersonal relationships, and ethics in student practice will be discussed. The problems of drug and alcohol abuse will be shown. Respect in the University including cultural, gender, and sexual conduct issues will be presented. Students will be made aware of resources to promote student wellbeing.

2. Describe plans for early identification of students in academic difficulty.

Ongoing advising and academic support

All students in the DMD program will be assigned an academic advisor with whom they will meet at least twice per semester. These sessions will include discussions about progress towards their degree, academic performance, career questions, engagement with practicums, and any other matters of concern. At the end of the first year of study, the academic advisor will make a formal recommendation for the student's continued progression in the program. During the first semester of year four, the academic advisor will also review with the student their progression towards graduation and address any outstanding requirements including completion of the defined competency assessments. Students will be assigned an academic advisor based on their career interests and faculty experience. First-year students will also meet with the Dean and Associate Deans individually to establish personal contact with the program administrators. The DMD faculty will be expected to be available to students for academic advising during regularly scheduled office hours and through personal appointments.

Students who experience difficulty in any course will be urged to seek help and assistance from the course instructor or their academic advisor before the problem becomes unmanageable. If academic problems arise, school-funded tutoring services will be available through the OSA. Students who require this assistance will be referred by the faculty of the course or their academic advisor. Additional tutoring will be offered by students and these tutors typically post their contact information on campus bulletin boards. The OSA keeps a list of recommended tutors.

Utilizing a competency-based grading system, all students must reach a threshold for clinical competency in knowledge and skill set at 75%. Structured remediation activities for each didactic course will ensure a higher level of knowledge for the cohort of students earning a Y, 60-75%. Students earning below 60% receive an F requiring repeat of the course or further academic action. Expectations for classes are defined on individual syllabi with any opportunity for make-up assignments. Students who miss two or more sessions are required to work with the faculty of each class to define make-up opportunities.

If a student fails to meet the above minimum requirements, he or she will be placed on probation. Probation formally begins with a written notification to the student from the advisor. It will include the reason for probation, probationary conditions, and the duration of probation. Students can be removed from probation by addressing the area of concern. Students may be terminated from the program if they fail to return from probation in the timeframe allotted, if they receive two Cs or lower within an academic year, if they are acting in a manner that violates the ethical and professional standards of CODA as determined by faculty vote, if they fail to return from a leave of absence by the date specified, or if their academic or

professional actions have created a situation for which a warning or probation is inappropriate or impossible.

A student may petition for readmission to the program with an endorsement from his or her advisor. The petition will be voted on by the DMD, and the approval must be unanimous. The petition is then sent to the Dean for final approval or rejection.

Students will have the opportunity to remediate a maximum of four (4) courses that resulted in a grade below 75% throughout the didactic program; hence more than 4 courses with a grade of 60-75% (before remediation) will require that additional courses resulting in that grade be repeated. Remediation is not available for a course that resulted in a score of 60% or below. A particular course can be repeated only once. Failing more than two (2) courses (before repeating), below 60%, will result in dismissal.

Incomplete or Withdrawal from a Course

During a semester, a student may withdraw or fail to complete all required assignments and/or examinations due to extenuating circumstances, such as, but not limited to, an illness or a family emergency. In such cases, the course coordinator may give a grade of Incomplete for the course. All missed assignments and exams must normally be completed within 10 business days after the end of the semester in which the Incomplete was received, or within a timeframe determined by the course coordinator. Failure to successfully complete the course will result in an earned F grade for the course and placement on Academic Probation. Withdrawal from a course must first be approved by the course coordinator and the Office of Academic Affairs. Where a student has had to withdraw from a course a grade of W will be applied and the student will have to repeat the course next time it is offered.

Dismissal

A student may be dismissed from CNUCDM if any of the following conditions exist and the Academic Review/Promotion and Graduation Committee determines that dismissal is warranted: a. Failure to meet any terms of Remediation or Academic Probation; b. Conduct subject to dismissal as described in the Honor Code section of the Student Handbook; c. Foregoing an academic semester without obtaining an approved leave of absence; or, d. Failure to complete the degree requirements in five consecutive academic years from the date of the first day the student begins the program.

Appeal of Dismissal

Students dismissed from the College may appeal the decision in writing within thirty (30) calendar days of notification of dismissal to the Dean of the College. The Dean will render a decision in writing within 15 calendar days of receipt of the formal written appeal. The Dean's decision is final.

Students will be allowed to remediate a maximum of 4 courses over the duration of the CDM Program; students will be dismissed if cumulative GPA falls below 60%; GPA will be calculated on completion of remediation; failed courses must be repeated; a failed course can be repeated only once.

Students are not permitted to begin a course if prerequisite course(s) has/have not been successfully completed and passed. Consequently, if a prerequisite course is not passed, the student's academic progression may be delayed by at least one academic year.

3. What are the planned outcomes for each of the student service areas? How will the effectiveness of the counseling system be measured, by whom and how often?

The planned outcomes of the student service areas noted above are summarized in the following table. The method of analysis, time of analysis, and responsible party is noted. The results of this process will be presented annually to the Institutional Effectiveness Committee for their consideration and action.

STUDENT SERVICE AREA ASSESSMENT PROCESS

SERVICE AREA	METHOD OF ANALYSIS	RESPONSIBLE PARTY	FREQUENCY	ACTION PROCESS
COUNSELING PERSONAL	Utilization review with outcomes aggregated	OSA Dean	Annual report	IEC to Dean and DEC
COUNSELING ACADEMIC	Utilization review and outcomes of interventions	AD academic affairs	Annual report	IEC to Dean and DEC
COUNSELING CAREER	Survey of users	Career counseling director	biennially	Dean of student affairs
COMMITTEE PARTICIPATION	Review of list of students and attendance	Dean's office	annually	Dean
FINANCIAL AID	Assessment of financial literacy of DMD students	Course director BSS 501	annually	ADAA
HEALTH SERVICES	Confirmation of insurance	registrar	On registration	Review by PEC
DUE PROCESS STUDENT RIGHTS	Case based review of effectiveness of processes	Dean, university attorney	concurrent	Review by PEC
STUDENT ADVOCACY	Survey of students	Dean student affairs	Biennially	To DEC
ACADEMIC RECORDS	Concurrent assessment of all FERPA protected material	Faculty, students, staff, registrar	concurrent	DEC
DEBT MANAGEMENT	Survey of student debt	Student financial services	annually	DEC

B. Supportive Documentation:

1. List the committees to which students will be assigned, the mechanism for appointment, and whether they will be voting members

See **Exhibit T**

2. List the dental school or University staff member who will be responsible for coordinating each of the following areas for dental students:
 - a. personal, academic, and career counseling
 - b. financial aid
 - c. health services
 - d. due process and protection of student rights
 - e. student advocacy
 - f. maintenance of integrity of student performance and evaluation records and
 - g. instruction on personal debt management and financial planning.

See **Appendix 4-7 Student Affairs Staff Assignments.**

1. Describe the typical class size throughout the program.

Class sizes are kept to 20 students or below for small group learning and 80 in large group learning formats. In preclinical laboratory, classes will be 40 students per section.

2. Describe how timely and appropriate interactions between students and faculty, and among students will be assured, including detailed information for online courses. For programs being offered via distance education, describe the provisions available to faculty to ensure that the enrolled student is the student completing the coursework.

Courses will be offered in the regular semester manner. There are no distance or online courses. Students will meet with their academic advisor four times a year to gauge their progress in the program and to determine if additional resources are necessary to ensure their success. Classes designed to prepare students for practicum work, a class to guide them through the internship application process, and workshops to provide support and encouragement through the completion of the dissertation are built into the program. Students may also utilize the resources available through the Associate Dean of Academic Affairs, whose responsibilities include informing students about degree requirements, leaves of absence, registration for classes, how to obtain fellowships and grants, procedures regarding violations, transfers, withdraws, and degree deadlines. University-wide support includes academic advising and educational planning, a computer lab and library, academic success and financial literacy workshops, and peer mentoring.

Timely and appropriate interactions between faculty and students will be fostered through course and program electronic support. E-mail will be frequently used to allow for continuous communications and many courses include supplementary web-based tools that include forums and discussion boards.

3. Institutional policies and procedures related to Students Rights and Responsibilities, including Student Complaint Policy

Appendix 2-3 2020-2021 Student Handbook and in the General Catalogue, Appendix 2-2 General Catalogue, Appendix C-2 Complaints Policy, Attachment C-3 Grievance-Complaint Form NonAccreditationIssue, Attachment C-4 Grievance-Complaint Form CODA, and Attachment C-5 Complaint Log
And Appendix 4-7 Complaint Process CNUCDM

STANDARD 4-8

- 4-8** At the time of acceptance, students **must** be advised of the total expected cost of their dental education.

Intent:

Financial information should include estimates of living expenses and educational fees, an analysis of financial need, and the availability of financial aid.

A. Description:

1. Describe how the school will inform potential students of the full cost of dental education and financial needs assessment prior to enrollment.

Formal financial aid presentations are given to all applicants at various stages of the enrollment process. These presentations are given during the admissions interview process, the orientation process, the first-year core course, the half-way point of the student's program, and during the exit interview process. Optional lunchtime and evening sessions are also offered throughout the year. Smaller-group presentations regarding federal regulatory updates and internal office policy and procedure revisions are when necessary.

Prior to being admitted to California Northstate University, the Student Financial Services office will conduct a 30-minute financial aid presentation during the applicant's interview day. This presentation provides each applicant with the total expected cost, estimates of living expenses, and detailed explanation of availability of all institutional, state, federal and private sources of financial aid. Each applicant receives a packet of financial aid information for future reference.

2. Describe how during each year of enrollment students will receive a statement on the accumulated debt, future needs assessment and availability of future financial aid.

Student Financial Services will have a comprehensive financial aid web site for matriculating and continuing students. Processes and systems will be implemented to allow students to apply for all types of financial aid electronically. Each academic year, the students can electronically, on a daily basis, view their financial aid award letter, level of indebtedness and their tuition statement of account. In addition, all continuing students can access the CNUCDM *Student Handbook* and financial aid website electronically.

3. For each separate item below, describe how the school will inform its students prior to graduation of:
 - a. repayment schedules and specific billing procedures,
 - b. grace periods and their impact on repayment schedules,

- c. deferments and their implications,
- d. cancellation provisions, and
- e. available consolidation options and the time frame in which students would be eligible for them.

All students who have borrowed at least one educational loan must attend the exit interview presentation and complete an on-line exit interview counseling session prior to graduation. This presentation discusses in great detail (a) repayment options and combined billing opportunities. In addition, a Loan Deferment and Repayment Timetable Chart will be provided to all students to assist them through the repayment process. Answers to questions students have regarding grace (b), deferment and forbearance periods (c) are included in the Financial Aid Packet provided to each student. Each student also will receive an individualized portfolio which includes information regarding loan repayment, deferment, consolidation options (e) and cancellation provisions (d).

It is planned that each academic year, the Office of Student Financial Services will bring in a guest speaker from Sallie Mae to conduct two to three consolidation presentations. This hour-long presentation is designed for all graduating students and includes detailed information regarding the eligibility requirements, advantages/disadvantages, loan limits and terms/conditions of consolidating student loans.

B: Supportive Documentation:

1. Samples of planned accumulated debt reports that will be provided to students during matriculation and before graduation

Appendix 4-8 student accumulated debt report

2. Student Financial Aid Handbook

Appendix 4-8 Student Financial Aid Handbook

Appendix 4-8 Student Financial Aid Resources

STANDARD 4-9

- 4-9** The institution **must** be in compliance with all federal and state regulations relating to student financial aid and student privacy.

A. Description:

1. Describe the dental school's policies and procedures that will ensure that the institution is in compliance with all federal and state regulations relating to student financial aid and student privacy (FERPA).

Formal financial aid presentations are given to all applicants at various stages of the enrollment process. These presentations are given during the admissions interview process, the orientation process, the first-year core course, the half-way point of the student's program, and during the exit interview process. Optional lunchtime and evening sessions are also offered throughout the year. Smaller-group presentations regarding federal regulatory updates and internal office policy and procedure revisions are when necessary. The students are expected to become aware of this information through the multiple presentations and to follow all federal and state regulations relating to their financial aid. All student financial aid information will be maintained as highly confidential information within University records and will only be released upon student authorization.

B. Supportive Documentation:

1. Student Financial Aid Handbook

See [Appendix 4-8 Student Financial Aid Handbook](#).

2. Policy and procedures related to student privacy

See [Appendix 4-9 1904-Student Records \(FERPA\)](#).

3. Student authorization form for release of information

See [Appendix 4-9 CNU_LOR Request FERPA Form](#).

STANDARD 4-10

4-10 The dental school **must** advise prospective students of mandatory health standards that will ensure that prospective students are qualified to undertake dental studies.

A. Description:

1. Describe the school's pre-matriculation health standards.

California Northstate University requires that all students submit documented laboratory proof of the absence of tuberculosis (updated yearly) and proof of immunization against measles, mumps, rubella, varicella (chicken pox), diphtheria/tetanus, and hepatitis B prior to matriculation for all students enrolled in a clinical program (a one-month grace period is typically allowed). In addition, students are further required to prove the efficacy of their immunizations through blood titers, which involve laboratory assessments of their blood, to measure the level of circulating antibodies associated with these various diseases. Depending on the program or particular rotation, students may be required to submit to a drug screen. All students enrolled in clinical programs must submit a completed physical form, signed by a physician, indicating the student is medically cleared to be a student and to participate in clinical rotations.

B. Supportive Documentation:

1. Student Medical History Form

California Northstate University utilizes *myrecordtracker*. All students will be required to upload all current medical records and updates on that system. This does not include a CNU form as medical record forms are health system and physician specific. This is as well true for the Colleges of Medicine, Pharmacy, Psychology and Health Sciences. This is done to prevent the errors associated with self-reported medical histories obtained without the review of a care giver. Myrecordtracker corrects this problem by supplying the actual medical record.

2. Pre-matriculation letter to students

The current prematriculation letter for all CNU students is under revision and will be available as revised at the time of the site visit.

STANDARD 4-11

4-11 There **must** be a mechanism for ready access to health care for students while they are enrolled in dental school.

A. Description:

1. Describe the school's plan for health care service for its students, including education of students about bodily fluid exposure, needle-stick policies, and other infectious and environmental hazards associated with learning in a patient care setting.

The University requires that all full-time and part-time students enrolled at California Northstate University be covered under a health insurance plan acceptable to the University. California Northstate University has made the Student Medical Health Care Plan available to students. Students may choose health care insurance through California Northstate University or may choose their own. Evidence of acceptable non-University health insurance coverage must be provided prior to program matriculation and prior to registration for the fall quarter each succeeding year thereafter.

Short-term or catastrophic coverage is not deemed comparable and cannot be an acceptable health insurance plan. A student's health insurance coverage may be randomly verified. Failure to maintain health insurance may result in immediate dismissal.

Students are automatically enrolled for disability insurance through the University. This charge will appear on a student's bill along with his/her tuition, housing, and meals. Coverage ends upon graduation. Students on a leave of absence have the option to retain disability coverage, but must prepay the entire premium for the period of the leave. For information, contact the Office of Student Services. Disability insurance is mandatory for all students in full-time programs.

California Northstate University also provides student counseling by an on-campus counselor to help students deal with a variety of academic and personal concerns. Short-term counseling is provided at no cost for all students currently enrolled in classes at California Northstate University. Students who present with long-term issues are referred to off-campus specialists for assessment and treatment. All efforts are made to make referrals to providers on the student's health insurance network so that the student does not incur additional costs.

B. Supportive Documentation:

1. Student Handbook

See [Appendix 2-3 2020-2021 CNUCDM Student Handbook](#).

2. Student Health Brochure

California Northstate University does not provide health services for its students. All students are required to have health insurance that can be obtained through a CNU student health

insurance exchange or on their own. The University utilizes *myrecordtracker* to monitor the active health insurance status of students at the beginning of each semester, with periodic audits throughout the year. The policy on student health insurance can be found in [Appendix 4-11 Student Health Insurance Policy](#).

The University does provide mental health counseling for its students on a drop-in or appointment basis. [Appendix 4-11 Counseling Usage](#) summarizes the major areas for which CNU students seek counseling support services through the University.

3. [School policies and procedures for infectious disease and environmental hazards exposure in clinical settings](#)

STANDARD 4-12

- 4-12** Students **must** be encouraged to be immunized against infectious diseases, such as, mumps, measles, rubella and hepatitis B, prior to contact with patients and/or infectious objects or materials, in an effort to minimize the risk of infection to patients and dental personnel.

A. Description:

1. Describe how students will be encouraged to be immunized against infectious diseases.

CNU University requires that all students submit documented laboratory proof of the absence of tuberculosis (updated yearly) and proof of immunization against measles, mumps, rubella, varicella (chicken pox), diphtheria/tetanus, and hepatitis B prior to matriculation for all students enrolled in a clinical program (a one-month grace period is typically allowed). In addition, students are further required to prove the efficacy of their immunizations through blood titers, which involve laboratory assessments of their blood, to measure the level of circulating antibodies associated with these various diseases.

B. Supportive Documentation:

1. University policy on student health and immunizations

See **Appendix 4-12 Immunization Policy**.

STANDARD 5 - PATIENT CARE SERVICES

STANDARD 5-1

- 5-1** The dental school **must** have a published policy addressing the meaning of and commitment to patient-centered care and distribute the written policy to each student, faculty, staff, and patient.

Intent:

A written statement of patient rights should include:

- *considerate, respectful and confidential treatment;*
- *continuity and completion of treatment;*
- *access to complete and current information about his/her condition;*
- *advance knowledge of the cost of treatment;*
- *informed consent;*
- *explanation of recommended treatment, treatment alternatives, the option to refuse treatment, the risk of no treatment, and expected outcomes of various treatments;*
- *treatment that meets the standard of care in the profession.*

A. Description:

1. Describe how the statement of patients' rights will be distributed to students, faculty, staff and to each patient.

The College of Dental Medicine will adhere to a Patients' Rights Policy that addresses each of the intent statements noted above. It is attached in **Appendix 5-1 Patient Rights Policy**.

The CNU statement of Patient's Rights Policy will be provided through a variety of means to students, faculty, staff, and to the patients of the College of Dental Medicine. For patients, we plan on providing access to the Patient's Rights Policy in one of two ways. For those individuals searching the college's website, the plan is to have this policy be part of the patient portal. In addition, as part of the registration documentation for those who do register as patients of the College, the Patient's Rights Policy statement will be provided in the registration packet for the patient to keep as part of their records.

For students, faculty and staff a similar method of introduction to the Patient's Rights Policy will be provided on their respective website portal/portals. Each student, faculty or staff member will receive a copy of the policy in their student enrollment or employment package. For employees, it is anticipated that a signed copy of the policy will become part of the employee record as an indication they understand fully their responsibilities to ensure patient's rights are fully met and respected.

To further ensure a humanistic educational and quality patient care culture within the college, the college's leadership team is fully committed to modelling behaviors and beliefs that reinforce the philosophies set forth in the Patient's Rights Policy. The College's leadership team will further develop ongoing training for faculty, staff and students to reinforce the humanistic and patient

care policies that focus on optimum patient care, respectful of the patients' rights relative to that treatment.

B. Supportive Documentation:

1. Patients' Rights Document, as available

See [Appendix 5-1 Patient Rights Policy](#).

STANDARD 5-2

5-2 Patient care **must** be evidenced-based, integrating the best research evidence and patient values.

Intent:

The dental school should use evidence to evaluate new technology and products and to guide diagnosis and treatment decisions.

A. Description:

1. Describe the process and procedures that will be used to integrate evidence-based dentistry with the provision of patient care, including diagnosis, treatment planning, caries control; treatment of periodontal conditions; restorative material and dental product selection; and treatment outcomes.

The American Dental Association defines the term “evidence-based dentistry” as follows:

“Evidence-based dentistry is an approach to oral health care that requires the judicious integration of systematic assessments of clinically relevant scientific evidence, relating to the patient's oral and medical condition and history, with the dentist's clinical expertise and the patient's treatment needs and preferences. (Trans. 2001:462) In 2007, the Association established the ADA Center for Evidence-Based Dentistry to provide leadership in implementing ADA programs and initiatives related to EBD.”

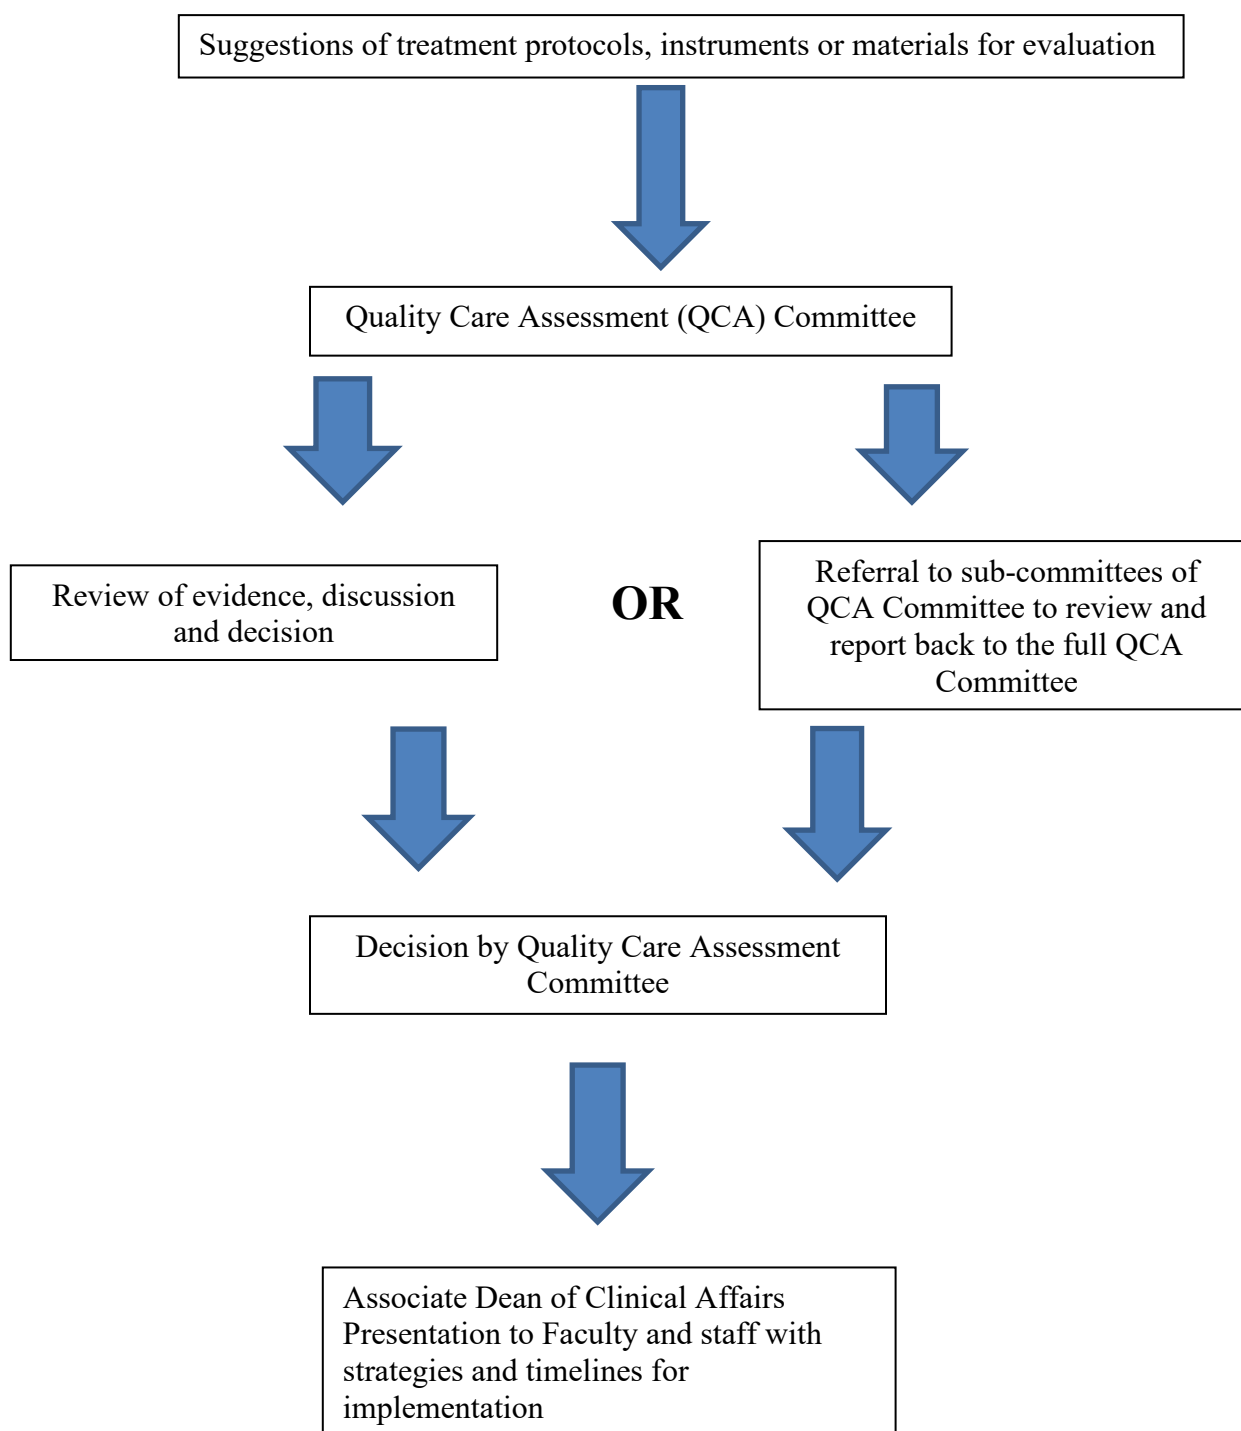

To realize its vision of disseminating the best available evidence and helping practitioners implement EBD, the ADA Center for Evidence-Based Dentistry works in collaboration with the Council on Scientific Affairs to convene expert panels that review the collective research evidence and develop evidence-based recommendations on key clinical issues.

The College of Dental Medicine plans to establish a Quality Care Assessment Committee. This committee will be charged with evaluation of the various treatment options for patient care using an evidenced based model to develop the CNU methods of patient care to be taught at the CNU College of Dental Medicine. The committee will integrate the best research evidence that supports the various treatment options from which patients are able to choose. The patient's decisions can be fully informed and made in light of their individual values, desires, and financial circumstances. The Quality Care Assessment Committee will also be charged with an evidenced-based evaluation of the products, techniques, and technology that enhance the value and quality of the diagnosis, treatment materials, and treatment techniques. To ensure quality of care outcomes, the committee will also provide an outcome assessment of the student treatment outcomes for their patients.

To ensure the evaluation is comprehensive, the committee members will be broad-based in their experience and areas of expertise. The goal is to evaluate all phases of patient care from initial

contact with the College through the completion of patient care. To be more specific, all aspects of patient care will be carefully evaluated from diagnosis, to treatment planning, through providing actual care whether it be dental hygiene, caries control, and restoration of teeth, treatment of infections of endodontic or periodontal origin. The evaluation will also include the choices of material and methods to provide that care. The final hallmark of quality care includes ongoing self-evaluation of treatment outcomes. The committee will be working with other institutional committees to develop outcome assessment tools and processes to ensure adequacy of educational effectiveness of both the college as well as developing assessment tools to ensure competency of the students we teach. At times, sub-committees or task forces within the committee can be designated with specific tasks to analyze and develop recommendations for action by the committee for the purpose of improving patient care and student teaching quality and effectiveness.

Evidence-based process for evaluation of treatment protocols, technologic instruments, or materials

B. Supportive Documentation:

1. Description of the planned school-wide committee that is charged with evaluating patient care

Appendix 5-2 Quality Assessment Committee

The Quality Assessment Committee will be comprised of the following members of the faculty and staff:

Charge:

The Quality Assessment Committee will be charged with developing the assessment directly or through subcommittees for

1. Infection and biohazard control assessment,
2. Patient record quality and safety assessment,
3. Development of and compliance with standards of care
- 4 Concurrent case review
5. Appointment and credentialing of faculty dentists
6. Systematic review of quality measures
7. Other assessment duties it deems necessary
8. Make recommendations to the Institutional Effectiveness Committee regarding the needed areas for annual assessment
9. Make recommendations to the Dean's Executive Committee regarding policies and resources to improve quality patient care.

Chair: Associate Dean of Clinical Affairs

Committee members:

Ex officio

Associate Dean of Curriculum and Clinical Education,
Clinic manager,
Dental Director of Clinic Operations,
Dental Director of Quality Assurance and Infection Control,

Additional members

Discipline Representatives for Radiology, Restorative Dentistry, Endodontics, Periodontics, Oral and Maxillofacial Surgery, Pediatric dentistry, Orthodontics, and other committee members as needed.

Two clinical staff representatives

Appointment and Terms:

Ex officio membership is continuous. All other members are for 3 year terms with unlimited renewal.

Meetings: Monthly as directed by the Dean of Clinical Affairs

2. Clinic policies and procedures, if available

Clinical policies and procedures are in development, not yet available

3. The school's planned treatment/care philosophies

The College's planned treatment and care philosophies are clearly defined to be a patient-centered and humanistic care philosophy, the Quality Care Assessment Committee is still in the very earliest phase of development of specific treatment and care philosophies that fulfill those philosophies. They are noted in [Appendix 5-2 Patient-Centered Care Policy](#).

STANDARD 5-3

- 5-3** The dental school **must** conduct a formal system of continuous quality improvement for the patient care program that demonstrates evidence of:
- standards of care that are patient-centered, focused on comprehensive care and written in a format that facilitates assessment with measurable criteria;
 - an ongoing review and analysis of compliance with the defined standards of care;
 - an ongoing review of a representative sample of patients and patient records to assess the appropriateness, necessity and quality of the care provided;
 - mechanisms to determine the cause(s) of treatment deficiencies; and
 - implementation of corrective measures as appropriate.

Intent:

Dental education programs should create and maintain databases for monitoring and improving patient care and serving as a resource for research and evidence-based practice.

A. Description:

1. Describe the school's planned quality assurance plan

California Northstate University is committed to ongoing development of its outcomes assessment program to ensure patient care that meets or exceeds the College of Dental Medicine's goal of providing patient-centered care through its humanistic educational teaching methods. The University is committed to developing a state-of-the-art assessment program and is currently sending its College of Medicine's Assistant Dean of Assessment, the College of Psychology's Dean, and College of Dental Medicine's Assistant Dean of Clinical Affairs to the Harvard Macy Institute to develop its clinical and academic assessment program. The clinical and academic assessment process is currently under development and refinement for the College of Dental Medicine. The Quality Assurance Plan as it is currently envisioned will have multiple layers of assessment through various Quality Assurance Committees. For example, the quality of clinical care assessment will be a charge of the Clinical Quality Assessment Committee. We also envision additional committees to assess quality and safety of patient health records as well as a committee to assess the quality, safety, and effectiveness of ongoing training for clinical infection control standards. Each quality assurance committee once fully formed will meet to develop their standards, assessment methods, and strategies for implementation.

2. Describe the development and planned implementation of the school's standards of care. Describe how these standards of care will be used to review the quality of patient care.

The Clinical Quality Assessment Committee will be charged with the development of the schools standards of care and the implementation of those standards. The Clinical Quality Assessment Committee's composition of members was described earlier in Standard 5. This committee will be working under the leadership of the Assistant Dean of Clinical Affairs to fully define the college's standards of care. Standards of Care are established based on the standards of the general professional community in which one practices. The committee will utilize many sources to develop its criteria for assessing quality of care relative to the standards of care in the

community. One resource for the committee will be the Guidelines for Assessment of Clinical Quality and Professional Performance of California Dental Association's Peer Review Council. The CNU Clinical Quality Assessment Committee will also rely on the expertise of the committee members and local community experts to help develop the CNU College of Dental Medicine standards of care guidelines and assessment criteria.

The Standards of Care guidelines will be implemented into its preclinical and clinical educational planning. The utilization of the standards of care in course planning ensures the educational outcomes lead to a patient-centered quality clinical care outcomes. The standards of care guidelines set clear goals and expectations for faculty, staff and most importantly our CNU students. As clinical care is being delivered, the standards of care define the expectations for clinical faculty in their assessment of the care delivered to patients on an ongoing basis. In addition, a clear understanding of the standards of care provides the basis for regular assessment of the quality of patient care as the College develops its program of Periodic Review of Care relative to the standards of care.

To summarize, there are several layers to the implementation and use of the CNU College of Dental Medicine's Standards of Care Guidelines once they are developed. The standards of Care guidelines will include the following:

- a. Development of preclinical and clinical educational course work
- b. Development and implementation of clinical outcome assessment and grading by clinical faculty in an ongoing and contemporaneous fashion on a daily basis during patient care.
- c. Development and implementation of periodic review and assessment of clinical outcomes in both episodic or regular focused reviews by staff or the Clinical Quality Assurance Committee

3. Describe the schools planned process for review of patient records. How often will records be audited? Who will perform the audits? How will corrective actions be monitored?

Each patient record will be reviewed at the conclusion of treatment by clinical faculty. The faculty serving as the attending supervisor of clinical care has immediate responsibility for reviewing the patient records ensuring the student has made accurate and complete representation of all pertinent information for that appointment and the procedure rendered. Ongoing review of records will be routinely done on a monthly basis. The ongoing review of records is anticipated to be a focused review of records by the clinic director or by designated staff. The focused review of records can take the form of review of specific charts or randomly selected charts of patients seen over the prior 30 days. For any errors, omissions, inconsistencies the student and/or faculty member creating the chart entry that is deficient in some manner will then be notified of the issue and counselled in such a manner to educate and improve future performance in record keeping. Following the counselling, a focused review of records from the individuals that were counselled will occur to provide assurance that the counselling was effective.

4. Describe how the school will determine patient treatment deficiencies?

Quality assessment is concurrent at the time and place of treatment. It is the duty of the attending faculty member to assess the quality of care at the time of treatment. Almost all treatment deficiencies will be identified by Clinical Faculty during the course of treatment. Any deficiency that would lead to a clinical outcome that does not meet the standard of care that can be remedied at the time of treatment will be managed through thoughtful instruction by faculty and the diligent effort of the student. For those deficiencies that cannot be remedied at the time of treatment, the faculty will need to identify the need for further care to correct the deficiency coordinate a suitable time and means for the deficiency to be remediated. On occasion, it may be necessary for faculty to stop treatment or to take over the clinical care directly to prevent harm to the patient or student.

For those deficiencies identified by faculty not remediated at the time of the initial treatment will be referred to the Dean of Clinical Affairs. The Dean of Clinical Affairs will then determine an appropriate course of action for remediation. This course of action will be determined in consultation with the clinical faculty using Clinical Quality Assurance (CQA) Guidelines to be developed by the Clinical Quality Assurance Committee. The remediation can include many possible options including re-treatment by student clinicians, referral for treatment by faculty member in Faculty Practice environment, or as indicated in the CQA Guidelines.

On occasion patient treatment deficiencies do not become apparent until the patient determines something does not seem right. Once the patient determines that in their opinion something is deficient, they then can make the student and faculty aware of the issue. The treating student under the supervision of clinical faculty will then make every effort to determine the source of the patient's complaint, the nature of the deficiency if any, and possible solutions if there is a deficiency. Once a deficiency is confirmed, then treatment solutions can be identified and proposed to the patient in an informed consent discussion which leads to a treatment decision. The CQA Committee will also be developing a means for patients to report in writing to the clinic director any perceived deficiencies so that a review process utilizing students, faculty and staff can be made. Once the review is completed, if a deficiency does exist, then treatment options can be then provided for the patient to consider as a means to resolve the deficiency.

B. Supportive Documentation:

1. Standards of Care document

Appendix 5-3 Standards of Care

2. Clinic Manual, as available

See below #5

3. Sample patient satisfaction survey, if available

See below #5

4. Patient records audit protocol form, if available

See below #5

5. Patient case completion review protocol form, if available

The following documents are currently under development as the clinics are not planned for operations for DMD students until 2020-2021:

1. Clinic Manual

2. Sample patient satisfaction Survey
3. Patient records audit protocol form
4. Patient case completion review protocol form

Standards of Care Document resource material:

Guidelines for Assessment of Clinical Quality and Professional Performance of the
California Dental Association's Peer Review Council

STANDARD 5-4

5-4 The use of quantitative criteria for student advancement and graduation **must not** compromise the delivery of comprehensive patient care.

A. Description:

1. Describe the school's philosophy on comprehensive patient care. How will patients be assured of receiving comprehensive care?

The Task Force of Dentists that led the decision to develop the CNU College of Dental Medicine envisioned in its strategic plan a clinical educational model that was focused on comprehensive care. The CNU College of Dental Medicine has adopted the philosophy of Comprehensive Patient Care envisioned by the developing Task Force. The College's leadership in designing its model of clinical care, strongly believes the following patient care educational model is the most effective model for ensuring comprehensive care for patients. Unfortunately, the enemy of comprehensive patient care in a dental school at times can be a quantitative patient care model which places a priority on student requirements for graduation. Our model of comprehensive care is built on the following criteria which we believe will ensure the priority is clearly on patient needs and comprehensive patient care. The following is our model to ensure comprehensive care takes precedence over student advancement requirements and graduation.

Patients will be assigned to a comprehensive care Treatment Group. Each Treatment Group will have a Treatment Group Leader, who is a dentist licensed in the State of California. For each Treatment Group there will also be a staff person identified as the Treatment Group Coordinator. To each Treatment Group, students will then be assigned to provide care under the supervision and guidance of the Treatment Group Leader aided by the Treatment Group Coordinator. The Treatment Group Coordinator's responsibility will be to schedule each patient in a fashion that ensure the patient receives the care they have been determined to need. It is the duty by nature of licensure for the attending licensed Dentist to ensure quality comprehensive care is fully delivered to each patient of record. The patients assigned to the treatment group become the patients of record of the Treatment Group Leader. In addition, it is the responsibility assigned by the College on the role of the Patient Care Coordinator to schedule each patient in a fashion that ensures they receive comprehensive care in a timely fashion.

This model relies in large part on the duties and responsibilities of being a licensed dentist in the State of California. A license to practice health care by its nature, carries a legal and ethical responsibility. As such it requires the Attending Doctor to provide comprehensive dental care in a fashion that meets or exceeds the minimum standards of care as establish by the community. These duties and responsibility associated with patient care are also is a job requirement associated with the appointment as Clinical Faculty of the CNU College of Dental Medicine.

The College recognizes that students do have requirements to meet for advancement and graduation. To be clear, the student's needs for requirements will not take priority over the patient's needs. This model while ensuring comprehensive care for patients as its priority, it also does allow for consideration of student requirements to be met in the following fashion. A

Treatment Group is a team of professionals in training whose role is to collectively manage and treat the patient in the best and most comprehensive fashion. This is not unlike the team of dentists that may provide care in concert through referral with the primary dentist. The Treatment Group Coordinator and the Treatment Group Leader routinely assess the needs of a patient and assign treatment to students based on their clinical skills and experience. It is also possible to consider the needs of students relative to the treatment needs of the patients presenting for treatment on any given day. It is possible that with the primary focus on quality comprehensive care for patients that students within the Treatment Group can be scheduled in a fashion similar to a referral practice where multiple practitioner provide comprehensive quality patient care.

2. Describe how patients will be assured of best practices care and not care related to quantitative requirements

The primary responsibility for ensuring best practices is the model we plan to employ wherein it is recognized that the legal responsibility associated with licensure and the job requirement to provide care that follows best practices as defined by the Quality Assurance Committee evidence based guidelines. In addition the Routine Periodic Audit review of Patient records and Focused Audit Review of Patient records as described in Standard 5-3 allow for assessment ensuring minimal opportunity to lose focus on the goals and application of the CNU comprehensive quality patient care standards. Furthermore, focused patient record review for those individuals who have lost sight of the goals of comprehensive care ensures

STANDARD 5-5

5-5 The dental school **must** ensure that active patients have access to professional services at all times for the management of dental emergencies.

A. Description:

1. Describe the school's planned policy and procedures for providing emergency services, including after- hours care for patients.

Having access to emergency dental care at all time is important for the active patients of California Northstate University College of Dental Medicine.

It is the policy of California Northstate University College of Dental Medicine that a faculty member and a backup faculty member will be on call after hours to manage dental emergencies of patients of the College of Dental Medicine.

Currently the student clinic and faculty clinic are still in architectural development. The full scope of the emergency care policy and its procedures manual are still in development.

The purpose of this call schedule is to answer queries regarding care but not to provide onsite treatment after hours. After hours onsite treatment will be through arrangement with local emergency Department and after opening by the California Northstate University Hospital and Clinics. The Emergency Department at CNU is planned to have a dental/OMS/ENT room for urgent treatment.

B. Supportive Documentation:

1. Information provided to patients regarding emergency services and after hours care, if available

This form is not yet available as no clinics are operating. However, the plan to cover emergency services after hours are noted above

STANDARD 5-6

- 5-6** All students, faculty and support staff involved in the direct provision of patient care **must** be continuously recognized in basic life support (B.L.S.), including cardiopulmonary resuscitation, and must be able to manage common medical emergencies.

A. Description:

1. Identify and describe the location of the emergency materials and equipment that will be available for use in the dental clinic and for instruction in the management of dental office emergencies. Describe plans for additional emergency equipment and supplies that may be accessible to the clinic and the planned location.

Because the architectural plans are in the early stages of development, we are unable at this time to identify specific locations of the emergency equipment and supplies other than to say that they will be in clearly marked or identified locations in the clinic, simulation laboratories, and OSCE simulation settings. The needs for each location will be identified based on the level of care provided in that location. For example, the preclinical simulation lab will require only basic emergency equipment suitable for any other large space occupied by students. The clinical treatment areas will have emergency equipment and supplies appropriate for the location. As a general campus wide emergency supply, there will multiple AED stations located throughout the campus whether they be patient care clinics, education halls and labs, or administrative quarters. As the plans become fully developed, the specific location and level of emergency care will be identifiable.

2. Describe how the emergency equipment will be monitored to assure it is functional.

The clinic director will have this as their duty to ensure the emergency equipment is monitored to assure functionality of equipment and currency of medical supplies. This requires several levels of monitoring to maintain functionality of emergency equipment to ensure all systems are functioning when needed. The first level of monitoring is personal inspection by a trained and knowledgeable designated individual who will inspect and document the level of readiness of equipment, supplies, organization, and ease of access to those materials. There will be monitoring logs recording the level of readiness. Following each reported use of the emergency cart, an inspection will be mandated so that the emergency cart equipment and supplies are fully ready to be deployed at the next emergency. Part of this duty will be documentation that regular examination and resupply have been done verifying functionality of emergency equipment. Documentation would include:

- a. Supplies are checked for both quantity and current useable date stamps
- b. Equipment is fully functional
- c. Location of equipment is clearly marked and unobstructed for easy access
- d. Routine training logs for staff, faculty and students are maintained. Training logs would contain at the least the attendee's names, dates, and training summary.

- e. Location and accessibility of emergency call stations are clearly identified and faculty, staff, and students serving in those locations can identify them.
3. Describe the dental school's planned policy regarding basic life support recognition (certification) for students, faculty and support staff who are involved in the direct provision of patient care.

The College of Dental Medicine planned policy will be all faculty, staff, and students who will be involved in direct provision of patient care will be trained and certified in Basic Life Support. There is strong support currently among the College's leadership to provide Advanced Life Support Certification to all those directly involved in patient care. The current discussion recognizes that repetition generates familiarity and skill enhancement so there is exploration of how best to provide certification to students on a yearly basis beginning in their first year. The level of certification from Basic Life Support raising to Advanced Life Support as they transition into clinical care. Documentation of training at the College has two levels of monitoring. The first is all clinical care faculty are required to be licensed in the state of California which requires by statute recertification every two years in BLS or ALS training. The College will require proof of currency of license as well as proof of BLS or ALS certification. As part of its educational program, the College will provide BLS and ALS certification for students, faculty, and the general dental community. This carries the duty of maintaining records of current certification of all attendees, including faculty, staff, and students

4. Describe how the dental school will ensure that recognition of these individuals is obtained and does not lapse.

The process to ensure recognition of certification of training if faculty, staff, and students is ensured was in large part answered in item 3 above. For faculty and staff, at the University all contracts for the Colleges of Medicine, Pharmacy, and Psychology are year to year. As part of the annual review of employment, it is Human Resources obligation to ensure documentation of licensure, currency of training and other employment mandated requirements. This annual reappointment will include the submission of the BLS certificate. The dental staff office will maintain a record of all BLS certificates of faculty and staff.

5. Does the school plan exceptions to this policy for persons who are medically or physically unable to perform such services? If so, how will these records be maintained by the program?

Americans with Disabilities Act mandates exceptions for persons who are medically or physically unable to perform for reasons related to their disability. The College of Dental Medicine will work to identify and document all those who are unable to perform these tasks, make appropriate adjustment and accommodations in light of the specific disability, and maintain written documentation signed by the individual and University representative. All of this will occur in a respectful, professional manner appropriate for a University and College that places a high value on the philosophy of Humanistic Education and Quality Comprehensive Clinical Care.

B. Supportive Documentation:

1. Copy of policy on managing emergency situations in the treatment area(s), if available

The policy on managing emergency situations in the clinic areas is in development. The policy in some aspects may need to consider location and design elements of the treatment areas that could impact the application of or suitability of the policy. Once the design of the clinic/clinics is established then specific policy can be developed that is appropriate for general use and specific each clinic location for the application of policy.

2. Copy of policy on basic life support recognition (certification)

Appendix 5-6 BLS policies

Basic Life Support: It is required that all faculty involved in patient care at the CNU College of Dental Medicine must possess a current license to practice in the state of California. The Dental Practice Act of California mandates biannual certification of Basic Life Support as a requirement of licensure. It is required that all faculty maintain licensure including BLS certification.

It is required that all clinic staff directly involved in patient care maintain BLS certification.

Records of certification in BLS are maintained in the dental staff office.

Students will be required to be BLS certified in Year 1 as a component of the curriculum. All matriculating students and students completing the second year will be offered the BLS course at CNSU, first in Foundations of Odontology (Odont 511) and at the end of the second year in Local Anesthesia (OMFS 632). It is the student's responsibility to provide the signed BLS certification card to *myrecordtracker*.

CNUCDM will sponsor a BLS certification course each semester at CNU available to students faculty and staff at no cost.

STANDARD 5-7

5-7 Written policies and procedures **must** be in place for the safe use of ionizing radiation which include criteria for patient selection, frequency of exposing radiographs on patients, and retaking radiographs consistent with current, accepted dental practice.

A. Description:

1. Describe the school's policy on the use of ionizing radiation. Describe the planned procedures to be used when working with ionizing radiation.

Recognizing that dentistry plays a significant role in maintaining safe radiation exposure of patients and to ensure not only the safety of patients but if students and staff it is paramount to provide training so that dental students, staff and faculty have clear guidelines to keep radiation exposures As Low As Reasonably Achievable (ALARA). The College is committed to ensuring the health and safety of patients, students, staff, and faculty who may be subject to radiation exposure. The policy will dictate that exposures have the following criteria:

- a. the exposures are justified in relationship to their potential benefits,
- b. necessary exposures are kept as low as reasonably possible (ALARA).
- c. Doses received by patients, students, or staff are kept below the allowable limits
- d. The policy will include criteria for patient selection, frequency of exposing radiographs on patients, retaking of radiographs

Radiation safety guidelines: The policy and procedures manual will provide radiation safety guidelines for the dental persons utilizing equipment including any restrictions of the operating technique for the use of that particular x-ray equipment being utilized. Once the equipment has been obtained then the safe operating techniques and guidelines can be then be developed specific for the equipment utilized.

Training: The policy will require that any dental personnel (students, staff, faculty) utilizing an x-ray generating equipment and imaging software be trained and demonstrate competence in that piece of equipment and be able to comply with radiation safety rules during its use. In addition adequate records of those trained and verified to be competent in the use will be kept.

Radiation Monitoring: Any individual whose job involves the use of x-rays should be provided an x-ray monitoring device. It is recognized that Monitoring devices must be provided if the anticipated annual dose exceeds the annual occupational limits as established in the U.S. Nuclear Regulatory Commission's Occupational Dose limits guidelines. Monitoring will be recommended for known pregnant employees. If the annual monitored exposure is less than 10% of the maximum allowable dose (5 rems), then monitors need not be worn.

If a student, staff or faculty is exposed to ionizing radiation at more than one facility then we will obtain from the other facility a copy of dosimetry report or documentation that confirms exposure is not likely to be greater than 10% of annual exposure.

2. Describe how the school plans to ensure safe use, application, and exposure of ionizing radiation for patients.

The policy and procedure manual will include the following to ensure safe use, application of, and exposure to Ionizing Radiation for patients and the personnel utilizing the equipment:

- a. criteria for patient selection consistent with the joint ADA-FDA guidelines
- b. frequency of exposing radiographs on patients
- c. retaking radiographs consistent with current accepted dental practice

B. Supportive Documentation:

1. Policy of use of ionizing radiation, if available

See **Appendix 5-7 Ionizing Dental Radiation Safety Proposed Policy.**

STANDARD 5-8

- 5-8** The dental school **must** establish and enforce a mechanism to ensure adequate preclinical/clinical/laboratory asepsis, infection and biohazard control and disposal of hazardous waste, consistent with accepted dental practice.

A. Description:

1. Describe the policy for handling and disposing of hazardous waste. Explain how the school will enforce this policy.

The policies for handling and disposing of hazardous waste at CNUCDM are based on the California Medical Waste Management Act. The CNUCDM Policy is to handle and dispose of hazardous waste in a fashion that meets or exceeds state and federal mandates. The current waste management plan for this Policy is under development using the California Dental Association's Regulatory Compliance Manual as is recommended for Medical Waste management and disposal as well as for the management and disposal of Hazardous and Universal Waste. The California Dental Association's Regulatory Compliance Manual used as reference (available on site or at cda.org) to develop these plans is found in **Appendix 5-8 CNUCDM hazardous waste plan**. The plans for both the medical waste and hazardous waste disposal are under development and will be completed once the contracts with licensed hazardous waste management companies and regulatory agencies are established, and the individuals responsible for its management are hired and identified. The Medical Waste Management Plan and Hazardous Waste Management Plans as they currently exist are found in **Appendix 5-8 CNUCDM medical waste plan**.

2. Describe the school's policy for preclinical/clinical/laboratory asepsis and infection and biohazard control. Explain how the school will enforce this policy.

Mandatory educational sessions of standard precautions for blood and airborne pathogens are provided during Orientation within the first week of the first year. Students receive additional training in proper blood-drawing techniques and patient related infection control policies prior to the clinical aspects of the program. The appropriate use of personal protective equipment such as gloves, face shields, gowns, masks, and hand washing will also be presented at these times. Additionally, all students will be expected to adhere to California Northstate University College of Dental Medicine's vaccination policy available in the student handbook.

Students must immediately report any occupational exposure incident to their clerkship/elective faculty member or immediate supervisor who will assist them in contacting the appropriate entities to follow the established protocol of that facility regarding occupational exposure incidents. In some circumstances, the costs incurred in dealing with occupational exposure incidents (such as testing) will be covered by the healthcare facility at which the exposure

occurred. In some circumstances, the healthcare facility may refuse to bear financial responsibility for the exposure. For these cases, the College of Dental Medicine's supplemental policy that covers blood and bodily fluid exposure/needle-still will take effect.

Students should also be aware that if, in the course of the testing required by occupational exposure incident protocols, they test positive for potentially infectious agents such as AIDS, HIV, or TB, the Occupational Safety and Health Officer is required by law to report this information to the County Health Department.

In the event of an infectious and/or environmental disease or disability, the Director of Student Affairs, Admissions and Outreach will work with the student, on a case-by-case basis, to ensure student wellness and minimize time lost in educational activities.

Enforcement of the infection control policy is led by the Director of infection control and asepsis, a staff position in the clinics and is as well the joint responsibility of every licensee whether faculty or staff. A monthly report of Quality measure implementation for infection control is made to the Clinical Quality Assessment Committee.

B. Supporting Documentation:

1. Infection and biohazard control policy, as available

Appendix 5-8 infection and environmental hazards control policy

Appendix 5-8 CNU medical waste plan

Policies are based on guidelines from the CDC, California Statute, and practice guides developed by Organization for Safety, Asepsis and Prevention (OSAP).

2. Hazardous waste control policy, as available

Appendix 5-8 CNU medical waste plan

Appendix 5-8 CNUCDM Hazardous waste plan

3. Post-exposure control plan, as available

Appendix 5-8 parenteral exposure and blood born pathogen policies

Appendix 5-8 exposure to infectious or environmental hazards

4. Sample monitoring report, as available

Appendix 5-8 Biohazard exposure incident report

STANDARD 5-9

5-9 The school's policies **must** ensure that the confidentiality of information pertaining to the health status of each patient is strictly maintained.

A. Description:

1. Describe how confidentiality will be maintained for each patient.

The current University healthcare colleges have arrangements with the various hospitals and other health institutions to provide experiential clinical learning opportunities for their medical, pharmacy, and psychology students. In these arrangements, the University has relied on the institutions providing the clerkships and preceptorships to provide the required HIPAA compliance training and security for protected health information. Specific to the College of Dental Medicine's Community Based Clinics, a similar working relationship is envisioned for each non-university based experiential clinical learning experience.

The College of Dental Medicine is establishing the first University based clinic to be involved in direct patient care. Consequently, the CNU College of Dental Medicine is currently proceeding with establishing the first University Policy and Procedures for Health Information Privacy. We are currently developing standards, protocols and methods for training staff, faculty, and students, as well as leading the University in developing the Information Technology infrastructure and staffing necessary to maintain protection of protected health information.

The College of Dental Medicine will have in place the required Physical, Administrative, Technical, Documentation Requirements, and Policies and Procedures that ensure compliance with State and Federal law for the protection of personal health information. The HIPAA compliance program as it is being developed by following the *ADA Practical Guide to HIPAA Compliance Privacy and Security Kit*. We are currently developing the following as is mandated for Protected Health Information.

1. Notice of Privacy Practices (NPP)
 - a. Use and Disclosure of Personal Health Information Policy and Procedures Statement
 - b. Signed Authorization defining the "Designated Record Set" of PHI for medical records and billing records.
2. Breach Notification Compliance Policy and Procedures
3. Business Associates and Subcontractors Policy and Procedures
4. Restricted Disclosure to a Health Plan
5. Patient requests to see and get copies of Records
6. Subsidized Marketing Communications
7. Sale of Patient Information
8. Decedents
9. Research

Specific to the need to address the Physical protections for providing HIPAA compliance for protection of PHI, the Dean and Planning Committee members have met with the architect, Adec, and Patterson Dental companies to develop the clinical design in light of the need for protection of individual health information. Additional meetings are currently scheduled to continue the development and to adopt the final plans to begin construction of the facilities that will house the Simulation labs and clinics.

The Technical aspects of protection are also being currently developed. Planning meetings have occurred and are ongoing with Simon Tan, the Manager of CNU IT Department. These meeting were to assess the university current IT capabilities and strategically plan for the additional security and infrastructure changes that are required to provide a stable and secure Electronic Health Record system. Further meetings are scheduled with the companies that provide institutional level dental specific Electronic Health Records (HER), specifically the purveyors of Wisdom and Axium. These meetings will help us better understand the IT needs and expectations for the College and will lead to Request for Proposals from these companies for their EHR systems. Each step in this process will lead to further development the Technical aspects of our protection plan and IT infrastructural development prior to the opening of the clinical training of students.

Once a decision is made for Electronic Health Record (EHR) is made, administrative decisions on Policies and Procedures can then be made that would be specific to the EHR system chosen by the College. These Policies and Procedures would be specifically designed to ensure access to Protected Health Information is limited to appropriately to specified faculty, staff and students based on specific needs for access to that information. In addition once the EHR system is determined, then appropriate HIPAA training modules for faculty, staff and students can then be developed. The final administrative role that would be determined once the EHR system is determined, is the administrative documentation necessary to fulfill HIPAA compliance expectations.

The CNU Health Information Privacy Policies and Procedures as they are developed over the course of the next few months will delineate for staff, faculty and students their obligation to protect individually identifiable health information that is generated, received, or maintained as health care providers and a health care institution. These policies and procedures are implemented as a means to protect the interest of our patients. It is implemented to fulfill legal obligations established by the Health Insurance Portability and Accountability Act (HIPAA) of 1996, its regulations for implementation, and any state law that provides greater protection.

These Policies and Procedures will be designed to address the basic expectations of HIPAA and the Privacy Rules that apply to the dental clinic of CNU College of Dental Medicine (CDM). These Policy and Procedures as well as the Privacy Rules are intended to apply to CNU CDM patients which included prospective patients, patients of record, former patients, their authorized representatives, and any others identified in the Privacy Rules.

The College has or will have to guide the process of developing its HIPAA Compliance, Privacy, and Security plan, one or more guides available on the market, such as the *ADA Practical Guide to HIPAA Compliance Privacy and Security Kit*.

B. Supporting Documentation:

1. Dental school's policy on patient confidentiality, as available

CNU will utilize the *ADA Practical Guide to HIPAA Compliance Privacy and Security Kit* to develop its policies on patient confidentiality.

STANDARD 6 - RESEARCH PROGRAM

STANDARD 6-1

6-1 Research, the process of scientific inquiry involved in the development and dissemination of new knowledge, **must** be an integral component of the purpose/mission, goals and objectives of the dental school.

A. Description:

1. Describe how research will be integral to the dental school's purpose/mission and list the school's research related goals and objectives.

The dental industry is going through significant changes that will continue in the foreseeable future. The large number of people not receiving dental care, the concentration of dental services being provided to the most affluent members of society who need these services the least, the traditional delivery model where oral health services are delivered in increasingly high priced surgical suites, and the development of preventive and behavior support sciences facilitating new models of care, all are driving disruptive innovations that are changing the nature of dental services delivery. These challenges, innovations, and changes represent opportunities for the College of Dental Medicine to excel by addressing these issues, obtaining extramural funding to do so, and documenting and publishing and results of these efforts.

The Mission of the College of Dental Medicine includes the following statements:

Research: Promulgate scientific inquiry throughout the curriculum and support student and faculty research that creates an environment of scientific curiosity and an evidence based foundation for clinical practice.

Service: Provide individual patient care services at all clinical sites under the auspices of CNUCDM that produces the very best oral health outcomes and clinical value.

Social Accountability: Advocate for and help build stronger communities in California and globally through improved oral health care, disease prevention, health promotion and protection from oral diseases through community-based approaches.

In addition, the Vision of the College of Dental Medicine is to provide constructive innovation in its education programs, and leadership in integrating oral health care into human health care systems. This vision includes the following values:

- Patient-centered didactic and clinical education that always puts improved health outcomes first
- Foster a humanistic and character-developing environment for dental students
- Making better communities and a better world through improved oral health
- Understanding the professional responsibility of the dentist as the head of the oral health care team

- Practicing health promotion and disease prevention and protection
- Advancing California Northstate University through excellence in all we do

The reason these points are listed here in the standard on **Research** is that this Mission, Vision and Values will be primary drivers of the research agenda for the College. The College is the only dental school located in the northern Central Valley in California, a large geographic area with significantly lower than average income for California and higher than average challenges for the population to have and maintain good oral health.

The initial research portfolio for the College, already established prior to the College starting to enroll students, is based on grants and contracts brought by Dr. Paul Glassman, Assistant Dean for Research. These grants all focus on translation of dental prevention and behavior support science into clinical care, integrated into communities, and using innovative delivery models to demonstrate the ability to improve access to oral health services, improve health outcomes, and lower the cost of care.

These focuses, being at the forefront of preventive science, applying cutting edge behavior support science, developing and deploying innovative delivery systems, and integrating oral health services with educational, social service, and general health delivery systems, align with the Mission, Vision, and Values of the College of Dental Medicine. They will help guide the development of the new funded inquiry and drive the creation of scholarship within the faculty and student body.

In addition, the College is in a unique position, being co-located with professional programs in Medicine, Pharmacy, and Graduate Psychology, to foster cross-disciplinary research and scholarship that apply the expertise in all these disciplines to improving the health of the population in the Central Valley of California.

2. Describe how the dental school will determine whether its research goals and objectives are met on an annual basis. If goals and objectives are not met, what steps will be taken to correct the deficiencies?

The College will be developing tracking mechanisms in multiple areas to determine whether its research objectives are met. These include tracking applications and awards for grants and contracts and tracking submitted manuscripts and publications. The College will also review annually the degree to which research pursuits and findings are influencing and incorporated into the curriculum and academic programs.

The role of the Assistant Dean for Research will include managing this tracking system and responding to annual assessment findings.

3. Describe how the dental schools' research program will support the overall educational program at the school, including research-driven changes in curriculum and/or clinical training.

Given the orientation of the College of Dental Medicine, as articulated in its Mission, Vision, and Values, to improve the oral health of the population of the Northern Central Valley of California, the focus of the research and scholarship activities of the faculty on these challenges

is integral to aligning resources and activities to achieve these goals. This focus will provide expertise and a rich source of information to drive the educational program in the direction of producing graduates prepared to contribute to addressing the challenges related to oral health facing the profession and society.

B. Supportive Documentation:

1. Mission and Goals Document

Appendix 1-2 CDM Strategic Plan

2. Research goals and outcomes

Research Goal:

Given the orientation of the College of Dental Medicine, as articulated in its Mission, Vision, and Values, to improve the oral health of the population of the Northern Central Valley of California, the focus of the research and scholarship activities of the faculty will be on addressing the challenges faced by the population of this area in achieving and maintaining optimal oral health.

Specific Research Objectives:

CNUCDM will encourage and support research and scholarship activities that address the following:

1. Document and understand the challenges faced by the population of the Northern Central Valley of California in achieving and maintaining good oral health.
2. Design and test interventions to address the oral health needs of the population of the Northern Central Valley of California including:
 - a. Address oral health literacy
 - b. Develop, deploy and test innovative delivery systems
 - c. Create and support “Community/Clinical Linkages” programs.
 - d. Apply of modern preventive oral health science as applied to community-based delivery systems and underserved populations.
 - e. Apply modern behavior support science as applied to community-based delivery systems and underserved populations.
 - f. Document the role of traditional dental disciplines as taught in the College of Dental Medicine in addressing the oral health needs of the population of the Northern Central Valley of California
 - g. Test and document use of allied oral health professionals working at the top of their education, license, and experience.
 - h. Develop and document the role of the College of Dental Medicine as the hub of a community-based delivery and oral health support network.
 - i. Document the ability to create and measure increased value in oral health delivery systems by improving oral health outcomes and lowering costs using the interventions described above.

- j. Create and document activities related to the “scholarship of teaching” to test and measure outcomes of innovative teaching approaches, with special emphasis on those that can impact understanding of issues related to population health.
3. Expose and involve dental students in research projects in the areas described above through linkages with faculty research, education about the potential to improve population health using the strategies described above, student projects woven into the educational curriculum, and elective participation in more extensive faculty-led projects.

Outcomes of the CDM Research Program:

CNUCDM will collect data and document its results in the following areas:

1. The number and dollar value of extramural research support obtained in grants and contracts related to the research agenda.
2. The number and descriptions of faculty-led research projects and scholarly activities started, completed and results published.
3. The number and description of student participation in required intra-course projects and elective participation in more extensive faculty-led projects.

STANDARD 6-2

- 6-2** The dental school faculty, as appropriate to meet the school's purpose/mission, goals and objectives, **must** engage in research or other forms of scholarly activity.

A. Description:

1. List faculty expectations and/or evaluation criteria for research and/or scholarly activity. Include expectations and/or evaluation criteria for the following categories of faculty, as appropriate:
 - a. full-time tenured,
 - b. full-time tenure-track,
 - c. full-time clinical track, and
 - d. part-time

Faculty are encouraged to engage in research and scholarship activities and are required to do so and document those activities for advancement through academic ranks from Instructor to Assistant Professor to Associate Professor to Professor. Structure and criteria for evaluation of faculty research and scholarly activities are described in the faculty handbook, found in [Appendix 3-1 Faculty Handbook](#). It should be noted that CNU does not offer tenure to its faculty.

The Rank and Promotion Committee will examine the dossier/portfolio of faculty for examples of sustained accomplishment in scholarship. The Committee uses the following guidelines in making its determinations.

Examples of indicators for accomplishments in the area of scholarship/research are, but not limited to:

Quality and number of publications, as defined by a published paper that meets the following criteria:

1. Book, primary author;
2. Book, secondary author;
3. Book, editor;
4. Primary author of a refereed Review article;
5. Primary author, patent – work is not otherwise published;
6. Publication of results of research in peer-reviewed journals or other professional publications;
7. Publication of other scholarly work in peer-reviewed journals and other professional publications;
8. Writes and submits as principal investigator research proposal or grant application to appropriate extramural or intramural funding agency that *receives funding*;
9. Primary author of original, peer-reviewed work not included in the above nine (9) items.
10. Book chapter, primary author;
11. Invited poster or platform presentation as primary author or principal investigator;

12. Publication of a peer-reviewed abstract as primary, secondary or senior author in which results of research or other scholarly work presented as a poster or platform presentation at a professional meeting;
13. Primary author of a refereed Case report;
14. Secondary author of a Book chapter;
15. Peer-reviewed review article as secondary or senior author;
16. Primary, secondary or senior author of a Continuing Education article;
17. Primary author of a peer-reviewed letter to the editor;
18. Secondary author of a peer-reviewed original work.

Additional Scholarly Activities that can be included in the dossier/portfolio include, but are not limited to:

1. Writes on average one (1) high quality research proposal or grant application that does not receive funding every two years and submits the proposal or grant application to an appropriate intramural, extramural, private or public agency or board;
2. Publication as primary, secondary or senior author of a non-peer-reviewed abstract in which results of research or other scholarly work is presented as a poster or platform presentation at a professional or scientific meeting;
3. Receiving an award and/or a commendation recognizing scholarly accomplishments;
4. Numbers of citations of papers published (impact factor) while a faculty member.
5. Scholarly/research activities also includes the development, demonstration, documentation and evaluation of innovative methods that increase effective teaching as long as such work results in the publication of the results of the innovation.

CNU currently has a well-established doctoral culture on campus with students enrolled in both the PharmD and MD programs and, more recently, in the PsyD program. The doctoral culture is pervasive across the University—with research opportunities and support for faculty and students. Research groups at the University have produced over 54 publications, 23 grants, 73 presentations, 37 scholarships and fellowships, four book chapters, and two patents.

Another component of creating a doctoral level culture is the appointment of appropriately qualified faculty members. The Rank and Promotion Committee of CNU will examine the CV of each candidate for examples of accomplishments in the areas of teaching, scholarly activity, and professional service to determine their placement in one of four academic ranks: Instructor, Assistant Professor, Associate Professor, and Professor.

At the Instructor level the applicant must have a DDS or DMD and they must have teaching or extensive professional experience. Applicants will need to have experience in the areas of teaching, research, and professional service. Those faculty who were previously hired as Instructors must have at least one year of experience at that rank. An Associate Professor must meet all the qualifications for an Assistant, with the addition of significant accomplishments in teaching, research, and professional service. They must have at least five years of experience as an Assistant Professor at CNU. This timeframe may be amended by the Rank and Promotion Committee due to previous time and service as determined by the Dean and awarded by the President. They must excel in two of three core competencies: teaching, research, or service. To reach the rank of Professor, a candidate must meet all the requirements for Associate Professor at CNU with the addition of a significant and outstanding record of teaching, research, and professional service. They must have spent a minimum of five years at the rank of Associate, though they may apply for early promotion.

2. Describe how faculty will receive mentorship for engaging in research and/or scholarly activity.

The Assistant Dean for Research plans to organize a faculty scholarship mentoring program. Faculty with scholarship and research expertise and experience will be assigned mentees. A series of educational programs will be convened to provide the fundamentals of scholarship and funded inquiry development.

In addition, as described earlier, a tracking mechanism will be established to assess individual faculty member's status and progress on developing scholarly activities. Collaborative groups will be encouraged to develop extramural funding for scholarly activities.

3. Describe the resources that will be provided to meet the school's research purposes/mission/goals including, but not limited to:

- a. financial support;
 - b. support related to writing and administering grants;
 - c. access to facilities and equipment;
 - d. faculty development opportunities; and
 - e. protected time dedicated to research for faculty.
- a. The Vice President for Research and the Dean share resources to provide financial support for institutionally supported research. This is budgeted in the working proforma at \$350,000 per year. **Appendix 1-5 Detailed Working Pro forma.**
 - b. The Institute for Teaching and Learning Excellence, the Dean for Research, mentors and other faculty resources including continuing education offer all CNU faculty the opportunity to improve scientific writing and grant writing.
 - c. The Vice President for Research administers lab space and facilities utilization for which use any faculty member can apply.
 - d. Clearly the formal research education of clinical faculty is an immense opportunity. The program at the University of Washington for clinical research, NIH sabbaticals and other research development opportunities will be made available to faculty.
 - e. Each year the faculty effort time will include time for research and scholarship and will support the development of faculty in research.

4. Describe any formal institutional programs available to support faculty research.

The vice President for Research sponsors a seminar series and the ITLE is a resource in development of the scholarship of teaching and learning among other opportunities at CNU

B. Supportive Documentation:

1. Institutional research report (Example exhibit U)

See **Exhibit U**

2. Faculty research information (Example exhibit V)

See **Exhibit V**

STANDARD 6-3

- 6-3** Dental education programs **must** provide opportunities, encourage, and support student participation in research and other scholarly activities mentored by faculty.

Intent:

The dental education program should provide students with opportunities to experience research including, but not limited to, biomedical, translational, educational, epidemiologic and clinical research. Such activities should align with clearly defined research mission and goals of the institution. The dental education program should introduce students to the principles of research and provide elective opportunities beyond basic introduction, including how such research is conducted and evaluated, and where appropriate, conveyed to patients and other practitioners, and applied in clinical settings.

A. Description:

1. Describe the ways that are planned for a student research program to be integrated with the dental school's purpose/mission and research related goals and objectives.

As described earlier, the College of Dental Medicine is in a unique position to develop a student education relevant focus on scholarship and research related to improving the oral health of the residents of the northern Central Valley of California. More than other areas of California, achieving this goal will require innovative, evidence-based approaches that emphasize integration into community structures. This emphasis will provide excellent opportunities for student participation, learning and contribution to scholarship.

Describe how students will receive mentorship for engaging in research and/or scholarly activity. How will students be informed of the opportunity to engage in research?

For the DMD program, establishment of a graduate culture will begin before students enter the program through appropriately rigorous admission requirements. These include a baccalaureate degree, demonstrated academic excellence and high GPA, evidence of scholastic engagement through letters of recommendation, and a driven desire to succeed in the profession as evidenced by their statement of purpose. Doctoral level course requirements are sequential and increase in difficulty and complexity as the student moves through the program gaining the skills and experience necessary to become a dentist. To ensure that students develop the skills and cultivate the attitudes and values needed for the profession, students will be mentored throughout the entire program.

Students in the DMD program will be integrated into the intellectual community of CNU in three fundamental ways. First, they will share the same semester schedule as the College of Pharmacy and the College of Medicine so that students are encouraged to interact through the same break times, vacations, and active class periods. Within this semester schedule, students in the DMD program will take Common Pathways courses with their fellow students in the College of

Medicine. These courses in Human Systems will provide opportunities for collaboration in coursework and projects.

Students will also be sharing learning spaces in the library and study halls. Additionally, each college has dedicated laboratory spaces, serving various functions inside the spectrum of research and clinical training. For instance, the College of Medicine has approximately 2,100 square feet of dedicated research space for benchtop research applications for faculty and their student mentees. In addition, the COM possesses a 619 square feet simulation lab composed of two digital manikins, PC read outs and emergency response equipment (crash carts, blood pressure cuffs, pseudo-meds, etc.). This space is allocated for simulated emergency room, trauma applications and ultrasound equipment. The manikins are highly interactive and give the students the opportunity to practice their clinical skills without the guilt or stress of potentially injuring a live patient. . CNUCOP has 3 classrooms of 5,000 square feet each, one sterile compounding lab, an IV sterile compounding lab. It shares the manikin lab with COM as well as an interprofessional education program. The COP has an Advanced Pharmacy Practice Simulation Lab and a new lab with 700 square feet finished in 2018 for drug discovery, pharmacology and virology.

CNU recognizes and promotes appropriate linkages among scholarship, teaching, assessment, student learning, and service. Each college of the University allots a percentage of faculty's time for pursuit of research and/or scholarly activities, including mentoring students in these. The institution clearly defines expectations for research, scholarship, and creative activity for its students. In the COM, students participate in a self-directed scholarly project. In the College of Pharmacy, students participate in scholarly activities, create scientific posters, participate in research with faculty mentors, participate in the CNUCOP Summer Research Fellowship Program, and receive travel assistance to represent the college at professional organization conferences. Additionally, students and faculty participate in a multitude of healthcare-related community service events each year. In fact, the COP students participated in 58 health fairs, health education and related health events from July of 2015 to July of 2016.

Students from the dental program also share certain courses and study groups with the students from the other graduate programs. These include sessions covering Statistics, pharmacology, and the yearlong Leadership in Health Professions course in the senior medicine seminar. Each of the Common Pathway courses in hematology, musculoskeletal/cutaneous, cardiovascular, pulmonary, neurology, gastroenterology and nephrology will have common small group learning sessions. While on clinical rotations in clinics, dental students will have interprofessional learning experiences with students in medicine, pharmacy, psychology and allied health programs from affiliated schools.

Students will be exposed, involved and mentored in research projects in the areas described in Section 6.1 in four ways:

- i. Through education about the potential to improve population health using the strategies described in Section 6.1
- ii. Through linkages with faculty research where students will be paired with a faculty research project, will be mentored in the purpose and methodology of the project and the specific role that they can play.

- iii. Through student projects woven into the educational curriculum where they will have specific assignments in academic courses to review literature, gather data, and document findings, and receive feedback from course faculty.
- iv. Through elective participation in more extensive faculty-led projects. Students will be offered elective participation of projects where will be mentored in the purpose and methodology of the project and the specific role that they can play.

2. Describe how the school will provide financial support; access to facilities, and equipment; development opportunities; and/or protected time dedicated to research for students.

The CDM and CNU will provide the following:

- i. Orientation of new faculty about the importance of research and scholarship and resources available to assist faculty in these areas.
- ii. Ongoing tracking, through the office of the Assistant Dean for Research, of faculty extramural support, research and scholarship activities,
- iii. A pool of intramural research funds to help faculty start research and scholarship activities, conduct preliminary investigations, hire staff for limited time in the start of a project, and transition to extramural funding.
- iv. Availability of the following resources:
 - 1. Assistance and mentorship from the Assistant Dean for Research
 - 2. Availability of a Research Coordinator to track faculty activities, help prepare funding proposals and reports, assist with pairing students to faculty research and scholarship activities, and other support services.
 - 3. Availability of a CNU biostatistician for help in designing projects, creation of data collection systems, and analysis of results.
 - 4. Availability of IT resources needed to conduct research and scholarship activities including tracking software, programming help with data collection and analysis tools, and training and support on the use of research and scholarship related IT tools.

CONCLUSION AND SUMMARY

Summarize in a qualitative appraisal and analysis the developing dental education program's strengths and weakness.

Standard 1 – Institutional Effectiveness

1. Assess the adequacy of institutional support for the dental education program.

CNU is a remarkable university in that it is a private, for-profit university, the first of its kind to successfully form MD, PharmD, PsyD and a baccalaureate level program and having done so in just a decade. Institutional support across each of these programs for dental medicine has been inestimable. Particularly the support of the College of Medicine and Dean John Silva has been remarkable. He has recognized for decades as chief of internal medicine and Dean at UC Davis that Sacramento and the Delta/Central Valley was in great need for dental education and that education must be integrated into health systems and interprofessionally with medicine.

President Alvin Cheung has been an indefatigable supporter of the College and its successful development with regard to applying the advocacy with the Board of Trustees, providing a new building purchased for the school, and demonstrating an in depth understanding of the requirements for a dental college. Remarkably, the case statement for the new school presented to the Board in June 2018 and shown in **Appendix 1-1 President Report On the Planning for Dental College 2018** was developed by President Cheung. In this presentation, he said strongly that the plans the college will meet the following interests:

- (1) The education program(s) must be of demand by the general public,
- (2) The program(s) must lead to gainful employment while serving humanity or society's needs,
- (3) The program must be affordable and compliant with regulations and accreditation,
- (4) The program(s) must be deliverable by multiple learning modalities /media and able to reach learners of the future,
- (5) CNU must continue to address diversity and access issues in education,
- (6) All colleges must operate in fiscally responsible manner to fulfill the education mission while maintaining long term sustainability and viability.

President Cheung and the Board demonstrated their institutional support by supporting these interests fully over the ensuing months. In April 2019, with the plans for the California Northstate Hospital and Clinics fully engaged, the investment strategy, architectural plans, building partners and local requirements are making fast progress. The team that recently completed the Zuckerberg San Francisco General Hospital has embarked on the CNU project. The ambulatory clinics of the Hospital will, as described in our self-study, include dental medicine including for DMD students within the fabric of the site. This is very much like the model of dental medicine education at academic health centers such as Columbia, Harvard and University of Connecticut where patients will present to the health care team integrated into the academic health center. This will offer incredible advantages in advancing human health through the integration of oral health at CNU.

2. Assess whether the program's outcomes assessment process will successfully measure whether the program is achieving its goals.

The goals of the program as noted in the CNUCDM strategic plan are

Goal 1. Educate effective practitioners of dental medicine

Recruit, retain, educate, and train the highest quality of DMD students

Goal 2. Develop a high quality faculty and staff

Develop and distribute resources to recruit, retain and promote the effective activities of faculty and staff. Promote research and scholarship in the college.

Goal 3. Achieve effective leadership in oral health care delivery

Provide patient care that becomes recognized as some of the best oral health care available anywhere. Gain the benefits of good oral health for the patients served and in our communities beyond.

Goal 4. Promote a diverse and inclusive environment in dental medicine and in the communities we serve

Create and sustain an environment that respects all its students, staff and faculty and the patients we serve. Promote multiculturalism and American values of equality and inclusiveness in the college and for community oral health.

Goal 5. Create exceptional facilities and infrastructure

Build an efficient infrastructure to support and sustain learning, teaching, communication, research and scholarship while keeping education affordable.

Goal 6. Ensure financial sustainability and growth

Build a financially sustainable budget that will provide effective support of existing programs while being poised for expansion through strategic growth of programs

As noted in the self-study EVERY activity of the College of Dental Medicine will undergo continuous outcomes assessment to assess the achievement of goals and to make useful changes in policies, procedures or paths designed for the continuous improvement of the college. This is especially important for a new college in that assessment of the bold and transformative ideas of the college are needed to understand their impact and make realistic changes to achieve the goals of the college.

The best way to assess this might be to look at multiple factors that relate directly to the goals of the program and to see how those explicit assessment integrate to the six goals noted in the strategic plan. Measurements of outcomes across many domains (clinical, academic, financial etc.) are needed to assess achievement of goals. Some examples of this process that will illustrate this are as follows:

- Example #1: Will the educational model of the **four themes of the curriculum (human studies, odontology, oral and maxillofacial studies, and behavioral and social sciences)** meet the needs of students and support the achievement of the defined competencies of the graduate? This links specifically to **Goal 1, 2, 3 and 6** of the program noted above

The course review process, which included the achievement of competencies through competency assessments (**goal 1 and 2**) will be one critical guide to this achievement. Faculty recruitment and retention (**goal 2, and 3**), student marketing and selection (**goal 3 and 6**), faculty and student engagement assessments will be guides to this assessment. By this holistic review, the effectiveness of the themes of the curriculum can be assessed tied to the goals of the college.

- Example #2: Will the **clinical education model** built around integration with the academic health center and strong community engagement, with a patient centered, team leader led model, allow students to effectively achieve the defined competencies of the program? This links specifically to **Goals 1, 2, 3, 4, 5, 6** of the program noted above.

The quality care evaluation process in the clinics (**Goal 3, 6**), the progress in clinical courses towards timely competency assessments (**Goal 1, 2, 3**), patient satisfaction surveys (**Goal 3**), assessment of access by an economically and culturally diverse community of patients (**Goal 3,4**), concurrent assessment of the performance of equipment and facilities, and assessment the financial performance of clinics will be some guide towards understanding this achievement and making necessary adjustments (**Goal 5 and 6**).

As part of the integrated assessment models described in our self-study of each of the standards, it can be seen how our outcomes assessment process will directly guide CNUCDM toward the achievement of its goals.

3. Assess the stability of the program's financial resources, as anticipated over the next five (5) years.

The university is on sound financial footing going forward as recognized in the WSCUC accreditation for dental medicine and the LCME accreditation for the MD program and ACP accreditation for pharmacy recently completed. The pro forma for the College of Dental

Medicine has been accepted by the President and the Board of Trustees. It ensure the successful development of the College of Dental Medicine.

Standard 2 - Educational Program

1. Assess the program's student applicant pool.

As noted in the self-study, California exports more dental students to other states than any other state, currently educating under 700 dentists per annum to replace 3-4% of the existing dentist workforce in California of about 32,000, equaling 1000-1200 dentists per annum. Less than half the applicants to US dental schools will gain acceptance this year which will also result in a high number of qualified applicants for CNUCDM. Other newly opened schools in this decade routinely have had exceptional opening classes with academic performance that meets or exceeds the national average. The same is expected for California Northstate

2. Assess whether the program will achieve its curricular goals through its stated competencies.

The program will achieve its stated competencies in every graduate through the implementation of the exceptional curriculum described in Standard 2. Of particular note is that each of the competency assessments have qualities that ensure that will be achieved in that they are linked to the Competencies described in every CODA standard. They are as well linked to the institutional defined competencies of the graduate and to the program learning outcomes. The exceptional pedagogic and clinical infrastructure of the program, its assessment process, and its faculty leadership will assure the achievement of these goals.

3. Assess the potential volume and variety of the program's patient pool.

As described in standard 2-9 narrative our region is undergoing a fortuitous transformation in patients accessing and receiving oral health care services. This is due to the changes in the Medical System which as improved access for children and adults especially with regard to the scope of services provided. Because of the exigencies of caring for poor patients including the fee schedule and developing cultural humility, this change has fallen to safety net institutions such as our new CNUCDM clinics and out affiliated health centers for care. In addition, our payer mix is likely strong because of the unique nature of Elk Grove as one of the most rapidly growing communities in the nation and its highly educated family oriented residents. Last year Elk Grove, the home of CNUCDM's two main clinics, is noted to be the single fastest growing economy in the nation as measured by population growth, unemployment rate, and regional GDP. For example, last year Apple increased its Elk Grove employees from 1200 to 6000. The development of the California Northstate expansion to include its teaching hospital and clinics, while a \$1.25 billion dollar direct expenditure will bring \$4 billion dollars in economic activity to the city. Many of those dollars will be returned to the CNUCDM in clinical care provision.

Standard 3 – Faculty and Staff

1. Assess the number and distribution of faculty and staff relative to the dental education program's stated purpose/mission, goals and objectives.

As noted in the Standard 3 narrative, the hiring plan for a full time faculty of 60 over the course of enrollment, will make CNUCDM comparable to its peer group of dental schools for faculty to student ratio and our capacity to achieve the stated purpose/mission goals and

objectives. Our outcomes assessment processes noted above will be essential in monitoring the number and distribution of the faculty and the pro forma allows for considerable flexibility in modifying our structure as needs arise due to changes in the environment or future identified needs. It is certain that as a new program, with emerging technology, providing culturally competent care to a new community and a variety of external and internal factors, modifications in the tasking and environment for faculty as well as for faculty size will be examined each year to result in the continuous improvement of the program.

Standard 4 – Educational Support Services

1. Assess the adequacy of the planned/existing facilities and learning resources.

The university demonstrates a strong commitment and capacity to develop facilities and learning resources. As described in the Standard 4 narrative, California Northstate is an exceptional learning community that devotes its resources and efforts towards developing the highest level of student experience. The College of Dental Medicine will be an effective leader within the university in furthering that goal. The purchase of a beautiful existing building adjacent to the campus and integrated into the campus expansion was coupled with the purchase of adjacent land. The integration of the dental clinics into the ambulatory clinics for the CNU Hospital is another example of the commitment for educational support. The library, the Institute for Teaching and Learning Excellence, classroom improvements among other investments demonstrate the adequacy of facilities and learning resources.

Standard 5 - Patient Care Services

1. Assess the appropriateness of the program's quality assurance system and standards of care.

The clinical quality assurance program as described in the narrative to Standard 5-3 is built around the desire for high quality patient centered care in every encounter. The narrative in Standard 5-3 supports this goal. Specifically to summarize this approach to quality assurance here are reprised the essential details of CNU's program:

In its current planned form the quality assurance system and standards of care provide an appropriate level of oversight and assure ongoing program assessment, outcomes evaluation and means for implementation and improvement. The quality assurance system plans for multiple layers of assessment of the patient care services provided by the clinic, its students and faculty. The system as envisioned will have multiple layers of assessment to ensure quality of care delivery. The assessments include:

1. Patient records
 - a. Medical history adequacy
 - b. Diagnosis and treatment planning assessment
 - c. Documentation of treatment
 - d. Faculty assessment of care, Out of Station Statement
2. Infection control
 - a. Quality
 - b. Safety

- c. Effectiveness
- d. Documentation
- 3. Quality of treatment provided
 - a. Timely faculty assessment during and at conclusion of procedure
 - b. Ongoing evaluation and updating of standards of care
 - c. Ongoing updating of treatment procedures using an evidenced based review

The Clinical Quality Assessment Committee and its subcommittees have their assigned areas of focus of assessment and will report the results of their committee's assessment reviews to the Dean of Clinical affairs. The Dean of Clinical affairs and the Clinical Quality Assessment committee will meet to consider the findings of the committees, evaluate and act on any areas needing improvement or modification.

As the clinic's Treatment Group Leaders, Infection control supervisor, and clinical faculty are identified an assessment and evaluation of the standards of care, quality of care, and infection control will be reviewed and modified as needed prior to initiation of actual patient care delivery. We believe this ensures the appropriate development of quality assurance in patient care at CNUCDM.

Standard 6 – Research Program

1. Assess the planned faculty and student research activities as they relate to the program's purpose/mission, goals and objectives.

The challenges, innovations, and changes facing the oral health industry and the unique position of College of Dental Medicine as the only dental school in the northern Central Valley of California represent opportunities for the College of Dental Medicine to excel by addressing these issues, obtaining extramural funding to do so, and documenting and publishing and results of these efforts. The College is well positioned to take advantage of these opportunities

(SUPPORTED IN TABLE 2)

TOPIC	ASSESSMENT ACTIVITY				RESULTS ANALYSIS	DISSEMINATION	IMPROVEMENT
Mission/Goal/Objective or Competency	Strategy (Measure)	Expected Results	When Assessed	Who is Responsible	Who is Responsible	To Whom	Resulting Actions
Provide excellence in teaching through development of an exceptional curriculum	A curriculum with four themes (human studies, odontology, oral and maxillofacial studies, behavioral and social sciences) has been presented to the planning committees. 226 course hours and course names have been identified and course directors have been selected	Completion of syllabi, development of course materials in Canvas, selection of source materials	Spring 2019	Curriculum committee, course directors Associate Dean of Academic Affairs and Faculty development	Global analysis by curriculum committee Each course director provided to Associate Dean of Academic Affairs and Faculty development	University VP of Academic Affairs, free universal dissemination with university approval	Cycle of improvement in curriculum in response to recommendations of curriculum committee
		2019-2020: presentation of D1 courses with assigned auditors and 360 degree course assessment	Spring 2020				
		Repeat this cycle for D2 2021, D3 2022, and D4 2023	Spring 2021, 2022, 2023				
	Participate fully in all	Demonstrated participation	Spring 2020	Associate Dean of	Associate Dean of Academic Affairs	Open dissemination to	Implementation of active

	activities of the ITLE with a broad engagement of full and part time faculty	resulting in incorporation of ITLE directed advance pedagogy in CODM courses		Academic Affairs and Faculty development	and Faculty development Institutional Effectiveness Committee (IEC)	the community of interest	learning in CODM courses Reports of course directors on implementation of ITLE training
Promote professionalism and ethics	Develop a student faculty mentorship program	<p>Train faculty in mentorship through faculty development program.</p> <p>Create assessment rubric for faculty to individually assess mentorship performance</p> <p>Assign each faculty member mentees</p> <p>Apply CDM resources to support mentorship activities</p>	<p>Spring 2020</p> <p>Spring 2020</p> <p>Fall 2020 Prior to formal training</p> <p>Ongoing as needed</p>	<p>Assistant Dean of Student Affairs</p> <p>Associate Dean of Academic Affairs and Development</p>	<p>ADAA to Faculty Council</p> <p>Institutional Effectiveness Committee (IEC)</p>	Open Dissemination	<p>EVALUATE</p> <p>Faculty council assessment</p> <p>Survey of students on the mentorship program</p> <p>Survey of faculty on the mentorship program</p> <p>Evaluations of student reflective essay on the mentorship program and its impact on professionalism</p> <p>ACT upon findings and specific</p>

							recommendations to influence and develop the Faculty Mentorship Program
Recruit a qualified class ensuring scientific clinical ability with a holistic approach to promote social consciousness and action	<p>Integrate into university recruitment and admissions processes.</p> <p>Implement the admissions marketing plan as in the CODA self-study</p>	<p>Application pool from the region (central valley, delta, Shasta, Humboldt, Sierras) in excess of applicants to other California dental programs.</p> <p>Social science majors represented.</p> <p>Students from universities of the Delta, Central Valley, mountains and Northern California HPSA shortage areas represented</p> <p>Immigrants and underrepresented minorities exceed the region</p>	Annum 2019	Assistant Dean of Student Affairs	Assistant Dean of Student Affairs	To ADEA and ADSAS	<p>More than 50% of students from the underserved region and colleges associated to the region</p> <p>20% social science majors</p> <p>Immigrants and underrepresented minorities in excess of other regional dental programs</p>
<u>Develop</u> a high quality faculty and staff Develop and distribute resources to recruit, retain and promote the effective activities of faculty and staff.	<p>Implement hiring plan for 36 FTE faculty as well as Volunteer onsite faculty.</p>	<p>Administrators in place in critical areas of academic affairs, curriculum, clinical affairs and research.</p> <p>Course directors and sufficient faculty in place for each of the courses at least 90</p>	By Fall 2019	Dean	Dean	<p>CODA</p> <p>Community of interest</p>	Sufficient faculty to deliver curriculum and clinical care/clinical education at each stage of development

	Complete MOU's for community based faculty	days prior to course delivery Faculty in place to care for patients in CNU clinics ready for students to join care teams					
Complement faculty with appropriate staff	High functioning qualified staff hired in timely fashion associated with need	Complete hiring plan for all academic, administrative and clinical staff. Complete hiring of qualified personnel as needed during development.	Ongoing to match faculty hiring plan	VP for human resources Dean Dean of Clinical Affairs Dean of Academic Affairs	VP for human resources Dean Dean of Clinical Affairs Dean of Academic Affairs	To University leadership and community	Clinical staffing model achieved consistent with industry standards in all areas. Academic and administrative staffing consistent with CNU collaborative models and standards and task based needs
Develop a program of scholarship and research that supports faculty development	Onboard new Dean of Research	Develop collaborative public health oriented research program that engages faculty and students at a variety of capacities Active college research program with external funding including NIH, HRSA, state of California, industry and foundation grants	Measure Annually with Spring 2019 as first assessment	Dean of Research	Dean of Research	VP research	Research program in top 50% of the 67 dental programs in the US by the first 5 years of operation
Provide patient care that becomes recognized as some of the best oral health care available anywhere	Complete construction of 2 clinics each of 30 clinical treatment	60 operational units. Core radiology, digital clinical facilities, operational electronic health record system,	Measure annually in Spring 2020	Dean of Clinical Affairs Dean	Dean of Clinical Affairs Dean	Patients Community	Operational program attracts patients who communicate the triple aim

	units and appropriate supporting clinical facilities. Equip clinics and hire expert renowned, clinical staff. Complete MOUs with health systems in the region for clinical education and care partnerships	sterilization and equipment management program Marketing program to attract sufficient patients with oral health needs fulfilled by CNU clinics					in surveys of the highest quality of care at the lowest cost and with the best patient experience 10,000 new patients in the first year of operation and additional 5000 per year to threshold of 20,000 active patients. Measure: Press Ganey, faculty and staff engagement survey
Gain the benefits of good oral health for the patients served and in our communities beyond	Develop thresholds for impact on extant pathologic entities in clinics and utilize standards/parameters of care to develop rubrics regarding thresholds	Reduced recurrent caries rate for enrolled patients as compared to cohort Greater tooth retention and periodontal index in patients with periodontal disease Prevention of oral cancer above community standards in patients with	Measure annually	Clinical affairs committee IEC Dean of Clinical Affairs	Clinical affairs committee IEC Dean of Clinical Affairs	Patients Community	Chart review pre- and post-interventions to assess value based care model Community-based interviews with stakeholders to assess community engagement

	for high quality outcomes: e.g. CAMBRA assessment tools, cancer screening outcomes and disease management and control profile for periodontal disease.	premalignant disease and high risk factors.					
Create and sustain an environment that respects all its students, staff and faculty and the patients we serve.	<p>The humanistic environment for dental education will be addressed by the appointed Dean of academic affairs to interface with extant CNU activities.</p> <p>Both curricular and faculty development program will be initiated to promulgate a dental college</p>	Faculty and students demonstrate a respectful and inclusive culture in plenary activities, interest group development, and individual assessment.	<p>Ongoing by diversity committee</p> <p>Annual report to Dean each June June 2020</p>	<p>Diversity Committee</p> <p>IEC</p> <p>Dean</p>	Dean	Entire community	<ul style="list-style-type: none"> • Engagement survey • Interviews with community of students staff and faculty

	culture of respect for diversity in all aspects						
Promote multiculturalism and American values of equality and inclusiveness in the college and for community oral health	Promote multicultural activities that engage the CNU community and the larger regional community	<p>Achieve broad multicultural engagement with students, faculty and staff. Examples Celebracion de Salud, Indian dentistry day, Asian dental society activity, National Dental Association</p> <p>Engage Multicultural programs in the Northstate community: California state fair, other community events,</p> <p>International engagement with Asia for dental education and practice</p>	<p>Ongoing by diversity committee</p> <p>Annual report to Dean each June June 2020</p>	<p>Diversity Committee</p> <p>IEC</p> <p>Dean</p>	Dean	Entire community	<p>Assess CNU activities and outcome assessments for these activities</p> <p>Assess in engagement survey</p>

Build an efficient infrastructure to support and sustain learning, teaching, communication, research and scholarship while keeping education affordable.	Phase 1: Identify space for two clinics and one type 1 and 2 laboratory and simulation clinic Create plans with A-dec for the lab, simulation and first clinic. THIS WILL BE DEVELOPED TO ENROLL A CLASS OF 2023 LATE IN 2019 OR EARLY IN 2020 Complete construction in 2019 of lab and preclinical lab and in 2019-2020 for the first clinic	Completion of phase one of infrastructure plan Completion of phase two of infrastructure plan	January 1, 2020 January 1, 2022	Vice President Operations President Dean	President	Board of Trustees	Timely enrollment of class Timely opening of clinics Effective operation of all facilities

	Phase 2: Initiate construction on the second clinic in 2020 with vendor to be named for completion in 2021						
Build a financially sustainable budget that will provide effective support of existing programs while being poised for expansion through strategic growth of programs	<p>Expend funds for personnel, faculty and staff, for facilities, equipment and educational materials sufficient to enroll a class in late 2019 or 2020.</p> <p>Gain tuition funds during the first matriculation and growing to 4 classes of 80 student each</p> <p>Gain clinical income, grants, gifts and other sources of income to</p>	A balance sheet and annual closing statement demonstrating the COD in the black within the proposed return on investment	Annual financial report June 2019 and annually	<p>Dean</p> <p>President</p> <p>Chief Financial Officer</p> <p>VP Operations</p>	President	Board of Trustees	<p>Budget</p> <p>Balance sheets</p> <p>Annual report</p> <p>Audit results</p>

	support programs.

CNUCDM EXHIBIT C OUTCOMES ASSESSMENT

GOALS

Goal 1. Educate effective practitioners of dental medicine

Recruit, retain, educate, and train the highest quality of DMD students

Goal 2. Develop a high quality faculty and staff

Develop and distribute resources to recruit, retain and promote the effective activities of faculty and staff. Promote research and scholarship in the college.

Goal 3. Achieve effective leadership in oral health care delivery

Provide patient care that becomes recognized as some of the best oral health care available anywhere. Gain the benefits of good oral health for the patients served and in our communities beyond.

Goal 4. Promote a diverse and inclusive environment in dental medicine and in the communities we serve

Create and sustain an environment that respects all its students, staff and faculty and the patients we serve. Promote multiculturalism and American values of equality and inclusiveness in the college and for community oral health.

Goal 5. Create exceptional facilities and infrastructure

Build an efficient infrastructure to support and sustain learning, teaching, communication, research and scholarship while keeping education affordable.

Goal 6. Ensure financial sustainability and growth

Build a financially sustainable budget that will provide effective support of existing programs while being poised for expansion through strategic growth of programs

STANDING COMMITTEE MEMBERSHIP

Committee	Chair	Members	Charge to the Committee	When Comm. Meets
Curriculum	Assoc Dean of Curriculum and Clinical Education	Wai Chan, Richard Simonsen, Michal Cadra, Kevin Keating, Rosemary Wu, Assoc Dean of Academic Affairs, Leon Assael, Raj Ramsamooj (COM), 2 student reps	<p>Evaluate Course and Program Learning Objectives. examine format as well as content considering course learning outcomes, assessment rubrics, the mapping to program learning outcomes, a content outline based on the academic calendar, a schedule of all assignments, credit hours, necessary information about library resources, and all relevant university/departmental policies. The syllabi are also reviewed to ensure that content is appropriate to the level and goals of the DMD program. If significant changes are needed, the committee will provide guidance to the faculty and require resubmission of the syllabus before final approval.</p> <p>Course assessment committees are 3 person committee that reports course reviews to the curriculum committee</p>	

Clinic/ Quality Assurance	Dr. Kevin Keating, Dean of Clinical Affairs	Wai Chan, Asst. Dean of Curriculum, Associate Dean of Academic Affairs, 3 clinical heads (pending), Leon Assael,	Review the goals of the clinical program and assess their success through a quality review process. These will be linked to clinical education goals and goals for patient centered care.	
Admissions	Dr. Richard Simonsen, Dean of Student Affairs, Admissions and Diversity	Wai Chan, Cathy Levering (lay person), 2 community-based members, (pending), Jagdev Heir, Stephanie Sandretti, Eric Wong, multiple students	Screen, interview, and select qualified applicants for admission to the College.	
Student Performance	Dr. Richard Simonsen, Dean of Student Affairs, Admissions and Diversity	A member of the Curriculum Committee, two students, a staff member from the University Office of Institutional Research, Quality, and Assessment, three faculty members	<p>Develop and apply assessment methods to evaluate curricular outcomes.</p> <p>Propose recommendations to the Dean's Executive Committee concerning methods by which the quality of the program and its graduates may continually be evaluated.</p> <p>Review assessment methods as well as remediation policies currently employed and evaluate data obtained from the didactic curriculum, preclinical and clinical experiences. .</p> <p>Evaluate aggregate student progress in achieving the educational outcomes of the College.</p>	
Academic Review/ Promotion and Graduation	Associate Dean of Academic Affairs	All course directors, Assistant Dean of Student Affairs and Admissions	Review individual student performance in the curriculum and make recommendations to the Dean regarding promotion	

			to the subsequent class and graduation Provide individual composite remediation plans and/or accommodations for students having academic difficulties in more than one course	
Institutional Effectiveness	Dean	Executive Council, two faculty members, two students	Systematically review the program goals and assess the outcomes of the strategies employed to achieve those goals. Each year a report to the University of the IEC will incorporate the performance and action of the curriculum committee, the clinic committee and the research committee and make strategic recommendations regarding achieving or further advancing goals. Table 2 stands as the guidepost to the work of the IEC	
Rank and Promotion	Chaired by a professor without administrative appointment		Review the criteria, standards and guidelines that are considered when determining if a faculty member is eligible for promotion. Provide an annual workshop on promotion guidelines and procedures for the faculty. The Promotion Review Committee decision process will conform to the Promotion and Tenure Policy and the Faculty Handbook.	
Research	Dr. Paul Glassman, Dean for Research	Representative from the University Office of	Assess the progress of the research program towards achieving goals and objectives and make	

		Institutional Research, Quality, and Assessment, Representative from the College of Medicine and College of Pharmacy Research teams, 2 students, member of the Curriculum Committee and Course Assessment Sub Committee	recommendations toward applying resources and other pathways towards achieving goals in scholarship and research.	
Executive	Dean	Associate and Assistant Deans, three elected member of the Faculty Senate	<p>Advise the Dean about matters related to the College and delivery of the curriculum.</p> <p>Promote College success.</p> <p>Provide input on financial decisions.</p> <p>Develop and review policies.</p> <p>Establish short and long-term goals that align with the strategic plan of the College and University.</p> <p>Monitor and assess the College's level of performance in meeting its goals.</p>	
Dean's Advisory	Dean	Business, government, philanthropic and community leaders	Facilitate community support for the dental college, identify community and business partnerships in the interest of the educational program, provide guidance on the colleges strategic goals	
Diversity, Inclusion and Climate	Dean of Student Affairs, Admissions and Diversity	Faculty, staff and students	Monitor the efforts and progress being made towards recruiting and retaining a diverse student body, faculty, staff and administrators, and creating and evaluating	

			diversity and inclusion initiatives across campus. This committee will be responsible for providing on-going reports to the Office of the President of the progress being made on these important and compelling issues.	
Standards of Care	Dr. Kevin Keating, Dean for Clinical Affairs	Associate Dean of Curriculum and Clinical Education, Clinic manager, Dental Director of Clinic Operations, Dental Director of Quality Assurance and Infection Control, Discipline Experts for Radiology, Restorative Dentistry, Endodontics, Periodontics, Oral and Maxillofacial Surgery, Pedodontics, Orthodontics, and other committee members as needed.	<p>Develop Standards of Care for patient centered care that are evidence based, and consistent with the calibrated clinical activities of DMD students, and faculty.</p> <p>Evaluation of the various treatment options for patient care using an evidenced based model to develop the CNU methods of patient care to be taught at the CNU College of Dental Medicine.</p> <p>Selection of evidence based technology in patient care.</p>	
Student Wellness	Dean of Student Affairs, Admissions and Diversity			
Faculty Search Committee	Convened as needed, chair chosen by XX based on the faculty positions needed			

EXHIBIT U RESEARCH GRANTS

Indicate the name of the dental school's director of research or chairman of the research committee. Indicate the **total** amount in federal grants received by the dental school during the past four years and the current budget year. Indicate whether the data is for an academic or fiscal year.

Assistant Dean of Research: Paul Glassman DDS, MA, MBA

Note: The following grants are in the process of being transferred to CNU:

FEDERAL/STATE GRANTS

Type of Grant	2019 Budget	2020 Budget			
Specific research project Grants:					
CA Dental Transformation Initiative: Sacramento County	\$135,329	\$104,302			
CA Dental Transformation Initiative: Orange County	\$122,724	\$96,918			
CA Dental Transformation Initiative: San Bernardino/ Riverside Counties	\$239,229	\$197,778			
CA Dental Transformation Initiative: San Joaquin County	\$74,504	\$44,416			
CA Dental Transformation Initiative: San Luis Obispo County	\$65,785	\$50,702			
Valley Mountain Regional Center planning grant	\$25,000				

Estimate the total amount of funds appropriated from the dental school budget, exclusive of grants itemized above, for the conduct of research during the past four years and the current budget year.

This is a preliminary accreditation application. There have been no funds appropriated from the dental school budget for the conduct of research during the past four years and the current budget year

Notice of Request for Third Party Comments

California Northstate University College of Dental Medicine has submitted an Initial Application for accreditation with the Commission on Dental Accreditation (CODA). As part of the accreditation process, CODA welcomes third party comments from communities of interest regarding the accreditation standards as they apply to CNU College of Dental Medicine. These standards address Institutional Effectiveness, Educational Program, Faculty and Staff, Educational Support Services, Patient Care Services and Research.

A copy of the accreditation standards and/or CODA's policy on third-party comments can be obtained by contacting CODA at 211 East Chicago Avenue, Chicago, IL 60611, or by calling 1/800-621-8099, extension 4653. They can also be obtained on CODA's website:

<https://www.ada.org/en/coda>.

All comments must pertain only to the standards relative to the CNU College of Dental Medicine predoctoral program or policies and procedures used in the accreditation process. All comments must be in writing and submitted to the aforementioned address. Comments will be screened by CODA for relevance.

Comments must be submitted to CODA 60 days prior to the site visit. The site visit for CNU College of Dental Medicine is scheduled for xxxxxxxxxxxxxxxx. Attached is CODA's Policy on Third Party Comments.

COMMISSION ON DENTAL ACCREDITATION

POSTING FORM FOR THIRD PARTY COMMENTS

The Commission currently publishes, in its accredited lists of programs, the year of the next site visit for each program it accredits. In addition, the Commission posts its spring and fall announcements on the Accreditation News area of the Commission's website for those programs being site visited January through June or July through December. Special site visits and initial accreditation site visits for developing programs may be scheduled after the posting on the Commission's website; thus, the specific dates of these site visits will not be available for publication. Parties interested in these specific dates (should they be established) are welcomed/encouraged to contact the Commission office.

The United States Department of Education (USDE) procedures require accrediting agencies to provide an opportunity for third-party comment, either in writing or at a public hearing (at the accrediting agencies' discretion) with respect to institutions or programs scheduled for review. All comments must relate to accreditation standards for the discipline and required accreditation policies. In order to comply with the Department's requirement on the use of third-party comment regarding program's qualifications for accreditation or initial accreditation, the following procedures have been developed.

Programs with the status of initial accreditation, and programs seeking initial accreditation must solicit comment through appropriate notification of communities of interest and the public such as faculty, students, program administrators, specialty and dental-related organizations, patients, and consumers.

On occasion, programs may be scheduled for special focused site visits and because of the urgency of the visit, solicitation of third-party comments within the ninety (90) day time-frame may not be possible. However, third party comments must be solicited at the time the program is notified of the Commission's planned site visit. In this case, the timeframe for solicitation of third-party comments will be shortened.

The Commission will request written comments from interested parties on the CODA website. All comments relative to programs being visited will be due in the Commission office no later than sixty (60) days prior to each program's site visit to allow time for the program to respond. Therefore, programs being site-visited in January through June will be listed in the fall posting of the previous year and programs scheduled for a site visit from July through December will be listed in the spring posting of the current year. Any unresolved issues related to the program's compliance with the accreditation standards will be reviewed by the visiting committee while on-site.

Those programs scheduled for review must solicit third-party comments through appropriate notification of communities of interest and the public such as faculty, students, program administrators, specialty and dental-related organizations, patients, and consumers at least ninety (90) days prior to their site visit. The notice should indicate the deadline of sixty (60) days for receipt of third-party comments in the Commission office and should stipulate that signed or unsigned comments will be accepted, that names and/or signatures will be removed from comments prior to forwarding them to the program, and that comments must pertain only to the standards for the particular program or policies and procedures used in the Commission's accreditation process. The announcement may include language to indicate that a copy of the appropriate accreditation standards and/or the Commission's policy on third-party comments may be obtained by contacting the Commission at 211 East Chicago Avenue, Chicago, IL 60611, or by calling 1/800-621-8099, extension 4653.

All comments submitted must pertain only to the standards relative to the particular program being reviewed or policies and procedures used in the accreditation process. Comments will be screened by Commission staff for relevancy. Signed or unsigned comments will be considered. For comments not relevant to these issues, the individual will be notified that the comment is not related to accreditation and, where appropriate, referred to the appropriate agency. For those individuals who are interested in submitting comments, requests may be made to the Commission office.

All relevant comments will have names and/or signatures removed and will then be referred to the program at least fifty (50) days prior to the site visit for review and response. A written response from the program should be provided to the Commission office and the visiting committee fifteen (15) days prior to the site visit. Adjustments may be necessary in the site visit schedule to allow discussion of comments with proper personnel. Negative comments received after the established deadline of sixty (60) days prior to the site visit will be handled as a complaint.

Revised: 2/18; 2/16; 2/15; 8/13; 8/12, 8/11, 7/09, 8/02, 1/97; Reaffirmed: 8/13; 8/10, 1/03;
Adopted: 7/95

SITE VISIT DATE: _____

**60-DAY DEADLINE FOR RECEIPT OF COMMENTS IN THE COMMISSION
OFFICE:**

(Commission on Dental Accreditation, 211 E. Chicago Avenue, Chicago, IL 60611)

COMPLAINTS

NOTICE OF OPPORTUNITY TO FILE COMPLAINTS

In its Student Handbook, CNU College of Dental Medicine, will provide all students with a notice of their opportunity to file complaints, pursuant to Commission on Dental Accreditation requirements.

The Commission on Dental Accreditation (CODA) is required by the U.S. Secretary of Education to require its dental medicine programs to record and handle student complaints regarding a school's adherence to the CODA Standards. The college must demonstrate a link between its review of complaints and its evaluation of a program in the accreditation process self-study. Therefore, in order to demonstrate compliance with the U.S. Department of Education Criteria for Recognition, and with the prior review and advice of Department of Education personnel, CODA requires dental schools to provide an opportunity for dental students to provide comments and/or complaints about the school's adherence to CODA's Standards.

Additionally, students, faculty, staff, patients, or the public may file complaints regarding adherence to CODA standards directly to the Commission on Dental Accreditation. As stated in the CODA standards:

“The Commission on Dental Accreditation will review complaints that relate to a program's compliance with the accreditation standards. The Commission is interested in the sustained quality and continued improvement of dental and dental-related education programs but does not intervene on behalf of individuals or act as a court of appeal for treatment received by patients or individuals in matters of admission, appointment, promotion or dismissal of faculty, staff or students. A copy of the appropriate accreditation standards and/or the Commission's policy and procedure for submission of complaints may be obtained by contacting the Commission at 211 East Chicago Avenue, Chicago, IL 60611-2678 or by calling 1-800-621-8099 extension 4653.”

REQUIRED RECORD OF COMPLAINT

CNU College of Dental Medicine will maintain a record of student complaints in the Office of Student Affairs and Admissions. Those records are to be made available to CODA visiting committees during regularly scheduled on-site evaluations.

Student Grievance/Complaint Form

This form provides a written record of your complaint. You are also encouraged to discuss this in person with the Assistant Dean of Student Affairs before or after this form is submitted.

CALIFORNIA NORTHSTATE UNIVERSITY
COLLEGE OF HEALTH SCIENCES DENTAL
SCHOOL INTEREST SURVEY, 2019

ITEM RESULT GRAPHS

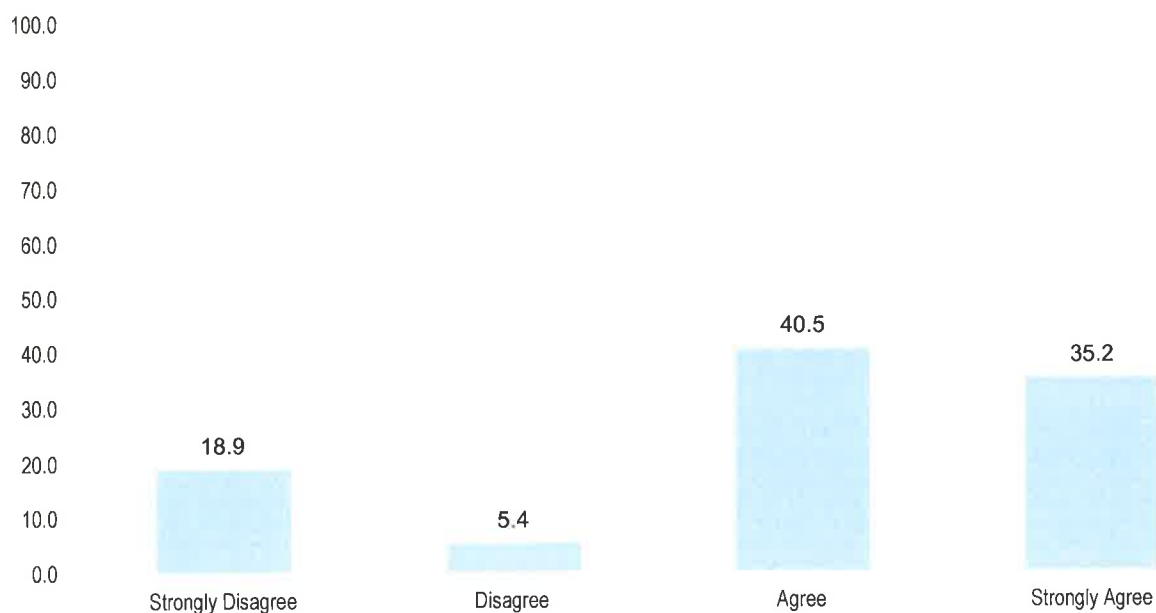

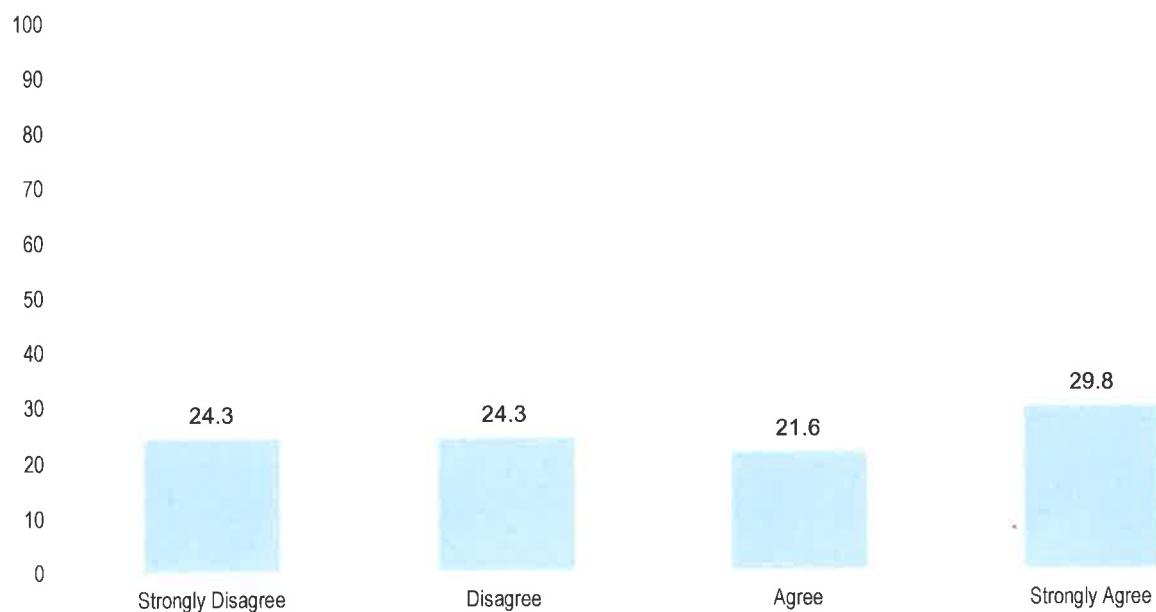

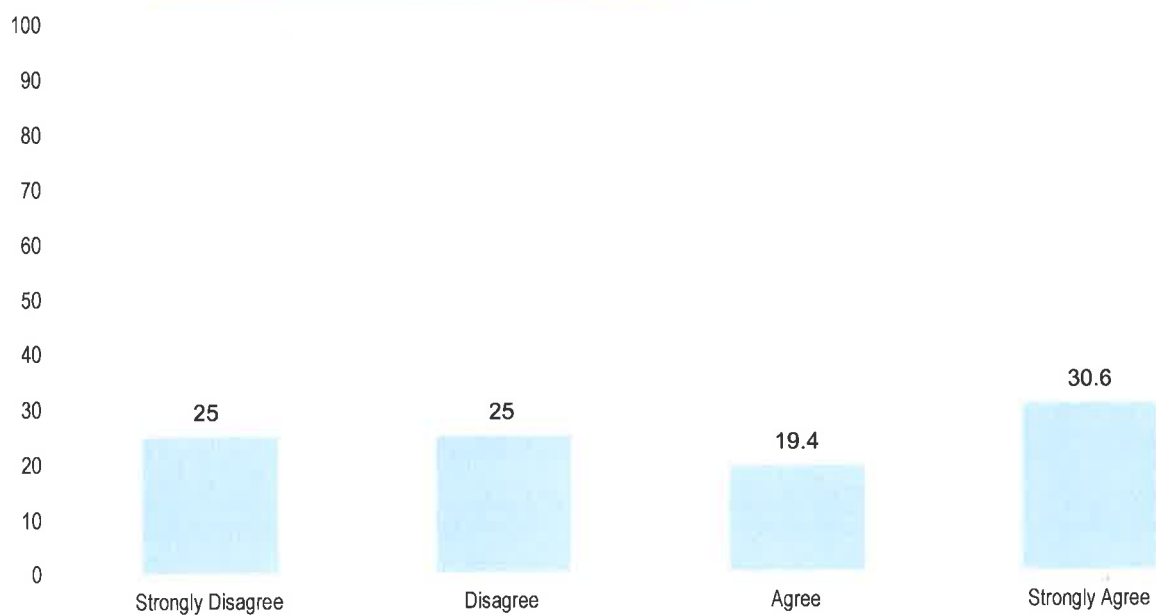

Figure 1. (Q1) I might be interested in more information regarding the dental program at CNU.**(n = 37)****Figure 2. (Q2) I might be interested in pursuing dentistry as a career option (n = 37)**

Figure 3. (Q3) I would apply to our starting dental program at CNU (n = 36)

Dental School Feasibility Work Group Meeting minutes**September 18, 2017**

California Northstate University

9700 West Taron Dr, Elk Grove, Ca 95757

Present: Drs. Alvin Cheung, Wai Chan (facilitator), Kevin Keating, Eric Wong, Debra Finney, Jagdev Heir, Rosemary Wu, Stephanie Sandretti

Meeting was called to order by Dr. Cheung at 7pm

All participants were emailed the most current ADA Health Policy Institute reports on Provider Adequacy in US, California Geographic Access to Dental Care, California Projected Supply of Dentists, and trends in Dental Schools before the meeting, so they all have a general understanding.

It is brought up that although HRSA has estimated there is a current shortage of 7300 dentists, when we talked with our California dental colleagues in dental education, the usual comment is there is no shortage in California, the issue is distribution of dentists. The geographic access report from HPI showed the limited access for rural and inner city population.

HPI reported that the per capita supply of dentists in US would increase through 2035. With respect to Projected supply of Dentists in California, it is projected that there will be a steady increase to year 2025, then go down a little.

Workforce issue and midlevel providers were mentioned.

The workgroup was also informed of the increase of 10 new dental schools since 2008. Total of dental schools as of 2017 is 66.

One dental school withdrew its CODA application due to lack of funding.

We touched the topic of cost. Cost of education, cost of tuition and loan burden, and cost to fund a new school, etc.

When our medical colleagues are paid for their residency training, dentists in residencies still have to pay tuition.

We also talked about the responsibility and accountability of an education institution and mission of CNU - Excellent Education at a reasonable cost.

It was mentioned at the discussion the idea of having residency programs in different specialties before building a new dental school.

We also talked about the demand of dental care in our community, the location of CNU, the cost of living and about partnership with community health centers and FQHCs.

Dr. Cheung suggested that the group meet again. Next meeting will be on **Saturday November 11** at 9 am at CNU.

Dr. Kevin Keating will chair the next meeting.

California NorthState University

Dental School Development Task Force

*Meeting Minutes***Feb 10, 2018**

Location: California NorthState University
Rancho Cordova campus
2910 Prospect Park Drive
Rancho Cordova

Present: Drs. Alvin Cheung (President, CNU), Kevin Keating (Chair), Huong Le, Jagdev Heir, Stephanie Sandretti, Wai Chan

Absent: Drs. Debra Finney, Eric Wong, Rosemary Wu

Meeting was called to order by Chair Dr. Keating at 9:15am.

1. The application/accreditation timeline

The application/accreditation timeline for the establishing the dental college was discussed. The Commission of Dental Accreditation meets twice a year, in January and in June. CNU is already a state and regional accredited higher education institution, but will undergo a substantive change for WSCUC in order to add the dental school. We will need regional accreditation approval to proceed with program accreditation; we will also need program accreditation to have a dental school.

The Task Force discussed and agreed that the Accreditation application will need to be submitted in March of 2018 for CODA. It may be approved in the June of 2019 or perhaps later. We will start our first class as soon as we have undergone regional and then professional accreditation (2019 fall or 2020 fall). Our goal is to have CODA approve all required documentations at its June 2019 meeting so that we can begin a class in 2019 if possible. A site visit will then be arranged. If everything is approved and CNU pass the site visit, then an initial accreditation will be granted. The applying institution will need to have a dental school dean for 6 months before the site visit, which we will have.

Criteria for granting accreditation was reviewed.

See attached CODA Accreditation Requirements.

2. The latest development in preventive oral health and the access and delivery of oral health care.

An open discussion on the latest development in preventive oral health and the access and delivery of oral health care - Kaiser Hospitals Group Long Beach Medical School will have an integrated program (medical, oral health, nursing); expect opening in 6 years. UC Davis has received a donation for a site for possible dental school. New dental school in east state of Washington.

Interprofessional education is the trend and it is important for the health care team to work together. **Wai Chan will check with Western University** to see what they do in their curriculum and the time they allocated in interprofessional education. The dental profession is evolving, and various factors would shape the oral health education, Dr. Cheung requested the task force to keep him informed of changes.

Dr. Cheung shared CNU's advantage –

- faculty,
- integrated curriculum,
- administration, with continuous evaluation on cost, peer and program.

Dr. Cheung also shared CNU's track record of quality education.

Dr. Cheung will email the Task Force the Mission Statement and Objectives of the Dental School so we can all speak with one voice.

3. Consultant considerations and planning

The Task Force agreed it will need a consultant to move the application process forward.

4. Budget planning for the College of Dentistry

The Task Force briefly discussed the annual operating budget of a dental school. Budget of UC Dental Schools is public information and is online. All schools' budgets are different due to class sizes, faculties, clinic income, facilities, researches, etc. The CNU CFO may have to do research on the budget.

5. Additional item

Dr. Cheung informed the Task Force of 3 possible sites for future indigent dental clinics - del Paso area, West Sacramento, Stockton Blvd/highway 99. The Task force will discuss timing and location in future meetings.

6. Future agenda items:

- 1) Program announcement document and new program approval process requirements
 - a. Outline for Program Development
 - b. Identify faculty and other program resources
 - c. Information about opportunities for graduates
 - d. Relationship of proposed program to existing program and to the University Plan
 - e. Need analysis of the Dental Program
 - f. Resources' requirements, implementation plan, proposed timeline.
- 2) Indigent oral health centers and revenue discussion

7. Next meeting date and location will be notified by D. Cheung's assistant.

Meeting adjourned at 11 am

California Northstate University

Dental School Development Task Force

Meeting Minutes**May 26, 2018**

Location: California Northstate University Rancho Cordova Campus
2910 Prospekt Park Dr,
Rancho Cordova, Ca

Present: Drs. Alvin Cheung (President, CNU), Kevin Keating (Chair), Huong Le, Eric Wong, Stephanie Sandretti, Wai Chan

Absent: Drs. Debra Finney, Jagdev Heir, Rosemary Wu

Meeting was called to order by Chair Dr. Keating at 9:18am.

1. Consultant considerations and planning

Dr. Cheung reported that CNU intended to move forward with dental school development, pending approval from Board of Trustees.

Dr. Keating also reported the dean of an East Coast dental school suggested that CNU have a clearly defined mission, vision, goal and objectives of the new dental school so the consultants can work within the requirements from CNU.

Dr. Le suggested Dr. Leon Assael - former dean of 2 dental schools, former site leads in CODA dental school site visits, current consultant on site visits, current Chair of Board of Directors of ADEA. Dr. Assael is currently in the SF Bay Area and will be easy for him to come to CNU. Dr. Le will link up Dr. Assael with Dr. Cheung. It was suggested that Drs. Keating and Chan also participate in the phone conference when Dr. Cheung talk with Dr. Assael.

Both Dean Chadwick of East Carolina University Dental School and Dean Nadershahi of UOP Dugoni School recommended Karl Haden of Academy of Academic Leadership(AAL). The Task Force has not made any decision to contact AAL at this time.

The same dean also stated that their dental school utilized 2 consultants for their curriculum development. The consultants then hired 40 dentists/speciaists from universities around the country to develop the curriculum submitted with the application..

There were discussion on having just one consultant or a team of consultants. There were also discussion on advantage of employing a dean first. It was brought up that nobody knows everything and it's important to utilize consultants helping the Dean.

Motion:

To Retain a consultant/consultants for California Northstate University College of Dentistry CODA application.

Motion passed

2. Report to the Board of Trustees and seeking formal approval to establish the dental college.

Motion:

The Dental School Development Task Force has gathered sufficient information and recommends the Board of Trustees to favorably consider moving forward with the California Northstate University College of Dentistry.

Motion passed

3. Curriculum design strategy

The following dental schools faculties are mentioned:

Dr. Connie Chu, former Assistant Dean of Clinical Education at Arizona School of Dentistry and Oral Health.

Dr. Sophia Saeed, Associate Professor at UCSF Dental School,

Dr. David Chambers, current Professor and former Academic Dean at Dugoni School of Dentistry.

CNU should take advantage of the presence of College of Pharmacy, College of Medicine to incorporate interprofessional education into its dental school curriculum. Having a university based hospital will help.

Dr. Cheung shared with the task force that when CNU Medical College developed its curriculum, CNU gathered 60 MDs from different specialties. The 60 MDs were asked:

- a) What is considered as adequate competency when medical students are assigned into rotations?
- b) What would you like to teach the students when they are in your rotations?
- c) How would you teach the required discipline in the Integrated Curriculum?

This preparation has helped CNU in developing its medical college curriculum.

Dr. Cheung asked if it is possible to invite a group of dentists to do the same and to develop a program and educational courses with outcome objectives that meet competency.

It is the task force's consensus that this can be done and the invitees should include faculty from dental schools.

It may be necessary to have three focus groups:

- i) clinicians
- ii) academics
- iii) budget

Current IT systems, Simulation systems in use are discussed. May get help from Western University College of Dental Medicine.

One of the California Dental Licensure Options is Licensure by Portfolio.

Dr. Huong suggested that all CNU dental students completed their Clinical Portfolio so they will be licensed to practice immediately after graduation from CNU Dental School. In this case, they do not have to wait for their examination results. This will make CNU Dental School different from current California dental schools

4. Budget for the planning committee

Motion:

The Dental School Development Task Force requests funding for consultants, CODA application and planning through summer 2019.

Motion passed.

5. Budget planning for the College of Dentistry

Number of students. Number of clinical dental chairs, Sim Lab, Clinical spaces are discussed. Suggested for 50 dental students, divide the class into morning clinic and afternoon clinic. The clinic will need 30 chairs with each operatory at a 10ftx12ft space. Vendors are known to be willing to work with dental schools. CNU should contact established vendors, The Dentists Service Company of CDA, and check with Dental College Deans to see who they use.

Extra mural clinics: Underserved area – Stockton Blvd, West Sacramento, Del Paso. To meet the need of rural areas, CNU has to recruit from rural and underserved area students who are willing to go back to the underserved area.

Dr. Cheung shared that CNU picked students who are determined to work hard and willing to serve the communities they come from.

Researches have showed that students admission GPA has nothing to do with their performances at licensure examinations. Their MCAT results and their school block performances do have a correlation to their licensure examinations result.

CNU College of Pharmacy and College of Medicine provide tutoring for students. Free tutoring for those requested by faculty and fee based tutoring for students who request on their own.

6. Application Timeline to CODA

Submit CODA application with the first year curriculum by December 2018.

7. Top academic job descriptions – CNU to post the positions after approval from Board of Trustees to move forward with the College of Dentistry.

- Dean
- Assistant or Associate Dean of Academic Affairs
- Assistant or Associate Dean of Curriculum
- Assistant Dean of Student Affairs

8, Program announcement document – Task Force will have to submit the Document, further discussion at next meeting.

- a. Outline for Program Development
 - b. Identify faculty and other program resources
 - c. Information about opportunities for graduates
 - d. Relationship of proposed program to existing program and to the University Plan.
 - e. Need analysis of the Dental Program.
 - f. Resource requirements, implementation plan, proposed timeline.
9. Indigent oral health centers and revenue discussion – will discuss at next meeting.

Natalie will send out schedule for next meeting.

Meeting adjourned at 11:45am

California North State University

Dental School Planning committee

Meeting

August 4, 2018

Location: California North State University
Rancho Cordova campus
2910 Prospect Park Drive
Rancho Cordova

Present: Drs. Alvin Cheung, Kevin Keating, Wai Chan, Jagdev Heir, Huong Le, Stephanie Sandretti, Eric Wong

Absent: Drs. Debra Finney, Rosemary Wu

Meeting was called to order by Chair Kevin Keating at 9:24 am

1. The application/accreditation timeline for the establishing the dental college; Accreditation application process and plan

Dr. Cheung shared with the committee his presentation to BOT.
Slides - on progress of the task force and information collected.
The BOT has approved for CNU to proceed on developing a dental college.
CNU is aware of students debt load and would take that into consideration when planning on tuition and fees.

Dr. Cheung updated the committee on timeline for College of Dentistry.

- Active seeking of future deans: search committee formed.
- Turn in application to CODA by March 2019 to give us time to fully develop curriculum and plan labs.
- Attempt to get approval by June 2019.
- The key for a successful dental education is the curriculum.
- It was suggested that the future dental college be known as the College of Oral Medicine.
- Stephanie Sandretti to email the dental caduceus logo to Dr. Cheung.

2. Consultant and dean start up team options and recommendation.

Deans positions have been posted at CNU website.
Members are asked to consider the available positions.

3. Curriculum design strategy

Ideas shared and suggestions made during committee meeting will be shared to the future dean of curriculum development.

It was consensus in the committee that dental students' technical skills required mentoring.

Basic sciences in the first year.

To make sense of the sciences, it was suggested that practicing dentists/faculties, in group discussions, share with students on how the science is applied to clinical practice. Case studies.

Subject matters in modules throughout the 4 years of education.

Specialty rotation for 6 weeks in the 4th year.

Dr. Cheung needs to present program announcement document (see item 6) at Board of Trustees meeting. It was suggested that we may need input from the future dean.

4. Budget for the planning committee

Members will receive copies of the proposed budget, Income and cost from Dr. Cheung.

Health Plan from CNU was suggested. Captive Insurance was mentioned.

5. Indigent oral health centers and revenue discussion

- Satellite Dental clinics for indigent population and also for student trainings. Students will rotate thru the sites.
- With respect to our social accountability and exposure of our students to dental ethics, we cannot limit the indigent population to the indigent clinics. On campus dental clinic should be opened to all. Service should be the same.
- Partnering with existing health centers was mentioned.
- CNU plans to start with 80 students per year. 2% drop out rate.
- Locations of the dental clinics to be accessible. Depends on the location, students may get to learn some basic foreign language.
- Plan big, consider 200 chairs, plumbed.
- In addition to school clinics in underserved area, senior students may get to rotate to FQHC in other Northern California cities and rural areas, also specialty training rotations.
- Wai Chan to contact Dr. Mort Rosenberg of Ca Department of Correction on donations of their used chairs and equipment.
- Huong Le will be having phone conference with Drs. Cheung and Keating next week. Dr. Cheung will email Dr. Le the topics of discussion.

6. Future agenda items:

- 1) Program announcement document
 - a. Outline for Program Development
 - b. Identify faculty and other program resources
 - c. Information about opportunities for graduates
 - d. Relationship of proposed program to existing program and to the University Plan
 - e. Need analysis of the Dental Program

- f. Resources' requirements, implementation plan, proposed timeline

7. Travel expenses

Dr. Cheung will provide form.

54 cents per mile for travel expenses.

Need to plan for site visits of dental schools.

The committee will consider attending ADEA MEETING 2019 March in Chicago

8. Planning Committee membership, attendance and commitment policy discussion

Members need to disclose conflict of interest, recuse from discussions on matters of conflict.

9. Next meeting date and location

Phone conference August 31 time to be determined, and September 21 at 3:30 pm

Adjourned at 11:40 pm

Respectfully submitted,

Wai M Chan

Board of Trustees Meeting Minutes**Council Meeting Minutes Day 1: 8/13/17 Start Time: 10:00 a.m.****Location: Napa Valley Lodge**

Present: *Chair-* Candace Fong, *Vice Chair-* Jim Walsh *Trustees:* Jody Stewart, Aung-Win Chiong, Shelton Duruisseau, Peter Tenerelli, Chiang Wang, Robert DeBruin, Barbara Livermore, Koon Siwabessy, *President-* Alvin Cheung, *Dean of COM-* Joseph Silva, *Dean of CHS-* Heather Brown, *General Counsel-* Paul Wagstaffe, *HR Manager-* Heidi Herman, *VP of Institutional Research-* Karen McClendon

Guest: *CFO/VP of Finance-* Shoua Xiong, *VP of Biotechnologies and Dean of Graduate Studies-* Catherine Yang

Absent: *Trustee-* Jeana Colabianchi, *Dean of COP-* Hieu Tran

I. Approval of Minutes

- a. Motion: Shelton Duruisseau
- b. Second: Jody Stewart
- c. Abstain: 0

II. Deans Report

- a. COM:
 - i. Accreditation update: continue preliminary accreditation with visit in June of 2019
 - ii. Curriculum Retreat: Full day course, reviewed all courses, converting to a mapping system with Med Hub, course committee review groups formed.
 - iii. Student Update: 1 student in remediation
 - iv. Update on Faculty: no new faculty hires, Skype interviews on anatomy currently happening.
 - v. Faculty/Staff resigned: 1 Clerkship Coordinator
 - vi. Staff new hires: 1 new anatomy lab tech, and 1 student wellness coordinator
 - vii. Student update: 94 enrolled, 13 students from CHS
 - viii. Faculty accomplishments: new elective courses, publications, student scholarly activities
 - ix. ISA: Updated this year with better survey questions that relate more to current updates that have been made. Will issue out in 3 cycles.
- b. CHS:

- i. Faculty and Staff: 1 new full time bio, 3 adjuncts in summer, 4 adjuncts for fall, 2 admin assist, 3 employees released, planning to hire 2 full time faculty
- ii. Student courses: 13 new courses developed for summer and all 2017 (positive results from new courses)
- iii. Admissions update: 69 incoming students for fall of 2017, reviewed demographics of incoming students
- iv. Strategic Recruitment Plan 2017-2020: building brand, generating applications (goal: 1000), selecting the class (goal 650 admitted), enrollment and yield (goal 240 EAs, and registration (goal 120 matriculated).
- v. Performance Metrics: reviewed GPA of matriculated students, reviewed progression of students going into COM/COP, no formal academic alerts because they are paired with faculty advisors and flagged prior to any major academic alerts (catch early on), 2 remediation's, and 5 withdrawals.
- vi. PMPB Success and Improvement: represents what students need to be successful (handout passed out)
- vii. Student Activities: MMI interview, new clubs, student government
- viii. Celebrations: 13 students accepted into COM, teaching excellence award, conference presentations.
- ix. Peter Tenerelli: pleased with growth. Do you feel you have the necessary resources to market and brand? Dean Brown-Will work as a team to see what will help us the most, creating an action plan. New recruiter plan is to have a stronger marketing background.

III. HR Report

- a. Conflict of Interest: no conflicts discovered, two new employees reviewing the form, binder in review
- b. Harassment Prevention Training: 99% complete
- c. Performance Update: completed just recently, can now review for annual merit increase based on data, changes for next year are updated forms, additional training and a streamlined process.
 - i. What will merit increase look like? Budget for 2% but a range of 0-5%
 - ii. Will there some be 0 increase? yes
- d. FERPA update: in compliance, 3 need to complete
- e. Fun Stuff: University strategic retreat, retirement celebration, CNU BBQ, and summer town hall. Employee of the Quarter was Gail Kubat.
- f. New Employees: 7 new faculty hires, and 4 part-time faculty, 8 new staff members
- g. Promotions and Changes: 3 promotions and 1 transfer from COP to COM
- h. Resignations: 6 resignations leaving and 6 others let go.

- i. Is salary an issue? Various reason why employees left
- i. Requisitions: wrapping up quite a few
- j. Benefits: open enrollment, same medical, dental and vision benefits, pet insurance, tickets at work.
- k. Paycom: first check date October 13, all employees have access to their files, will use a biometric clock.
 - i. Candace Fong: What will be considered tardy? Policies need to be reflected. Alvin Cheung: will give a range for punching in and out. ii. Chiang Wang: What if a faculty members have off campus meetings? How do you count the number of hours? Alvin Cheung: will have different codes.
 - iii. Candace Fong: As exempt employees, it will be a problem. iv. Heidi Herman: Main goal is for the hourly employees and per diem
 - v. Candace Fong: Why would the students clock in and out?
 - vi. Candace Fong: Are there any other universities that require the faculty/students clock in? Alvin Cheung: Not that he is aware of. Candace Fong: Are there other ways to make faculty accountable? Seems like a major red flag.
 - vii. Chiang Wang: Always make sure we have office hours, and make sure they are present. Design times where everyone needs to be present. Want to make sure we are not the only ones using this type of system otherwise there will be more retention problems. Needs flexibility. Need to tell faculty members and exempt employees how the information collected will be used.
 - viii. Candace Fong: Can it be rolled out to staff first and hold off on faculty?
 - We are already needing to address the turnover.
 - ix. Further discussion during Executive Session
- 1. Upcoming Events: Kings Games, Thanksgiving Potluck, Holiday Party

IV. Approval/ Review of Policy and Procedures

- a. Faculty & Staff Retention Policy: minor edits
- b. Non-Renewal of Faculty Appointments: Replaces previous policy
 - i. Motion: Peter Tenerelli
 - ii. Second: Shelton Duruisseau
 - iii. Action Item: Make edits with the other polices that change due to this policy. Motion: Chiang Wang, Second: Koon Siwabessy
- c. Administrative Appointments: New PEC approved.
 - i. Motion: Robert DeBruin
 - ii. Second: Jim Walsh
- d. Diversity and Inclusion Policy: adds gender identity and gender inclusion
 - i. Motion: Robert DeBruin
 - ii. Second: Shelton Duruisseau

- e. Crisis Management & Communication: provides procedure for crisis and emergency reaction and communication. Add Candace Fong to ENS system.
 - i. Motion: Chiang Wang
 - ii. Second: Barbara Livermore
- f. Legacy Admission: Tightens definition of immediate family
 - i. Motion: Koon Siwabessy
 - ii. Second: Jim Walsh
- g. Ask to board that medical leave of absence should not be counted toward the period of time while on leave for Leave of Absence. Candace Fong: Bring this back to next meeting. Motion: Livermore, Second: Wang

V. President's Report

- a. Vision: Growth of university over next ten years
- b. Core Values: reviewed
- c. Our Achievements: COP graduated 51 with honors, no tuition increase for fall 2017 for COP, COM successful clerkship training, WASC accredited for next 8 years.
- d. Continuing Education: Training of preceptors (live and on line) e. Facility Update: pharmacy practice simulation lab upgrade, new classrooms for psychology program, CHS buildout, event center complete, seven college rooms, NMR, ultra-quiet study room.
- f. Operations Technology: Paycom, Budget Maestro, Share Point, Med Hub
- g. Staff and Faculty Retention: tuition subsidy for employees, employee tuition discount, King's tickets
- h. Trustee Development: annual trustee conference
- i. Big Celebration: Reaccreditation Gala

VI. Committee Reports

- a. Academic and Assessment: Dr. McClendon
 - i. Part 1 of self-assessment passed out, once filled out place on table.
 - ii. COP/COM Student learning focus: inter-professional education with new events.
 - iii. PLO new outcome results presented. Class of 2018 COP all PLO results were developed. CHS and COM will be presented next year, still collecting data. Class of 2017 PLO results were Proficient
 - iv. COM mapping and alignment: aligned CLOs with PLOs and ILOs
 - v. Accreditation: 4 recommendations, 6 commendations
- b. Finance Update: Ms. Xiong
 - i. Financial Audit: cycle will start in September, physical inventory count (labs, IT, classrooms). Reviewed financial audit timeline.

- ii. Budget to Actual: Reviewed budget through July of COP, COM, CHS and West Taron Holdings
- iii. Reviewed key metrics for target enrollment to keep in balance for the budget.
- iv. Financial Aid Packages about 90% completed, expect to have all completed by orientation.
- v. Reviewed 2018 budget cycle
- vi. Upcoming Events: 401k audit, K-1 schedules for all members, and Cathy Bank audit
- c. Governance and Succession Planning: Drs. Wang and McClendon
 - i. Reviewed committee memberships, members are encouraged to fill out a preference sheet of what committee they prefer to be on.
 - ii. Reviewed what it takes to be an effective board member.
 - iii. A strengths and improvement discussion worksheet was discussed
 - iv. Improvements opportunities were described, such as having the Academic Committee present the Deans reports.
 - v. Succession Planning

VII. Adjournment

The meeting was adjourned 3:30pm and went in to executive session

Day 2: 8/14/17

Start Time: 8:30am

Present: *Chair-* Candace Fong, *Vice Chair-* Jim Walsh *Trustees:* Jody Stewart, Aung-Win Chiong, Shelton Duruisseau, Peter Tenerelli, Chiang Wang, Robert DeBruin, Barbara Livermore

President- Alvin Cheung, *Dean of COM-* Joseph Silva, *Dean of CHS-* Heather Brown, *Dean of COP-* Hieu Tran, *General Counsel-* Paul Wagstaffe, *HR Manager-* Heidi Herman, *VP of Institutional Research-* Karen McClendon

Guest: *CFO/VP of Finance-* Shoua Xiong, *VP of Biotechnologies and Dean of Graduate Studies-* Catherine Yang

Absent: *Trustee-* Jeana Colabianchi

I. Deans Report

a. COP

- i. Class of 2021- 140 confirmed students, reviewed demographics
- ii. Faculty Status: two people left COP, and about 69% of positions have been filled.
- iii. Accreditation: self-study report due October 15, 2017. Comprehensive review 2018-2019.

- iv. Academic Performance Review: 127 alerts generated, 2 dismissed from CO 2019, 1 appealed dismissal from CO2020.

II. New Program Update

- a. PsyD: Start Fall 2019, business case presented in May, in final interview process, curriculum under full scale development, will be a substantive change, will be updating the airport ads. Reviewed program curriculum.
- b. MPS: Dr. Yang presented on the Master of Pharmaceutical Sciences program. Start fall 2019, reviewed some biotech companies, 2-year program, with minimal requirement of 31 units, two tracks (thesis or capstone), developed PLOs, program size is 15-20 initial phase, reviewed a proposed budget.
- c. MPH: Deferred
- d. CON: Fall 2020, dean consultant interviewed, chief nursing executives meeting conducted.
- e. Pharm Research Manufacturing: Spring 2020, 7 patents from US patent office, potentially two more in the process of acquisition, and research organization firm acquisition is under discussion.
- f. COD: BOT endorses the new program
- g. Perinatal Ultrasound: Winter 2017, provide the service, faculty practice plan
- h. New proposed structure accepted, two new positions (chief academic officer and senior vice president)

III. Strategic Plan Update, Dr. Karen McClendon

- a. University retreat: representatives from each college, alignment of SPs, reviewed collected evidence, recommended new strategies and tactics. COM and COP are fully aligned. Reviewed some of new tactics that were suggested at the meeting.
- b. New Goal: Advocacy and Health Policy- develop health policy leaders and change makers
- c. Board approves the new goal. IV. BOT Candidate
- a. No report
- b. Collected all forms, will report to Dr. Fong then assign members to committees.
- c. Once members assigned to Nomination Committee those members will start recruiting.
- d. Will need to create a 3-5-year plan.

V. BOT Meetings and Holiday Party

- a. Holiday Party Friday December 15
- b. November 28th at Rancho Cordova at 2pm for the next BOT meeting

VI. Succession Planning

- a. Dr. Wang gave a brief discussion on the steps of succession planning

VII. Adjournment

The meeting was adjourned at 10:45am

VIII. Executive Session
Trustees only

Signature of Chair and Secretary:

**Board of Trustees Meeting Retreat Minutes
Day 1**

Council Meeting Minutes: 6/3/18

Start Time: 9:30 a.m.

Location: South Lake Tahoe, CA

Present: *Chair-* Candace Fong, *Vice Chair-* Jim Walsh *Trustees:* Jody Stewart, Aung-Win Chiong, Shelton Duruisseau, Chiang Wang, Robert DeBruin, Wai Chan, Koon Siwabessy, Jeana Colabianchi, *President-* Alvin Cheung, *General Counsel-* Paul Wagstaffe, *VP of Institutional Research-* Karen McClendon

Absent: *HR Manager-* Heidi Herman

Guest: *CFO/VP of Finance-* Shoua Xiong

I. Approval of 2/27/18

- a. Motion: Shelton Duruisseau
- b. Second: Robert DeBruin
- c. Abstain: 1

II. Committee Reports

- a. Academic Committee (Dr. Karen McClendon)
 - i. Presented on highlights of all Deans reports
 - ii. Full Deans reports given to trustees
 - iii. Would like status updates from the Deans
 - iv. Would like to have regular admissions updates
 - v. Reviewed COM report
 - 1. Academic learning
 - 2. Wellness program
 - 3. Accreditation
 - 4. Student publication noted on presentation that those are extra publications not related to curriculum. At the next meeting prepare more bullet points and where we are headed and where we want to be.
 - 5. Annotate when there are low class ratings why that may be
 - vi. Reviewed CHS Report
 - 1. More CHS Students have been admitted to COM and COP
 - 2. Recruitment numbers are increasing for the following year
 - 3. Working on building brand of CHS by running the Summer Science Camp

- 4. Once enrollment increases, CNU will look more into housing options
- 5. CHS Research Day was a great success and WSCUC visit was on the same day. The visiting team was really impressed by the presentations.
- vii. Reviewed COP Report
- viii. Reviewed CPsy Report
- b. Audit Committee (Dr. Aungwin Chiong)
 - i. Moss Adams completed audit in mid-March
 - ii. Moss Adams provided an unmodified opinion
 - iii. Audit results showed no changes in external audit.
 - iv. Consistent policies being followed
 - v. Total revenues have continued to grow throughout the years
 - vi. Debt to equity ratio is lower due to controlled budget
- c. Finance Committee (Dr. Koon Siwabessy)
 - i. Will now give monthly closing updates
 - ii. Reviewed Budget to Actual for April
 - iii. Positive net income for COP- approximately 3 students on LOA
 - iv. Positive net income for COM- approximately 5 students on LOA
 - 1. Suggest changing name of LOA to a different designation
 - v. Net loss for CPsy – no students currently – projection for enrollment is 30 students
 - vi. West Taron Holding currently has 5 properties.
 - vii. Combined P&L for all for schools of 1.4M
- d. Scholarship and Fund Committee (Dr. Jim Walsh)
 - i. Gave a breakdown of the scholarships offered for each program
 - ii. Reviewed the fund development and sources of scholarships
 - iii. Approximately \$569,209 was awarded in 2017

III. Presidents Report (Dr. Alvin Cheung)

- a. Student Success of COM, higher national exam results for Step 1
- b. Reviewed rates of residency match compared to the national average for Step 1
- c. Nursing Program Update: Department of Consumer Affairs voted to put a moratorium on nursing school approvals and expansions
- d. Dental Program Update: Reviewed the 6 main interest in starting a dental school which the board approved at the last meeting.

 - ii. Reviewed the national debt average of dental school graduates
 - iii. Reviewed the phase of accreditation and timeline for dental school.
 - iv. Ask board to support the motion:
 - 1. To retain a consultant for CNU COD for the application.

2. Task force gathered sufficient information and recommends the board of trustees to favorably consider moving forward with the CNUCOD.

3. CODA task force requests funding for consultants. CODA application and planning through summer of 2019.

a. Motion: Robert Debruin

b. Second: Jeana Colabianchi

c. Abstain: 1

e. Master of Pharmaceutical Sciences: WSCUC conditionally approved the program with recommendations.

f. Research Update: Reviewed the research projects in each college.

g. National Trustee Conference: reviewed the forecast of the future of education.

i. Cyber security issues: multiple layers of defense ii. How to bring in the next generation of board members

IV. Human Resources (Dr. Alvin Cheung)

a. Total number of current employees: 173 – Where do we want to be with enrollment? – No fixed target, employment revolves around enrollment.

b. Conflict of Interest is up to date

c. Harassment Prevention will be done through Paycom

d. Performance Evaluations: Approximately 60% complete, goal to be completed by end of June

e. FERPA – up to date, annual training will be at summer town hall

f. Reviewed new faculty, staff and student hires

g. Reviewed promotions and changes within the University

h. Include: will the resignations affect attrition rate for WSCUC? Karen-will have to do an evaluation of employees who have left CNU and prepare if WSCUC inquires.

V. Strategic Planning and Accreditation Update (Dr. Karen McClendon)

a. Reviewed the updates to the strategies to the strategic plan

b. Ask board to endorse the new tactics presented. Rubrics will be created after board approval.

i. Motion: Jim Walsh

ii. Second: Robert DeBruin

c. Showed the progress from 2017 to current meeting in 2018.

d. Analytics and Dashboards

i. Created grade check and GPA dashboards for CHS

ii. Created dashboards for PLOs, CLOs, ILOs for COP

iii. COM currently working on gathering data to create dashboards

iv. Dashboard for the Registrar's Office

v. Dashboard for the Business Office

e. Accreditation

- i. CPsy Program (interim) approval by WSCUC, waiting for official letter
- ii. MPS Program – WSCUC team approved the change and the program, awaiting final approval from WSCUC Commission in June.

VI. Executive Session

- a. Trustees, President, and General Counsel.

VII. Adjournment

- a. The meeting was adjourned at 2:11pm

**Board of Trustees Meeting Retreat
Minutes
Day 2**

Council Meeting Minutes:

6/3/18

Start Time: 8:30
a.m.

Location: South Lake Tahoe,
CA

Present: *Chair-* Candace Fong, *Vice Chair-* Jim Walsh *Trustees:* Jody Stewart, Aung-Win Chiong, Shelton Duruisseau, Chiang Wang, Robert DeBruin, Wai Chan, Koon Siwabessy, Jeana Colabianchi, *President-* Alvin Cheung, *General Counsel-* Paul Wagstaffe, *VP of Institutional Research-* Karen McClendon

Absent: *HR Manager-* Heidi Herman

Guest: *CFO/VP of Finance-* Shoua Xiong

I. Investment Policy (Shoua Xiong and Paul Wagstaffe)

- a. Policy review and purpose
 - i. To provide a well thought out framework from which sound investment decisions can be made

- c. PsyD had final approval
- d. Dental Medicine College Update: Application was submitted on 10/30/18. Proposal to be submitted in February. Anticipating final approval in June of 2019.

Dean Assael was excused from the meeting

V. Committee Updates

- a. Audit Committee
 - i. Dr. Chiong noted that the Audit Committee meets once a year.

- ii. Presented the proposed 2018 audit timeline.
- iii. Ms. Xiong gave a more depth analysis of who is on the CNU Audit committee and the process.
- b. Finance Committee
 - i. Dr. Siwabessy presented the finance report for all colleges
 - 1. Finance Committee gave an overall approval.
- c. Academic Affairs Committee
 - i. Dr. McClendon presented on behalf of the Academic Affairs Committee for all the colleges
 - 1. COP:
 - a. Discussed accreditation visit and implementations from the last ACPE visit.
 - b. Reviewed new initiatives and data mining regarding previous courses, gpa's, pcoa's, and exams.
 - c. Data mining results helps recognizes students at risk.
 - d. Reviewed attrition rates: Will delve deeper into what "other" means.
 - 2. CHS:
 - a. Note how many applications are offered for each program?
 - b. Reviewed curriculum with currently 30 courses being offered.
 - c. Counseling services are being offered at both campuses.
 - d. Send results of students using counseling services: over 200 counseling sessions for Fall 2018 term.
 - 3. COM:
 - a. Reviewed some of the Summative Exams results.
 - b. Targeting more diversity groups in admissions and recruitment.
 - i. Are we targeting American Indian groups?
Fewer of those groups in the region.
 - c. Reviewed admissions data for Class of 2022
 - d. Average MCAT score is higher than UC Davis.
 - e. More active learning in courses
 - f. Full program review will begin after graduation of class of 2019.
 - 4. Psy:
 - a. 11 students began for fall semester to keep a small first cohort of 10-12
 - b. Reviewed total applications for fall of 2019
 - c. Reviewed partnership with the community
 - d. Practicums sites are growing.
 - 5. University Performance Dashboard
 - a. Currently developing a dashboard for university performance metrics

6. Scholarship Update

- a. Dr. Cheung presented on current major scholarship activities
- b. NCEF Gala raised \$78,000
- c. Plan on increasing scholarships for CHS for those being admitted.

VI. Presidents Report

- a. COP Conferral of Degree for STUDENT X (REDACTED NAME)
 - i. Motion: Robert DeBruin
 - ii. Second: Wai Chan
 - iii. Abstain: 0
 - iv. Approve: Approve
- b. Reviewed CNU and National Average for USMLE Step 1 examines for COM
- c. Program Updates
 - i. Reviewed timeline for next 10 years
 - ii. Reviewed real estate update
 - iii. Reviewed Ownership Descriptions for each entity
- d. Student Housing
 - i. Reviewed project descriptions
 - 1. CNU v CSUS comparison
 - ii. Reviewed cost of building dorms and floor plans
 - iii. Showed timeline of dormitory
- e. Biotech Innovation District
 - i. Need to find a good project, finding, talented workforce, and real estate
- f. Project
 - i. Dr. Cheung showed a model of the project and discussed the business plan.
 - ii. Reviewed financial strategies for financing the project

VII. Board of Trustee Bylaws

- a. Reviewed updated changes from July 23, 2018 meeting.
- b. Changes made to sections:
 - i. Article 4
 - ii. Article 6
 - iii. Article 10
- c. Created a new article, Article 11-Board Vacancies
- d. The motion to approve the update Board of Trustee Bylaws
 - i. Motion: Robert DeBruin
 - ii. Second: Jeana Colabianchi
 - iii. Abstain: 0
 - iv. Approve: Yes

VIII. Holiday Party

- a. Candace Fong offered her house to host the holiday party.
- b. Possible date is Friday December 14th or December 15th

IX. Executive Session

X. End Time

- a. The meeting was adjourned at 6:42pm

Signature of Chair and Secretary:

President's Executive Council Minutes

Council Meeting Minutes: June 12th, 2017 Start Time:

2:07 p.m.

Present: *President- Alvin Cheung, Dean of CHS- Heather Brown, VP of Institutional Research & Assessment-Karen McClendon, VP of University Operations, Faculty Programs & Development- Grant Lackey, VP of Biotechnologies and Dean of Graduate Studies- Catherine Yang, HR Manager- Heidi Herman, CNU Faculty Senate Chair –Ruth Vinall, Dean of COP- Hieu Tran, VP of Research- Philip Mack, VP of Admissions and Student Services- Xiaodong Feng*

Absent: *VP of Finance/CFO- Shoua Xiong, General Counsel-Paul Wagstaffe, Dean of COM- Joseph Silva*

I. Approval of Minutes from 4/24/17

The motion to approve the 4/10/17 minutes as written was motioned by *VP of Biotechnologies and Dean of Graduate Studies- Catherine Yang* and seconded by *VP of Research- Philip Mack*. The motion to approve the minutes as amended was approved by a vote of:

Yes: 10 No: 0 Abstain: 1

Dr. Cheung would like to formally recognize Dr. Heather Brown as Dean of the College of Health Sciences.

II. Old Business

n/a

III. Deans Report

- a. COP: Planning on 3 year program, faculty have been briefed. There is a new pharmacy program starting in Long Beach, CA. Currently working on Joint Faculty Appointments. Class 2021 has 141 EA's signed with 20 offers still standing.
- b. COM: Dr. Lackey presented on behalf of Dean Silva. About 80 preceptors have been trained.
- c. CHS: Admissions update- 20 EA's for PMPB and 46 EA's for undergrad. Recruitment strategy will be a top focus for the upcoming College Strategic Planning Meeting. Hiring update- Biology onsite interviews are scheduled and Skype interviews are in the final process.

IV. Policy and Procedures

- a. New Program Approval Process (Review)
 - Minor updates made
 - This policy applies for academic programs
- b. Promoting a Positive Learning Environment and Avoiding Student Mistreatment
 - Policy statement and procedures updated
 - This policy will also go into CANVAS as a learning tool

The motion to approve Promoting a Positive Learning Environment and Avoiding Student Mistreatment as a University Policy was motioned by *Dean of COP- Hieu Tran*

and seconded by *VP of University Operations, Faculty Programs & Development*- Grant Lackey. The motion to approve the policy was approved by a vote of:

Yes: 11 No: 0 Abstain: 0

c. Deferred Admissions Policy

- Can only defer 1 year
- Define what can be granted for student deferral
- If granted deferral students must affirm their intent to enroll by a specified date

The motion to approve the Deferred Admission Policy for COP was motioned by *VP of University Operations, Faculty Programs & Development*- Grant Lackey and seconded by *VP of Biotechnologies and Dean of Graduate Studies*- Catherine Yang. The motion to approve the policy was approved by a vote of:

Yes: 11 No: 0 Abstain: 0

d. Complaint Grievance Form

- Decrease the number of days from 21 business days to 10 and 5 business days depending on what step of the process they are currently in.

The motion to approve the Complaint and Grievance Form for COP was motioned by *VP of University Operations, Faculty Programs & Development*- Grant Lackey and seconded by *VP of Biotechnologies and Dean of Graduate Studies*- Catherine Yang. The motion to approve the policy was approved by a vote of:

Yes: 11 No: 0 Abstain: 0

e. CNU Letter of Recommendation Request

- Dr. Lackey and the CE Department will hold a faculty training session on "How to write an effective LOR"

The motion to approve the Complaint and Grievance Form for COP was motioned by *VP of University Operations, Faculty Programs & Development*- Grant Lackey and seconded by *VP of Biotechnologies and Dean of Graduate Studies*- Catherine Yang. The motion to approve the policy was approved by a vote:

Yes: 11 No: 0 Abstain: 0

V. Student Satisfaction Survey

- a. Dr. McClendon noted that there was a low response rate among the students this year.
- b. Dr. McClendon noted that some of the positives for CHS were: study and lounge space, academic advising, understanding of requirements. Some of the areas of improvements: improvement of information on website and handbook not useful.
- c. Next year will send out more reminders to students and give a longer response time.

VI. HRIS

- a. Ms. Herman described the new HR system that will be rolling out within the next few months.
- b. It will include training modules, employee access to own file, vacation request forms, etc.
- c. This will help with auditing and tracking of schedules

VII. Summer Town Hall

- a. Dr. Cheung noted this is a mandatory meeting.
- b. The date was changed from August 18th to July 31st and will be held at the event center.

VIII. Strategic Retreat Update

- a. Dr. McClendon updated PEC members that the Strategic Planning Retreat went extremely well
- b. It was fully updated with evidence and new goals and strategies.
- c. Working in groups helped identify data points for future success of the institution
- d. Dr. Cheung noted that CNU will now be purchasing new analytic systems instead of creating our own.

IX. Bio/Chem Hazard Waste

- a. Dr. Cheung noted that every college should be mindful of the amount of bio/chem waste that they are producing this was prompted by a news article of another university in town.
- b. Proper waste disposal techniques need to be monitored and ordering of new chemicals

X. Dental School Discussion

- a. Discussion of dental program; Board endorses it unanimously.

XI. Adjournment

The Joint PEC meeting was adjourned at **5:45 p.m.**

Signature of President:

President

Date _____

IT Update

Q2 IT Summary and Report

June 22, 2018

Jan to March:	831 Tickets Handled
April to present, June 22:	692 Tickets Handled

Major Projects:

1. **CNU no longer paying for the lines going to the old Sac State building.**
The 3 fiber lines have been cancelled last month. This should yield a savings of more than \$3k per month.
2. **Telephone Services:** We are now off copper lines, PRI using Frontier and going digital with Net2Phone instead. This should save roughly \$300 per month but more importantly, gives a much more agility in scaling up or down when needed. We have gone from 20 simultaneous calls to currently 44. We also have roughly 100 more DID (4 digit numbers) to use at our disposal.
3. **MSPE:** Both Hoa and Charnil has been doing a great job at creating the templates Dr. Falck has been requesting. In the last couple weeks, they've been doing final color and format tweaks. Everything has been going smoothly.
4. **Switching over to CCI in Rancho instead of ATT.** This transition does not require any land work or easement contracts. Everything can be switched on their backend. This will not affect pricing, only updating our speeds and improving bandwidth since ATT was a consumer grade line.
5. **Contracts Renewed:**
 - **Fortinet:** Continues the use of our firewalls and threat definitions - **Cisco SmartNet:** Continues coverage on all our network switches
 - **Symantec:** Continues support and definition updates on virus protections on user PCs.
6. **Broken script in our SQL:** resolved by Hoa and Sharnil. They worked tirelessly for two weeks on it and finally have all the issues worked out.

President's Executive Council Minutes

Council Meeting Minutes: August 27, 2018

Start Time: 1:10 p.m.

Present: *President-* Alvin Cheung, *HR Manager-* Heidi Herman, *VP of Research-* Philip Mack, *VP of University Operations, Faculty Programs & Development-* Grant Lackey, *VP of Academic Affairs-* Catherine Yang, *General Counsel-* Paul Wagstaffe, *Legal Counsel-* Anisha Basi, *Dean of COM-* Joseph Silva, *Dean of COP-* Hieu Tran, *VP of Institutional Research & Assessment-* Karen McClendon, *Dean of CHS-* Heather Brown, *VP of Admissions and Student Services-* Xiaodong Feng, *Dean of Psychology –* Bret McLaughlin

Absent: *CNU Faculty Senate Chair-* Chris Wostenberg, *VP of Finance/CFO-* Shoua Xiong

Guest: Michael Ibrahim

I. Approval of Minutes 7/23/18

- a. Motion: *General Counsel-* Paul Wagstaffe
- b. Second: *VP of University Operations, Faculty Programs & Development-* Grant Lackey
- c. Abstain: 3
- d. Approval: Yes

II. Old Business

- a. Faculty Development Revision: Sent out for review to PEC members. Clarified career development and professional development. Will send out and have an electronic vote by Friday 8/31/18.

III. Deans Report

- a. COM: Over 2200 applications for fall 2019 class. Working on curriculum mapping and refining progress.
- b. COP: Beginning class of 2023 recruitment with PharmCAS. ACPE noted there is a 20% drop in pharmacy applications. Started the pharmacy primer program this summer, 55 students signed up, so far positive remarks. Will send ACPE document to President for review. ACPE site visit is in March.
- c. CHS: Classes started today! 84 undergrads started, with a few more starting and 24 post baccs. Student life and career services are up and running. Welcome BBQ coming up. Student Handbook is under review by legal. Currently hiring for Dean of Student Affairs and Admissions.
- d. Psy: Currently have 10 students, with the potential of 2-3 more adding. Students start September 4th. APA application will be turned in by the end of the week. All practicums are set for the current class. 6-Prong plan to increase enrollment.
- e. Faculty Senate: Updating Bylaws for Faculty Senate

IV. Review and Approval of Policy

- a. COP Academic Progression Policy (start coverage for class of 2023)
 - i. Updated Section III Scope and Coverage.
 - ii. This policy will be reviewed offline and more updates will need to be made.
- b. CNU Service Guidelines (Dr. Lackey)
 - i. Dr. Lackey presented on the Faculty "Service" component evaluation guideline. Looks for any suggestions from PEC members. This guideline pertains more to the qualitative factors rather than quantitative.

- ii. Forward this guideline to Faculty Senate for review
- iii. Add "Assessing and Evaluating the Service" section
- iv. Under Scope add Dean's will make judgement on weight of service for each college

V. Graduation

- a. COP will have about 63 students, COM will have 57, and CHS will have 12 students graduating.
- b. COP 8:30-11am, COM 6-8pm. 95 minutes max for each ceremony.
- c. University committee will formed for graduation.
- d. CHS is still pending.

VI. Academic Calendars

- a. COM is still in discussion
- b. Turn it in a single document

VII. Distance Learning

- a. University expects faculty to embrace and support that every college create a distance learning course.
- b. COP currently has 2 courses ready.
- c. Summer of 2019 look into hiring an Educational Technology expert.

VIII. Teaching and Learning Center

- a. Dr. Yang presented a proposal for the Academy for Teaching and Learning Excellence
- b. Dr. Lackey mentioned that he has some guest from UC Davis that are willing to come and give lectures on the topic.
- c. Formalize kick off of the Academy of Teaching and Learning Excellence with Faculty Development seminars.
- d. Enhance mission statement
- e. Bring back updated version after faculty senate reviews and gives suggestions

IX. Reporting Changes

- a. Dr. Cheung is in the process updating the Organizational Chart in anticipation of new colleges.

X. Psychology Services and Pharmacy Faculty Practice Plan

- a. Set aside some real estate at Stonelake for Psychology and Pharmacy Practice Plan

XI. Data Mining

- a. Dean Tran showed different results for PCOA and different areas of learning
- b. Reviewed the different correlations between PCOA and course grades
- c. Reviewed impact of TBL.
- d. Suggestion: Before any changes made there needs to be a reason for the change, it needs to be compelling. When change is being implemented needs to be directed by the purpose of the change.

XII. College Dentistry

- a. Dean interviews are complete

XIII. Innovation Policy and Procedures

- a. Working on creating the procedure

XIV. Administrative Training Schedule

- a. Start a new training schedule
- b. Announce dates all at once

XV. Adjournment

The Joint PEC meeting was adjourned at 3:46 pm

Signature of President:

Alvin Cheung, President

Date 9/10/18

Signature of Secretary:

Natalie Vachalek

Natalie Vachalek, Secretary

Date 9/10/18

President's Executive Council Minutes

Council Meeting Minutes: November 26, 2018

Start Time: 1:05

Present: *President-* Alvin Cheung, *HR Manager-* Heidi Herman, *VP of Academic Affairs-* Catherine Yang, *General Counsel-* Paul Wagstaffe, *Dean of COM-* Joseph Silva, *Dean of COP-* Hieu Tran, *Dean of CHS-* Heather Brown, *Dean of Psychology –* Bret McLaughlin, *VP of Finance/CFO-* Shoua Xiong, *VP of Research-* Philip Mack, *VP of Admissions and Student Services-* Xiaodong Feng, *CNU Faculty Senate Chair-* Chris Wostenberg, *VP of Institutional Research & Assessment-* Karen McClendon, *Dean of CDM-* Leon Assael

Absent: *Legal Counsel-* Anisha Basi

I. Approval of 11/12/18 Minutes

- a. Motion: *General Counsel-* Paul Wagstaffe
- b. Second: *Dean of COP-* Hieu Tran
- c. Abstain: 3
- d. Approve: Yes

II. Old Business

- a. Cell Phone & Reimbursement Policy: Will be brought back at the 12/17/18 meeting.

III. Deans Report

- a. COM: 4th interview day coming up this Friday with 39 acceptances for the next class. COM Research Day is December 14th. 60 publications with students have been completed.
- b. COP: 230 completed applicants. Interviewed 113 currently with 35 EA's signed. January and February are usually the busiest interview month. Strategies to enhance recruitment by visiting different states where CNU has higher number of applicants. COP Open House in January and June.
- c. CHS: 291 applications and 190 acceptances. Open House attendance was over 90. January 26 will be the next CHS Open House. Conducted a Student Town Hall which was very productive. New recruiter starting January. Ongoing search for Assistant Dean of Student Affairs and Admissions
- d. CPsy: 76 applicants for next year. Drs. Ettensohn, McLaughlin, and Nevis are presenting papers at an upcoming conference. Will be starting interview process soon for next class.
- e. CDM: Currently conducting interviews for the different Deans roles and looking for space at CNU for the Dental Medicine College. Working with Dr. McClendon for WASC proposal. Set-up a pre-Dental group meeting at the Rancho Cordova campus for students. Goal of 80 students for the first year.
- f. MPS: 3 faculty members which are part of COP. Building new courses and next curriculum stage. MPS faculty have been setting up booths at the Open Houses.

- a. Dr. Wostenberg presented on the changes made to the Faculty Senate Bylaws. Conditional approval with update on Section 5.3.
 - i. Motion: *Dean of COM-* Joseph Silva
 - ii. Second: *Dean of COP-* Hieu Tran
 - iii. Abstain: 1
 - iv. Approval: Yes

V. Enrollment Cycle Management

- a. Dr. Cheung would like admission/enrollment updates be sent to his and CFO's office biweekly.
- b. Would like the admissions team to be creative in reaching out to other states and locations in their recruitment strategies.

VI. Scholarship Communication

- a. Dr. Cheung like the Foundation to publish the recognition of the students more on their website along with CNU website.
- b. Need to announce deadlines for when applications are due to the scholarship committee and NCEF.
- c. Scholarship Award Ceremony will be held on April 5th at 6pm, Joint Scholarship with NCEF and CNU.
- d. Dr. Feng suggestion also doing a Faculty of the Year and Preceptor of the Year for both COM, CPsy, and CHS.

VII. Article/Press Release for COM

- a. Create a press release for the COM student success.

VIII. Distance Learning

- a. COP is ready to start a course.
- b. CHS has 5 ready to start. Screencast-o-matic will be a program that will help deliver the course.

IX. Adjournment

The Joint PEC meeting was adjourned at 3:15 pm

Signature of President:

Alvin Cheung, President

Signature of Secretary:

Natalie Vachalek

Appendix D-5 New Program Approval Process

New Academic Program Approval Process

I. Policy Statement

California Northstate University (the "University") procedures provide mechanisms for ensuring that consistent and coordinated decisions are made concerning program development and resource allocation. The final responsibility for program approval within the University rests with the University Board of Trustees.

II. Purpose

To provide a rational and effective method of new program development, consideration, and approval.

III. Scope/Coverage

This policy applies to all new programs.

IV. Procedure

- A. The program approval process begins with the endorsement of PEC then a proposal to the Board of Trustees for approval to conduct further exploratory work necessary to determine a new program's viability and congruence with the University's mission and strategic plan.
- B. The proposed program that is submitted to the Board of Trustees should be described in a Program Announcement ("PA"), a document detailing the rationale for developing the program and the need for it, and the areas that need to be fully considered. The PA shall also:
 - i. Provide an outline for program development,
 - ii. Describe the curriculum and requirements for admission and graduation,
 - iii. Identify faculty and other program resources,
 - iv. Provide information about opportunities for graduates,
 - v. Outline the new program's alignment with institutional mission,
 - vi. Provide a need analysis of the new program (*i.e.* supply and demand issues),
 - vii. Outline resources requirements (including education facilities and financial resources), and include an implementation plan and proposed timeline.
- C. Prior to the submission of the PA to the Board of Trustees, preliminary research and investigation shall be performed by the proposing party with regards to (i) – (vii), *above*, and also academic quality, relevance and need and the adequacy and commitment of all resources necessary to support the program.

- D. Once the Board of Trustees has granted provisional approval for the University to investigate the viability of a new program, the next stage involves internal University review and approval of the PA by the relevant faculty group (e.g., department chairs, directors, deans, etc.) to assess planning and resource implications of the proposed program. The relevant dean will work with the campus leadership to initiate any necessary reviews and approvals by faculty governing bodies.
- E. Upon successful completion of these reviews and receipt of approvals, the PA will be formally presented to the Director of Assessment and Effectiveness for review and approval of the proposed program for quality and for congruence with the University's mission and strategic plan. After approval by the Director of Assessment and Effectiveness, the PA will be formally presented to the President's Executive Council ("PEC") for review and approval.
- F. The PEC will ensure that needed resources are available, including faculty, administrative, library, computer, laboratory and other resources. When all concerns are resolved, the PEC will approve the PA and forward the PA to the Board of Trustees for review and approval.

APPENDIX A: Sample New Academic Program Proposal (Doctor of Psychology)

Table of Contents

Section 1

INTRODUCTION

(1) Program Purpose and Objectives

(2) Historical Development of the Field and Development of Academic Programs in the Field

- (3) Timetable for Development of the Program, including Enrollment Projections
- (4) Relationship of Proposed Program to Existing Campus Programs and to University Strategic Plans
- (5) Campus Unit Administering the Program and organization structure
- (6) Evaluation of the Program

Section 2

PROJECTED NEED

- (1) Projected Need for the Psychology Doctorates
- (2) Student Demand for the Program
- (3) Opportunities for Placement of Graduates
- (4) Importance of the Proposed Program to the Discipline
- (5) Ways in Which the Proposed Program Will Meet the Needs of Society
- (6) Relationship of the Program to Research and Professional Interests of the Faculty
- (7) Program Differentiation

Section 3

PROGRAM

- (1) Admission Requirements
- (2) Student Recruitment Plan and Enrollment Projections
- (3) Program Curriculum and Pedagogies
- (3) Program Learning Outcomes
- (4) Plan for Practice Sites
- (5) Accreditation Requirements (WASC and APA)
- (6) Monitoring of Student Progress
- (7) Special Requirements

Outline for Program Development

The inauguration of the College of Dental Medicine affords the opportunity to advance health sciences education and practice through the inclusion of oral health education and practice into an emerging academic health center, community health system and hospitals.

The selection of the name of the College and the degree is designed to reflect the ethos and the culture of the program. It is first a College in that it focuses on inquiry, action capacity and education at the highest level. As a College we will exhibit traditional values of scholarly work, a learning community, and academic freedom. As a College of Dental Medicine, we recognize that oral health care is the practice of medicine and surgery and is integrated into all other aspects of health care. The degree D.M.D. reflects doctoral level of knowledge and skills and recognizes that oral health care is not surgical care alone but includes the behavioral, social, and medical management aspects of oral diseases.

The integration of oral health into human health requires dentists who are capable of performing at the highest level in an ever more complex and demanding environment of emerging technology, social change, human disease management, and evolving health systems. The CNUCDM is developing a curriculum with four basic themes into which all didactic and clinical content will be served. These four themes are: **Human Systems, Odontology, Oral and Maxillofacial Studies, and Behavioral and Social Sciences**. All four themes will be delivered in a diagonal curriculum. The CNUCDM will develop clinical delivery programs at the highest level on campus and across the region with health system partners that promote preventative health strategies, and value-based care in a health science educational model. These programs will be integrated to the greatest extent with other health resources within health systems and in the community beyond.

California Northstate University (CNU) is an institution of higher education dedicated to advancing the art and science of healthcare, and to educating, training, and developing individuals to provide competent, patient-centered care. The University consists of four colleges: the College of Health Sciences (CHS), the College of Medicine (COM), the College of Pharmacy (COP), and the College of Psychology (PsyD). The Colleges of Medicine and of Pharmacy offer an MD degree and a Pharm D degree, respectively; whereas the College of Health Sciences offers a B.S. degree in Health Sciences. The College of Psychology provides a doctorate in Psychology.

Curriculum, Admissions and Graduation Requirements

Curriculum

The dental program is a four year program and culminates in a clinical doctoral degree: the Doctor of Dental Medicine (DMD).

The Mission of the College of Dental Medicine is to advance the art and sciences of healthcare through excellence in oral health education, practice, research, service, and social accountability.

Education: Create skilled and knowledgeable clinicians who will constantly advance their capabilities throughout life

Practice: Produce clinical leaders in oral health who will serve in private practice, health systems practice, and in interprofessional settings

Research: Promulgate scientific inquiry throughout the curriculum and support student and faculty research that creates an environment of scientific curiosity and an evidence-based foundation for clinical practice

Service: Provide individual patient care services at all clinical sites under the auspices of CNUCDM that produces the very best oral health outcomes and clinical value

Social Accountability: Advocate for and help build stronger communities in California and globally through improved oral health care, disease prevention, health promotion and protection from oral diseases through community-based approaches

The Vision of the College of Dental Medicine is to provide constructive innovation in its education programs and leadership in integrating oral health care into human health care systems.

Values:

- Providing patient-centered didactic and clinical education that always puts improved health outcomes first
- Foster a humanistic and character-developing environment for dental students
- Building stronger communities and creating a better world through improved oral health
- Understanding the professional responsibility of the dentist as the head of the oral health care team
- Practicing health promotion and disease prevention and protection
- Advancing California Northstate University through excellence in all we do

The integration of oral health into overall human health requires dentists who are capable of performing at the highest level in an ever more complex and demanding environment of emerging technology, social change, human disease management, and evolving health systems.

In response, the California Northstate College of Dental Medicine (CNUCDM) has developed a curriculum with four basic themes: Human Systems, Odontology, Oral and Maxillofacial Studies, and Behavioral and Social Sciences. All four themes will be delivered in a diagonal curriculum¹ to provide both horizontal and vertical integration of clinical and basic sciences in order to build students' competency in both the art and science of dentistry. Patients' assessment and management decisions need to be made through consideration of individual patient's health status and selection of the most appropriate interventions. The curriculum therefore is reflective of the necessary integration of the biomedical, behavioral, and social sciences.

The DMD curriculum will include concurrent didactic, small group learning, simulation and clinical experiences at all phases of the curriculum with increasing clinical experiences and decreasing didactic experiences gradually through all four years. While basic clinical encounters begin in the fall of the first year, advanced clinical practice occurs in the fourth year.

While emphasis on didactic foundations is at a high level in the first year, some didactic components with seminars and case-based didactic experiences continue through the fourth year. Specific types of pedagogical methods during classroom learning include the following: presentation, demonstration, simulations, team-based learning, problem-based learning, and clinical case studies.

CNU's dental program will utilize a Common Pathway with the Colleges of Health Sciences, Medicine, Pharmacy, and Psychology to build a solid foundation in the medical sciences and to provide a rich interprofessional education for students who will be working in healthcare teams for the benefit of patients. The following principles will be employed throughout the DMD curriculum:

- Interprofessional education experiences
- Collaborative practice models in clinical education
- Strong basic medical sciences with systems-based block segments
- Immediate and continuous clinical correlation
- Patient-centered care with practitioner/faculty led care teams
- Education in health systems and community clinics integrated with CNU based clinical education
- A competency-based clinical practicum
- Eclectic curriculum with "selectives" (electives that students choose) to guide students towards areas of clinical, research and societal interests. Selectives are among an array of clinical experiential, research or didactic courses available as part of the academic calendar to be selected by students in the developed block time.

These principles and designated educational experiences are designed to provide a strong foundation for building competency in the practice of dentistry.

Each course provides a syllabus in CNU format that includes the following elements: the goals and requirements of each course, the nature of the course content and the method(s) of evaluation to be used

¹Definition: the diagonal curriculum includes concurrent didactic, small group learning, simulation and clinical experiences at all phases of the curriculum with increasing clinical experiences and decreasing didactics gradually through all four years. While basic clinical encounters begin in the fall of the first year, advanced clinical practice occurs in the fourth year. While emphasis on didactic foundations is at a high level in the first year, some didactic component with seminars and case-based didactics continues through the fourth year

and how grades and competency are determined.

Program Learning Outcomes (PLOs)

Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy

Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry

Culturally competent, empathic communication: Demonstrate patient-centered, empathic, and culturally competent communication and interpersonal skills

Oral and Written Communication: Demonstrate sound oral and written communications in patient care

Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care

Ethics and Professionalism: Demonstrate professionalism and ethical decision making

Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare

Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

The four themes will be presented utilizing interprofessional education in part utilizing a **Common Pathway** for some courses. The **Common Pathway** consists of aspects of courses especially in human systems and behavioral and social sciences that can be taught alongside students in medicine, pharmacy and clinical psychology. Course that will utilized in part or in whole a Common Pathway will be noted in the course list as **CP Courses**.

The 4 themes These are yearly courses all in each of the four years named HS 5, 6, 7, 8; Odont 5, 6, 7, 8; OMFS 5, 6, 7, 8; and, BSS 5, 6, 7, 8.

CREDIT HOURS

Analysis of credit hours. Credit hours are assigned consistent with CNU credit hour policy

CNU CREDIT HOUR POLICY

I. PURPOSE

The purpose of this policy is to define the credit hour policy of the California Northstate University.

II. SCOPE/COVERAGE

This policy governs the assignment of credit hours of lecture courses, practicum work, and internship assignments.

III. POLICY STATEMENT Credit Hour Policy

For each 15-week semester, one (1) hour of credit is assigned per hour each week of classroom or direct faculty didactic instruction (that is, per hour of lecture or student in-class time) and a minimum of two (2)

hours of out-of-class student work (homework). For practicum and internship time, one (1) hour of credit is assigned per three (3) hours each week of student time spent in this activity.

IV. PROCEDURE

Credit Hours in accord with this policy are assigned to courses at the time of course creation and syllabus approval by the Curriculum Committee.

Consistent with this policy, 1 credit is assigned for each 15 lecture hours in a course and its associated 30 preparation/ homework hours. 1 credit is assigned for every 25 small group learning hours and its associated 25 preparation/homework hours, and 1 credit for every 30 laboratory hours and 30 preparation/ labwork hours.

<u>Codes</u>	<u>Course Type</u>
LAL	LECTURE AND/OR ACTIVE LEARNING COURSE
SIM	CLINICAL SIMULATION COURSE
LAB	LABORATORY COURSE
SEM	SEMINAR
CLIN	CLINICAL EXPERIENTIAL LEARNING
HS	HUMAN SYSTEMS COURSE
Odont	ODONTOLOGY COURSE
OMFS	ORAL AND MAXILLOFACIAL STUDIES COURSE
BSS	BEHAVIORAL AND SOCIAL SCIENCES COURSE

GRADING

Utilizing a competency based grading system, all students must reach a threshold for clinical competency in knowledge and skill set at 75%. Structured remediation activities for each didactic course will ensure a higher level of knowledge for the cohort of students earning a Y, 65-75%. Students earning below 60% receive an F requiring repeat of the course or further academic action. Students earning 90%-95% will earn a grade of Honors and students earning 96-100% will earn Highest Honors.

Clinical courses will be graded Pass/Fail with the opportunity to earn EPR's (exceptional performance reviews) that can be offered to up to 1/3 of enrollees to each course director at the conclusion of each term. EPR's will be recorded numerically in each transcript according to the course in which they were earned. EPR's are based upon patient-centered care and patient outcomes as well as application of the program learning outcomes. Each clinical course will develop defined rubrics for the achievement of EPRs.

Class rank will be based upon the students' performance in LAL, SIM and LAB courses for 60% of the class rank value and by rank based upon clinics EPRs for 40% of class rank value.

LAL, SIM AND LAB GRADING

HH	PASS WITH HIGHEST HONORS (96-100%)
H	pass with honors (90-95%)
P	pass (75-90%)
Y	no pass, requires remediation (60-75%) to earn P (Y is temporary grade)
F	fail (less than 60%)
I	Incomplete, course work at satisfactory quality but assignments completion delayed by circumstance (temporary grade)
IP	In progress grade given for multiple semester courses where final grade given in subsequent semester
W	Official withdrawal

CLIN GRADING

P	Clinical care demonstrates knowledge and skills and values commensurate with achieving the defined competencies of the curriculum. Clinical course outcomes will be linked to both Program learning outcomes and CODA defined clinical competencies through Competency Evaluations (CEs). Passing of CEs integrated into a clinical course is required for a P in the course.
Y	No pass, requires remediation to earn a P (Y is temporary grade)
EPRs	Exceptional Performance Reviews based upon rubrics defined by the Program Learning Outcomes as accommodated in the clinical course

CNUCDM Course Descriptions

Human Systems

Case-based biomedical sciences: For the following Common Pathways courses (labeled CP Course) with the College of Medicine (COM), the clinical case presentations will include those oral cases presented by the CDM faculty, in addition to selected common cases with the COM. The supporting basic science with each courses will be Common Pathway anatomy, histology, embryology, biochemistry, immunology m microbiology nutrition, pathology pharmacology and physiology.

Course #	Course Title	Credits	Year	Term
HS 511	Hematology (CP Course)	4	DS 1	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences will include: dental care in the hemophilia patient, acquired bleeding disorders in the dental patient, oral effects of anemia, and dental care for the hematology oncology patient.

Course #	Course Title	Credits	Year	Term
HS 521	Integumentary and Musculoskeletal Systems (CP Course)	7	DS 1	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences will include vesiculobullous disease of the oral mucosa, oral manifestations of muscular dystrophy, oral cancer, myofascial pain dysfunction syndrome, arthritis in dental practice, osteoporosis and oral health.

Course #	Course Title	Credits	Year	Term
HS 512	Neuroscience (CP Course)	9	DS 1	Spring

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences will include maxillofacial nerve injury, oral manifestations of Parkinson's disease, oral and maxillofacial movement disorders, trigeminal neuralgia, migraine and facial migraine, oral care of the stroke and spinal cord injured patient.

Course #	Course Title	Credits	Year	Term
HS 522	Cardiovascular and Pulmonary Systems (CP Course)	9	DS 1	Spring

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases

related to oral health sciences include: prevention, diagnosis, and immediate treatment of acute myocardial ischemia in dental practice, oral health aspects of obstructive sleep apnea, managing asthma in dental practice, congestive heart failure implications in oral health care, valvular heart disease implications in dental practice, Marfan's syndrome.

Course #	Course Title	Credits	Year	Term
HS 611	Renal System (CP Course)	5	DS 2	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences include oral manifestations of renal failure/renal osteodystrophy/HPTH, dehydration and oliguria in odontogenic infection, acid/base considerations in fever and dental infection.

Course #	Course Title	Credits	Year	Term
HS 621	Gastroenterology (CP Course)	5	DS 2	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences include oral effects of chronic liver failure, oral surgical considerations in Vitamin K dependent factor depletion in chronic hepatitis, oral **manifestations of** bulimia, Salivary gland disorders, concomitant disorders of the GI and oral microbiome, effects of mastication/salivary health on GI health, oral manifestations of patients with colonic polyps.

Course #	Course Title	Credits	Year	Term
HS 631	Endocrine System (CP Course)	5	DS 2	Fall

As described in COM curriculum with clinical case correlation by dental faculty. Correlated clinical cases related to oral health sciences include , oral health considerations in obesity, oral health impact of type 1 and type 2 diabetes, oral findings in endocrine disorders e.g. multiple endocrine neoplasia, hyperthyroidism/hypothyroidism.

Course #	Course Title	Credits	Year	Term
HS 641	Clinical Pharmacology	3	DS 2	Fall

This course will review the basics of pharmacokinetics and drug development and review the important clinical characteristics of the major drug categories including cardiac, pulmonary, GI, GU, endocrine, musculoskeletal, psychotropic, neurologic, dermatologic drugs, antibiotics,

Course #	Course Title	Credits	Year	Term
HS 642	Clinical Pharmacology 2/Oral Pharmacology	3	DS 2	Spring

This course will review the major drugs used in dental practice. Emphasis on analgesics, pain and anxiety

control, antibiotics. Other drugs of oral diseases including oral mucosal diseases, diseases of the dental pulp and periodontium, paranasal sinuses, and those for musculoskeletal problems of the head and neck. Correlation of drugs in the general pharmacopeia with oral health impact for HS 631 will concentrate on side effects of the oral region including examples of xerostomia, superinfection with thrush, tardive dyskinesia, among others.

Course #	Course Title	Credits	Year	Term
HS 721	Junior Year Medicine Seminar	2	DS 3	Fall

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Cases will be selected from existing active patients as well as from standardized patients, for the D3 class with evidence based review of relevant medical findings and their impact on oral health and clinical interventions. This will be done with a purpose to mitigate risk and improve patient care outcomes.

Course #	Course Title	Credits	Year	Term
HS 722	Junior Year Medicine Seminar	2	DS 3	Spring

Complex cases will be selected beyond the level of HS721 including those commonly requiring medical surgical intervention in concurrence with oral health care. Examples such as oncology patients, obstetric patients, and transplant patients will be examined. Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities will be continued in the seminar as well.

Course #	Course Title	Credits	Year	Term
HS 821	Senior Year Medicine Seminar	2	DS 4	Fall

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Continued development of advanced based cases including those on hospitalized patients.

Course #	Course Title	Credits	Year	Term
HS 822	Senior Year Medicine Seminar	2	DS 4	Spring

Weekly case-based seminars presenting existing dental and comprehensive care patients and their medical comorbidities. Continued development of advanced based cases including those on hospitalized patients.

Odontology

Course #	Course Title	Credits	Year	Term
----------	--------------	---------	------	------

Odont 511	Foundations of Odontology <i>LAL and CLIN</i>	6	DS 1	Fall
------------------	---	----------	-------------	-------------

This course will introduce students to infection control, the dental office and clinical care site, and provide initial skill in interaction with the patient and the patient's oral cavity. Students will enter the clinical setting with faculty and upper level students to provide limited aspects of oral care and join the oral health care team.

Course #	Course Title	Credits	Year	Term
Odont 521	Dental Anatomy <i>LAL and LAB</i>	6	DS 1	Fall

Anatomy of the teeth and associated structures is presented including the masticatory apparatus. Clinical correlations affecting function such as sleep disorders, temporomandibular disorders and growth and development anomalies are clinical correlates to explain function and structure in dental anatomy.

Course #	Course Title	Credits	Year	Term
Odont 522	Cariology	3	DS 1	Spring

The biology, phenotype, epidemiology, anatomical changes from caries is presented. The prevention of caries through CAMBRA is developed as well as strategies for management at all stages of the disease. The course introduces the pathways of caries as a regional and systemic disease.

Course #	Course Title	Credits	Year	Term
Odont 611	Operative Dentistry <i>LAL and LAB</i>	6	DS 2	Fall

The surgical treatment of caries and degenerative and congenital diseases of the enamel and dentin is presented through the development of technical skills to remove diseased portions of the teeth and to provide anatomical functional direct restorations of teeth. Prevention and minimally invasive procedures for caries management is emphasized. Laboratory session focus on the development of procedures and psychomotor skills using surgical armamentarium in a simulated clinical setting for the treatment of caries and other diseases of the enamel and dentin.

Course #	Course Title	Credits	Year	Term
Odont 621	Periodontology <i>LAL and LAB</i>	3	DS 2	Fall

The normal structure and function of the periodontium is presented. The pathology, microbiology, immunology, and pathophysiology of diseases of the periodontium is presented. Prevention, chronic disease management, and nonsurgical/minimally invasive procedures for periodontal diseases is emphasized. Laboratory session focus on the development of procedures and psychomotor skills using surgical armamentarium in a simulated clinical setting for the treatment of diseases of the periodontium.

Course #	Course Title	Credits	Year	Term
Odont 622	Periodontology LAL and LAB	3	DS 2	Spring

In-depth understanding of the etiology and progression of chronic periodontal diseases is developed in this course. The influence of systemic diseases such as HIV, diabetes mellitus, and obesity on the health of the periodontium is explored. Surgical interventions for the treatment of diseases of the periodontium is presented. The laboratory is focused on advanced techniques including flap surgery, guided tissue regeneration, socket preservation among others, as well as continued development of skills in curettage.

Course #	Course Title	Credits	Year	Term
Odont 632	Prosthodontics and Implant Dentistry: Removable Prosthodontics LAL and LAB	6	DS 2	Spring

The anatomic and pathophysiologic aspects of partial and full edentulism is presented. Development, construction, placement and maintenance of full and partial removable prosthodontic restorations is presented. The laboratory will include impressions, jaw occlusal registrations, gnathology, cast development and mounting, development of wax rims and occlusal scheme and teeth mounting.

Course #	Course Title	Credits	Year	Term
Odont 642	Endodontology: Diseases of the Pulp and Pathways of Odontogenic Infection, Endodontic Therapy and Technique LAL and LAB	3	DS 2	Spring

The diagnosis and treatment of the diseases of the dental pulp throughout life is presented. The biologic basis for treatment of diseases of the pulp is developed as well as the rationale for these methods. The laboratory will introduce students to the ortho-endodontic therapy methods including the use of magnification, access the pulp canals, instrumentation of the canals and obliteration of the pulpectomy site to clinical standards.

Course #	Course Title	Credits	Year	Term
Odont 662	Comprehensive Care Family Dentistry CLIN and LAB	3	DS 2	Spring

Treatment of caries and periodontal disease with discipline based faculty from operative dentistry, prosthodontics, endodontology and periodontology is carried out with the DS 2 as an active participant in the care team that includes a DS3 and DS 4. Students will participate in case presentations, medical record assessment and recording, and other aspects of the clinic activities. The laboratory will include a simulated clinic visit including OSCE record and electronic health record.

Course #	Course Title	Credits	Year	Term
Odont 741	Prosthodontics and Implant Dentistry: Fixed Prosthodontics <i>LAL and LAB</i>	6	DS 3	Fall

The indirect restoration of teeth and the indirect replacement of missing teeth with crowns and bridges is presented. Treatment planning for these restorations including occlusal, periodontal, caries assessment is presented. Other methods for indirect restoration including partial coverage indirect restoration is presented. The introduction of digital techniques for impression and CadCam restoration development is presented. The laboratory will provide practice with the surgical armamentarium for tooth preparation for fixed prosthetic restoration, for impressions with analog and digital methods and for the construction of fixed indirect restorations. The laboratory will also teach methods for provisional restoration of the fixed prosthodontic patient.

Course #	Course Title	Credits	Year	Term
Odont 761	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Fall

This daily clinic will focus on students developing their family of patients in conjunction with other members of their team headed by the faculty team leader. Emphasis on diagnosis and treatment planning and completion of initial urgent procedures will be carried out.

Course #	Course Title	Credits	Year	Term
Odont 752	Periodontology Seminar <i>SEM</i>	2	DS 3	Spring

Using a case-based format, the treatment planning, outcome assessment, management of medical and dental comorbidities among others of the patient with diseases of the periodontium is presented. Patient-centered, health systems informed, and culturally aware aspects of care are discussed through the case-based format.

Course #	Course Title	Credits	Year	Term
Odont 762	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 3	Spring

This daily clinic will further develop the completion of Phase 1 therapy, disease control mitigation of risk and initiation of preventive care in the patient family. The student will develop this under the leadership of the team leader. The student will also begin aspects of Phase 2 therapy, reconstructive dentistry and address other comorbidities in patient care.

Course #	Course Title	Credits	Year	Term
Odont 841	Periodontology Seminar <i>SEM</i>	2	DS 4	Fall

Using case-based format, interdisciplinary problems especially with orthodontics, endodontics and prosthodontic consideration will be developed through patient presentations of patients of record or via the OSCE format. Further exploration of comorbidities in periodontal diseases will be developed.

Course #	Course Title	Credits	Year	Term
Odont 851	Prosthodontics and Implant Dentistry: Implant Surgery and Prosthodontic Reconstruction	3	DS 4	Fall

The replacement of missing teeth utilizing dental implants is presented. This course includes the biomechanics of implants, concepts of osseointegration, restoration options for implants, implant systems and the placement of implants. The laboratory will teach the placement of implants including appropriate assessment and osteotomies, and the restoration of implants using indirect and direct techniques.

Course #	Course Title	Credits	Year	Term
Odont 861	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Fall

This clinical practicum will focus on the daily clinical activities of a practicing dentist including all intake, comprehensive care, case management issue extant under the leadership of the team leader. The DS 4 will also demonstrate leadership of the oral healthcare team including DS2 and 3 students and the dental assisting and dental hygiene staff through cooperation and assessment of outcomes of care.

Course #	Course Title	Credits	Year	Term
Odont 862	Comprehensive Care Family Dentistry <i>CLIN</i>	8	DS 4	Spring

The final semester of comprehensive care family dentistry will focus on the completion of phase 2 care for patients of record, increasing facility in providing initial evaluation and care of the dental patient, and addressing complex issues in care including those associated to overall health, stages of life, cultural awareness among others.

Oral and Maxillofacial Studies

Course #	Course Title	Credits	Year	Term
OMFS 511	Foundations of Dental Medicine <i>LAL</i>	3	DS 1	Fall

This course will focus on introduction to the patient/doctor relationship, the role of dental medicine in health care, the scientific basis of the pathophysiology, diagnostic methods, and treatment modalities of major oral diseases. Examples will include congenital diseases such as cleft lip and palate, degenerative diseases such as rheumatoid arthritis, neoplastic disease such as oral squamous cancer, traumatic diseases such as facial fracture, and infectious disease such as HPV.

This course includes a review of biochemistry relevant to the medical school first and second year HS courses to match the coursework provided to the MD students in foundations of medicine.

Course #	Course Title	Credits	Year	Term
OMFS 512	Oral Microbiology/Immunology <i>LAL</i>	3	DS 1	Spring

The oral microbiome in health and disease is presented including the ecologic niches of the oral region: periodontium, teeth, mucosa, nasopharynx, and salivary glands. The virology of the upper airway mouth and pharynx is presented including HPV, HIV, and acute viral diseases. The presence of prions and their potential role in disease is presented. The host response resulting in homeostasis or the initiation of infection is reviewed

Course #	Course Title	Credits	Year	Term
OMFS 532	Surgical Anatomy of the Head and Neck <i>LAL and LAB</i>	2	DS 1	Spring

The structures of the viscerocranium are presented including osteology, myology, cranial nerve peripheral anatomy, salivary glands, lymphatics, arterial supply and venous drainage. In-depth understanding of fascial planes, infratemporal fossa, triangles of the neck, myology of the mandible and maxilla will be presented with clinical illustrations as to their utility in dental medicine practice.

Course #	Course Title	Credits	Year	Term
OMFS 621	Dental Medicine at All Stages of Life	3	DS 2	Fall

Growth, development, function and the human experience from birth to death will be presented including the impact of oral health and oral health interventions, prevention, disease promotion and treatment at all stages. This topic is developed from the biologic, social, economic and cultural aspects of the human experience.

Course #	Course Title	Credits	Year	Term
OMFS 631	Dental Anesthesiology 1: Local Anesthesia <i>LAL and LAB</i>	3	DS 2	Fall

The pharmacology of local anesthesia, armamentarium for administration and technique for administration is presented. Local and systemic complications of administration, contraindications and comorbidities are presented. The laboratory will demonstrate and practice technique of local anesthesia administration on analogy and haptic simulators.

Course #	Course Title	Credits	Year	Term
OMFS 641	Oral Radiology 1 <i>LAL and LAB</i>	3	DS 2	Fall

The physics of ionizing radiation and the development of Roentgen's methods are presented. The components of clinical equipment to emit radiation and sensors, both analog and digital are presented. The interpretation of oral radiographs, periapical and bite wing radiographs is developed. Intraoral radiographs using a simulator are performed in the laboratory.

Course #	Course Title	Credits	Year	Term
----------	--------------	---------	------	------

OMFS 632	Dental Anesthesiology 2: Pain and Anxiety Control, Analgesia, Medical Management of Local Anesthesia Patients	3	DS 2	Spring
-----------------	--	----------	-------------	---------------

The risks of local anesthesia detection and management are presented. Understanding pain and anxiety in dental practice through assessment methods is presented. The pharmacologic and nonpharmacological means of mitigating pain and anxiety in dental care is presented. This includes the use of nitrous oxide, oral anxiolysis, and parenteral drugs.

Course #	Course Title	Credits	Year	Term
OMFS 642	Oral Pathology/Oral Medicine 1 <i>LAL and LAB</i>	3	DS 2	Spring

The significant tumors, anomalies, oral manifestations of systemic disease and other pathologies of the oral and maxillofacial region are presented. The laboratory will focus on the gross pathology and microscopic pathology of the oral and maxillofacial region

Course #	Course Title	Credits	Year	Term
OMFS 652	Orthodontics and Craniofacial Growth and Development <i>LAL and LAB</i>	3	DS 2	Spring

Principles of craniofacial growth and development will be presented. Abnormalities leading to malocclusion and dentofacial deformities will be shown. Methods of diagnosing disorders of dental facial growth and development will be understood and utilized by students. Orthodontic interventions for these conditions including methods, and outcomes will be shown. The laboratory will concentrate on diagnosis and orthodontic treatment methods.

Course #	Course Title	Credits	Year	Term
OMFS 751	Oral Radiology 2	3	DS 3	Fall

The understanding of Panoramic, planar films, CT, MRI. Nuclear medicine, and non-ionizing methods of image acquisition is presented. Comparison of these methods and appropriate case selection for these studies is presented. The utility in treatment planning and integration with other digital treatment planning methods is shown. The diagnosis of pathology via these methods is developed.

Course #	Course Title	Credits	Year	Term
OMFS 761	Principles of Oral Surgery <i>LAL and LAB</i>	3	DS 3	Fall

The principles of aseptic technique, flap design, surgical access, surgical hemostasis, infection prevention, and wound healing are presented. Technique for the removal of erupted and non-erupted teeth, both surgically and via forceps and elevator is presented. Preprosthetic surgical technique and minor soft tissue surgery including biopsy is presented. The laboratory will focus on the surgical and nonsurgical removal of teeth and on soft tissue surgery and biopsy.

Course #	Course Title	Credits	Year	Term
OMFS 771	Pediatric Dentistry <i>LAL and LAB</i>	3	DS 3	Fall

Child development and child management in the clinical setting will be developed from a holistic and family based perspective. Major diseases in growth and development of the oral cavity will be elucidated. The development of the deciduous and mixed dentition along with craniofacial development is presented. Caries diagnosis, treatment and prevention in the deciduous dentition is shown. The laboratory will provide simulated clinical experiences in caries treatment, deciduous crowns, space maintenance, and care of the pediatric patient.

Course #	Course Title	Credits	Year	Term
OMFS 742	Oral Pathology/Oral Medicine 2	3	DS 3	Spring

Further development of the oral manifestations of systemic disease is presented with emphasis on diabetes, hematologic bleeding disorders, hematologic malignancies, lymphomas, myeloma, xerostomic diseases, autoimmune disease, maxillofacial movement disorders, other neurologic diseases such as Parkinson's, with oral manifestations.

Course #	Course Title	Credits	Year	Term
OMFS 752	Clinical Clerkship: Pediatric Dentistry <i>4 weeks, 30 hours per week plus call</i>	8	DS 3	Spring

The student will engage in clinical experiences in the pediatric dentistry clinic as a member of the care team, treating patients under the supervision of pediatric dentistry faculty. Consultation on pediatric patients referred for oral conditions via pediatric medicine will occur.

Course #	Course Title	Credits	Year	Term
OMFS 762	Advanced Topics in Oral and Maxillofacial Surgery	2	DS 3	Spring

Understanding of major conditions of the oral and maxillofacial region requiring surgical intervention is presented. This includes diagnostic features, techniques for corrective surgery and outcome assessment. Categories include the treatment of facial trauma, ablative tumor surgery of the head and neck, cleft lip and palate surgery, craniofacial surgery, orthognathic surgery, reconstructive surgery of the jaws and face, and surgical treatment of temporomandibular disorders.

Course #	Course Title	Credits	Year	Term
OMFS 772	Clinical Clerkship: Oral and Maxillofacial Surgery <i>4 weeks, 30 hours per week plus call</i>	8	DS 3	Spring

The students will enter the oral and maxillofacial surgery care team for this clerkship including the care of patients for dentoalveolar surgery, major maxillofacial surgery and complex conditions of the head and neck. Clinical experience in ambulatory oral surgery and anesthesia and assisting for maxillofacial surgery in the operating room including emergency and trauma care occurs. Participation in hospital rounds and conferences occurs.

Course #	Course Title	Credits	Year	Term
OMFS 851	Oral Radiology Seminar	2	DS 4	Fall

This case-based seminar will present findings using all methods in OMFS 651 and OMFS 751 to demonstrate through active learning the radiographic findings in key diseases of the oral and maxillofacial region.

Course #	Course Title	Credits	Year	Term
OMFS 862	Oral Pathology/Oral Medicine Seminar	2	DS 4	Spring

Concentration on oral medicine will include the risk assessment and management of complex systemic diseases related to dental medicine care in dental practice. Case-based discussion on the dental medicine patient with HIV, ongoing chemotherapy for malignancy, osteoporosis/osteopenia among others will be presented by students in seminar format.

Course #	Course Title	Credits	Year	Term
----------	--------------	---------	------	------

OMFS 862	Clinical Clerkship: Orthodontics <i>4 hours per week for 8 weeks</i>	2	DS 4	Spring
-----------------	---	----------	-------------	---------------

Students will enter the orthodontic care team providing diagnostic and treatment services for patients undergoing orthodontic care under the auspices of orthodontic faculty in College of Dental Medicine clinics.

Behavioral and Social Sciences

Course #	Course Title	Credits	Year	Term
BSS 501	Managing Student Life	1	DS 1	Fall

Resilience, sustainability as a student and future health professional will be presented. Managing student debt, stress management, effects of social media, interpersonal relationships, and ethics in student practice will be discussed. The problems of drug and alcohol abuse will be shown. Respect in the University including cultural, gender, and sexual conduct issues will be presented. Students will be made aware of resources to promote student wellbeing.

Course #	Course Title	Credits	Year	Term
BSS 522	Ethics in Dental Medicine and Health Care	2	DS 1	Spring

The fundamentals of dental and medical ethics are presented including beneficence and non-maleficence. The Helsinki statement and other aspects of human research guidelines are presented including the role of Human Studies committees. The care of animals in biomedical research is discussed as well as the ethical use of human tissue in clinical care, transplant medicine etc. Ethical financial relationships and the underlying law behind them in clinical practice is discussed. The role of the criminal, tort system, the Board of Dentistry of California, and the ADA in dental ethics is presented.

Course #	Course Title	Credits	Year	Term
BSS 662	Behavioral Medicine (CP Course)	3	DS 2	Spring

In this course aspects of clinical psychology of importance in dental practice is presented. Case-based learning will include: minor and major psychiatric illnesses impacting on oral health and the provision of oral health care; elder, spousal and child abuse; dental fear; and, dental phobias.

Course #	Course Title	Credits	Year	Term
BSS 701	Dental Public Health	2	DS 3	Fall

The fundamentals of public health are presented including health and public health measures for health protection, protection from disease and health promotion. The surgeon general's report, 2000, updated 2019, on the status of oral health in America is presented. WHO assessment of oral health globally is presented. Population based initiative to improve oral health are discussed with a focus on clean water and fluoride exposure.

Course #	Course Title	Credits	Year	Term
BSS 721	Practice Management 1	2	DS 3	Fall

Addressing issues of student debt, career path, and modes of practice will be presented. Operating a dental practice via solo or group practice model and in health systems based practice will be discussed. Issues including human resources management, the actions of the care team in practice and financial responsibility and accounting will be presented.

Course #	Course Title	Credits	Year	Term
BSS 861	Clinical Clerkship: Community-based Education <i>4 weeks, 30 hours per week plus call</i>	8	DS 4	Fall

Affiliated health systems based practices will accept CNU students into their care teams where senior students will provide clinical care under the supervision of Volunteer Community-Based Faculty in those sites. Suitable transportation and housing will be arranged for where needed. The purpose of the course is to provide community engagement with the constituencies served, to gain experience in community-based clinical care and to interact with the interprofessional and intraprofessional care team

Course #	Course Title	Credits	Year	Term
BSS 871	Seminar in Dental Public Health	2	DS 4	Fall

This weekly seminar develops through case based discussions led by student teams the public health issues in oral health in California and globally including access to care, social determinants of oral health, scope of practice issues, insurance and payment systems for oral health, access to fluoride, immunizations especially for HPV, and health protection for vulnerable populations such as children and elderly.

Course #	Course Title	Credits	Year	Term
BSS 822	Practice Management 2	2	DS 4	Spring

The simulation of dental practices in various models will be developed by students in groups including addressing issues of hiring, overhead, interaction with vendors, staff development, marketing, accounting and all operations in dental practice. The regulatory environment for pricing, dental insurance, health insurance will be reviewed as well as all aspects of the operation of dental practices.

Course #	Course Title	Credits	Year	Term
BSS 862	Clinical Clerkship: Community-based Education <i>4 weeks, 30 hours per week plus call</i>	8	DS 4	Spring

This course will be at a second community-based rotation site to elaborate on the activities of the first rotation and engage a new community and a new clinic. In addition to comprehensive care experience, the student will compare and contrast communities and clinical care entities and provide a reflective essay on their community care experience.

Course #	Course Title	Credits	Year	Term
BSS 872	Senior Elective Clinical Clerkship	6	DS 4	Spring

D4 students will select from additional clerkships available at clinical sites either discipline based or comprehensive care in odontology, oral and maxillofacial studies or human studies. Examples include comprehensive care at a remote clinic (odontology), dental specialty clerkship in oral maxillofacial surgery (OMFS), clerkship in internal medicine (Human Studies), or population health study abroad or in US (BSS).

Credit Hours and Student Contact Hours

Curriculum Theme	Credit Hours	Year	Credit Hours	Contact Hours
Human Systems	58	Year 1	55	1140
Odontology	84	Year 2	66	1380
OMFS	62	Year 3	60	1590
BSS	36	Year 4	59	1470
Total	240		240	5580

Appendix D-6 Program Announcement

DMD Program Learning Outcomes (PLOs)

PLO 1: Patient-Centered Care

Demonstrate understanding of healthcare disparities and cultural awareness and capability in patient counseling and providing appropriate patient advocacy

Indicators	Initial	Developing	Developed	Proficient
1.1. Education. Demonstrates ability to educate all audiences through effectively communicating information and assessing learning	<ul style="list-style-type: none"> Does not appropriately counsel patients Does not check for understanding, ask questions, and/or asks inappropriate questions. Does not demonstrate the ability to find and utilize appropriate resources and references necessary for providing accurate counseling, consultation and education 	<ul style="list-style-type: none"> Counsels patients but leaves out pertinent information needed by patient Communicates with basic level of clarity but does not always check for understanding or rephrase when confusion occurs. Demonstrates the ability to find a one or two resources, yet the resources are not the best or most appropriate for providing accurate counseling, consultation and education 	<ul style="list-style-type: none"> Generally demonstrates empathy, communicates accurate information clearly, checks for understanding Seeks to ensure understanding and generally asks questions. Frequently demonstrates the ability to find and utilize appropriate resources and references necessary for providing accurate counseling, consultation and education 	<ul style="list-style-type: none"> Consistently demonstrates empathy, communicates accurate information clearly, checks for understanding Ensures understanding and asks appropriate questions. Consistently demonstrates the ability to find and utilize appropriate resources and references for providing accurate patient counseling, consultation and education
1.2. Patient advocacy. Represents the patient's best interests	<ul style="list-style-type: none"> Does not demonstrate the ability represent a patient's best interest 	<ul style="list-style-type: none"> Demonstrates awareness of issues that impact a patient Demonstrates minimal ability to articulate these issues but does not demonstrate ability to sufficiently advocate on a patient's behalf 	<ul style="list-style-type: none"> Demonstrates sufficient awareness of issues that impact a patient Demonstrates ability to articulate these issues Demonstrates ability to sufficiently advocate on a patient's behalf 	<ul style="list-style-type: none"> Demonstrates full awareness of the most important issues that impact a patient Demonstrates ability to clearly and effectively articulate these issues Demonstrates ability to effectively advocate on a patient's behalf

Appendix D-6 Program Announcement

PLO 2: Evidence-Based Care.

Apply sound, current, and evidence-based oral healthcare within the scope of general dentistry

Indicators	Initial	Developing	Developed	Proficient
2.1. Patient-centered care. Demonstrates ability to provide patient-centered care as the medication expert (collect and interpret evidence, prioritize, formulate assessments and recommendations, implement, monitor and adjust plans, and document activities)	<ul style="list-style-type: none"> Does not demonstrate ability to provide patient-centered care at the medication expert level; e.g., demonstrates ability to collect but not sufficiently interpret evidence, does not prioritize, formulates basic assessments and recommendations, does not sufficiently monitor and adjust plans nor document activities. 	<ul style="list-style-type: none"> Demonstrates ability to provide patient-centered care as the medication expert in some, but not all, areas as follows: collect and interpret evidence, prioritize, formulate assessments and recommendations, implement, monitor and adjust plans, and document activities 	<ul style="list-style-type: none"> Demonstrates ability to provide patient-centered care as the medication expert (generally demonstrates ability to collect and interpret evidence, prioritize, formulate assessments and recommendations, implement, monitor and adjust plans, and document activities) 	<ul style="list-style-type: none"> Demonstrates ability to provide sufficient patient-centered care as the expert (collects and interprets evidence, prioritizes, formulates assessments and recommendations, implements, monitors and adjusts plans, and documents activities)
2.2. Systems management. Demonstrates ability to manage patient healthcare needs using human, financial, technological, and physical resources to optimize the safety and efficacy of medication use systems	<ul style="list-style-type: none"> Does not demonstrate understanding of oral healthcare delivery systems parts Does not demonstrate understanding of the forces that influence components of the oral healthcare delivery system, including their connection to patient care Does not demonstrate understanding of any challenges to systems that affect oral healthcare delivery Does not demonstrate understanding of how to work with different subsystems to deliver oral healthcare 	<ul style="list-style-type: none"> Demonstrates understanding of some parts of oral healthcare delivery systems but does not identify how they are related to each other Demonstrates understanding of some forces that influence the parts of healthcare delivery systems, but demonstrate minimal understanding of their connection to patient care Demonstrates understanding of some challenges that can affect delivery of oral healthcare Demonstrates some understanding of how to work with different subsystems and how they function to deliver oral healthcare, but demonstrate minimal awareness or understanding of one's own role within the oral healthcare delivery system 	<ul style="list-style-type: none"> Demonstrates understanding of most major components of oral healthcare systems and their respective relationships Demonstrates understanding of the forces that influence the components of healthcare delivery systems, and demonstrate some understanding of their influence on the quality of patient care Demonstrates understanding of most challenges that can affect delivery of oral healthcare, but does not demonstrate complete comprehension of the effects Demonstrates basic understanding of how to work with different subsystems and how they function to deliver oral healthcare and demonstrate some understanding of one's role within the oral healthcare delivery system, but does not necessarily demonstrate 	<ul style="list-style-type: none"> Demonstrates understanding of the major components of oral healthcare systems, their respective relationships, and their functions related to patient care Demonstrates thorough understanding of the forces that influence components of healthcare delivery systems and demonstrate full understanding of their influence and implications on the quality of patient care Demonstrates understanding of pertinent challenges to specific aspects of healthcare delivery by demonstrating abilities to thoroughly discuss the implications for the appropriate parts of oral health care delivery systems Demonstrates excellent understanding of how to work with different subsystems involved while also demonstrating understanding of one's role within the subsystems,

Appendix D-6 Program Announcement

				application of knowledge in a manner that maximizes the quality of oral healthcare	and demonstrate appropriate application of knowledge in a manner that maximizes the quality of oral healthcare
2.3. Health and wellness. Designs prevention, intervention, and educational strategies for individuals and communities to manage chronic disease and improve oral health and wellness	<ul style="list-style-type: none">Does not demonstrate understanding of how the arts can be utilized to optimize patients' well-being	<ul style="list-style-type: none">Demonstrates knowledge of some of the ways that the arts can be utilized to optimize patients' well-being	<ul style="list-style-type: none">Demonstrates sufficient knowledge of multiple ways that the arts can be utilized to optimize patients' well-being	<ul style="list-style-type: none">Demonstrates thorough knowledge of the ways that the arts can be utilized to optimize patients' well-being and creatively applies this knowledge to improve well-being and the practice and delivery of oral healthcare	
2.4. Population-based care. Demonstrates understanding of how population-based care influences patient-centered care and the development of practice guidelines and evidence-based best practices	<ul style="list-style-type: none">Does not demonstrate awareness of population-based care.	<ul style="list-style-type: none">Demonstrates minimal understanding of population-based care and how it influences patient-centered careDoes not demonstrate awareness of how these notions influence the development of practice guidelines	<ul style="list-style-type: none">Demonstrates sufficient understanding of population-based care and how it influences patient-centered careDemonstrates sufficient understanding of how population-based care influences the development of practice guidelines and best practices for patient care	<ul style="list-style-type: none">Demonstrates superb understanding of population-based care and how it influences patient-centered careDemonstrates superb understanding of how population-based care influences the development of practice guidelines and demonstrates knowledge of best practices for patient care	

Appendix D-6 Program Announcement

PLO 3: Culturally Competent, Empathic Communication.

Demonstrate patient centered, empathic and culturally competent communication and interpersonal skills

Indicators	Initial	Developing	Developed	Proficient
3.1. Empathy. Demonstrates the ability to communicate with the patient empathically.	<ul style="list-style-type: none"> Does not demonstrate the ability to communicate with the patient empathically. 	<ul style="list-style-type: none"> Demonstrates some ability, but experiences lapses in the ability to communicate empathically 	<ul style="list-style-type: none"> Demonstrates the ability to communicate empathically, with few lapses. 	<ul style="list-style-type: none"> Demonstrates an advanced ability, and never experiences lapses in communicating empathically.
3.2. Cultural competence. Demonstrates the ability to engage in communication with the patient that is culturally aware and accepting.	<ul style="list-style-type: none"> Does not demonstrate communication and interactions that convey respect or concern for patients and the community. Does not demonstrate an awareness of customs, beliefs, or perspectives in diverse patients Does not demonstrate awareness of cultural and linguistic needs of patients in order to communicate health information 	<ul style="list-style-type: none"> Demonstrates communication and interactions characteristic of a minimal level of respect, and little concern for patients and the community is apparent through use of some appropriate communication, but student does not employ follow-up questions for clarification, when necessary, and student provides inappropriate detail in responses Demonstrates a minimal level of awareness of customs, beliefs, or perspectives in diverse patients Demonstrates minimal awareness of cultural and linguistic needs of patients; either does not or only attempt to adapt behaviors, but does so ineffectively, to communicate health information 	<ul style="list-style-type: none"> Demonstrates appropriate communication and interactions that are characteristic of a basic level of respect, and concern for patients and the community is apparent through use of appropriate communication, where student uses some clear, but not necessarily relevant or detailed, follow-up questions and responses Demonstrates awareness of customs and beliefs, but may not clarify with patients about personal perspectives Demonstrates awareness of the cultural and linguistic needs of diverse patients, and adapt behaviors to communicate health information, but communication may not be effective 	<ul style="list-style-type: none"> Demonstrates professional communication and interactions by showing empathy, respect, and concern for patients and the community through use of appropriate communication where follow-up questions (as needed) and responses are clear, relevant, and detailed Demonstrates awareness of customs, beliefs, or perspectives in diverse patients; ask appropriate questions to clarify perspectives and perceptions in diverse patients Demonstrates full awareness of and responsiveness to cultural and linguistic needs of diverse patients by adapting behaviors appropriately in order to effectively communicate health information

Appendix D-6 Program Announcement

PLO 4: Oral and Written Communication.

Demonstrate sound oral and written communications in patient care

Indicators	Initial	Developing	Developed	Proficient
4.1. Oral communication. Demonstrate sound oral communication in patient care.	<ul style="list-style-type: none"> Does not demonstrate logical reasoning in oral communications in patient care. Does not demonstrate the ability to cite sound evidence that support ideas within presentations or discussions. 	<ul style="list-style-type: none"> Demonstrates some logical reasoning in oral communications in patient care but demonstrates some lapses. Demonstrates some ability to cite sound evidence that support ideas within presentations or discussions, but demonstrates some lapses. 	<ul style="list-style-type: none"> Generally demonstrates logical reasoning in oral communications in patient care. Generally demonstrates the ability to cite sound evidence that support ideas within presentations or discussions. 	<ul style="list-style-type: none"> Consistently demonstrates logical reasoning in oral communications in patient care. Consistently demonstrates the ability to cite sound evidence that support ideas within presentations or discussions.
4.2. Written communication. Demonstrate sound written communication in patient care.	<ul style="list-style-type: none"> Does not demonstrate logical reasoning in written communications in patient care. Does not demonstrate the written ability to cite sound evidence that support ideas. 	<ul style="list-style-type: none"> Demonstrates some logical reasoning in written communications in patient care but demonstrates some lapses. Demonstrates some written ability to cite sound evidence that support ideas, but demonstrates some lapses. 	<ul style="list-style-type: none"> Generally logical reasoning in written communications in patient care. Generally demonstrates the written ability to cite sound evidence that support ideas. 	<ul style="list-style-type: none"> Consistently demonstrates logical reasoning in written communications in patient care. Consistently demonstrates the written ability to cite sound evidence that support ideas.

Appendix D-6 Program Announcement

PLO 5: Critical Thinking.

Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care

Indicators	Initial	Developing	Developed	Proficient
5.1. Problem solving. Identifies problems; explore and prioritize potential strategies; and designs, implements, and evaluates viable solutions	<ul style="list-style-type: none"> Is not able to correctly identify the problem or issue being considered. Does not identify appropriate resources. Includes extraneous information or inappropriate or insufficient resources. Does not demonstrate understanding of the content of materials reviewed. Makes inappropriate inferences. Does not evaluate possible alternatives or generates ideas that are illogical or extraneous to issue at hand. Does not propose a solution or does not articulate decision. Does not adequately provide rationale for selected alternative or decision 	<ul style="list-style-type: none"> Identifies the problem or issue but does not demonstrate awareness of all the factors associated with the problem or issues that impact decision making. Identifies a few, but not all, resources needed for decision making. Demonstrates ability to interpret some information and data but not all. Does not fully or effectively evaluate alternative solutions. Proposes a decision with many apparent weaknesses (i.e., not feasible, lack of regard for consequences, lack of supporting evidence, illogical, irrelevant to issue at hand, etc.). Provides rationale for selected alternative or decision but does not build a solid position with supporting evidence. Is unable to defend decision or course of action. 	<ul style="list-style-type: none"> Correctly identifies problem or issue being considered and demonstrates adequate awareness of the factors associated with this problem or issue that impact decision making. Identifies most of the resources needed. Demonstrates ability to interpret most information and data. Considers and evaluates possible solutions in a way that generally leads to a logical decision or course of action. Proposes a solution that does not contain apparent weaknesses that may or may not be the obvious clear choice. Solutions chosen demonstrate consideration of most of the strengths, weaknesses, feasibility, effects, consequences, relevance, etc.). Provides rationale for selected alternative or decision which includes some solid supporting evidence. Is able to defend decision or course of action at a basic level. 	<ul style="list-style-type: none"> Consistently correctly identifies the problem or issue being considered and all of the primary factors associated with this problem or issue that impact decision making. Articulates the importance of these factors. Identifies all appropriate resources. Demonstrates ability to correctly interpret information and data needed for appropriate decision making. Demonstrates awareness of importance of these data in decision-making process. Considers and evaluates possible solutions effectively and thoroughly. Evaluation leads to sound, logical, and "best" decision or course of action. Proposes a solution that is entirely appropriate to the situation at hand. Solutions chosen demonstrate consideration of all of the important and relevant strengths, weaknesses, feasibility, effects, consequences, etc.). Provides rationale for selected alternative or decision and builds a solid position with appropriate and relevant supporting evidence. Effectively defends decision or course of action.

Appendix D-6 Program Announcement

PLO 6: Ethics and Professionalism.

Demonstrating professionalism and ethical decision making

Indicators	Initial	Developing	Developed	Proficient
6.1. Professionalism. Demonstrates behaviors and values that are consistent with the trust given to the profession by patients, other healthcare providers, and society	<ul style="list-style-type: none"> Does not consistently demonstrate professional attitudes and behaviors (altruism, excellence, duty, accountability, honesty, and integrity) Demonstrates frequent lapses in accountability or quality of work 	<ul style="list-style-type: none"> Demonstrates some professional attitudes and behaviors yet there is inconsistency that may impede on the quality of work or treatment of patients and other healthcare team members (altruism, excellence, duty, accountability, honesty, and integrity) 	<ul style="list-style-type: none"> Generally demonstrates most of the professional attitudes and behaviors (altruism, excellence, duty, accountability, honesty, and integrity) that are required in the profession Demonstrates ability to use these behaviors and values to improve healthcare 	<ul style="list-style-type: none"> Consistently demonstrates the professional attitudes and behaviors that uphold the integrity and competence of the work and the treatment of patients and other healthcare team professionals (altruism, excellence, duty, accountability, honesty, and integrity) Consistently uses these behaviors and values to improve healthcare
6.2. Ethics. Demonstrates the ability to make decisions consistent with the values of practitioners and scholars of oral healthcare.	<ul style="list-style-type: none"> Does not make ethical decisions consistent with the values of practitioners and scholars of oral healthcare. 	<ul style="list-style-type: none"> Demonstrates the ability to exercise ethical decision making, and a rudimentary knowledge of ethics within oral healthcare. 	<ul style="list-style-type: none"> Demonstrates the ability to exercise clear and ethical decision making, and a sufficient knowledge of ethics within oral healthcare. 	Demonstrates the ability to exercise clear and ethical decision making, and an advanced knowledge of ethics within oral healthcare.

Appendix D-6 Program Announcement

PLO 7: Biomedical Sciences Knowledge.

Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare

Indicators	Initial	Developing	Developed	Proficient
7.1. Diagnostic and pharmacologic. Demonstrates the ability to describe how to deliver patient assessments, knowledge of medicines, and delivering diagnoses.	<ul style="list-style-type: none"> Does not demonstrate the ability to describe diagnostic and pharmacologic knowledge related to oral health. 	<ul style="list-style-type: none"> Demonstrates a rudimentary ability to describe diagnostic and pharmacologic knowledge related to oral health. 	<ul style="list-style-type: none"> Demonstrates a sufficient ability to describe diagnostic and pharmacologic knowledge related to oral health. 	<ul style="list-style-type: none"> Demonstrates an advanced ability to describe diagnostic and pharmacologic knowledge related to oral health.
7.2. Orofacial pain/temporomandibular/ Sleep disorder. Demonstrates the ability to describe the anatomical, physiological, and neurological basis; classification, epidemiology, and etiology; and assessments and treatments of orofacial pain, temporomandibular joint disease, and sleep disorders.	<ul style="list-style-type: none"> Does not demonstrate the ability to describe scientific or assessment knowledge related to OFP/TMJ disease and sleep disorders. 	<ul style="list-style-type: none"> Demonstrates a rudimentary ability to describe scientific or assessment knowledge related to OFP/TMJ disease and sleep disorders. 	<ul style="list-style-type: none"> Demonstrates a sufficient ability to describe scientific or assessment knowledge related to OFP/TMJ disease and sleep disorders. 	<ul style="list-style-type: none"> Demonstrates an advanced ability to describe scientific or assessment knowledge related to OFP/TMJ disease and sleep disorders.
7.3. Maxillofacial pathology Demonstrates the ability to describe the scientific aspects of head and neck diseases, as well as knowledge of assessment and diagnosis.	<ul style="list-style-type: none"> Does not demonstrate the ability to describe the scientific or assessment knowledge related to head and neck diseases. 	<ul style="list-style-type: none"> Demonstrates a rudimentary ability to describe the scientific or assessment knowledge related to head and neck diseases. 	<ul style="list-style-type: none"> Demonstrates a sufficient ability to describe the scientific or assessment knowledge related to head and neck diseases. 	<ul style="list-style-type: none"> Demonstrates an advanced ability to describe the scientific or assessment knowledge related to head and neck diseases.

Appendix D-6 Program Announcement

PLO 8: Practice Management.

Apply legal, regulatory, and business management concepts related to the provision of oral healthcare services

Indicators	Initial	Developing	Developed	Proficient
8.1. Legal aspects Applies legal and regulatory concepts related to the provision of oral healthcare services.	<ul style="list-style-type: none"> Does not demonstrate an understanding or the ability to apply legal and regulatory concepts related to the provision of oral healthcare services. 	<ul style="list-style-type: none"> Demonstrates a rudimentary understanding and ability to apply legal and regulatory concepts related to the provision of oral healthcare services. 	<ul style="list-style-type: none"> Demonstrates a sound understanding and ability to apply legal and regulatory concepts related to the provision of oral healthcare services. 	<ul style="list-style-type: none"> Demonstrates an advanced understanding and ability to apply legal and regulatory concepts related to the provision of oral healthcare sciences.
8.2. Business management Applies business management concepts to the provision of oral healthcare services.	<ul style="list-style-type: none"> Does not demonstrate an understanding or the ability to apply business management concepts related to the provision of oral healthcare services. 	<ul style="list-style-type: none"> Demonstrates a rudimentary understanding and ability to apply business management concepts related to the provision of oral healthcare services. 	<ul style="list-style-type: none"> Demonstrates a sound understanding and ability to apply business management concepts related to the provision of oral healthcare services. 	<ul style="list-style-type: none"> Demonstrates an advanced understanding and ability to apply business management concepts related to the provision of oral healthcare sciences.

DMD Co-Curricular Learning Outcomes (CoCuLOs)

CoCuLO	Initial	Developing	Developed	Proficient
1. Social Awareness and Cultural Sensitivity Students demonstrate awareness of and responsiveness to social and cultural differences by adapting behaviors appropriately and using effective interpersonal skills	<ul style="list-style-type: none"> Does not demonstrate awareness of others' feelings in relation to social or cultural differences Does not adapt behaviors to current social or cultural situations 	<ul style="list-style-type: none"> Demonstrates some demonstrate awareness of others' feelings in relation to social or cultural differences Demonstrates ability to adapt behaviors to current social or cultural situations 	<ul style="list-style-type: none"> Generally demonstrates awareness of others' feelings in relation to social or cultural differences Frequently demonstrates ability to adapt behaviors to current social or cultural situations 	<ul style="list-style-type: none"> Consistently demonstrates awareness of others' feelings in relation to social or cultural differences Consistently demonstrates ability to adapt behaviors to current social or cultural situations, as displayed by use of all of the following: appropriate language, use respectful tone, verification of understanding
2. Professionalism and Advocacy Students demonstrate professional behavior with other healthcare professionals and advocate for initiatives to improve patient care	<ul style="list-style-type: none"> Does not consistently demonstrate professional attitudes or behaviors Does not advocate for initiatives to improve patient care 	<ul style="list-style-type: none"> Demonstrates some professional attitudes and behaviors Occasionally advocates for initiatives to improve patient care 	<ul style="list-style-type: none"> Generally demonstrates professional attitudes and behaviors Often demonstrates ability to use these behaviors and values to improve healthcare 	<ul style="list-style-type: none"> Consistently demonstrates professional attitudes and behaviors Consistently demonstrates ability to use these behaviors and values to improve healthcare
3. Self-Awareness and Learning Students demonstrate self-awareness through reflection and appropriate planning of self-directed learning and career advancement	<ul style="list-style-type: none"> Does not demonstrate self-awareness of own biases impacting ability to work with others Does not show ability to reflect on own knowledge, skills, abilities, and experiences Does not seek opportunities for personal growth 	<ul style="list-style-type: none"> Demonstrates minimal self-awareness of own biases impacting ability to work with others Demonstrates rudimentary ability to reflect on own knowledge, skills, abilities, and experiences. Occasionally seeks opportunities for 	<ul style="list-style-type: none"> Often demonstrates self-awareness of own biases impacting ability to work with others Demonstrates some ability to reflect on own knowledge, skills, and experiences Often seeks opportunities for personal growth and self-directed learning 	<ul style="list-style-type: none"> Consistently demonstrates self-awareness of own biases impacting ability to work with others Demonstrates ability to reflect on own knowledge, skills, and experiences Regularly seeks opportunities for personal growth and self-directed learning

	and self-directed learning	personal growth and self-directed learning		
4. Innovation/ Entrepreneurship Students demonstrate innovation and creativity in accomplishing professional goals	<ul style="list-style-type: none"> Does not demonstrate innovation and creativity in accomplishing professional goals 	<ul style="list-style-type: none"> Demonstrates minimal innovation and creativity in accomplishing professional goals 	<ul style="list-style-type: none"> Demonstrates innovation and creativity but professional goals may not be feasible or appropriate 	<ul style="list-style-type: none"> Consistently demonstrates innovation and creativity in accomplishing professional goals
5. Public Health and Education Students apply learned skills to deliver public health initiatives and education to the community	<ul style="list-style-type: none"> Does not apply learned skills to deliver public health initiatives and education to the community 	<ul style="list-style-type: none"> Demonstrates difficulty applying learned skills to deliver public health initiatives and education to the community 	<ul style="list-style-type: none"> Demonstrates sufficient application of learned skills to deliver public health initiatives and education to the community 	<ul style="list-style-type: none"> Demonstrates appropriate and effective application of learned skills to deliver public health initiatives and education to the community
6. Service and Leadership Students demonstrate the ability to lead and work collaboratively with others to accomplish shared goals	<ul style="list-style-type: none"> Functions to satisfy personal needs rather than those of the healthcare team 	<ul style="list-style-type: none"> Demonstrates minimal ability to contribute toward shared goals 	<ul style="list-style-type: none"> Generally contributes toward shared goals 	<ul style="list-style-type: none"> Consistently contributes toward shared goals

Admissions

Students seeking admission to the DMD program will use the centralized application service for dental school admission called ADSAS, administered through WebAdmit and the American Dental Education Association. Minimum requirements for entrance to the program are: undergraduate minimum GPA of 2.8 (preferred 3.2), DAT score of 17 or greater with a preferred DAT of 19.

Minimum Requirements

California Northstate University College of Dental Medicine prefers a baccalaureate degree from a regionally accredited, four-year institution within the United States; or a non-U.S. equivalent institution. Required minimum coursework:

- 2 semesters, 3 quarters, or 1 year of college level English (*IB or AP credits may be considered if they are accepted by the undergraduate program*)

IB or AP credits not accepted for the following:

- 2 semesters, or 3 quarters, or 1 year of Biology with Laboratory
- 2 semesters, or 3 quarters, or 1 year of Inorganic (General) Chemistry with Laboratory
- 2 semesters, or 3 quarters, or 1 year of Organic Chemistry with Laboratory
- 2 semesters, or 3 quarters, or 1 year of Physics
- 2 semesters, or 3 quarters, or 1 year of college level Math (*Statistics and/or Calculus preferred*)
- 1 semester, 1 quarter, or 3 units of Biochemistry

Recommended Coursework, but not required:

- Social sciences
- Anatomy
- Microbiology
- Behavior Sciences
- Physiology
- Immunology
- Foreign languages

Standards in five areas must be met by all candidates: Observation, Communication, Motor Function, Cognitive, and Professional.

Each application will be thoroughly reviewed by the admissions committee and all areas of the application will be carefully considered. The ADSAS application has a required personal statement and a required section that asks whether the student is from a disadvantaged background. The personal statement prompt pertains to a student's community engagement and community service background.

It is important that the student body of the DMD program represents the best of future clinicians, and the admissions committee will pay particular attention to professional, research, education, and life experiences. Along with academic excellence, the committee will be looking for students with diverse cultural, socioeconomic, work, and educational backgrounds. CNU has a diverse faculty and student body and it is the admissions policy of the University that no applicant will be discriminated against on the basis of race, religious creed, color, national origin, ancestry, citizenship status, sex, gender, gender identity, sexual orientation, mental disability, medical condition, genetic information, age, military or veteran status, physical appearance, or any other consideration made unlawful by federal, state, or local laws.

In the interview, we are looking for demonstration of each of the following: 1) Demonstrated academic ability/capacity, 2) critical thinking skills, 3) interpersonal and social skills, 4) commitment to diversity, 5) commitment to community service, 6) a candidate's match in terms of the culture and expectations of CNUCDM (i.e., commitment to the profession and to becoming a healer).

Graduation Requirements

240 in resident Credit Hours

Faculty and Other Program Resources

Administration and Faculty

A planning group of 47 future faculty associated to the Sacramento District Dental Society has met several times to develop curriculum. The 12 original members of the planning group for the College of Dental Medicine will also serve in part-time faculty capacity. The hiring plan for 42.5 full-time salaried faculty provides a comprehensive mix to accommodate instructional, clinical, service and scholarly needs of the college.

Note that FTE from initial BMS and preclinical and clinical educators will be divided among more than one hire each of whom will consume .1 to .2 FTE

Administration

Position	Initial FTE	FTE w/ full enrollment
Dean	1.0	1.0
Associate Dean, Academic Affairs and Faculty Development	1.0	1.0
Assistant Dean, Curriculum and Clinical Education	1.0	1.0
Assistant Dean, Clinical Affairs	1.0	1.0
Assistant Dean, Student Affairs and Admissions	0.5	1.0
Assistant Dean, Research	0.67	0.67

Faculty

Position	Initial FTE	FTE w/ full enrollment
Basic Medical Sciences Faculty*	6	6
Preclinical Education Faculty	0.5	6.0
Clinical Education (general) Faculty	1.0	12.0
Clinical Education (specialty) Faculty	1.0	12.0
Part-time Clinical	0	6.0
Volunteer Clinical (general and specialty) Faculty	6.5	18.0
TOTALS	15	60

*These are primarily College of Medicine faculty teaching in Common Pathway courses

Faculty

Basic Medical Sciences educators (in addition to COM common pathway educators = 6 FTE

These faculty will be DMD, DDS, MD, D. Psych, DPharm, or PhD terminal degrees with engagement for case based education in the common pathway curriculum, and in the teaching of head and neck anatomy, dental anatomy, and behavioral sciences

Preclinical educators = 6 FTE

These faculty will hold DMD, BDS or DDS and have appropriate postdoctoral certificate or degree education in operative dentistry, prosthodontics, periodontology, pediatric dentistry or oral and maxillofacial surgery.

Clinical educators general dentistry = 12 FTE

These are general dentists holding the DMD or DDS or BDS who will serve as student preceptors, team leaders, in comprehensive care. Some will serve in discipline based faculty in special needs, emergency care, and oral diagnosis among others

Clinical educators dental specialties = 12 FTE

These are full time positions in dental specialties for board certified specialists holding the DMD, MD, or DDS including specialists in prosthodontics, periodontology, endodontology, pediatric dentistry, orthodontics, oral and maxillofacial pathology, oral and maxillofacial radiology, and oral and maxillofacial surgery

Part time clinical educators = 12 FTE

These are ½ to 1 day a week positions for general dentists and specialists holding the DMD or BDS or DDS degree for clinical or preclinical assignments as educators.

Volunteer Clinical Adjunct Faculty (no cost)

Faculty salaried by health entities with whom CNU has affiliation agreements for clinical education will be given faculty appointments to provide clinical education. These faculty will hold a terminal degree such as DMD, DDS, MD, PhD, DPharm

Hiring Plan for CDM Faculty: 2019-20 and 2020-21

Academic Year	Position	Course	Name	Hire Date
2019-20	*Assistant Professor of Pathology	Hematology	Nazila Hejazi	5-1-2019
	*Associate Professor of Anatomy	Integumentary and Musculoskeletal	Nripendra Dhillon	5-1-2019
	Professor	Odontology	Maureen McAndrew	6-1-2019
	Professor	Dental Anatomy	Gerald Glickman	6-1-2019
	Professor	Dental Anatomy Foundations of Dental Medicine Surgical Anatomy of the Head and Neck	Leon Assael	12-1-2018
	Professor	Managing Student Life Ethics in Dental Medicine and Health Care	Richard Simonsen	2-14-2019
	*Professor of Clinical Neurology	Neuroscience	Forshing Lui	5-1-2019
	*Associate Professor of Emergency Medicine	Cardiovascular and Pulmonary Systems	Darilyn Falck	10-1-2019
	*Associate Professor of Physiology	Cardiovascular and Pulmonary Systems	Tracy Yarbrough	10-1-2019
	Professor Assistant Professor	Cariology Oral Microbiology/Immunology	Kevin Keating Pending	3-1-2019 10-1-2019

Academic Year	Position	Course	Name	Hire Date
2020-21	*Associate Professor of Physiology	Renal System	Tracy Yarbrough	5-1-2020
	*Professor of Molecular Biology, Immunology and Microbiology	Gastroenterology	Nehad El-Sawi	5-1-2020
	*Associate Professor of Physiology, Endocrinology and Clinical Skills	Endocrine System	Mark Sheffield	5-1-2020
	Assistant Professor	Clinical Pharmacology 1	Pending	5-1-2020
	Assistant Professor	Operative Dentistry	Wai Chan	5-1-2020
	Assistant Professor	Periodontology	Rosemary Wu	5-1-2020
	Assistant Professor	Dental Anesthesiology 1: Local Anesthesia	Michael Cadra	5-1-2020
		Dental Anesthesiology 2: Pain and Anxiety Control, Analgesia, Medical Management of Local Anesthesia		
	Assistant Professor	Oral Radiology 1	Shikha Rathi	5-1-2020
	Assistant Professor	Clinical Pharmacology 2/Oral Pharmacology	Jagdev Heir	5-1-2020
	Associate/Assistant Professor	Prosthodontics and Implant Dentistry: Removable Prosthodontics	Pending	10-1-2020
	Professor	Comprehensive Care Family Dentistry Endodontology, Diseases of the Pulp and Pathways of Odontogenic Infection	Gerald Glickman	6-1-2019
	Associate/Assistant Professor	Oral Pathology/Oral Medicine 1	Pending	10-1-2020
	Associate/Assistant Professor	Orthodontics and Craniofacial Growth and Development	Pending	10-1-2020
	Associate/Assistant Professor	Behavioral Medicine	Pending	10-1-2020
	Associate/Assistant Professor	Dental Medicine at all Stages of Life	Pending	10-1-2020

* Faculty shared with College of Medicine

Facility, Labs and Equipment:

California Northstate University College Dental Medicine is located in Elk Grove, a city adjacent to the City of Sacramento. CNUCDM has a dedicated building of 15,000 square feet that will be used exclusively by the DMD program. The College will also share common space on the main campus a few blocks away.

All dental students will begin clinical training in their first year, utilizing the preclinical laboratory and clinical simulation labs that are planned to be built in the Elk Grove building dedicated to CNUCDM. First year students will also have clinical experiences as part of the care team in the clinic. The CNUCDM facilities will contain 40 dental simulation units where the students will be able to practice the skills taught within the classroom. The units will contain instruments and configurations, compartments to store instruments, a torso with adumbrated arms and shoulders, and height adjustment. The unit will be on wheels and have the ability to fit comfortably under workstations.

The main clinical practicum of the CNUCDM program will be in two clinics operated by the University. The first will be in the CNUCDM-dedicated facility. The second will be within the greater Sacramento area with a planned opening by the end of Year 2 of the program. Like other dental school-based clinics, CNU's clinics will feature faculty and students working side by side and providing the highest level of clinical care while completing competency evaluations and gaining clinical experience for the DMD students.

The initial capacity of the College of Dental Medicine will accommodate a class of 80 students. All Common Pathway courses are in plenary classrooms accommodating 180 students which will seat all medical and dental students. Small group learning facilities are adequate to accommodate all students into their "college" group of 20. Anatomy laboratory, learning center and library, general skills laboratories are all adequate to accommodate all students in a regular schedule.

Preclinical and simulation laboratory will have four types of facilities in the dedicated College of Dental Medicine building:

1. Type 1: Bench laboratory space with seating, audiovisual and instrumentation for 80 students (class example: dental anatomy)
2. Type 2: Operative dentistry/A-Dec simulator with scanning self-assessment optical scanner, work station, 40 units. Students will practice in this environment in two sections.
3. Type 3: Operative dentistry: A-Dec 40 dental chairs with simulator dental head: Students will work in this environment when rotated from type 2 simulation during the same hours. Students will either be assigned during preclinical laboratory hours to the Type 2 or 3 units. Of note is that this will be performed for the first 2 years as there will not be a 3rd and 4th year class. The second clinic and additional simulation space using emerging technology is anticipated for the 3rd -5th year of operations.
4. Type 4: Haptic simulators: these 4 MOOG Simodont units will be assigned on a rotating basis to students in groups of 4.

Computers/Offices

All CNUCDM faculty have their own offices, and also have access to computer hardware and software needed to conduct their research. All computers are connected to a local network via a shared server as well as having Internet access. The Information Services department at CNUCDM supports all hardware and software used.

Information about Opportunities for Graduates

Employment prospects for dentists are excellent. According to the U.S. Bureau of Labor Statistics, the growth in the profession is projected to increase by 19.4 percent between 2016 and 2026. This is a significant increase over other job sectors which are expected to grow by only 7 percent during that same time period. The demand for dentists is increasing so dramatically because the US population continues to exponentially grow and age. The aging US population is more likely to retain their teeth due to advancements in healthcare. Additionally, the increased risk of oral cancer increases the demand on the number of dental professionals in the country.² The 2019 U.S. News and World Report also indicates that dentists enjoy a profession in the top 5 of the 100 Best Jobs in the nation and is second most favorable in Health Care Jobs. It is also a lucrative profession, with the average salary of \$158,120.

Dentists have an array of career options. Their roles go far beyond private practices. Dentists can work in academia, public health, and hospitals. They can also choose to conduct research or pursue international humanitarian efforts to support oral health around the globe.

Alignment with Institutional Mission

Comparison of the University goals and those of the college indicate that the goals of both are inclusive of the other. As a component of the University, the college contributes through its goals to the University goals of student success, excellence in research and patient care, financial stability and workplace excellence. The goals of the University similarly to provide resources and sustenance to those of the college. These are mapped as follows indicating which college goals (columns) support those of the University (rows). Those that the college supports for the University are denoted as “D” and those that the University supports for the college are noted as “U.”

Dental/University	Student success	Research scholarship	Patient care	Workplace	Infrastructure	Financial Stability
Educate profess	UD		UD			UD
Develop people		U	UD	UD		UD
Lead healthcare	D	UD	UD	D		UD
Diversity	UD		UD	UD		U
Facilities	U	U	UD	U	U	U
Financial Stabil.	U	D	UD		U	U

Needs analysis of The New Program

Dental disease is the greatest untreated and undertreated of all diseases in children, the elderly, disabled, special needs, the poor and medically compromised. Despite that, in 2016, there were only 1.8 dental school graduates for every 100,000 people in the United States. This is a significant decrease from 1977, when there were 2.4 dental school graduates for every 100,000 people.³ The need in California is particularly acute, with vast amounts of the population living in the central valley, mountains and rural areas. California currently has only 6 dental schools out of the 66 dental schools in the United States. Only two of those dental schools are in Northern California and none serve the central valley. Further, of the 30 largest metropolitan areas in the nation, Sacramento and San Diego are the only ones without a single dental school associated to their region. California residents seek dental education outside of their own state at the highest rate of any state.

Admission into dental school is extremely competitive. Only 50 percent of applicants are accepted, in spite of increasing performance in applicant GPAs and DAT test results. The DAT average for applicants in 2000 was 17.8 and had risen to 19.3 by 2017. Similarly, GPAs grew from 3.2 in 2000 to 3.4 by 2017.⁴ Therefore, there is a need for highly qualified candidates to be provided a dental school education who cannot be served by the current number of dental programs. There is also a shortage of both applicants and enrollees who are Latino and African American. This is of particular concern in California, a state whose population is roughly 40 percent Latino and 7 percent African American. Currently, dental college enrollment is 5 percent African American and 9.1 percent Latino.⁵

Employment prospects for dentists are excellent. According to the U.S. Bureau of Labor Statistics, the growth in the profession is projected to increase by 19.4 percent between 2016 and 2026. This is a significant increase over other job sectors which are expected to grow by only 7 percent during that same time period. The demand for dentists is increasing so dramatically because the US population continues to exponentially grow and age. The aging US population is more likely to retain their teeth due to advancements in healthcare. Additionally, the increased risk of oral cancer increases the demand on the number of dental professionals in the country.⁶ The 2019 U.S. News and World Report also indicates that dentists enjoy a profession in the top 5 of the 100 Best Jobs in the nation and is second most favorable in Health Care Jobs. It is also a lucrative profession, with the average salary of \$158,120.

Fall 2020	<ul style="list-style-type: none"> • Admitting the first cohort (Class of 2024) • Anticipated enrollment of 80 students • Open applications for the program to enroll students for Fall 2021

Appendix D-7 Faculty Senate Approval Letter

CALIFORNIA
NORTHSTATE
UNIVERSITY

November 12, 2018

Dear Dean Assael:

This certifies that on November 6, 2018, the Faculty Senate at California Northstate University did review and resolve as follows:

First, some information regarding the future needs for dentists over the coming years.

" Overall employment of dentists is projected to grow 19 percent from 2016 to 2026, much faster than the average for all occupations. Demand for dental services will increase as the population ages....Demand for dentists' services will increase as studies continue to link oral health to overall health."

Dentists - Bureau of Labor Statistics

<https://www.bls.gov/ooh/healthcare/dentists.htm>

Advantages of a Dental Medicine Program at CNU.

To the University:

The dental school is aligned with the University's vision and mission to advance the art of healthcare and its commitment to meet the future needs of the community. The Bureau of Labor Statistics projects " Overall employment of dentists is projected to grow 19 percent from 2016 to 2026, much faster than the average for all occupations."

To the Students:

In addition, the school of dentistry provides incoming students with an additional option and opportunity that best fits their individual desire on how to participate as a member of the Health Care Team.

To the Region:

And lastly, the school of dentistry will help the region to meet the expected growing demand for dentists as the population ages and as studies continue to support the correlation between oral health to overall health.

Christopher Wostenberg

College of Dental Medicine Marketing and Recruitment Plan

Market Research

Dental disease is the greatest untreated and undertreated of all diseases in children, the elderly, disabled, special needs, the poor and medically compromised. Despite that, in 2016, there were only 1.8 dental school graduates for every 100,000 people in the United States. This is a significant decrease from 1977, when there were 2.4 dental school graduates for every 100,000 people.¹ The need in California is particularly acute, with vast amounts of the population living in the central valley, mountains and rural areas. California currently has only 6 dental schools out of the 66 dental schools in the United States. Only two of those dental schools are in Northern California and none serve the central valley. Further, of the 30 largest metropolitan areas in the nation, Sacramento and San Diego are the only ones without a single dental school associated to their region. California residents seek dental education outside of their own state at the highest rate of any state.

Admission into dental school is extremely competitive. Only 50 percent of applicants are accepted, in spite of increasing performance in applicant GPAs and DAT test results. The DAT average for applicants in 2000 was 17.8 and had risen to 19.3 by 2017. Similarly, GPAs grew from 3.2 in 2000 to 3.4 by 2017.² Therefore, there is a need for highly qualified candidates to be provided a dental school education who cannot be served by the current number of dental programs. There is also a shortage of both applicants and enrollees who are Latino and African American. This is of particular concern in California, a state whose population is roughly 40 percent Latino and 7 percent African American. Currently, dental college enrollment is 5 percent African American and 9.1 percent Latino.³

Employment prospects for dentists are excellent. According to the U.S. Bureau of Labor Statistics, the growth in the profession is projected to increase by 19.4 percent between 2016 and 2026. This is a significant increase over other job sectors which are expected to grow by only 7 percent during that same time period. The demand for dentists is increasing so dramatically

because the US population continues to exponentially grow and age. The aging US population is more likely to retain their teeth due to advancements in healthcare. Additionally, the increased risk of oral cancer increases the demand on the number of dental professionals in the country.⁴ The 2019 U.S. News and World Report also indicates that dentists enjoy a profession in the top 5 of the 100 Best Jobs in the nation and is second most favorable in Health Care Jobs. It is also a lucrative profession, with the average salary of \$158,120.

Marketing Strategy

This is a very strong market so filling a class would not require marketing. However, there is a desire to mold a school tied to its mission statement and its goals and objectives. In the case of CNU we are desiring students with a social consciousness, a diverse student body and one of high academic potential. Since the CDM is based upon a community service and primary care model, the marketing strategies would be influenced by that paradigm.

The elements are as follows:

1. Pipeline
 - a. Develop a program beginning in secondary school to stimulate interest in dentistry as a career. The CDM will work with local 9th -12th grade schools in the greater Sacramento area and the Delta that serve students with low socioeconomic status and reside in areas of need for health care resources.
 - b. A Dentist for a Day program will introduce students to dentistry. This is shown to schools via an onsite presentation by faculty, typically in Health classes
 - c. Girl Scout and Boy Scout badges can be earned related to oral health
 - d. Student projects in high school will be available that are directed to oral health in either science or social science courses
2. College level
 - a. Visit colleges, especially those with underrepresented minorities and social need to meet with pre-health societies and preprofessional counselors among others (The dental school pro forma provides a list of those regional baccalaureate institutions)
 - b. Summer research opportunities for baccalaureate and post baccalaureate students
3. Public
 - a. Participation in Health fairs and free health screenings, including those in inter-professional environments with medicine and pharmacy. While doing these events, volunteers from high school and college level will be recruited to help as volunteers. Among examples of this for CNU will be Celebracion de Salud (an inter-professional health fair program for migrant workers) and California Dental Association Mission of Mercy (CDA Cares), which would include CNU students and prospective students
 - b. Web site development will emphasize the features of the CDM
 - c. Interviews with the press and other communications resources

⁴Bureau of Labor Statistics, U.S. Department of Labor, *Occupational Outlook Handbook*, Dentists. Retrieved from <https://www.bls.gov/ooh/healthcare/dentists.htm>

- d. Social media presence on Facebook, Instagram
- e. Print media and visual media: CNU presence at the airport and via its presence on Interstate 5 will produce valuable marketing for prospective students, staff, faculty and patients.
- f. Patient care marketing will emphasize prevention and the value of oral health screening. When operational, the CDM clinics will be utilized for health screening and informational purposes

Marketing Plan Budget

The Admissions officer will be a full time position whose focus will be on class development and leading in this area. In-kind cost is based upon effort of existing faculty, staff and students. Travel and marketing budget for programs, IT, travel swag, etc. might be up to 50K per year.

Pipeline - \$20,000 - staff time to coordinate with pipeline programs, travel, provide presentations, distribution of promotional merchandise

College level - \$20,000 – travel and staff time to visit regional colleges with large numbers of underrepresented minority students, distribute promotional merchandise

Public - \$10,000 – brochures, staff time for development and maintenance of social media, staff time and travel for participation in health fairs

Marketing Goals

The marketing goal for the first four years of the CDM is to have 80 students in each Year 1, with a total of 320 students by the 4th year in operation. The patient care marketing goal is for 5000 new patients enrolled per year

Appendix 1.1 President Report On the Planning for Dental College 2018

Predoctoral Dental Education

The Economic Costs and Benefits of Dental Education: An Empirical Analysis

Gary L. Stafford, D.M.D.; Farrokh Nourzad, Ph.D.; William K. Lobb, D.D.S., M.S., M.P.H.; Jason R. Beall, B.A.

Submitted for publication 9/26/13; accepted 2/26/14.

spring 2011 (Class of 2011). Our estimates indicated that the return on investment in dental education increased from 27.32 percent to 31.56 percent for the first three cohorts (2003-05) but then trended downward for the next six cohorts (2006-11). Following the high of 2005, there was a sharp decline from 2005 to 2008, then a rebound from 2008 to 2011, albeit not to the high of 2005. From 2005 to 2011, there was a decline of almost two percentage points to 29.78 percent. Over the entire period, the average ROI was 29.4 percent, which compared favorably with the return on some alternative investments. For example, using the S&P 500 index over the period from 1999 to 2012, the average return for investing in the stock market, including dividends, was 14.3 percent,²⁸ which was slightly less than one-half the

Appendix 1.1 President Report On the Planning for Dental College 2018

CODA Accreditation

Phase 1: Now until January 2019, Accreditation process: Self study completed in 2018 with submission to the Commission on Dental Accreditation by **February 1, 2019**.

According to the following categories:

Standard 1: Institutional issues, self study on institutional accreditation, humanism, finances, methods of continuous improvement, diversity, engagement with health systems, affiliation agreements, alliances, physical plant

Standard 2: Curriculum: Curriculum structure including competency based education model, elements of syllabi, length of instruction, attention to biomedical sciences, clinical discipline based activities, community based education, teaching methods, assessment methods, critical thinking, integrated BMS, course evaluation, ensuring adequate patient pool, self assessment, multiculturalism, practice management, pathways to defined competencies, ethics, evidence based care, community care

Standard 3: Faculty affairs: sufficient faculty, ongoing faculty development plan, governance, faculty assessment, process for promotion

Standard 4: Student affairs: admissions, admitting students with advanced standing,, admitting diverse students, learning facilities and resources, site affiliation agreements, student services, cost and financial aid structure, student health...

Standard 5: clinical operations, policies for clinic function, and evidence based care, system for continuous patient care quality improvement, emergency training and care, ionizing radiation compliance, infection control compliance, patient records and confidentiality policies

Standard 6: research: faculty and student research opportunities and output

Appendix 1.1 President Report On the Planning for Dental College 2018

CODA Accreditation

Phase 1: Now until January 2019, Accreditation process: Self study completed in 2018 with submission to the Commission on Dental Accreditation by **February 1, 2019**.

Phase 2: Initial site visit April-May 2019, Site visit spring of 2019 with limited commission representatives and staff to direct inquiries regarding self study. Modifications as needed.

Phase 3: July 2019 CODA meeting: meetings of review committee and the Commission on Dental Accreditation resulting in vote of the commission on initial program approval IPA.

Positive vote results in immediate rollout of DMD program with recruitment of class via the ADEA PASS admissions process. **First class in summer of 2020**

Phase 4 If needed: Negative vote by commission results in corrective activity to address recommendations, bringing amended application to commission for its January 2020 meeting. Approval at that meeting means class can still be recruited for Summer of 2020 (Touro University in NY had this eventuality and was able to fill class with over 2000 applicants after the normal application cycle)

CALIFORNIA NORTHSTATE UNIVERSITY

Strategic Plan 2015- 2020

(Updated with evaluations in 2017)

**MISSION**

To advance the art and science of healthcare

VISION

To provide innovative education and healthcare delivery systems

CORE VALUES (WE CARE):

- Working as a team
- Embracing diversity and workplace excellence
- Caring about our students, our staff, our faculty, and our profession
- Advancing our university, our goals, and our discipline
- Responding to challenges that may impede Mission
- Enhancing communication and partnership

STRATEGIC GOALS**Goal 1. Student Success and Educational Effectiveness**

Ensure student success and student learning outcomes.

Goal 2. Research & Other Scholarly Activities

Develop, support, and sustain innovative, collaborative approaches for research and scholarly activities in health and administrative sciences and education.

Goal 3. Patient Care and Service

Provide educational opportunities to enhance community health and patient care.

Goal 4. Workplace Excellence

Create and sustain an environment conducive to productivity, collegiality, professionalism, and respect that attracts and embraces diverse top-tier talent.

Goal 5. Infrastructure

Maintain an efficient infrastructure to support and sustain learning, teaching, communication, research and scholarship while keeping education affordable.

Goal 6. Financial Sustainability and Growth

Create a financially sustainable enterprise-wide growth model.

STRATEGIES AND TACTICS FOR OUR GOALS

Goal 1. Student Success and Educational Effectiveness

Ensure student success and student learning outcomes.

Strategy 1.1. Provide excellence in teaching.

Tactics:

- Develop a Center for Teaching and Learning that will endorse best practices in teaching
- Provide mentorship programs
- Provide faculty development opportunities

Indicator	Initial	Developing	Developed	Achieved	Evidence
Focused practice in teaching and learning has been developed	No plan for developing a practice approach for teaching and learning has been established.	A plan for developing a practice approach for teaching and learning is initiated, but it only somewhat addresses the need for endorsing best practices in teaching.	A practice approach for teaching and learning is in its final stages of development. Some programs have been incorporated to endorse best practices of teaching, but further development of these programs is needed.	A practice approach for teaching and learning has been fully developed. Programs have been incorporated within the center to endorse best practices in teaching.	<ol style="list-style-type: none"> 1. Practice approach has been assessed for linkage to student success outcome 2. Establish method and modality of teaching linkage to student success outcome 3. Student course evaluation 4. Faculty peer evaluation 5. Student outcome index collected at the college level and reported by semester and annually (COP, COM, CHS specific) 6. Engagement surveys
A mentorship program has been implemented	No plan for providing a mentorship program has been established.	A plan for providing a mentorship program has been established but has not yet been implemented.	A mentorship program has been initiated; however, the program may be lacking key areas that are critical for its effectiveness and adequacy.	A fully developed mentorship program has been implemented. Program is extensive and provides effective, adequate mentorship needed.	A full faculty mentorship program exists within each college. A student mentorship program exists at each college. Faculty mentorship in

					COM, COP and CHS has been implemented (directory of mentor/mentee) Peer evaluation Faculty survey of mentorship needs annually We will develop a university mentorship manual – to be added to employee handbook as appendix
Faculty development opportunities are provided	No plan for providing faculty development opportunities has been established.	A plan for providing faculty development opportunities has been established but has not yet been implemented.	Faculty development opportunities are provided; however, such opportunities may not be inclusive of all faculty and addition of other opportunities are welcome to enrich faculty development.	Faculty development opportunities are provided. Opportunities for development are available to all faculty in each college.	<ul style="list-style-type: none"> • A strong Office of Continuing Education exists that provides faculty development opportunities. • Faculty are provided with a budget to attend faculty development opportunities. • University weekly professional development seminars, email updates on pedagogy Monthly CE program • Faculty PD fund allocation

Strategy 1.2. Utilize the institution's Cycle of Improvement to continually improve student learning and ensure learning outcomes and student success.

Tactics:

- Assess student learning outcomes at all levels of learning and use results to make improvements in curriculum, teaching, and learning
- Evaluate program effectiveness through an institutional program review process

Indicator	Initial	Developing	Developed	Achieved	Evidence
Student learning outcomes at all levels of learning are assessed and results are used	Student learning outcomes are not being assessed to make educational improvements.	Student learning outcomes are assessed, but not necessarily at all levels. Results may	Student learning outcomes are assessed at all levels of learning, and results are provided to the	Student learning outcomes are assessed appropriately at all levels of learning.	In CHS, COP, and COM, assessment of learning outcomes at all levels is conducted

to make improvements in curriculum, teaching, and learning		or may not be provided, and no improvements in curriculum, teaching, and learning are made.	appropriate decision-making committees. Curricular, teaching, and learning improvements are taking place but not in a timely fashion.	and results are provided to the appropriate decision-making committees to make curricular, teaching, and learning improvements in a timely fashion.	<p>on a routine basis. All learning outcomes are mapped to specific courses so where they are delivered is identifiable and their level of mastery is measured. This is achieved by gathering evidence of student performance on assignments, presentations, exams, etc. The assessment data are analyzed and used to make changes and improvements in the curriculum to ensure that the desired outcomes are being achieved. In COP, for example, assessment of student learning outcomes lead to some resequencing of pharmacy law and ethics, so that first year students could be introduced to the topics.</p> <ol style="list-style-type: none"> 1. Assessment committee activities and minutes 2. Curriculum recommendation for changes based on assessment (e.g. lengthened the foundation of medicine in COM; COP implemented longitudinal practice lab to improve student readiness for IPPE; CHS created primer
--	--	---	---	---	--

					courses for general and organic chemistry to facilitate subsequent stages of learning)
Program effectiveness is evaluated through an institutional program review process	No evaluation of program effectiveness has occurred through the institutional program review process.	Program effectiveness evaluation has been initiated through the institutional program review process, but overall evaluation lacks rigor and thoroughness to produce accurate results for decision making.	Program effectiveness has been evaluated through the institutional program review process, but the extent of the evaluation may be weak in a few areas. Results of the evaluation are generally useful for decision making.	Program effectiveness has been rigorously and thoroughly evaluated through the institutional program review process. Results of the evaluation are comprehensive and accurate for decision making.	COP completed its second program review in 2016-7. As a direct result of the program review faculty retention is being addressed through an institutional review of practices, while the admissions committee is acting upon suggestions made by the external reviewers to review its standards. All three colleges also engages in college and institutional retreats of faculty and staff enabling discussion and action planning on program effectiveness. 1. COP completed program review with external expert in pharmacy practice 2. COM Phase A improvements including resequencing of CVP, lengthening foundation of medicine and the GI course

Strategy 1.3. Provide opportunities for all CNU students to participate in Interprofessional Education (IPE).

Tactics:

- Create IPE experiences for students within and across the curricula
- Establish MOUs for IPE experiences

Indicator	Initial	Developing	Developed	Achieved	Evidence
IPE experiences are for students within and across the curricula	No plan for creating IPE experiences for students has been discussed.	Some discussion of creating IPE experiences for students has taken place. Specific IPE experiences may be identified for potential creation.	IPE experiences have been created, but they appear to be weak in building valuable and meaningful opportunities for students.	IPE experiences for students have been created. IPE experiences build valuable and meaningful opportunities for students.	- CNU had 9 IPE events with COM, COP & Sac State SON -Faculty Assessments were completed for each event -Expand IPE plan to include CHS students 1. IPE sessions conducted with students from all three colleges and nursing school at CSUS, (e.g. neurology case, OSCE cardiac pulmonary critical care simulation, patient communication and history taking IPE with COP and COM students); CHS PMPB standardized patient experience with COM students
MOUs for IPE experiences have been established	MOUs have not been established. No partners for establishing MOUs with have been identified.	Partners for establishing MOUs with have been identified.	Negotiation with partners for potential establishment of MOUs has been initiated.	MOUs have been established. MOUs have been signed.	MOU between CNU and CSUS signed.

Strategy 1.4. Promote and ensure development of the core competencies (ILOs).

Tactics:

- Embed core competencies (ILOs) in all courses
- Assess all core competencies using appropriate data points

Indicator	Initial	Developing	Developed	Achieved	Evidence
Core competencies are embedded in all courses	No core competencies are embedded within the courses.	Discussions of embedding the core competencies within some courses have occurred.	Some core competencies have been embedded in some courses. Further work is needed in embedding remaining	All core competencies are embedded in the appropriate courses.	Curriculum Maps (GELOs and ILOs to courses), Course Proposals, Syllabi - Prescriptive plans are designed to

		Competencies have not been formally embedded.	core competencies.		satisfy LOs achievement across all levels in all programs offered by CHS
Core competencies using appropriate data points are assessed	Core competencies are not assessed. No data points are identified for assessment.	Some core competencies are assessed while others have not been assessed. Data points used are weak or inappropriate for assessment.	Most core competencies are assessed. Data points used in the assessment are generally appropriate but can be further evaluated for reflectiveness of what students are able to demonstrate.	All core competencies are assessed with equal rigor. Data points used in the assessment are logical and reflective of what students are able to demonstrate.	Student performance measured by Summative Exam Questions, Signature Assignments, Rubrics – not all courses offered as CHS is entering its 3 rd of operation 1. core competencies assessed through a) summative exams at each course grade level at COP and COM. b) summative exams and signature assignments at CHS

Goal 2. Research and Other Scholarly Activities

Develop, support, and sustain innovative, collaborative approaches for research and scholarly activities in health and administrative sciences and education.

Strategy 2.1. Increase faculty productivity in discipline-related research and other scholarly activities.

Tactics:

- Implement a grant-writing program to support external grant applications
- Establish an infrastructure to support scholarly activity such as functional lab space, sustainable practice sites for clinical research, and research personnel such as students and technicians
- Establish a formal research mentoring program for new investigators

Indicator	Initial	Developing	Developed	Achieved	Evidence
A grant-writing program is in place to support external grant applications	No grant-writing program to support external grant applications has been established.	A grant-writing program has been developed but has not yet been implemented to support external grant applications.	A grant-writing program has been fully developed and is in its initial stages of implementation. Program provides adequate support for external grant applications.	A grant-writing program has been implemented and is fully functioning. Program provides effective support in grant writing for external grant applications.	<ul style="list-style-type: none"> • High-quality grants have been reviewed, written, and submitted. (see Office of Research spreadsheet)
Infrastructure exists to support scholarly activity such as functional lab space,	No infrastructure to support scholarly activity has been established.	Infrastructure to support scholarly activity is currently being established. Some resources for support of	Infrastructure to support scholarly activity has been mostly established. Most resources for the support of scholarly	Infrastructure to support scholarly activity has been fully established. Appropriate and sufficient resources	<ul style="list-style-type: none"> • Interlibrary loan requests by FT professional librarian • Lab space

sustainable practice sites for clinical research, and research personnel such as students and technicians		scholarly activity have been identified.	activity have been secured, but additional resources are needed.	for the continued support of scholarly activity are secured.	<ul style="list-style-type: none"> Sustainable clinical research sites available
A formal research mentoring program for new investigators is fully functioning	No formal research mentoring program is available for new investigators.	A formal research mentoring program is in the process of establishment. Resources in this program have been identified and are currently being acquired.	A formal research mentoring program is in its initial stages of implementation. Most resources needed in this program are available to new investigators, but additional resources are needed to develop a more robust program.	A formal research mentoring program has been fully implemented. Resources in this program are sufficient, and the program is appropriate for new investigators.	<ul style="list-style-type: none"> Office of Research trains and provides structural resources for new investigators

Strategy 2.2. Maintain a strong infrastructure to support faculty and student research and scholarship.

Tactics:

- Establish centers for research to support research activities
- Build capacity for the Office of Research
- Offer Summer Science Camp to provide financial support for research and scholarly activities
- Solicit grants from non-profit foundations
- Implement plans to support research opportunities

Indicator	Initial	Developing	Developed	Achieved	Evidence
Centers for research support research activities	No centers for research have been established.	Plans for establishing centers for research are being developed. Resources are being identified.	Centers for research are established; however, some necessary resources are still lacking.	Centers for research are established with adequate, appropriate resources available.	Plans for strategic recruits in research areas of emphasis. Infrastructure and resource identification is ongoing
The Office of Research is fully functioning to support research	The Office of Research is not established.	The Office of Research is currently being established ; resources are identified to support research.	The Office of Research has some resources to support research. Further resources are needed in order for the office to function optimally.	The Office of Research has adequate resources to support research. Office is fully functioning.	Office of Research has established functional IRB, IACUC, IBC committees, with requisite annual training fulfilled. Compliance with federal research integrity requirements met. All requirements met for federal grant submission. SAMS completed and compliant.
Offer Summer Science Camp to provide financial	Summer Science Camp has not been established.	Summer Science Camp is in the process of	Summer Science Camp is fully developed and is	Summer Science Camp is currently offered and is	

support for research and scholarly activities		development. Program has not been piloted.	awaiting implementation.	increasing university funding for research and scholarly activities	
Grants from non-profit foundations are solicited	No solicitation of grants from non-profit foundations has occurred.	Grants from non-profit foundations have been identified for solicitation, but no solicitation has occurred.	Solicitation of grants from non-profit foundations has occurred. Grant money has not yet been secured.	Solicitation of grants from non-profit foundations has occurred. Grant money has been secured.	Currently generating plans to establish methodology for foundation funding.
Plans to support research opportunities are implemented	No plans have been discussed to support research opportunities.	Discussion of plans to support research opportunities has been initiated.	Plans to support research opportunities have been fully developed and are awaiting implementation.	Plans to support research opportunities have been implemented.	Ongoing and established collaborations, contracts, and MOUs.

Goal 3. Patient Care and Service

Provide practice and service opportunities to enhance community health and patient care.

Strategy 3.1. Provide practice opportunities for students and faculty in professional programs.

Tactics:

- Procure and maintain clinical practice sites for students
- Procure and maintain clinical practice sites for faculty
- Cultivate cooperative relationships with healthcare organizations to enhance educational opportunities and patient care experiences
- Facilitate collaborative and interdisciplinary educational opportunities

Indicator	Initial	Developing	Developed	Achieved	Evidence
Clinical practice sites are procured and maintained	No clinical sites have been procured.	Few clinical practice sites have been procured and have been minimally maintained. Plans to procure additional sites do not account for attrition. Financial support for the maintenance of the sites is weak.	Clinical practice sites have been procured and are maintained as required. Plans to procure additional sites tenuously account for attrition. Financial support for the maintenance of the sites is present but not strong.	Clinical practice sites have been procured and have been maintained sufficiently. Plans to procure additional sites account for attrition. Financial support for the maintenance of the sites is secured.	We have procured several Ambulatory care sites for the PharmD faculty at this time. We are working with local hospitals to place PharmD faculty in internal medicine units.
Clinical sites are appropriate for faculty practice	No clinical sites for faculty practice have been identified.	Clinical sites for faculty practice have been identified.	Clinical sites are secured but are not fully appropriate for faculty practice	Clinical sites are secured and are regularly for appropriateness for faculty practice.	<ul style="list-style-type: none"> • The Clinic at Sutter General, Sacramento – Add Dr. Sam Rasty to Dr. Sukhvir Kaur • River Site Medical Group, Sacramento – Drs. Huyen Vu and Erika Titus • White Memorial

					Hospital, Los Angeles – Dr. Kristine Kim • Lodi hospital with Adventist Health System – Dr. Justin Lenhard • Dignity (in progress)
Cooperative relationships with healthcare organizations are enhancing educational opportunities and patient care experiences	Relationships with healthcare organizations have not been established through MOUs.	Relationships with healthcare organizations are currently being developed. No MOUs have yet been signed.	Relationships with healthcare organizations are strong and discussion of signing MOUs has taken place.	Relationships with healthcare organizations are cooperative, effective, and diplomatic. MOUs have been signed.	Currently our CNU affiliation agreement allow faculty and students to be at practice sites. If an MOU is needed we will sign one specific to the site.
Collaborative and interdisciplinary educational opportunities are regularly occurring	Collaborative and interdisciplinary educational opportunities have not been identified.	Collaborative and interdisciplinary educational opportunities have been identified, and plans for their facilitation have been drafted.	Collaborative and interdisciplinary educational opportunities have been established. Facilitation of these are tenuous.	Collaborative and interdisciplinary educational opportunities are currently being facilitated effectively.	We do have a interdisciplinary educational opportunity with Sacramento State Univ for our eMBA program. As well as IPE activities with Sacramento State Univ School of Nursing. In planning stages to have M1 students rotate with PharmD faculty at Ambulatory Care Practice sites.

Strategy 3.2. Provide service opportunities to enhance community health (and patient care).

Tactics:

- Collaborate with local recognized healthcare practitioners and the local community on educational opportunities and health enhancement
- Foster collaboration with local universities, high schools, and professional communities to initiate services within the community
- Develop a CNU-owned practice facility/ organization that provides community health services

Indicator	Initial	Developing	Developed	Achieved	Evidence
Collaborations exist between CNU and local recognized healthcare practitioners and the local community to provide educational	No collaboration with local recognized healthcare practitioners and the local community has taken place.	Relationships with local recognized healthcare practitioners and the local community are being developed.	Relationships with local recognized healthcare practitioners and the local community are established, but not necessarily collaborative, in offering educational opportunities and	Relationships with local recognized healthcare practitioners and the local community are collaborative, strong, and effective in offering educational opportunities and	1. The Clinic at Sutter General, Sacramento – Dr. Sam Rasty to Dr. Sukhvair Kaur 2. River Site Medical Group, Sacramento – Drs. Huyen Vu and Erika Titus

opportunities and health enhancement			health enhancement.	health enhancement.	3. White Memorial Hospital, Los Angeles – Dr. Kristine Kim 4. Lodi Hospital with Adventist Health System – Dr. Justin Lenhard 5. Dignity (in progress)
Collaboration with local universities, high schools, and professional communities facilitates services within the community	No collaboration with local universities, high schools, and professional communities has taken place.	Plans for collaborating with local universities, high schools, and professional communities are being drafted, and some outreach to these entities has occurred.	Collaborative efforts with local universities, high schools, and professional communities are in their initial stages of establishment.	University is collaborating effectively with local universities, high schools, and professional communities.	1. Provides HS Summer Science Program (Biotechnology and Forensics) 2. Provides HS Teacher Molecular Biology Lab Techniques Professional Development Workshop 3. Provides Equipment and Supply Loan Program for Molecular Lab Activities to HS 4. Provides Undergraduate College Student mentors for HS science courses 5. Collaborates w/ CSUS for HS summer science academies 6. Provides outreach workshops to middle school girls and underserved populations (biotechnology lab) 7. Faculty as e-mentors for Sheldon High Biotech Academy 8. Service Learning Internships for CHS Students
A CNU-owned practice facility/ organization provides community	No CNU-owned practice facility/ organization has been established.	A CNU-owned practice facility/ organization is in the process of development. Plans	A CNU-owned practice facility/ organization has been developed. The facility/ organization	A CNU-owned practice facility/ organization has been developed and is fully functioning	1. River City Medical Group

health services		for implementing the facility/ organization have being drafted.	has both faculty-run and student-run clinics but are not well coordinated.	with both faculty-run and student-run clinics. Clinics are run efficiently.	
-----------------	--	---	--	---	--

Goal 4. Workplace Excellence

Create and sustain an environment conducive to productivity, collegiality, professionalism, and respect that attracts and embraces diverse top-tier talent.

Strategy 4.1. Foster faculty and staff recognition.

Tactics:

- Develop and implement an employee reward and recognition program to recognize outstanding contributions
- Acknowledge faculty and staff research and work accomplishments in university or college magazine

Indicator	Initial	Developing	Developed	Achieved	Evidence
An employee reward and recognition program is functioning to recognize outstanding contributions	An employee reward and recognition program has not been developed.	An employee reward and recognition program is being developed.	An employee reward and recognition program has been developed but is awaiting implementation.	An employee reward and recognition program has been developed and is implemented. Employees are recognized consistently.	Employee of the Quarter; regular commendations given at employee events throughout the year; recognition of employees in magazine; regular employee events are put on: annual BBQ, holiday party; Faculty of the year award
Faculty and staff research and work accomplishments is recognized in university or college magazine	No acknowledgement of faculty and staff research and work accomplishments is included in the university or college magazine.	Acknowledgement of faculty and staff research and work accomplishments is included in the university or college magazine but not regularly.	Acknowledgement of faculty and staff research and work accomplishments is regularly included in the university or college magazine; however, recognition between faculty and staff is imbalanced (e.g., significantly more articles are dedicated to faculty accomplishments than to staff accomplishments or vice versa).	Acknowledgement of faculty and staff research and work accomplishments is regularly included in the university or college magazine. Recognition between faculty and staff is balanced.	Recognition of faculty and staff in University magazine; accomplishments also recognized at quarterly BOT meetings

Strategy 4.2. Create a work environment that values collegiality, professionalism, and respect for faculty and staff.

Tactics:

- Provide opportunities for development programs to promote diversity, collegiality, and professionalism of faculty and staff
- Utilize employee input in planning processes to continually make improvements in workplace
- Assess for employee satisfaction with work climate and use assessment results to make improvements

Indicator	Initial	Developing	Developed	Achieved	Evidence
Development programs are provided to promote diversity, collegiality, and professionalism of faculty and staff	No development programs to promote diversity, collegiality, and professionalism of faculty and staff have been established.	Development programs to promote diversity, collegiality, and professionalism of faculty and staff are being established but are not yet complete.	Development programs to promote diversity, collegiality, and professionalism of faculty and staff are established, but programs are limited in variety and types.	Development programs to promote diversity, collegiality, and professionalism of faculty and staff are established. Programs range in variety and types.	Fun and spirit events-happy hours, holiday party, BBQ's; Faculty development programs-CE's, training on civil treatment and professionalism; mentoring program
Employee input in planning processes is utilized to continually make improvements in workplace	No employee input is utilized in planning processes.	Minimal employee input is utilized in planning processes, contributing to little improvements in the workplace.	Some employee input is utilized in planning processes to continually make improvements in the workplace.	Employee input is utilized extensively in planning processes to continually make improvements in the workplace.	Committee input is always valued; University faculty senate; 360 evaluations of leadership; participation in accreditation; climate surveys
Employee satisfaction with work climate is assessed and assessment results are used to make improvements	No assessment of employee satisfaction with work climate has been conducted.	Assessment of employee satisfaction with work climate is conducted, but not regularly, and results are not used to make improvements.	Assessment of employee satisfaction with work climate is conducted regularly, and results are considered for making improvements, but improvements do not necessarily result.	Assessment of employee satisfaction with work climate is conducted regularly, and results are used appropriately to make improvements.	360 evaluations of management and leadership; employee surveys always reviewed; creation of focus groups for specific items

Goal 5. Infrastructure

Maintain an efficient infrastructure to support and sustain learning, teaching, communication, research and scholarship while keeping education affordable.

Strategy 5.1. Promote employee productivity while reducing waste.

Tactics:

- Develop service goals and use performance matrices for assessing service areas
- Conduct workload analyses to determine productivity and allocation of employee time

Indicator	Initial	Developing	Developed	Achieved	Evidence
Service goals have been developed and performance matrices are used for assessing service areas	Service goals and performance matrices for service areas have not been developed.	Service goals have been developed, but few performance matrices have been created. Use of matrices for assessing service areas is inconsistent and	Service goals have been developed, and performance matrices have been created. Matrices are currently being used, but not regularly, to assess service areas.	Service goals and performance matrices have been developed. Matrices are currently being used regularly to assess service areas.	Workload analysis for various departments; goals create by department and assessed; performance evaluations system; peer evaluations, student evaluations 1. Financial aid - % of student loan packaging rate (loan

					approved and certified) 10 days prior to start of semester 2. Financial literacy presentation scheduled and delivered
Workload analyses are conducted to determine productivity and allocation of employee time	No workload analyses are conducted to determine productivity and allocation of employee time.	Workload analyses are conducted to determine productivity and allocation of employee time, and results are not utilized to make improvements	Workload analyses are conducted regularly to determine productivity and allocation of employee time, but results of analyses do not inform decision making.	Workload analyses are conducted regularly and accurately to determine productivity and allocation of employee time.	Workload analysis policy in place, Faculty regularly having workload reviewed, HR conducting workload analysis for staff departments 1. teaching load index, credit hour per FTE 2. research load index per FTE (grants, articles published, awards, 3. service load index per FTE (committee, advising) 4. Practice load index per FTE for clinical practice faculty

Strategy 5.2. Provide resources that directly support teaching and learning opportunities for students.

Tactics:

- Provide support for Simulation and Training Laboratory
- Invest in and support distance learning
- Perform comparative analyses of internal cost of education

Indicator	Initial	Developing	Developed	Achieved	Evidence
Simulation and Training Laboratory are supported and maintained	No support for the Simulation and Training Laboratory has been provided.	Little support for the Simulation and Training Laboratory has been provided, but further support is needed to ensure the lab's efficient operation.	Support for operation of the Simulation and Training Laboratory has been provided; however, further support is needed to ensure its efficient operation.	Adequate support for continued and efficient operation of the Simulation and Training Laboratory has been provided.	1. budgeted resource per simulation session and laboratory training (purchase, maintenance and update)
Distance learning programs are utilized	Distance learning programs are not being utilized.	A plan to utilize distance learning programs is currently being discussed.	Distance learning programs are fully planned and ready for implementation.	Distance learning programs are fully implemented and are being utilized.	1. CHS – medical terminology course implemented 2. COM students provided with UWORLD practice

					question bank and STEP 1 RX practice question bank with performance metrics feedback to students 3. COP – LPPK exam 4 th year per rotation; online law review; hub coordinator faculty teaching pharmacy practice 607 online
Comparative analyses of internal cost of education are conducted	No comparative analysis of internal cost of education has been conducted.	Components for a comparative analysis of internal cost of education have been gathered, but analysis has not been conducted.	A comparative analysis of internal cost of education has been conducted, but results appear to be inaccurate for decision making.	A comparative analysis of internal cost of education has been conducted and is accurate for decision making.	1. Annual comparative analysis of cost to degree at COP, COM,

Strategy 5.3. Provide and allocate appropriate resources across the university.

Tactics:

- Expand and upgrade IT services and technology to enhance efficiency and security
- Procure enterprise IT system encompassing and providing infrastructure
- Assess use of internal and external resources
- Manage a budget to monitor university-related expenses
- Increase scholarship opportunities for students

Indicator	Initial	Developing	Developed	Achieved	Evidence
IT services and technology are appropriately utilized to enhance efficiency and security	No expansion and upgrading of IT services and technology have been completed.	A plan for expanding and upgrading IT services and technology has been established, but implementation has not yet occurred.	IT services and technology are in the process of being expanded and upgraded to enhance efficiency and security but is not yet complete.	IT services and technology has been expanded and upgraded to enhance efficiency and security.	IT has expanded efficiency and security in IT services. 1.) Implemented a more robust and timely protocol for server side security updates and patching. This is in response to the global ransomware threats seen by other educational institutions and health care facilities. 2.) Improved mechanisms for access to specific files for faculty

					<p>and staff while preserving the need for intuitional data preservation and integrity to enhance efficiency in systems such as a new Microsoft SharePoint integration.</p> <p>3.) Improved backup mechanisms has been implemented to reduce potential lost periods (between backup windows) and also in response to the global ransomware instances.</p> <p>1. IT implemented share-point to enhance remote access security</p> <p>2. IT procured Simplivity for efficient use of server and storage space</p> <p>3. CNU implemented Great Plane for financial reporting</p>
Enterprise IT system provides infrastructure necessary to suit the needs of the institution and its users	No discussion for procuring an enterprise IT system has occurred.	Some plan for procuring an enterprise IT system is in place, but procurement of system has not taken place.	Enterprise IT system has been procured and is currently providing the infrastructure necessary to suit the needs of the institution and its users, but the system needs refinement for optimal usability.	Enterprise IT system has been procured and is currently providing the infrastructure necessary to suit the needs of the institution and its users. System is used to its fullest extent to support infrastructure.	<p>Evidence: IT has procured and/or refined usage of existing systems to provide improved Enterprise IT system infrastructure for the needs of the institution and its users.</p> <p>1.) Integration of systems/applications to systems allows improved experiences for out leaning</p>

					<p>management system Canvas. IT has completed integrations with Mediasite (lecture capture videos) into Canvas so that students and faculty can have a one stop shop to access course materials as well as video content. The integration with Turning Technologies and Canvas has just been completed to allow faculty real time access to student / clicker (mapping) as well integration of results directly into the gradebook.</p> <p>2.) IT has started to fully utilize this past year the deduplication functionality as well as the fault tolerance features of our hyper-converged SAN</p> <p>1. Electronic dashboard for finance department for internal control and management of budget</p> <p>2. HRIS (potentially Paycom for HR management, payroll, talent acquisition, performance evaluations, and learning management)</p> <p>3. Microsoft IB for academic performance dashboard for student learning</p>
--	--	--	--	--	--

					<p>assessment and predictive analytics</p> <p>4. MEDU for tracking and providing must see cases in clerkships</p> <p>5. Online course proposal for Pharmaco-economics</p>
Internal and external resources are regularly assessed for appropriate decision making	No identification of use of internal and external resources has been completed.	Identification of use of internal and external resources is conducted, but no assessments have occurred for decision making.	Some assessment of use of internal and external resources has been conducted; however, further assessment is needed for decision making.	Assessment of use of internal and external resources has occurred; assessment results are complete for decision making.	CNU policy requires that at all levels of the organization we assess and consider internal and external resources prior to making decisions. Administration currently assesses the use of internal and external resources has occurred for decision making for financial commitments, purchasing, hiring, construction, expansion, and program development, just to name a few. This process is expected from all employees and is currently achieved.
A budget is developed, maintained, and managed to monitor university-related expenses	No budget to monitor university-related expenses has been developed.	A budget to monitor university-related expenses has been developed, but it has not been maintained and managed appropriately. Budget is not accurate and sufficient for decision making.	A budget to monitor university-related expenses has been developed. Budget is generally updated in a timely fashion and contains only minimal inaccuracies for decision making.	A budget to monitor university-related expenses has been developed to adequately manage expenses. Budget is continuously updated in a timely fashion and reflects information accurately for decision making.	CNU has a budgeting process that includes all departments. The budget is updated, approved by the department managers, Deans, CFO, and finally by the president. The CFO closely monitors and updates the budget on a regular basis to assure that the organization has accurate

					information for decision making. See current 2016-2017 budget. 1. Budget Great Plane report developed 2. Monthly budget vs. actual financial report 3. Annual budget cycle published and procedure fully developed and implemented
Scholarship opportunities are available for students	No scholarship opportunities for students have been identified.	Few scholarship opportunities have been made available, and scholarships lack variety (e.g., most scholarships are awarded based on financial need and few are for academic achievement and service).	A number of scholarship opportunities have been made available to students, but these scholarships lack in variety (e.g., most scholarships offered are based on academic achievement, most scholarships offered are based on financial need).	A variety of types of scholarship opportunities have been made available to students (e.g., those based on academic achievement, financial need, interests in specific study areas).	1. Five categories of CNU scholarship opportunity implemented (academic, leadership, research, WE CARE financial need, President Scholarship) 2. CNU Scholarship committee implemented 3. Annual award ceremony to promote endowment and giving 4. Donor board to recognize contribution at University lobby 5. Mini-grants 6. Northern California Scholarship Foundation

Goal 6. Financial Sustainability and Growth

Create a financially sustainable enterprise-wide growth model.

Strategy 6.1. Develop revenue programs.

Tactics:

- Create and implement an alumni investment program
- Create short-term educational programs, courses, and certifications
- Provide pipeline programs

Indicator	Initial	Developing	Developed	Achieved	Evidence
An alumni investment	No discussion or plan for an alumni	An alumni investment	An alumni investment program has been	An alumni investment	<ul style="list-style-type: none"> • We have developed a

program has been implemented and is providing support for the university	investment program has taken place.	program is being developed-- key areas of the program have been articulated.	developed, but little development has occurred.	program has been developed and is providing support for the university	workable plan for an Alumni Investment Program <ul style="list-style-type: none"> • We have formed an Alumni Team to hold positions as officers. • We have hired a LLC Lawyer form a Non Profit LLC • We have interviewed Investment Bankers for financial assistance.
Short-term educational programs, courses, and certifications are offered	Short-term education courses, programs, and certifications are not offered.	Short-term education courses, programs, and certifications are in the process of development.	Short-term education courses, programs, and certifications are developed and are awaiting implementation.	Short-term education courses, programs, and certifications are offered regularly.	For students, A few short term education courses are offered such as the summer anatomy course others are in the planning stages. For faculty and staff, many 1-2 hour short courses are offered regularly on research, clinical, administrative, wellness, and self-improvement topics. If needed, a list of topics can be provided.
Pipeline programs are being implemented	No discussion of building pipeline programs has occurred.	Some discussion of building pipeline programs has occurred. Initial research about building these programs are being done.	Pipeline programs are currently being established. Resources for offering programs have been secured. Programs are awaiting implementation.	Pipeline programs are currently being offered. Resources for offering these programs are sustainable for their continued maintenance.	CHS provides a pipeline program offering students the ability to progress into the COM and COP programs. This program is in place and is well documented.

Strategy 6.2. Develop and maintain effective plans to support institutional operations.

Tactics:

- Develop an effective admissions strategy to ensure the admittance of high quality candidates
- Develop an effective marketing strategy to recruit qualified faculty and staff
- Maintain strong faculty and staff retention rates within the institution

Indicator	Initial	Developing	Developed	Achieved	Evidence
An effective admissions strategy to ensure the admittance of high quality candidates is in place	No admissions strategy has been developed to ensure the admittance of high quality candidates.	An admissions strategy is in the process of development. Strategy may appear to be unfeasible or incomplete and requires revision.	An admissions strategy is developed. Strategy may not include some, but not all, of the most appropriate criteria for ensuring the admittance of high quality candidates.	An effective admissions strategy has been developed to account for all criteria most appropriate in ensuring the admittance of high quality candidates.	MMI Interviews, involvement of administration, community members, alumni in those interviews; Admissions committee process and review; multiple layers of review and oversight guided by policy; test scores, GPAs-data in AMcas
An effective marketing strategy to recruit qualified faculty and staff has been developed	No marketing strategy is in place to recruit qualified faculty and staff.	A marketing strategy in the process of development and is not yet complete. Strategy includes insufficient details or may lack critical areas necessary in a marketing plan.	A marketing strategy has been developed to recruit qualified faculty and staff. However, lapses in the plan are apparent and need revision.	A sound marketing strategy has been designed to recruit qualified faculty and staff. Strategy accounts for all necessary components needed in a marketing plan.	Hiring policy and procedure in place; constant review and update of job descriptions; contracts with top job sites for recruiting candidates; search committee training on recruiting, references checked for all candidates; background checks
The institution retains faculty and staff	Faculty and staff retention rates are below 65%.	Faculty and staff retention rates are 65-74%.	Faculty and staff retention rates are 75-84%.	Faculty and staff retention rates are 85 % or higher.	Rates improved since last time based on payroll and HR data and reports; exit interviews

Strategy 6.3. Research viability of new programs that are consistent with the Mission for implementation.

Tactics:

- Conduct appropriate research to explore plans for potential growth
- Create plans for new program development
- Develop substantive change proposals for new programs
- Implement new programs

Indicator	Initial	Developing	Developed	Achieved	Evidence
Appropriate research is conducted to explore plans for potential growth	No research has been conducted to explore plans for potential growth.	Minimal research has been conducted to explore plans for potential growth, but research information is too scanty for decision making.	Research has been conducted to explore plans for potential growth, and results are sufficient. Additional research is beneficial for decision making.	Research to explore plans for potential growth has been conducted. Information gathered is detailed, extensive, and appropriate for	Research conducted by M.S. programs and psychology program (PsyD program)

				decision making.	
Plans for new program development are implemented	No creation of plans for new program development has been initiated.	Discussion of creating a plan for new program development is occurring.	Plans for new program development are currently being developed but are not yet complete.	Plans for new program development have been created.	Presentation to the BOT for initial approval to continue research and proposal development
Substantive change approvals are obtained for new programs	No substantive change proposals for new programs have been developed.	A substantive change proposal is in the process of being drafted.	A substantive change proposal has been submitted for review by the accreditor.	Substantive change proposal has been approved.	N/A
New programs are implemented	No implementation of new programs has occurred.	Initial stages of the implementation of new programs have occurred.	New program is in process of being implemented.	New program has implemented.	N/A

The Future of Dental Education: Vision 2030

Oral health today

THE 2018 ADEA ANNUAL SESSION & EXHIBITION
MARCH 17-20 | ORLANDO

Dental education exists to gain the benefits of good oral health for all

- Oral health is the optimal contribution of the structure and function of the oral cavity to the well being of the patient

What is the status of oral health in America?

David Satcher MD

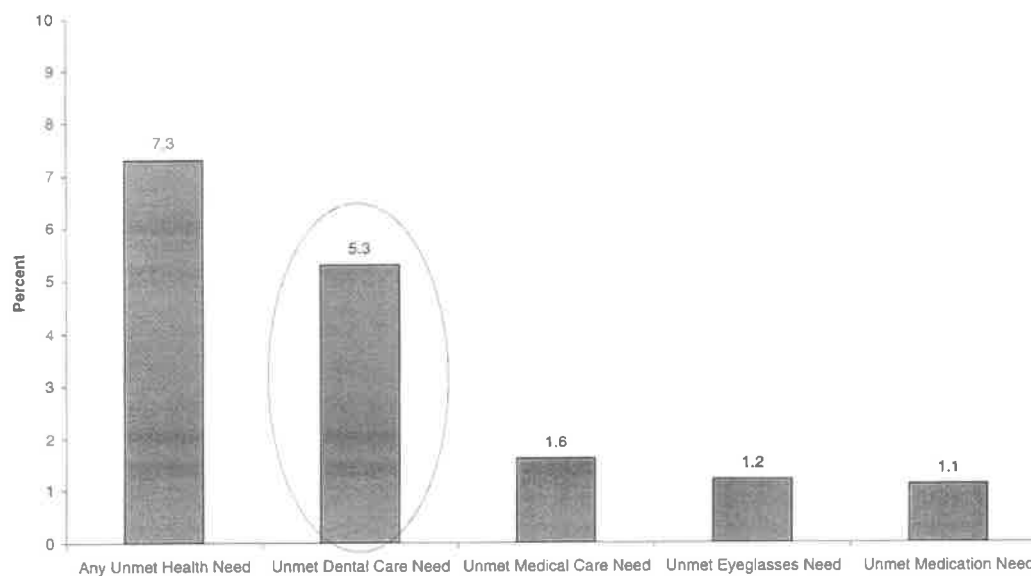

- a “silent epidemic” of dental and oral diseases is affecting some population groups. This burden of disease restricts activities in school, work, and home, and often significantly diminishes the quality of life. Those who suffer the worst oral health are found among the poor of all ages, with poor children and poor older Americans particularly vulnerable. Members of racial and ethnic minority groups also experience a disproportionate level of oral health problems. Individuals who are medically compromised or who have disabilities are at greater risk for oral diseases, and, in turn, oral diseases further jeopardize their health.

The real status of oral health today

- The hidden epidemic is no longer hidden
- Societal changes in body image and ability to tolerate destructive disease
- Health disparities heightening
- The oral systemic link is real
- Persistent disease and declining demand for oral health services
- The now visible burden of untreated oral diseases

Dental Health: The most frequent unmet health need in children

PEDIATRICS®

Changing face of caries

- Findings of a systematic review of 9 studies on root caries in older adults:
 - Overall root caries incidence = 23.7% per year
 - Overall root caries increment = 0.47 surfaces/year
 - Root + coronal increment = 1.31 surfaces/year
 - Caries rates in dentate elderly now exceed that in commercially insured children
- , “In Nursing Homes, an Epidemic of Poor Dental Hygiene,”
- In Wisconsin, 31 percent of residents of 24 facilities had teeth broken down to the gums, with visible roots

Note: Numbers from 2010 to 2030 are projected.

Dental Education Today

- Dental students are not taught how to care for sick people. Dental students are not educated as part of health systems. This is unique in health science education.
- Biomedical education in dental schools is a diminishing component of education for dental students.
- Basic medical sciences once an average of 1600 hours of a 4000 hour curriculum is now about 600 hours on average
- Dental education is focused on performance of procedures sometimes at the expense of knowledge
- Exploration of new workforce models is occurring

Dental First Year Enrollment and Graduates

Source: American Dental Association, Survey of Dental Education, projection by E Solomon

Solomon, Dental Economics

- The U.S. Centers for Medicare and Medicaid Services predicts insurance as a source of dental expenditures will remain relatively stable at 51.0% up to 2023. They also estimate out-of pocket expenditures will decline to 35.1% and government sources will increase to 13.9% of all dental expenditures by 2023. This projection estimates government expenditures for dental services more than doubling by 2023 to \$26.7 billion. Historically, government expenditures for dental services have not increased at this rate.

Community Based Education at UCSF Asian Health Services among 14 sites

University of California
San Francisco

Health systems based practice

- ***Systems-Based Practice*** requires residents/fellows to demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care.

Emphasis on Value

“Providers should be required to measure...improvements in quality of life, functioning and longevity.

After a patient has a knee replaced, can she walk normally? When a child has asthma can he play school sports? Unfortunately, the measurements we use today leaves us unable to make many of these vital judgments about the quality of doctors, hospitals or health care organizations.”

David Lansky, CEO, Pacific Business Group on Health, speaking on behalf of Boeing, Target, Disney, Wal-Mart, Intel, GE, Wells Fargo and the California Public Employees Retirement System.

Curriculum needs for system based/value based practice

- **Core biomedical science for DDS consistent with health team leaders**
- **More robust dental team members in DH, DT and DA educated in intraprofessional health system environment**
- **Dental team integrated into interprofessional team through IPE and collaborative practice models**
- **All clinical practicum carried out in operating health systems**

The key elements of change

- **Collaborative interprofessional practices**
- **Integrated payment system**
- **Value based payment system**
- **Reduce the unit cost of dental care with**
 - **Workforce development: team care intraprofessional education**
 - **Practice models**
 - **Technology**

Key elements of change II

- **Oral health integrated into primary care**
- **Evidence based integration into key health focus areas e.g.**
 - **Diabetes**
 - **Obesity**
 - **Atherosclerotic diseases**
 - **Oncology**
 - **Child development**
 - **Pregnancy**

Key elements of change III

THE 2018 ADEA ANNUAL SESSION & EXHIBITION
MARCH 17-20 | ORLANDO

- **Holistic admissions to dental school**
- **True commitment to diversity in dental education environment**
- **Community based education**
- **Clinical education of dental workforce entirely in health systems**
- **Collaboration with schools of health sciences and health systems**
- **Adoption of ACGME core competencies**
- **Presence of oral health in every AAAHC member**
- **Advance degrees in Health Systems**

Appendix 1-2 CDM Strategic Plan

**CALIFORNIA NORTHSTATE
UNIVERSITY**
College of Dental Medicine
Strategic Plan

Strategic Plan
2019- 2024

(Completed February 2019)

History

As a new College of Dental Medicine, this strategic plan is embarked upon at California Northstate University to create a vigorous, effective and sustainable college. The strategic plan will guide us towards the completion of the first five years of the college, the recruitment of faculty, staff and students and the matriculation and graduation of our first class. At the completion of this five-year plan, we will have demonstrated the presence of California Northstate as an emerging critical and valuable component of American dental education.

Upon the selection of the Dean of the College of Dental Medicine, the planning committee, the Board of Trustees, the advisory committee of the Sacramento District Dental Society, among others had presentations and discussion with Dean regarding the Mission, Vision and Values of the College of Dental Medicine, and additional elements of the proposed strategic plan. The initial draft was sent out for review internally and externally to dental education leaders and to the CNU academic leadership for their feedback and amendments. The preliminary draft was presented to the December 2018 meeting of the Board of Trustees. The advisory committee was reconvened on February 4 and unanimously approved the master plan. The planning committee convened on February 15, 2019 to review the plan, focused on the curriculum and professional identity model of the College. After further feedback, the plan will be incorporated as approved by the President's Executive Council at its April 1st meeting.

MISSION

The Mission of the College of Dental Medicine is to advance the art and science of health care through excellence in oral health education, practice, research, service, and social accountability.

Education: Create caring, skilled and knowledgeable clinicians who will constantly advance their capabilities throughout life

Practice: Produce clinical leaders in oral health who will serve in private practice, health systems practice, in interprofessional settings, academia and industry

Research: Promulgate scientific inquiry throughout the curriculum and support student and faculty research that creates an environment of scientific curiosity and an evidence-based foundation for clinical practice.

Service: Provide individual patient care services at all clinical sites under the auspices of CNUCDM that produces the very best oral health outcomes and clinical value.

Social Accountability: Advocate for and help build stronger communities in California and globally through improved oral health care, disease prevention, health promotion and protection from oral diseases through community-based approaches.

VISION

The Vision of the College of Dental Medicine is to provide constructive innovation in its education programs, and leadership in integrating oral health care into human health care systems.

The College of Dental Medicine Embraces the California Northstate University WECARE Values of:

- Working as a team
- Embracing diversity and workplace excellence
- Caring about our students, our staff, our faculty, and our profession
- Advancing our university, our goals, and our discipline
- Responding to challenges that may impede Mission
- Enhancing communication and partnership

College of Dental Medicine Values:

- Patient-centered didactic and clinical education that always puts improved health outcomes first
- Foster a humanistic and character-developing environment for dental students
- Making better communities and a better world through improved oral health
- Understanding the professional responsibility of the dentist as the head of the oral health care team
- Practicing health promotion and disease prevention and protection
- Advancing California Northstate University through excellence in all we do

SUPPORTING NARRATIVE FOR THE STRATEGIC PLAN'S STRATEGIC GOALS

The inauguration of the College of Dental Medicine affords the opportunity to advance health sciences education and practice through the inclusion of oral health education and practice into an emerging academic health center, community health system and hospitals/including the planned California Northstate Medical Center.

The selection of the name of the College and the degree is designed to reflect the ethos and the culture of the program. It is first a College in that it focuses on inquiry, action capacity and education at the highest level. As a College we will exhibit traditional values of scholarly work, a learning community, and academic freedom. As a College of Dental Medicine, we recognize that oral health care is the practice of medicine and surgery and is integrated into all other aspects of health care. The degree D.M.D. reflects doctoral level of knowledge and skills and recognizes that oral health care is not surgical care alone but includes the behavioral, social, and medical management aspects of oral diseases.

The integration of oral health into human health requires dentists who are capable of performing at the highest level in an ever more complex and demanding environment of emerging technology, social change, human disease management, and evolving health systems. The CNUCDM is developing a curriculum with four basic themes into which all didactic and clinical content will be served. These four themes are: **Human Systems, Odontology, Oral and Maxillofacial Studies, and Behavioral and Social Sciences**. All four themes will be delivered in a diagonal curriculum. The CNUCDM will develop clinical delivery programs at the highest level on campus and across the region with health system partners that promote preventative health strategies, and value-based care in a health science educational model. These programs will be integrated to the greatest extent with other health resources within health systems and in the community beyond.

PROGRAM LEARNING OUTCOMES

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare
8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

PROGRAM CLINICAL CARE OUTCOMES

Patients experience:

1. Patient-centered highest quality diagnostic, preventive and treatment services at the most reasonable cost with the best patient experience and treatment outcomes
2. Comprehensive oral health care in a dental medicine model integrated with overall health
3. Minimally invasive care utilizing the latest technology

STRATEGIC GOALS

Tactics, development plan, critical success factors, and evidence of achievement

Goal 1. Educate effective practitioners of dental medicine

Recruit, retain, educate, and train the highest quality of DMD students

Goal 2. Develop a high quality faculty and staff

Develop and distribute resources to recruit, retain and promote the effective activities of faculty and staff. Promote research and scholarship in the college.

Goal 3. Achieve effective leadership in oral health care delivery

Provide patient care that becomes recognized as some of the best oral health care available anywhere. Gain the benefits of good oral health for the patients served and in our communities beyond.

Goal 4. Promote a diverse and inclusive environment in dental medicine and in the communities we serve

Create and sustain an environment that respects all its students, staff and faculty and the patients we serve. Promote multiculturalism and American values of equality and inclusiveness in the college and for community oral health.

Goal 5. Create exceptional facilities and infrastructure

Build an efficient infrastructure to support and sustain learning, teaching, communication, research and scholarship while keeping education affordable.

Goal 6. Ensure financial sustainability and growth

Build a financially sustainable budget that will provide effective support of existing programs while being poised for expansion through strategic growth of programs

CODA TABLE 2: The cycle of continuous improvement based upon the strategic plan

STRATEGIES AND TACTICS FOR OUR GOALS

Goal 1. Educate effective practitioners of dental medicine

Recruit, retain, and train the highest quality of DMD students

Strategy 1.1. Provide excellence in teaching.

Tactics:

- Develop and deliver an exceptional curriculum
- Work with the CNU Institute for Teaching and Learning Excellence to develop contemporary pedagogy
- Develop a student faculty mentorship program to promote professionalism and ethics

Tactic	February 2019 status	Development Plan	Critical Success Factors	Party responsible for report	Evidence of Achievement
Develop and deliver an exceptional curriculum	A curriculum with four themes (human studies, odontology, oral and maxillofacial studies, behavioral and social sciences) has been presented to the planning committees. 226 course hours and course names have been identified and course directors have been selected	Spring 2019: Completion of syllabi, development of course materials in Canvas . selection of source materials 2019-2020: presentation of D1 courses with assigned auditors and 360 degree course assessment Repeat this cycle for D2, 2021, D3, 2022, and D4 2023	Positive assessment of courses at 360 degrees: students auditor, faculty, course director, academic Dean, Dean Pass or remediation to pass for all courses (for academic reasons) with competency-based grading policy Performance at or above national average on National Board Exam	Associate Dean of Academic Affairs	1. Student course evaluations 2. Student engagement dashboard 3. Faculty self assessment 4. Course auditors report
Work with the Institute for Teaching and Learning Excellence (ITLE) to develop contemporary pedagogy	The center is an emerging organization for which was launched in October 2018 by the College of Medicine, Pharmacy, and Psychology	Participate fully in all activities of the ITLE with a broad engagement of full and part time faculty	Demonstrated participation resulting in incorporation of ITLE directed advance pedagogy in CODM courses	Associate Dean of Academic Affairs	Implementation of active learning in CODM courses Reports of course directors on implementation of ITLE training
		Train faculty in mentorship	Improved student life	Dean	Survey of students on the

Develop a student faculty mentorship program to promote professionalism and ethics	No mentorship program has been established as of February 2019	<p>through faculty development program.</p> <p>Create assessment rubric for faculty to individually assess mentorship performance</p> <p>Assign each faculty member mentees</p> <p>Apply CDM resources to support mentorship activities</p> <p>Perform annual review of program and participants</p>	<p>Improved faculty staff and student satisfaction.</p> <p>Development of values of professionalism in students</p>	Assistant Dean of Student Affairs	<p>mentorship program</p> <p>Survey of faculty on the mentorship program</p> <p>Evaluations of student reflective essay on the mentorship program and its impact on professionalism</p>
--	--	--	---	-----------------------------------	---

Goal 1: Strategy 1.2 Recruit and retain exceptional dental students

Tactics:

- Recruit a qualified class ensuring scientific clinical ability with a holistic approach to promote social consciousness and action
- Retain all these qualified students with timely completion of the DMD program

Tactic	February 2019 Status	Development Plan	Critical Success Factors	Party responsible for report	Evidence of Achievement
Recruit a qualified class ensuring scientific clinical ability with a holistic approach to promote social consciousness and action	The college has begun to integrate into university recruitment and admissions processes. Participation in the university wide admissions and student affairs retreat in January 2019	Implement the admissions marketing plan as in the CODA self study Appendix XX INSERT HERE MARKETING PLAN	Application pool from the region (central valley, delta, Shasta, Humboldt, Sierras) in excess of applicants to other California dental programs. Social science majors represented. Students from universities of the Delta, Central Valley, mountains and Northern California HPSA shortage areas represented Immigrants and underrepresented minorities exceed the region	Dean of admissions and student affairs	More than 50% of students from the underserved region and colleges associated to the region 20% social science majors Immigrants and underrepresented minorities in excess of other regional dental programs
Retain all students with timely completion of the DMD program	No students are enrolled in the college of dentistry but programs to assist in retention are in place for medicine and pharmacy	Assess the effect of the mentorship program in Strategy 1.1 on retention of students Monitor student performance consistently and continuously		Associate Dean of Academic Affairs.	1.

Goal 2. Develop a high quality faculty and staff

Develop and distribute resources to recruit, retain and promote the effective activities of faculty and staff.
Promote research and scholarship in the college.

Tactics:

- Recruit outstanding sufficient founding faculty of the college
- Complement faculty with appropriate staff
- Develop a program of scholarship and research that supports faculty development

Tactic	February 2019 status	Development plan	Critical Success factors	Party responsible for report	Evidence of achievement
Recruit outstanding sufficient founding faculty of the college	65 interested full and part time faculty engaged and interviews commenced Hiring plan for faculty accepted by university.	Implement hiring plan for 36 FTE faculty as well as Volunteer onsite faculty. Complete MOU's for community based faculty	Sufficient faculty to deliver curriculum and clinical care/clinical education at each stage of development	Dean Associate Dean of Academic affairs	Administrators in place in critical areas of academic affairs, curriculum, clinical affairs and research. Course directors and sufficient faculty in place for each of the courses at least 90 days prior to course delivery Faculty in place to care for patients in CNU clinics ready for students to join care teams
Complement faculty with appropriate staff	Staff hires have begun with Dean's administrator and hiring plan for academic and clinical operations under development	Complete hiring plan for all academic, administrative and clinical staff. Complete hiring of qualified personnel as needed during development.	High functioning qualified staff hired in timely fashion associated with need	VP for human resources Dean Dean of Clinical Affairs Dean of Academic affairs	Clinical staffing model achieved consistent with industry standards in all areas. Academic and administrative staffing consistent with CNU collaborative models and standards and task based needs
Develop a program of scholarship and research that supports faculty development	Interview and hiring plan completed for assistant Dean of research	Develop collaborative public health oriented research program	Active college research program with external funding including NIH, HRSA, state of California, industry and foundation grants	Dean of research VP for Research	Research program in top 50% of the 67 dental programs in the US by the first 5 years of operation

Goal 3. Achieve effective leadership in oral health care delivery

Tactics

- Provide patient care that becomes recognized as some of the best oral health care available anywhere.
- Gain the benefits of good oral health for the patients served and in our communities beyond.

Tactic	Initial status February 2019	Development plan	Critical Success Factors	Responsible for reporting	Evidence of achievement
Provide patient care that becomes recognized as some of the best oral health care available anywhere	Plans for clinics and clinical partners are under development	Complete construction of 2 clinics each of 30 clinical treatment units and appropriate supporting clinical facilities. Equip clinics and hire expert renowned, clinical staff. Complete MOUs with health systems in the region for clinical education and care partnerships.	60 operational units. Core radiology, digital clinical facilities, operational electronic health record system, sterilization and equipment management program Marketing program to attract sufficient patients with oral health needs fulfilled by CNU clinics	Dean of Clinical Affairs Dean	Operational program attracts patients who communicate the triple aim in surveys of the highest quality of care at the lowest cost and with the best patient experience 10,000 new patients in the first year of operation and additional 5000 per year to threshold of 20,000 active patients. Measure: Press Ganey, faculty and staff engagement survey
Gain the benefits of good oral health for the patients served and in our communities beyond	Clinics are not operational in February 2019. Analytics of outcomes based care and value based care for diseases including caries, periodontal disease and oral cancer have been undertaken	Develop thresholds for impact on extant pathologic entities in clinics and utilize standards/parameters of care to develop rubrics regarding thresholds for high quality outcomes: e.g. CAMBRA assessment tools, cancer screening outcomes and disease management and control profile for periodontal disease. Engage Sacramento community in population health initiatives to improve oral health	Reduced recurrent caries rate for enrolled patients as compared to cohort Greater tooth retention and periodontal index in patients with periodontal disease Prevention of oral cancer above community standards in patients with premalignant disease and high risk factors. Increased utilization and decreased disease as outcome of community engagement	Dean of Clinical affairs	Chart review pre- and post-interventions to assess value based care model Community-based interviews with stakeholders to assess community engagement

Goal 4: Promote a diverse and inclusive environment in dental medicine and in the communities we serve

Tactics

- Create and sustain an environment that respects all its students, staff and faculty and the patients we serve.
- Promote multiculturalism and American values of equality and inclusiveness in the college and for community oral health

Tactic	Status February 2019	Development Plan	Critical Success Factors	Party Responsible for report	Evidence of achievement
Create and sustain an environment that respects all its students, staff and faculty and the patients we serve.	Consistent CNU values and applied environment in student affairs admissions and academic affairs are present to create a community of respect.	The humanistic environment for dental education will be addressed by the appointed Dean of academic affairs to interface with extant CNU activities. Both curricular and faculty development program will be initiated to promulgate a dental college culture of respect for diversity in all aspects	Faculty and students demonstrate a respectful and inclusive culture in plenary activities, interest group development, and individual assessment.	Dean	<ul style="list-style-type: none"> • Engagement survey • Interviews with community of students staff and faculty
Promote multiculturalism and American values of equality and inclusiveness in the college and for community oral health	CNU is established as a remarkably multicultural academic health center in one of the most diverse communities in California.	Promote multicultural activities that engage the CNU community and the larger regional community	<p>Achieve broad multicultural engagement with students, faculty and staff. Examples Celebracion de Salud, Indian dentistry day, Asian dental society activity, National Dental Association</p> <p>Engage Multicultural programs in the Northstate community: California state fair, other community events,</p>	Dean Dean of student affairs and admissions	<p>Assess CNU activities and outcome assessments for these activities</p> <p>Assess in engagement survey</p>

			International engagement with Asia for dental education and practice

Learning Outcomes' Assessment at CNU

Learning Outcomes' Assessment

Learning outcomes assessment is the purposeful, systematic measurement of student learning at various levels of learning. The goal is a cycle of continued improvement of academic quality for the institution. Effective learning outcomes' assessment is always responsive to the following questions:

- What knowledge, skills, and attitudes will successful students have acquired upon graduation?
- How well do students perform relative to these learning outcomes?
- How can programs improve to provide a stronger academic experience to students?

Purpose of the Handbook

The purpose of this handbook is to assist CNU faculty, program chairs, and Directors of Assessment, and Assessment Committee Chairs in conducting learning outcomes' assessment. It is a step-by-step guide that expounds the basic concepts and processes, provides examples and strategies for meeting the specific requirements, and offers approaches for making assessment a useful tool in curricular renewal.

Learning Outcomes Assessment and Academic Quality

CNU has two processes for assessing academic quality: *Program Review* and *Learning Outcomes' Assessment*. Learning outcomes' assessment is an annual process by which faculty assess student mastery of program-level outcomes. Program review occurs every five years and examines programs' overall functioning by studying administrative data, graduate outcomes, and other measures of effectiveness. In addition, the program review also provides an opportunity for academic program faculty to examine learning outcomes data collected through the annual learning outcomes assessment.

Benefits of Learning Outcomes Assessment

When conducted properly, learning outcomes' assessment has benefits for the entire institution. It benefits students by ensuring they master the material of their degree program and by providing academic and professional programs that are responsive to both their own (and society's) needs. It benefits faculty by providing the tools necessary to lead curricular development. Finally, it benefits the entire institution by giving the institution documented evidence of student learning and achievement, thereby validating the institution is achieving its mission and goals.

Learning Outcomes' Assessment at CNU

At CNU, there are four primary groups directly involved with assessment activity.

- Faculty develop learning outcomes, assess student performance, and provide the necessary analysis to understand learning outcomes in their programs.
- Directors of Assessment manage the assessment process within their programs and submit yearly assessment reports that provide evidence of the activity.
- The Directors of Assessments work with the Vice President of Institutional Research and

Appendix 1-2 CNU Assessment Handbook

Effectiveness to plan for appropriate assessment methodology and practices and provides support throughout the process. The Director of Assessment for each college coordinates the overall effort for the college's assessment activities with assistance from the Assessment Committee and Assessment Committee Chair.

- The University's Assessment Committee, consisting of representatives from all the schools and divisions in the University, reviews and advises assessment activity to keep the university aligned with requirements of regional accreditation. The college's Assessment Committees review student learning results from which specific recommendations for improvement are generated to be addressed program faculty. The student learning outcomes' reports are used to provide evidence, where appropriate, in the budget process.

Six steps of learning outcomes assessment

There are six steps of learning outcomes' assessment: develop/revise learning outcomes, design outcome measures, collect data, analyze and evaluate data, create assessment report, and plan for the next assessment cycle. The Assessment Handbook is divided into six sections addressing each of these steps. Each section provides a basic overview of the goals and purpose of the step, lists the specific activities for departments associated with the step, and offers suggestions and potential strategies for effectively completing the step.

SIX STEPS OF LEARNING ASSESSMENT

1. Develop/revise learning outcomes
2. Design outcome measures
3. Collect data
4. Analyze and evaluate assessment data
5. Write action plans and create annual assessment report
6. Plan for next assessment cycle

The ideas and suggestions for completing the steps are intended to provide useful information for faculty and department chairs. Since each academic department differs in terms of size, approach, and outlook, it is important to ensure that the assessment approach matches the needs of the program. Staff from the Office of Institutional Effectiveness are available to discuss ideas and plan for programs to build a learning outcomes' assessment program that meets its needs.

Cyclical nature of learning assessment

Since the primary goal of learning outcomes program assessment is continued improvement of the quality of education offered by CNU; the process is cyclical in nature. Assessment is an ongoing process that should grow and change as programs evolve and develop.

Section I: Developing Learning Outcomes

The first step in learning outcomes' assessment is the creation of outcomes, which reflect the core knowledge and material of the program. Most programs have previously developed learning outcomes, so this step of the process allows for reexamination and potential

Checklist of Needed Activity for Developing Learning Outcomes:

- ☐ Key learning outcomes developed
- ☐ Evidence of faculty participation in developing learning outcomes
- ☐ Verification that outcomes are; being performed by students, observable, and measurable

Appendix 1-2 CNU Assessment Handbook

revision. The development of learning outcomes should capitalize on the depth of knowledge of the faculty and thereby help shape the nature and direction of the program.

This section describes characteristics of strong learning outcomes, provides suggestions on how to develop outcomes, and discusses a process by which programs can scrutinize learning outcomes to ensure their strength.

Effective learning outcomes

Learning outcomes are statements that specify what students will be able to do or demonstrate as a result of earning their degrees. Effective outcomes are usually expressed as knowledge, skills, or abilities that students will possess upon successful completion of a program. They provide guidance for faculty regarding content, instruction, and evaluation, and serve as the basis for ensuring program effectiveness. Because we evaluate student performance in terms of specific actions, the strongest learning outcomes are measurable and observable.

Tool 1: Key questions to consider when drafting learning outcomes

- What is the most essential knowledge students need to have acquired upon successful completion of the program?
- Are there specific skills or abilities students need? What are they?
- How does the program attempt to shape students' attitudes or views regarding the discipline or profession?

Selecting the right verb

Given that learning outcomes focus on observable and measurable actions performed by students, the selection of an action verb for each outcome is crucial. Determining the best verb to use in a learning outcome can be challenging because of its need to accurately reflect the knowledge, skills and abilities being studied. *Tool 2: Common learning outcome action verbs* provides a brief list of verbs that are used in writing learning outcomes at the collegiate level.

Tool 2: Common learning outcome action verbs

Analyze	Demonstrate	Prepare
Apply	Design	Rate
Compare	Develop	Revise
Compile	Discuss	Select
Compute	Evaluate	Use
Create	Explain	Utilize
Critique	Predict	Write

Certain verbs are unclear and subject to different interpretations in terms of what action they are specifying. Verbs/verb phrases such as know, become aware of, appreciate, learn, understand, and become familiar with should be avoided; they frequently denote behavior that is not easily observed or measured.

Strengthening weak learning outcomes

Tool 3: Evaluating learning outcomes

5

- Is the action done by the students?
- Is the specified action observable?
- Can the specified action be measured?

The process for strengthening learning outcomes re-examines the original characteristics used of strong outcomes. By asking the three questions in *Tool 3: Evaluating learning outcomes*, weaknesses in learning outcomes emerge.

Revising learning outcomes

The process of writing learning outcomes is not simple. Determining the outcomes a program wants to examine can pose the first challenge. In addition, drafting the outcome often takes several revisions to develop a strong one that reflects the intentions of the faculty. However, the effort put into drafting strong outcomes will be returned through an easier time developing measures, collecting data, analyzing the results, and ultimately making recommendations for improvement. Strong outcomes will help to focus the entire process and allow for the most useful results from the assessment process.

Section II: Designing Outcome Measures

After developing learning outcomes, the second step in the assessment process is to select outcome measures. While learning outcomes describe the knowledge, skills and abilities that students should possess after instruction (or completion of the program), outcome measures are the specific tools and methods that generate data and information about students' performance relative to learning outcomes.

There are two types of outcome measures: direct measures and indirect measures. Each serves an important function in assessment, and when used together they provide a richer perspective on student learning by providing direct evidence and context to understand student performance.

Checklist of Needed Activity for Developing Outcome Measures:

- ☐ At least one direct measure for each learning outcomes
- ☐ Indirect measures that will facilitate understanding of the assessment data, when appropriate
- ☐ Evidence of faculty participation in the development of measures
- ☐ Established performance standards for each measure being used
- ☐ Expected results for each measure being used

→ **Direct measures** are methods for assessing actual samples of student work to provide evidence of student performance relative to the learning outcomes.

→ **Indirect measures** are methods for assessing secondary information on student learning that do not rely on actual samples of student work.

Each type of outcome measure serves a particular purpose. Direct measures assess the extent to which students' work meets the learning outcome performance standards. Indirect measures compliment direct measures by providing supportive evidence, information, and student perspective. Together they provide a richer perspective on student learning by providing direct evidence and context to understand student performance.

Outcome measures should meet three criteria

Regardless of the type of measure used, strong measures share three basic qualities:

- Provide sufficient data and information to measure the learning outcome
- Are not overly burdensome departments to collect
- Have established performance standards and expected results to help guide the analyses

Selecting direct measures

There are many issues to consider when selecting direct measures of learning. Programs should be creative in determining the most useful way to measure student performance, but at the same time ensure that the methods allow for meaning from interpretation and results. *Tool 1: Sample direct measures* provides a list of some of the more common methods within higher education and can help foster ideas for developing measures.

Tool 1: Sample direct measures

- Student Portfolio Evaluation
- Student Performances or OSCEs
- Tests and Examinations
- Thesis Evaluation
- Course-Embedded Assessments
- Pre-test/Post-test Evaluation

Course-embedded assessments are direct measures which use student work in specific courses to assess student learning. Students are already motivated to do their best on these assessments because they are conventionally graded on them. For example, if one learning outcome requires students to synthesize the literature on a topic in the field, student research papers may be evaluated using a rubric to assess how well they meet the learning outcome. Many classroom assignments can be used for course-embedded assessment as long as they assess a program's student learning outcome. Course-embedded assessment measures are often selected because they take place in the classroom, take advantage of student motivation to do well, and directly assess what is taught in the classroom.

Examinations: Many course-level learning Outcomes can be assessed by examinations given within the course. In some cases the outcomes measured by the examinations will be identical to the program's student learning outcomes and, the exam questions will assess both course and program outcomes. With some creativity, exam questions can also be written to cover broader Program Learning Outcomes (PLOs) without losing their validity for course grading. In programs without capstone courses, it might be possible to write a coordinated set of exam questions that provide a fuller picture of student learning when administered in exams across a series of courses.

Analysis of course papers: Course papers can be used as measures for student learning outcomes. Because students create these papers for a grade, they are motivated to do their best and these papers may reflect the students' best work. This process typically requires development of a rubric that focuses on program learning outcomes. Faculty groups read these same papers to assess the attainment of PLOs. This second reading should be done by someone other than the instructor or by others along with the instructor, as the purpose for the assessment is different from grading. Scoring rubrics for the papers, based on the relevant learning outcomes should be developed and shared with faculty raters prior to rating to promote inter-rater reliability.

Analysis of course projects and presentations: Products other than papers can also be assessed for attainment of program learning outcomes. For example, if students are required to give oral presentations, other faculty and even area professionals can be invited to these presentations and can serve as outside evaluators using the same rubric as other raters.

Student performances: In some areas, such as teaching or counseling, analysis of student classroom teaching, mock counseling sessions or other performances can provide useful measures of student learning. A standardized evaluation form is necessary to ensure consistency in assessment. One advantage of using performances is that they can be videotaped for later analysis.

Cross course measures are direct measures of student work across the program. Cross course measures examine students' work that incorporates multiple dimensions of knowledge, skills and abilities developed throughout the entire program. The most common types of cross course measures are capstone course papers and projects, and student portfolios.

Capstone courses: Capstone courses provide an opportunity to measure student learning, because this is where students are most likely to exhibit their cumulative understanding and competence in the discipline. One of the purposes of capstone courses is to provide an opportunity for students to "put it together," which typically requires students to integrate the knowledge, skills and abilities found in the program's learning outcomes.

Student portfolios: Compilations of students' work in their major can provide a rich and well-rounded view of student learning. The program usually specifies the work that goes into the portfolio or allows students to select examples based on established guidelines. By compiling a range of student work, portfolios can be used as the measure for more than one learning outcome. Portfolios can also be valuable for the student by providing a reflection of their skills and abilities. Portfolios do require strong, well-constructed rubrics to make the process of extracting assessment data manageable.

Internship supervisor evaluations: If the program has a number of students who are doing relevant internships or other work-based learning, standard evaluations by supervisors using a rubric designed to measure a particular learning outcome across the duration of the internship may provide data on attainment of learning outcomes. In addition, when programs exercise control over the content of internships, those settings can serve as capstone experiences where students can demonstrate their knowledge skills and abilities.

Selecting indirect measures

Like selecting direct measures, there are many issues to consider when selecting indirect measures of learning. Programs should be creative in determining the most useful way to measure student performance, but at the same time ensure that the methods allow for meaning from interpretation and results. *Tool 2: Sample indirect measures* provides a list of some of the more common methods within higher education and can help cultivate ideas for developing indirect measures.

CNU conducts two surveys each year that can be analyzed as indirect measures of learning. The Alumni Survey and the Graduating Student Survey both contain questions regarding the learning experience at CNU.

Tool 2: Sample indirect measures

- Graduating student and alumni surveys
- Employer and internship supervisor surveys
- Exit interviews and focus groups

In addition, programs are able to add supplemental questionnaires to the Alumni Survey that can be used to answer specific questions and issues of the program. The benefits of including these types of measures into department assessment plans are that they have built in comparisons by examining the program's responses relative to the University or school and they require limited work by chairs and faculty in collecting the data.

While University surveys may provide some insights into students learning experience, they sometimes lack the specificity needed by programs in their assessment activity. Accordingly the programs may need to conduct their own primary research to address the issues. These methods may be quantitative or qualitative in nature, but should still address the key issues of strong measures.

Internship Supervisor Survey: Internship supervisors may provide general feedback to programs regarding the overall performance of a group of students during the internship providing indirect evidence of attainment of learning outcomes. This should not be confused with internship supervisors' evaluation of student performance on specific learning outcomes.

Focus Groups: Focus Groups provide in-depth, qualitative interviews with a small number of carefully selected people who are thought to represent the population of interest (students in the program). For program assessment, students are brought together to discuss their perceptions of how well they achieved the program's learning outcomes.

Exit Interviews: Graduating students are interviewed individually to obtain feedback on the program. Data obtained can address strengths and weaknesses of the program and/or assess relevant concepts, theories or skills related to the program's learning outcomes.

Area Expert Comments: Comments made by area experts can be useful in gaining an overall understanding of how students will be judged in a given field. This differs from having experts use the same rubric faculty raters use, and instead focuses on their opinion of the quality of students' work and the program in general. This should not be considered a direct outcome measure but it can serve as a valuable indirect measure.

Establishing performance standards: When interpreting assessment results, it is useful to set a performance standard that specifies the acceptable level of student work or response. For each learning outcome the program should ask "What is an acceptable performance standard for this learning outcome?" This performance standard may be a passing score on an exam, a rubric rating of "meets program standards" on a student paper or another indicator of the quality of student work.

Establishing expected results: By setting expected results for the percentage of students meeting or exceeding performance standards before data collection begins, the program can gauge its effectiveness in helping students meet the learning outcomes. For example: Seventy-five percent of students met the performance standard set by the department for the outcome measure on ethical reasoning. This can be compared to the expected result of 80% meeting the performance standard which reveals an area for improvement.

Evaluating measures

It is possible to evaluate outcome measures by asking the three questions found in *Tool 3*:

Questions for evaluating outcome measure. If faculty and chairs are able to answer “yes” to all of three questions, it is likely that a strong set of measures has been developed.

Tool 3: Questions for evaluating outcome measures

- Does the measure provide sufficient data and information to analyze the learning outcome?
- Does the measure require a reasonable amount of work to collect?
- Does the measure establish performance standards to help guide the analysis?

Section III: Collecting Data

Data collection is the next step in the assessment process. This section will cover the process of collecting student work and indirect measures, rating work, and storing data. The collection process may seem like a daunting task, but with planning, it can move more smoothly and provide quality data and information about the programs learning outcomes.

The data collection process consists of three basic steps: **gathering** necessary student work and other information, **evaluating** the results, and **storing** the data. The **Gathering, Evaluating, and Storing (GES)** process is used for both direct and indirect measures; however some of the specific steps will vary. The key to simplifying the data collection process is planning. *Tool 1: Questions to ask in planning data collection* provides a number of questions to think about before gathering data.

Checklist of Needed Activity for Collecting Data:

- ☐ Direct data collected for each learning outcome and measure
- ☐ Indirect data collected, if appropriate
- ☐ Secure electronic database of both direct indirect measures
- ☐ Examples of the student work for each performance standard in either paper or electronic form.

Tool 1: Questions to ask in planning data collection

Direct Measures	Indirect Measures
<ul style="list-style-type: none"> Where is the student work coming from? How will the student work be organized and stored for evaluation? When will it be evaluated? Who will be responsible for evaluating? How will the performance data be stored? How will it be secured? How will examples of student work be stored? Paper? Electronically? Are there FERPA issues to consider? 	<ul style="list-style-type: none"> Who will conduct the research for the measure? When will research be done? In a class? How will the results be tabulated or a categorized? If you are using institutional data, will special data analysis need to be done?

Step 1: Gathering

The process of gathering materials for direct measures varies greatly depending on the measures used. For course-embedded measures or capstone experiences, it is necessary to coordinate with the faculty member teaching the course to ensure the student work is collected and forwarded for assessment. If a portfolio is being used, it will be necessary to determine who is responsible for putting the portfolio together.

When using indirect measures, the gathering phase consists of conducting the necessary research (survey, focus group, or other measures). Indirect measures based on secondary analysis of

material (e.g. course syllabi) need these materials to be compiled. Programs should set a schedule that outlines the materials needed to simplify follow up and ensure all student work is collected.

Step 2: Evaluating

The evaluation phase for direct measures includes the examination of student's work by faculty to determine the level to which it meets the learning outcome. Because assessment looks to evaluate specific aspects of the student work, rubrics are often used as guidelines in the process.

Effective rubrics, standardized evaluation forms used to assess student work toward meeting learning outcomes, can be developed in many different ways to assist the evaluation process. They can describe qualitative as well as quantitative differences; and are often used to assess assignments, projects, portfolios, term papers, internships, essay tests, and performances. They allow multiple raters to assess student work effectively by increasing the consistency of ratings and decreasing the time required for assessment. The development of rubrics is covered in Appendix A: Rubric Toolbox.

Regardless of the type or style of rubric used, there are a few general principles to ensure they are effective. *Tool 2: Steps for using a rubric to evaluate student work* outlines the basic process of using rubrics.

Tool 2: Steps for using a rubric to evaluate student work

- Review the rubric with all raters to ensure it is consistently understood.
- Use the descriptors in each performance level to guide ratings
- Assign the rating that best represents the student's work

The key to achieving consistency between raters is conducting a "norming" session to allow faculty raters to reach consensus on the levels of student work at each level of the performance standard. *Tool 3: Steps to "norming" a rubric* provides the basic process of a norming session.

Tool 3: Steps in "norming" a rubric

- Explain to the raters how to use the rubric
- Provide samples of student work
- Discuss each sample and determine how raters determine scores
- Reach a general consensus on each level of the performance standard

For indirect measures that the department is conducting, the evaluation phase consists of the compiling of the results into a form that are meaningful to those doing the assessment. For survey data, this will generally include entering the data into a data set for analysis and generating the descriptive statistics. For more qualitative work such as focus groups, this part of the process maybe the extraction of any themes or ideas.

Step 3: Storing

There are two different storage issues which departments need to address. The first is an electronic storage system of all the data that are compiled from students' work and results from indirect measures.

For tracking direct (and some indirect) measures programs may create an electronic database/Excel spreadsheet to store all of their assessment data for later analysis.⁵ The database will typically list all students and their performance on the measure. *Tool 4: Example of a program database* illustrates how to compile the database of assessment data.

Tool 4: Example of a program database			LO 1: Portfolio Rating	LO 1: Senior Exit Interview	LO 2: Paper Rating from 300-level course
Last Name	First Name	Year			
Allan	Jane	Senior	4	More writing needed	4
Miller	Larry	Senior	5	Not present	5
Smith	Bob	Senior	3	More writing needed	3
Bloom	Desmond	Junior			
Jones	Robin	Junior			3
Smith	Troy	Junior			1

Because this database will have individual student information, it is very important to ensure it remains secure and that only faculty and staff involved in the assessment activity have access to the contents.

Many times, however, indirect measures may not be trackable by specific students. For these types of measures a descriptive report of the results will be useful as the program reviews the direct measures.

The second storage issue facing the department revolves around copies of student work and responses to questionnaires. It is generally advisable to retain copies of or access to the direct measures until the University Assessment Committee has reviewed the final report. If these examples contain either students' names or student id numbers, it will be necessary to maintain a secure filing system. *Tool 5: Protecting student identification* provides a procedure to limit inappropriate access to student information. While this requires a bit of work upfront, it can help the program avoid thorny issues later.

Additionally, it is recommended that samples of students' work be stored to document the assessment process. Generally for each direct measure, an example at each level of the performance standard should be saved. Electronic copies of student work can reduce space required for storage and allow the original work to be returned to the students. These documents can be scanned and stored as PDF files to help limit the amount of storage space necessary.

Tool 5: Protecting Student Identity

- Assign a unique numeric code to all students enrolled in program (Do not use student ID or Social Security Number)
- Store number in secured database
- Collect student work with name
- Print appropriate code on each example of student work
- Redact work to eliminate evidence of authorship

Student awareness of assessment activity and privacy issues

Students should be aware that their work may be used in the assessment purposes. *Tool 6: Syllabi statement regarding student work in assessment* provides an example of a statement that departments may want to use. By incorporating the statement on select or all program courses the department informs students about its assessment work.

Tool 6: Syllabi statement regarding the retention of student work
Notice:

Copies of your coursework including any submitted papers and/or portfolios may be kept on file for institutional research, assessment and accreditation purposes.

As noted in the section about keeping data work secure, student work is protected by The Family Educational Rights and Privacy Act (FERPA) (20 U.S.C. § 1232g; 34 CFR Part 99). To comply with FERPA regulations, student work should either be maintained in a secure system with access limited to those involved in assessment or should have all personally identifiable information removed. Even without a name, some student work is considered identifiable if it contains sufficient information about the student to enable the author to be identified.

Strategies for collecting data

By reviewing the original planning questions in *Tool 1: Questions to ask in planning data collection* before collecting data, programs can avoid many potential roadblocks in the data collection process. The following example lists three common roadblocks that can occur during this process and illustrates an effective plan for data collection.

Section IV: Analyzing Assessment Data

Analysis of data is the next step in the assessment process. Analysis is a process that provides better understanding of data and allows inferences to be made. It summarizes the data, enhances the value of information gathered and provides direction for decisions regarding program improvement. While data analysis can be relatively complex, for the purpose of assessment it is usually basic.

Checklist of Needed Activity for Analyzing Assessment Data:

- ☐ An indication of the number students participating in the assessment activity for each outcome measure
- ☐ The percentage of students who met or exceeded the performance standard for each outcome measure

This section discusses the core elements of data analysis and provides strategies for and examples of analysis. The underlying theme of this section is to illustrate how to link data to the learning outcomes and provide a basis for using data to improve student learning.

Before analyzing data

Two important steps should be completed before analyzing data. The first step is to review the data visually. Reviewing data has two benefits: It allows for the identification of outliers and possible mistakes, and it enables basic patterns or trends to emerge. For example, it may be clear that all students who took a particular class had difficulty with a particular outcome.

The second step of the process is to determine the appropriate method for analyzing the data. This can range from simply counting the number of successful students to higher powered statistical analyses. The two key factors are first to make sure the analysis method fits the data; and second, to ensure that method aligns with the program's needs. There are two types of data used in assessment each with different methods of analysis.

Categorical data are based on groupings or categories for the evaluation of student performance. For example a simple passed/failed score is categorical because there are two groups into which students can be placed. Often rubrics generate categorical data by using a scale of “exceeding expectations,” “meeting expectation,” and “failing to meet expectations”.

Numerical data are based on scales that reflect student performance. Tests which are scored based on the percentage of questions answered correctly generate numeric data.

Direct measures can generate either categorical or numerical data. Student's papers rated on an assessment rubric may be categorized as “meeting standard” or “failing to meet standard”. However the papers may be scored on a numerical scale indicating the overall quality of the paper with respect to the learning outcome.

Indirect measures can also generate either categorical or numerical data. By asking students on a questionnaire: “Did you have sufficient writing in the program?” a program would compile categorical data based on those saying “yes” and those saying “no.” However, by asking students to indicate how strongly they agree with a statement like “there was sufficient writing required in

my program”, numeric data could be generated by applying an agreement scale. (5 – Strongly agree, 4 – Agree, 3 – Neither, 2 – Disagree, 1 – Strongly disagree).

Analyzing assessment data

Once the data have been reviewed and the type determined, the process of analyzing data follows. *Tool 1: Methods for analyzing data* provides a brief overview of the basic methods used to analyze assessment data.

Assessment’s focus on student achievement of learning outcomes typically requires the determination of counts and percentages. Together they show clearly the number of students involved in the activity and the rate of successful display of the outcome. All data, regardless of type can be analyzed using counts and percentages. Numeric data has the additional benefit of being able to be analyzed using descriptive statistics. Mean, median, and mode provide useful information to interpret data by allowing for easier comparison between groups and tests for significant differences.

Tool 1: Methods for analyzing data

- **Percentage:** Proportion of total cases falling into a category
- **Mean:** Average of a set of scores
- **Median:** Middle value in an ascending list of scores
- **Mode:** Most frequent score
- **Standard Deviation:** Average distance of scores from the mean
- **Percentile:** Percentage of a distribution of scores that is equal to or below a specified value.

The impact of dispersion

By examining how data are distributed around measures of central tendency, particularly the mean and median, a richer understanding of the data emerges. The standard deviation represents the average deviation of scores about the mean. Small standard deviations in student performance indicate that performance levels varied little across students in the sample. Large standard deviations indicate a greater variability in levels of student performance. Standard deviations are commonly reported with the mean. Percentiles represent the percentage of a distribution of scores that are at or below a specified value. They are calculated by the formula $\text{Percentile} = S_b/n \times 100$, where S_b is the number of scores below the score of interest, and n is the total number of scores. They are often reported with the median which by definition is the 50th percentile. For example: a median score of 75 on a final exam would be the 50th percentile indicating 50% of students scored above 75 and 50% scored below. By examining the 25th, 50th, and 75th percentiles one can gain a sense of a student’s performance relative to the group.

Missing data and valid responses

Working with assessment data, there are many instances when data will not be available for every student. As a general rule, missing data should be excluded from calculations of percentages and descriptive statistics. If a program has ten (10) students, and eight (8) submit a needed paper for the assessment of an outcome; then eight (8) submitters become the basis of the analysis. Extending the example, if six (6) of the submitted papers meet or exceed the performance standard, then a program would indicate 75% of students submitting papers showed mastery of the outcome rather than 60% of all students in the program.

Presenting analysis

Tables and graphs are useful in presenting analysis because they focus attention to specific results. Tables are useful for reporting multiple percentages and frequencies, comparison of student performance with stated performance standards and some descriptive statistics. They provide an ordered way for readers to see results quickly for each outcome measure without having to search through text to find a particular result. Graphs can further enhance the visual impact of assessment. Graphical representations of results show differences in variables, which makes graphs highly effective in showcasing assessment results.

When sharing the results of program assessment it may be useful to report each learning outcome and outcome measure paired with the corresponding results of the analyses, which joins the multiple outcome measures (direct and indirect) for each learning outcome. Next, compare the results with the specified performance standard and discuss the implications of the data as they relate to the program. Both strengths and areas for improvement are discussed, because showcasing program success is just as important as identifying areas for improvement, when it comes to making data based decisions about the program.

When comparing student performance to specified performance standards, a table with the counts and percentages may be useful to summarize the data. The example in *Tool 2: Example of table of counts and percentages* shows data collected from 20 student portfolios for two learning outcomes. It indicates the number of students completing the portfolio component and the percentage who were below, met and above the performance standard. While 70% of students in the sample achieved or exceeded the standard, 30% were below the performance standard.

Tool 2: Example of table of counts and percentages				
	# of students evaluated	% of students		
		Below Performance Standard	Meeting Performance Standard	Above Performance Standard
Demonstrate critical thinking and writing skills within the discipline	20	30	50	20
Apply specialized knowledge within Trans Psych and related fields	18	5	5	90

The role of advanced statistical analysis

As a program's assessment activity and data increase, more advanced analysis may be useful in understanding student learning. It is possible to

- Study differences in performance to examine the effects of curricular change
- Conduct pre and post assessments to evaluate effect of specific learning experiences
- Compare program students to national performance on certification examinations

The Office of Institutional Effectiveness will work with programs looking to incorporate these and other types of analysis into their assessment activity.

Section V: Reporting Results

The next step of the cycle is reporting results of program assessment. This phase focuses on interpreting strengths, areas for improvement, and identifying recommendations to enhance student learning. There are two steps in writing the assessment report:

1. Working with faculty to understand assessment results
2. Writing the final assessment report

Working with faculty to understand assessment results

Including program faculty in all steps of the assessment process is important to ensure its meaningfulness and effectiveness. The inclusion of faculty insights is probably most important in interpreting results and identifying strategies for improving student learning. The methods used for sharing results is driven by character of the department, with some pouring over all the data generated and others simply reviewing summary analysis outlined in Section IV of the handbook. Using summary reports of assessment results, and the University Assessment Committee's review of the previous year's report will typically facilitate rich discussion and generate useful interpretation for the assessment report.

Writing the assessment report

The assessment report is the document which summarizes a program's assessment activities, program decisions, and future directions. The report is reviewed by the University's Assessment Committee, and used by the academic program to evaluate its effectiveness. This report also serves as the principle evidence of learning outcomes assessment for institutional accreditation. It is typically compiled by the program chair and faculty based on the work outlined earlier in this Handbook. The report contains three components: Outcome Reports, Executive Summary, and Appendix of Supporting Material.

Outcome reports examine each learning outcome individually (see Appendix C). This section of the report is divided into three sections: Outcome and Past Assessment, Assessment Activity, and Interpretation of Results.

Outcome and Past Assessment gives an overview of past assessment activity with this learning outcome. This section gives a brief description of trends and general findings.

Checklist of Needed Activity for Reporting Assessment Results:

- ☐ One completed outcome-specific report for each learning outcome assessed during the year which includes results, interpretation, and implications
- ☐ An executive summary including a list of student learning outcomes, description of the overall findings, any challenges the program faced in its assessment activity, and Assessment Committee recommendations.
- ☐ An appendix of materials used in the assessment process including direct and indirect measures

Assessment Activity describes each component of the assessment process. It includes the following sections:

Outcome measures includes a description of each measure used for this outcome by identifying how the measure was created, when it was implemented, and who used it. The description also indicates if it is a direct or indirect measure.

Performance standard defines the assessment criteria and how well students (overall) are expected to perform on this measure. This section also includes a justification for the expected performance level. For example, if a new outcome was added to the program, students may not be expected to perform at 80%, but rather 50%. It is important to explain the justification for this standard not only for the reviewers, but also to create and maintain a record for the program.

Data collection explains the collection procedures. A clear description of this process will also allow for easy replication in the future. *Tool 1: Data collection questions* gives a list of three basic questions to address when completing this section of the report.

Tool 1: Data collection questions

- *How were data collected?*
Did each professor ask students to submit 2 copies of papers so that one copy could be used for the assessment? Did the chair ask each faculty member to submit papers to him/her?
- *When was data collection?*
Fall semester? Spring semester?
- *Which students were included?*
Students in a specific course? Seniors? Juniors?

Analysis section describes results and how data were analyzed. The following questions should be addressed:

What approach was used to analyze data?

Average scores on a multiple-choice test? Percent rated in each category on a rubric?

What did you find?

What are your results?

Did you have the level of participation expected?

Did you receive data from all courses who should have contributed? How many participants are missing? Does the work received provide a good sample to determine if the learning outcome was or was not achieved?

Interpretation of results provides meaning to the data collected in the assessment process and includes the following three sections:

Extent this Learning Outcome has been achieved by students discusses how well students performed on each measure (direct and indirect) by summarizing information from **Analysis** section for each measure. In this section, the outcome

is viewed as a whole entity and not in its component parts as in the *Assessment Activity* section.

Program strengths and opportunities for improvement relative to assessment of outcome requires the program to define where students are performing at the highest and lowest, and what this means for the program. How do results indicate that the department is adequately supporting (or not supporting) this learning outcome?

Discuss planned curricular or program improvements for this year based on assessment of outcome.

This section describes the plan for action for the next year. Planned improvements usually address one of the following areas:

- Courses supporting learning outcomes
- Learning outcomes
- Measures (rubrics, tests, surveys)

Executive summary through its different sections provides a brief history of previous assessment activities and linkages to school and university mission. This section includes the following components:

Description of where documents are stored provides direction for finding assessment data. It is advisable for programs to retain (or have access to) student work generating assessment data for one year. This allows for easy reference while the University Assessment Committee is reviewing the report. This can be done either in paper form or electronically. Programs should maintain samples of student work for each level of performance standards used in the assessment activity (e.g. exceeding the standard) as part of the report to make future examination possible.

Lists of all outcomes past and present provides an ongoing history of learning outcomes for the program. All learning outcomes should be included in this list.

Description of linkage to departmental and university mission refers to specific aspects of the school and

university mission that relate to the program. Completing this section requires an explanation of how the program connects to the university mission and school plan. *See Tool 2: University Mission and Link to Strategic Plan* for further information.

Describe how the program implemented its planned improvements from last year
It is important to provide the program and reader an understanding of what occurred and why. The following information needs to be included in this section:

Tool 2: University Mission and Link to Strategic Plan

University Mission

To advance the Art and Science of Healthcare

See University portal for Strategic Plan

- Description of the specific planned improvement for each outcome
- How the program concluded that improvements needed to be made
- Who was involved in the implementation
- When the completion occurred

Tool 3: Example of Documentation of Implemented Planned Improvements		
Outcome	Planned Improvement	Update (<i>Indicate when, where, and how planned improvement was completed. If planned improvement was not completed, please provide explanation.</i>)
Apply ethical reasoning in discussing applied issues.	Add a case-study assignment to course that reinforces ethical theories learned in previous course	The professor who primarily teaches course X reviewed the course syllabus and decided to add a homework assignment to week 5 in which students reflect on the ethical consideration of a research project.
Write a coherent argument using primary sources	Invite the library faculty to course X to review finding primary sources	We decided against this planned improvement because starting in the fall course X is no longer a requirement for the major. Instead we have decided to work with the library faculty to develop an online refresher that will be targeted to a series of elective courses

Response to University Assessment Committee Recommendations

Each program will receive a report from the Assessment Committee with one of the following boxes selected:

Report accepted as submitted – If this box was selected, indicate that your report was accepted as submitted.

Revisions required to accept report this year – If this box was selected, describe what actions taken to have report accepted.

Recommendations for next year's assessment process – If this box was selected, list each recommendation and if it was or was not implemented. A thorough response to this item gives context for why recommendations were or were not acted on.

Appendix of supporting materials is a compilation of materials that aids in the understanding of the outcome reports and the executive summary. *Tool 3: Items often included in assessment report appendices* lists the types of materials that are most commonly included. Appendices should include copies of all assessment instruments including rubrics. By including items such as rubrics and other measures in the appendices, those who read the assessment report will have a better understanding of how the results were achieved and a context for interpreting recommendations for improvement.

Tool 4: Items often included in assessment report appendices

- Notes from meetings with faculty
- Examples of outcomes measures
- Rubrics used to score student work
- Questionnaires used in indirect measures
- Charts and graphs illustrating results of data analyses
- Reports from institutional surveys

Section VI: Planning for the Next Assessment and Closing the Assessment Loop

Assessment is a cyclical process that builds on previous work and activity. The “assessment loop” is closed once a program takes findings from its assessment results, and implements changes based on those findings. Generally, assessment findings indicate a need to modify the assessment process or the academic program.

Checklist of Needed Activity for Planning and Implementing Changes:

- ☐ Results from current assessment cycle
- ☐ Draft of assessment report

Making any change also requires consideration of resources and developing a plan of action. The following section provides a framework for thinking about taking action to close the assessment loop.

Changes in the assessment process

When reviewing the assessment results, it is also important to evaluate the assessment process. This involves considering all aspects involved in creating the assessment report. Reviewing learning outcomes as well as approaches to gathering data will provide direction on improving the assessment process.

Learning outcomes

Tool 1: Re-assessing learning outcomes provides a structure for reviewing student learning outcomes. Based on findings from the student learning outcome assessment results, a program may want to retain, modify, or eliminate an outcome.

Tool 1: Re-assessing learning outcomes	
<u>Results from assessment activity</u>	<u>Likely use of outcome during next cycle</u>
Students not performing adequately relative to outcome	→ If recommendations impact student learning immediately, re-assess outcome using same measure during next cycle.
	→ If recommendations impact student learning over an extended timeframe; schedule re-assessment for later
Students performing adequately relative to outcome	→ If same results for the past 3 years, consider replacing this outcome. Potentially schedule re-assessment at an appropriate interval (e.g. three years)
Students performance relative to outcome yields unclear current results	→ If difficulty in determining appropriate level relates to outcome; re-write outcome and reassess during next cycle
	→ If difficulty relates to measures; retain outcome; revise measure; and re-assess during next year

Measures

In addition to changing outcomes, there might be a need to change the type of data collected. If results obtained were not as expected, it is also important to know if better information could be collected to demonstrate student learning. This change could vary from modifying items on a multiple-choice test to creating a new rubric for reviewing essays.

Data collection procedures

In addition to having the correct measures, it is also important to consider how data were collected in previous student learning assessments. Knowing who was included in the assessment data, and when data were collected are important to understanding if changes need to be made in data collection procedures.

Changes in the academic program

Results from the student learning assessment may indicate that program curricula need to be reviewed and adjusted. Mapping learning outcomes to the curriculum is the first step to understanding if changes are necessary. Changing how concepts are introduced and the timing of that introduction to students are two common findings from student learning assessments.

Mapping outcomes to the curriculum

Results may indicate a need to understand where students are introduced to concepts defined in the learning outcomes. Mapping learning outcomes to program courses is the first step in understanding where students are introduced to the material they need to master.

Examining concept reinforcement

Often programs will discover that students are introduced to the concept in the curriculum, but course assignments and planned experiences are not sufficient to help students master those concepts. This may lead to considering modifications in assignments, readings, or general teaching approaches to reinforce concepts with students. A program may also discover that a new course needs to be created to sufficiently address a learning outcome.

Examining course sequencing

Sometimes faculty will discover that the course provides sufficient support for the student to master the material, but course sequencing should be adjusted so that students are introduced to concepts that build on and complement each other. The student learning assessment process can be used as an audit of the programmatic educational experience.

Taking Action

Opportunities to improve the assessment process and curriculum may emerge from assessment results, but will not be realized without planning and implementation. The assessment loop is only closed if actions are taken to make modifications where necessary. Answering who, what, when, and where questions about assessment modifications are helpful to planning and implementing any changes. *Tool 2: Questions for planning change* provides a few questions to assist with mapping and implementing changes.

Tool 2: Questions for planning change

- Who will implement the changes?
- Who needs to be involved to make these changes successful?
- What will be changed?
- What needs to occur in order for things to change?
- When will the changes be put in place?
- Where will they be implemented?
- How will they be implemented?

The cycle of continuous improvement based upon the strategic plan

STRATEGIES AND TACTICS FOR OUR GOALS

Goal 1. Educate effective practitioners of dental medicine

Recruit, retain, and train the highest quality of DMD students

Strategy 1.1. Provide excellence in teaching.

Tactics:

- Develop and deliver an exceptional curriculum
- Work with the CNU Institute for Teaching and Learning Excellence to develop contemporary pedagogy
- Develop a student faculty mentorship program to promote professionalism and ethics

Tactic	February 2019 status	Development Plan	Critical Success Factors	Party responsible for report	Evidence of Achievement
Develop and deliver an exceptional curriculum	A curriculum with four themes (human studies, odontology, oral and maxillofacial studies, behavioral and social sciences) has been presented to the planning committees. 226 course hours and course names have been identified and course directors have been selected	Spring 2019: Completion of syllabi, development of course materials in Canvas . selection of source materials 2019-2020: presentation of D1 courses with assigned auditors and 360 degree course assessment Repeat this cycle for D2, 2021, D3, 2022, and D4 2023	Positive assessment of courses at 360 degrees: students auditor, faculty, course director, academic Dean, Dean Pass or remediation to pass for all courses (for academic reasons) with competency-based grading policy Performance at or above national average on National Board Exam	Associate Dean of Academic Affairs	1. Student course evaluations 2. Student engagement dashboard 3. Faculty self assessment 4. Course auditors report
Work with the Institute for Teaching and Learning Excellence (ITLE) to develop contemporary pedagogy	The center is an emerging organization for which was launched in October 2018 by the College of Medicine, Pharmacy, and Psychology	Participate fully in all activities of the ITLE with a broad engagement of full and part time faculty	Demonstrated participation resulting in incorporation of ITLE directed advance pedagogy in CODM courses	Associate Dean of Academic Affairs	Implementation of active learning in CODM courses Reports of course directors on implementation of ITLE training
Develop a student faculty mentorship program to promote	No mentorship program has	Train faculty in mentorship through faculty	Improved student life	Dean	Survey of students on the mentorship program

professionalism and ethics	been established as of February 2019	<p>development program.</p> <p>Create assessment rubric for faculty to individually assess mentorship performance</p> <p>Assign each faculty member mentees</p> <p>Apply CDM resources to support mentorship activities</p> <p>Perform annual review of program and participants</p>	<p>Improved faculty staff and student satisfaction.</p> <p>Development of values of professionalism in students</p>	Assistant Dean of Student Affairs	<p>118</p> <p>Survey of faculty on the mentorship program</p> <p>Evaluations of student reflective essay on the mentorship program and its impact on professionalism</p>
----------------------------	--------------------------------------	--	---	-----------------------------------	--

Goal 1: Strategy 1.2 Recruit and retain exceptional dental students

Tactics:

- Recruit a qualified class ensuring scientific clinical ability with a holistic approach to promote social consciousness and action
- Retain all these qualified students with timely completion of the DMD program

Tactic	February 2019 Status	Development Plan	Critical Success Factors	Party responsible for report	Evidence of Achievement
Recruit a qualified class ensuring scientific clinical ability with a holistic approach to promote social consciousness and action	The college has begun to integrate into university recruitment and admissions processes. Participation in the university wide admissions and student affairs retreat in January 2019	Implement the admissions marketing plan as in the CODA self study Appendix XX INSERT HERE MARKETING PLAN	Application pool from the region (central valley, delta, Shasta, Humboldt, Sierras) in excess of applicants to other California dental programs. Social science majors represented. Students from universities of the Delta, Central Valley, mountains and Northern California HPSA shortage areas represented Immigrants and underrepresented minorities exceed the region	Dean of admissions and student affairs	More than 50% of students from the underserved region and colleges associated to the region 20% social science majors Immigrants and underrepresented minorities in excess of other regional dental programs
Retain all students with timely completion of the DMD program	No students are enrolled in the college of dentistry but programs to assist in retention are in place for medicine and pharmacy	Assess the effect of the mentorship program in Strategy 1.1 on retention of students Monitor student performance consistently and continuously		Associate Dean of Academic Affairs.	1.

Goal 2. Develop a high quality faculty and staff

Develop and distribute resources to recruit, retain and promote the effective activities of faculty and staff.
Promote research and scholarship in the college.

Tactics:

- Recruit outstanding sufficient founding faculty of the college
- Complement faculty with appropriate staff
- Develop a program of scholarship and research that supports faculty development

Tactic	February 2019 status	Development plan	Critical Success factors	Party responsible for report	Evidence of achievement
Recruit outstanding sufficient founding faculty of the college	65 interested full and part time faculty engaged and interviews commenced Hiring plan for faculty accepted by university.	Implement hiring plan for 36 FTE faculty as well as Volunteer onsite faculty. Complete MOU's for community based faculty	Sufficient faculty to deliver curriculum and clinical care/clinical education at each stage of development	Dean Associate Dean of Academic affairs	Administrators in place in critical areas of academic affairs, curriculum, clinical affairs and research. Course directors and sufficient faculty in place for each of the courses at least 90 days prior to course delivery Faculty in place to care for patients in CNU clinics ready for students to join care teams
Complement faculty with appropriate staff	Staff hires have begun with Dean's administrator and hiring plan for academic and clinical operations under development	Complete hiring plan for all academic, administrative and clinical staff. Complete hiring of qualified personnel as needed during development.	High functioning qualified staff hired in timely fashion associated with need	VP for human resources Dean Dean of Clinical Affairs Dean of Academic affairs	Clinical staffing model achieved consistent with industry standards in all areas. Academic and administrative staffing consistent with CNU collaborative models and standards and task based needs
Develop a program of scholarship and research that supports faculty development	Interview and hiring plan completed for assistant Dean of research	Develop collaborative public health oriented research program	Active college research program with external funding including NIH, HRSA, state of California, industry and foundation grants	Dean of research VP for Research	Research program in top 50% of the 67 dental programs in the US by the first 5 years of operation

Goal 3. Achieve effective leadership in oral health care delivery

Tactics

- Provide patient care that becomes recognized as some of the best oral health care available anywhere.
- Gain the benefits of good oral health for the patients served and in our communities beyond.

Tactic	Initial status February 2019	Development plan	Critical Success Factors	Responsible for reporting	Evidence of achievement
Provide patient care that becomes recognized as some of the best oral health care available anywhere	Plans for clinics and clinical partners are under development	Complete construction of 2 clinics each of 30 clinical treatment units and appropriate supporting clinical facilities. Equip clinics and hire expert renowned, clinical staff. Complete MOUs with health systems in the region for clinical education and care partnerships.	60 operational units. Core radiology, digital clinical facilities, operational electronic health record system, sterilization and equipment management program Marketing program to attract sufficient patients with oral health needs fulfilled by CNU clinics	Dean of Clinical Affairs Dean	Operational program attracts patients who communicate the triple aim in surveys of the highest quality of care at the lowest cost and with the best patient experience 10,000 new patients in the first year of operation and additional 5000 per year to threshold of 20,000 active patients. Measure: Press Ganey, faculty and staff engagement survey
Gain the benefits of good oral health for the patients served and in our communities beyond	Clinics are not operational in February 2019. Analytics of outcomes based care and value based care for diseases including caries, periodontal disease and oral cancer have been undertaken	Develop thresholds for impact on extant pathologic entities in clinics and utilize standards/parameters of care to develop rubrics regarding thresholds for high quality outcomes: e.g. CAMBRA assessment tools, cancer screening outcomes and disease management and control profile for periodontal disease. Engage Sacramento community in population health initiatives to improve oral health	Reduced recurrent caries rate for enrolled patients as compared to cohort Greater tooth retention and periodontal index in patients with periodontal disease Prevention of oral cancer above community standards in patients with premalignant disease and high risk factors. Increased utilization and decreased disease as outcome of community engagement	Dean of Clinical affairs	Chart review pre- and post-interventions to assess value based care model Community-based interviews with stakeholders to assess community engagement

Goal 4: Promote a diverse and inclusive environment in dental medicine and in the communities we serve

Tactics

- Create and sustain an environment that respects all its students, staff and faculty and the patients we serve.
- Promote multiculturalism and American values of equality and inclusiveness in the college and for community oral health

Tactic	Status February 2019	Development Plan	Critical Success Factors	Party Responsible for report	Evidence of achievement
Create and sustain an environment that respects all its students, staff and faculty and the patients we serve.	Consistent CNU values and applied environment in student affairs admissions and academic affairs are present to create a community of respect.	<p>The humanistic environment for dental education will be addressed by the appointed Dean of academic affairs to interface with extant CNU activities.</p> <p>Both curricular and faculty development program will be initiated to promulgate a dental college culture of respect for diversity in all aspects</p>	Faculty and students demonstrate a respectful and inclusive culture in plenary activities, interest group development, and individual assessment.	Dean	<ul style="list-style-type: none"> Engagement survey Interviews with community of students staff and faculty
Promote multiculturalism and American values of equality and inclusiveness in the college and for community oral health	CNU is established as a remarkably multicultural academic health center in one of the most diverse communities in California.	Promote multicultural activities that engage the CNU community and the larger regional community	<p>Achieve broad multicultural engagement with students, faculty and staff. Examples Celebracion de Salud, Indian dentistry day, Asian dental society activity, National Dental Association</p> <p>Engage Multicultural programs in the Northstate community: California state fair, other community events,</p> <p>International engagement with Asia for dental education and practice</p>	Dean Dean of student affairs and admissions	<p>Assess CNU activities and outcome assessments for these activities</p> <p>Assess in engagement survey</p>

Goal 5. Create exceptional facilities and infrastructure

Tactics:

Build an efficient infrastructure to support and sustain learning, teaching, communication, research and scholarship while keeping education affordable.

Tactics	Status February 2019	Development Plan	Critical Success Factors	Party responsible for reporting	Evidence of achievement
Build an efficient infrastructure to support and sustain learning, teaching, communication, research and scholarship while keeping education affordable.	<p>Sites are under consideration for development of clinical and preclinical facilities</p> <p>Library, anatomy, general labs and contemporary classroom access at CNU are being positioned for use by the CDM</p>	<p>Phase 1: Identify space for two clinics and one type 1 and 2 laboratory and simulation clinic</p> <p>Create plans with A-dec for the lab, simulation and first clinic.</p> <p>THIS WILL BE DEVELOPED TO ENROLL A CLASS OF 2023 LATE IN 2019 OR EARLY IN 2020/</p> <p>Complete construction in 2019 of lab and preclinical lab and in 2019-2020 for the first clinic</p> <p>Phase 2: Initiate construction on the second clinic in 2020 with vendor to be named for completion in 2021</p>	<p>Completion of phase one of infrastructure plan in 2019</p> <p>Completion of phase 2 of infrastructure plan in 2021</p>	<p>Dean</p> <p>Dean of academic affairs</p> <p>Dean of clinical affairs</p>	<p>Timely enrollment of class</p> <p>Timely opening of clinics</p> <p>Effective operation of all facilities</p>

Goal 6. Ensure financial sustainability and growth

Tactics:

Build a financially sustainable budget that will provide effective support of existing programs while being poised for expansion through strategic growth of programs

Tactic	Status February 2019	Development Plan	Critical Success Factors	Party responsible for reporting	Evidence of Achievement
Build a financially sustainable budget that will provide effective support of existing programs while being poised for expansion through strategic growth of programs	The proforma and budget for the school of dentistry has been completed with the Chief Financial Officer accounting for sufficient funding and scaling up of programs for the next 10 years	<p>Expend funds for personnel, faculty and staff, for facilities, equipment and educational materials sufficient to enroll a class in late 2019 or 2020.</p> <p>Gain tuition funds during the first matriculation and growing to 4 classes of 80 student each</p> <p>Gain clinical income, grants, gifts and other sources of income to support programs.</p>	A balance sheet and annual closing statement demonstrating the COD in the black within the proposed return on investment.	Dean President Chief financial officer.	Budget Balance sheets Annual report Audit results

1. General Employment Policies

1.1 Introductory Statement

Welcome to California Northstate University! As an employee of California Northstate University (the "University"), you are an important member of a team effort. We expect all of the employees of the University to demonstrate initiative, enthusiasm, a passion for the advancement of the University, including its colleges and programs, respect for co-workers and students, and dedication to our mission, vision, and values. We hope that you will find your position with the University rewarding, challenging, and productive.

Because our success depends upon the dedication of our employees, we are highly selective in choosing new members of our team. We look to you and the other employees to contribute to the success of the University.

This employee handbook is intended to explain the terms and conditions of employment of all full-time and part-time employees and supervisors, help you understand many of your responsibilities as an employee, and provide you with easy access to the general policies and practices of the University. Written employment contracts between California Northstate University and some individuals may supersede some of the provisions of this handbook. The University also has policies in its Faculty Handbook and other policies or guidelines posted on its network drives which are intended to complement and/or expand upon the policies contained herein.

This handbook summarizes the policies and practices in effect at the time of publication. This handbook supersedes all previously issued handbooks and any policy or benefit statements or memoranda that are inconsistent with the policies described herein. The University reserves the right to alter, revise or abolish any of the practices or policies set forth in this handbook, which has been approved by the Board of Trustees.

As a University employee, you are expected to abide by the intent and language of this handbook. If you have any questions, please contact your immediate or departmental supervisor and/or an authorized member of Human Resources or the appropriate University official.

1.2 Mission, Vision, and Values

- A. **Mission:** *To advance the art and science of healthcare.*
- B. **Vision:** *To provide innovative education and healthcare delivery systems.*
- C. **Core Values (WECARE)**

Working as a team

Embracing diversity and workplace excellence

Caring about our students, our staff, our faculty and our profession

Advancing our university, our goals, and our discipline

Responding to challenges that may impede our Mission

Enhancing communication and partnership

1.3 Core Principles

1. Education is our business.
2. Education is about teaching and learning.
3. Education is effective when students can solve problems, pass the board exam, and have gainful careers.
4. Educational affordability is about the least time and cost to obtain the degree.
5. Education is delivered by faculty who are committed to high-yield teaching, low-stress/stress-free learning, and outcome-based SLOs (CLOs, PLOs, ILOs, and CoCLOs) assessment.
6. Education is delivered with a relevant curriculum characterized by integration of basic and clinical sciences, supported by technology, and taught by responsible and qualified faculty and staff who are loyal to the CNU's values, interests, and priorities.
7. Education should encompass not only cognitive and intellectual growth, but also social and emotional growth, moral development and character building.
8. Educational quality is maintained through governance oversight, program review, judicial use of resources, accountability, and administrative leadership.

1.4 Anti-Harassment

California Northstate University is committed to providing a work environment free of harassment, disrespectful or other unprofessional conduct. University policy prohibits conduct that is disrespectful or unprofessional, as well as harassment based on sex (including pregnancy, childbirth, breastfeeding or related medical conditions), race, religion (including religious dress and grooming practices), color, gender (including gender identity and gender expression), national origin, ancestry, physical or mental disability, medical condition, genetic information, marital status, registered domestic partner status, age, sexual orientation, military and veteran status or any other basis protected by federal, state or local law or ordinance or regulation. It also prohibits harassment, disrespectful or unprofessional conduct based on the perception that anyone has any of those characteristics, or is associated with a person who has or is perceived as having any of those characteristics. **All such conduct violates University policy.**

The University's anti-harassment policy applies to all persons involved in the operation of the University and prohibits harassment, disrespectful or unprofessional conduct by any employee of the University, including supervisors and managers, as well as vendors, students, independent contractors and any other persons. Applicants, employees, unpaid interns, volunteers and independent contractors are all protected from harassment.

Prohibited harassment, disrespectful or unprofessional conduct includes, but is not limited to, the following behavior:

- Verbal conduct such as epithets, derogatory jokes or comments, slurs or unwanted sexual advances, invitations or comments;

Appendix 1-3 Employee Handbook Feb 2016

- Visual displays such as derogatory and/or sexually-oriented posters, photography, cartoons, drawings or gestures;
- Physical conduct including assault, unwanted touching, intentionally blocking normal movement or interfering with work because of sex, race or any other protected basis;
- Threats and demands to submit to sexual requests as a condition of continued employment, or to avoid some other loss, and offers of employment benefits in return for sexual favors;
- Retaliation for reporting or threatening to report harassment; and
- Communication via electronic media of any type that includes any conduct that is prohibited by state and/or federal law, or by University policy.

Sexual harassment does not need to be motivated by sexual desire to be unlawful or to violate this policy. For example, hostile acts toward an employee because of his/her gender can amount to sexual harassment, regardless of whether the treatment is motivated by any sexual desire.

If you believe that you have been the subject of harassment or other prohibited conduct, bring your complaint to your supervisor or Human Resources of the University as soon as possible after the incident. You will be asked to provide details of the incident or incidents, names of individuals involved and names of any witnesses. It would be best to communicate your complaint in writing, but this is not mandatory. Supervisors will refer all complaints involving harassment or other prohibited conduct to Human Resources. The University will immediately undertake an effective, thorough and objective investigation of the allegations.

If the University determines that harassment or other prohibited conduct has occurred, effective remedial action will be taken in accordance with the circumstances involved. Any employee determined by the University to be responsible for harassment or other prohibited conduct will be subject to appropriate disciplinary action, up to, and including termination. A University representative will advise all parties concerned of the results of the investigation. The University will not retaliate against you for filing a complaint and will not tolerate or permit retaliation by management, employees or co-workers.

The University encourages all individuals to report any incidents of harassment or other prohibited conduct forbidden by this policy **immediately** so that complaints can be quickly and fairly resolved. You also should be aware that the Federal Equal Employment Opportunity Commission and the California Department of Fair Employment and Housing investigate and prosecute complaints of prohibited harassment in employment. If you think you have been harassed or that you have been retaliated against for resisting or complaining, you may file a complaint with the appropriate agency. The nearest office can be found by visiting the agency websites at www.dfeh.ca.gov and www.eeoc.gov.

1.5 At-Will Employment Status

California Northstate University employees are employed on an at-will basis. Employment at-will means that the employment relationship may be terminated, with or without cause and with or without advance notice at any time by the employee or the University. Nothing in this handbook shall limit the right to terminate at-will employment. Nothing in this employee handbook or in any other personnel document, including benefit plan descriptions, creates or is intended to create a

Appendix 1-3 Employee Handbook Feb 2016

promise or representation of continued employment for any employee.

No employee of the University has any authority to enter into an agreement for employment for any specified period of time or to make an agreement for employment on other than at-will terms. Only the President of California Northstate University has the authority to make any such agreement, which is binding only if it is in writing.

Nothing in this at-will statement is intended to interfere with an employee's rights to communicate or work with others toward altering the terms and conditions of his or her employment.

1.6 Equal Employment Opportunity and Non-Discrimination

California Northstate University is an equal opportunity employer and makes employment decisions on the basis of merit. We want to have the best available persons in every job. University policy prohibits unlawful discrimination based on race, color, creed, gender (including gender identity and gender expression), religion (all aspects of religious beliefs, observance or practice, including religious dress or grooming practices) marital status, registered domestic partner status, age, national origin, ancestry, physical or mental disability, medical condition (including cancer or a record or history of cancer, and genetic characteristics), sex (including pregnancy, childbirth, breastfeeding or related medical condition), genetic information, sexual orientation, military and veteran status or any other consideration made unlawful by federal, state, or local laws. It also prohibits unlawful discrimination based on the perception that anyone has any of those characteristics, or is associated with a person who has or is perceived as having any of those characteristics.

Pay discrimination between employees of the opposite sex performing substantially similar work, as defined by the California Fair Pay Act and federal law, is prohibited. Pay differentials may be valid in certain situations defined by law. Employees will not be retaliated against for inquiring about or discussing wages. However, California Northstate University is not obligated to disclose the wages of its employees, and encourages employees to treat wages as a matter of privacy.

Discrimination can also include failing to reasonably accommodate religious practices or qualified individuals with disabilities where the accommodation does not pose an undue hardship.

All such discrimination is **unlawful**.

The University is committed to compliance with all applicable laws providing equal employment opportunities. This commitment applies to all persons involved in University operations. The University prohibits unlawful discrimination against any job applicant, employee or unpaid intern by any employee of the University, including supervisors and coworkers.

If you believe you have been subjected to any form of unlawful discrimination, submit a complaint to your supervisor or Human Resources. Your complaint should be specific and should include the names of the individuals involved and the names of any witnesses. If you need assistance with your complaint, or if you prefer to make a complaint in person, contact Human Resources. The University will immediately undertake an effective, thorough, and objective investigation and attempt to resolve the situation.

Appendix 1-3 Employee Handbook Feb 2016

If the University determines that unlawful discrimination has occurred, effective remedial action will be taken commensurate with the severity of the offense. Appropriate action also will be taken to deter any future discrimination.

To comply with applicable laws ensuring equal employment opportunities to qualified individuals with a disability, the University will make reasonable accommodations for the known physical or mental limitations of an otherwise qualified individual with a disability who is an applicant or an employee unless undue hardship would result. Any job applicant or employee who requires an accommodation in order to perform the essential functions of the job should contact Human Resources and discuss the need for an accommodation. The University will engage in an interactive process with the employee to identify possible accommodations, if any, which will help the applicant or employee perform the job.

An applicant, employee or unpaid intern who requires an accommodation of a religious belief or practice (including religious dress and grooming practices, such as religious clothing or hairstyles) should also contact Human Resources and discuss the need for an accommodation. If the accommodation is reasonable and will not impose an undue hardship, the University will make the accommodation.

The University will not retaliate against you for bringing a complaint of discrimination, participating in the investigation of any complaint, or requesting a reasonable accommodation, and will not knowingly tolerate or permit retaliation by management, employees or co-workers.

1.7 Right to Revise

This employee handbook contains the employment policies and practices of California Northstate University in effect at the time of publication. All previously issued handbooks and any inconsistent policy statements or memoranda are superseded.

California Northstate University reserves the right to revise, modify, delete, or add to any and all policies, procedures, work rules, or benefits stated in this handbook or in any other document, except for the policy of at-will employment. However, any such changes must be in writing and must be signed by the president of California Northstate University.

Any written changes to this handbook will be distributed to all employees so that employees will be aware of the new policies or procedures. No oral statements or representations can in any way alter the provisions of this handbook.

2. Hiring

2.1 Orientation

All employees are required to participate in New Employee Orientation on their first day of employment. Orientation will be conducted by Human Resources. The HR Manager will provide an introduction to the University, its mission, vision, values, and culture. Employees will be given a new hire packet which will be reviewed with them. All required forms in that packet must be completed that day. Expectations and guidelines contained in this Handbook will be discussed in detail.

2.2 New Hires

Completion of the introductory period does not entitle you to remain employed by California Northstate University for any definite period of time. Your status as an at-will employee does not change. The employment relationship may be terminated, with or without cause and with or without advance notice, at any time by you or the University.

The first 90 worked days of continuous employment at California Northstate University is considered an introductory period. During this time, you will learn your responsibilities, get acquainted with fellow employees, and determine whether or not you are happy with your job. Your supervisor will closely monitor your performance.

2.3 Bridging of Time

California Northstate University will give credit to employees previously employed by the University, provided the break in service does not exceed 365 days. Generally, the break in service time will be deducted from the employee's original service date. Special rules apply to reinstatement of sick leave benefits under the California Healthy Workplaces, Healthy Families Act.

Human Resources will discuss reinstatement of benefits and other length of service issues with rehired employees.

2.4 Regular Employees

Regular employees are those who are hired to work on a regular schedule. Regular employees may be classified as full-time or part-time.

2.5 Full-Time Employees

Regular full-time employees are those who are scheduled for and do work 40 hours per week. Regular full-time employees are eligible for most employee benefits described in this handbook. Benefit eligibility may depend on length of continuous service. Benefit eligibility requirements may also be imposed by the plans themselves or by law. Please refer to the Benefits section of this Handbook.

2.6 Part-Time Employees

Part-time employees are those who are scheduled for and do work fewer than 40 hours per week. Part-time employees may be eligible for some of the California Northstate University employee benefits if they meet certain eligibility requirements. Benefit eligibility requirements may also be imposed by the plans themselves or by law. Please refer to the Benefits section of this Handbook.

2.7 Special Project Employees

Special project employees are those employees hired to perform a special job task or work for a limited time period. An example of a special project employee is a student hired to perform services during the summer months. Special project employees may not be eligible for any or some benefits. If you have questions regarding your eligibility for particular benefits, see the Human Resources Department. The conditions of eligibility for benefits are set forth in the particular plan documents for each benefit.

2.8 Temporary Employees

Temporary employees are those employed for short-term assignments. Short-term assignments generally are periods of three months or fewer; however, such assignments may be extended. Temporary employees are not eligible for employee benefits except those mandated by applicable law.

2.9 Job Duties

During the introductory period, your supervisor will explain your job responsibilities and the performance standards expected of you. Be aware that your job responsibilities may change at any time during your employment. From time to time, you may be asked to work on special projects, or to assist with other work necessary or important to the operation of your department or college, other colleges, or California Northstate University. Your cooperation and assistance in performing such additional work is expected.

California Northstate University reserves the right, at any time, with or without notice, to alter or change job responsibilities, reassign or transfer job positions, or assign additional job responsibilities.

3. Leaves of Absence

3.1 Bereavement Leave

California Northstate University grants leave of absence to employees in the event of the death of the employee's current spouse, registered domestic partner, child, parent, legal guardian, brother, sister, grandparent, or grandchild; or mother-, father-, sister-, brother-, son-, or daughter-in-law. An employee with such a death in the family may take up to three consecutive scheduled workdays off, without pay, with the approval of the University. Accrued sick leave or vacation hours may also be used. If additional time off is needed, through use of vacation or unpaid leave, the employee should discuss this with his/her supervisor.

3.2 Civil Air Patrol Leave

No employee with more than 90 days of service shall be disciplined for taking time off to perform emergency duty as a volunteer in the California Civil Air Patrol. If you are a Civil Air Patrol volunteer, please alert your supervisor that you may have to take time off for emergency duty. When taking time off for emergency duty, please alert your supervisor before doing so, giving as much advance notice as possible.

Up to 10 days of leave for duty may be taken each year. However, leave for a single emergency mission cannot exceed three days, unless the emergency is extended by the entity in charge of the operation and the extension of leave is approved by the University. The employee may elect to take this leave as unpaid or elect to use any paid vacation time previously accrued and unused.

3.3 Extended Medical Leave

A medical leave of absence may be granted for non-work-related medical disabilities (other than pregnancy, childbirth, and related medical conditions addressed in the following section) with a doctor's written certificate of disability to Human Resources. Extended disability leaves will also be considered on a case-by-case basis, consistent with the University's obligations under federal and state disability laws.

Employees should request any leave in writing directed to Human Resources as far in advance as possible. If you are granted a medical leave, California Northstate University will pay you sick pay for the period of time equivalent to your accumulated sick pay earned. You also may use any paid vacation time previously accrued.

A medical leave begins on the first day your doctor certifies that you are unable to work, and ends when your doctor certifies that you are able to return to work. Your doctor should provide you with a form showing the date you were disabled and the estimated date you will be able to return to work. An employee returning from a medical disability leave must present a doctor's certificate declaring fitness to return to work.

If returning from a non-work-related medical leave, you will be offered the same position you held at the time your leave began, if available. If your former position is not available, a comparable position will be offered. If neither the same nor a comparable position is available, your return to work will depend on job openings existing at the time of your scheduled return. California Northstate University makes no guarantees of reinstatement, and your return will

Appendix 1-3 Employee Handbook Feb 2016

depend on your qualifications for existing openings.

California workers' compensation laws govern work-related injuries and illnesses. California pregnancy disability laws govern leaves taken because of pregnancy, childbirth, and related medical conditions. An employee that needs reasonable accommodations should contact Human Resources and discuss the need for an accommodation.

Any leave taken under this provision qualifying as leave under the state and/or federal family and medical leave laws (FMLA/CFRA) will be counted as family/medical leave, charged to your entitlement of 12 workweeks of family/medical leave in a 12-month period, and governed by the rules relating to family/medical leave.

3.4 Family and Medical Leave

State and federal family and medical leave laws provide up to 12 workweeks of unpaid family/medical leave within a 12-month period, under the following conditions:

- The employee has been employed with the University for a total of at least 12 months prior to the commencement of leave. The 12 months of employment must have accumulated within the previous seven years (certain exceptions apply);
- The employee has worked at least 1,250 hours during the previous 12-month period before the need for leave; and
- The employee is employed at a work site where there are 50 or more employees within a 75 mile radius.

Leave may be taken for one or more of the following reasons:

- The birth of the employee's child, or placement of a child with the employee for adoption or foster care (FMLA/CFRA);
- For incapacity due to pregnancy, prenatal medical care or child birth (FMLA only);
- For a serious health condition that makes the employee unable to perform his or her job (FMLA/CFRA);
- To care for the employee's spouse, child, or parent who has a serious health condition (FMLA/CFRA);
- To care for the employee's registered domestic partner (CFRA only).

For additional information about eligibility for family/medical leave, contact Human Resources.

Pregnancy, Childbirth or Related Conditions

Leave because of the employee's disability for pregnancy, childbirth or related medical condition is not counted as time used under California law (the California Family Rights Act). However, time off because of pregnancy disability, childbirth or related medical condition does count as family and medical leave under federal law (the Family and Medical Leave Act). Employees who

Appendix 1-3 Employee Handbook Feb 2016

take time off for pregnancy disability and who are eligible for family and medical leave will also be placed on family and medical leave that runs at the same time as their pregnancy disability leave. Once the pregnant employee is no longer disabled, or once the employee has exhausted PDL and has given birth she may apply for leave under the California Family Rights Act, for purposes of baby bonding.

Any leave taken for the birth, adoption, or foster care placement of a child does not have to be taken in one continuous period of time. California Family Rights Act leave taken for the birth or placement of a child will be granted in minimum amounts of two weeks. However, the University will grant a request for a California Family Rights Act leave (for birth/placement of a child) of less than two weeks' duration on any two occasions. The University may also grant additional requests for leave lasting less than two weeks at its discretion. Any leave taken must be concluded within one year of the birth or placement of the child with the employee.

Military Family Leave Entitlements

- Eligible employees whose spouse, son, daughter or parent is on covered active duty or call to covered active duty status may use their 12-week leave entitlement to address certain qualifying exigencies. Qualifying exigencies may include attending certain military events, arranging for alternative childcare, addressing certain financial and legal arrangements, attending certain counseling sessions, and attending post-deployment reintegration briefings.
- Eligible employees may also take a special leave entitlement of up to 26 weeks of leave to care for a covered service member during a single 12-month period. (FMLA/CFRA for 12 weeks if the care provider is eligible for both, followed by 14 weeks of FMLA only, or 26 weeks of FMLA only if leave is not CFRA covered leave). A covered service member is either:
 - A current member of the Armed forces, including a member of the National Guard or Reserves, who is undergoing medical treatment, recuperation or therapy, is otherwise in outpatient status, or is otherwise on the temporary disability retired list, for a serious injury or illness*; or
 - A veteran who was discharged or released under conditions other than dishonorable at any time during the five-year period prior to the first date the eligible employee takes FMLA leave to care for the covered veteran, and who is undergoing medical treatment, recuperation, or therapy for a serious injury or illness.*

*The FMLA definitions of "serious injury or illness" for current service members and veterans are distinct from the FMLA definition of "serious health condition."

Calculating the 12-month Period

For purposes of calculating the 12-month period during which 12 weeks of FMLA or qualifying exigency leaves may be taken, California Northstate University uses a rolling year, which is defined as a year beginning on a yearly anniversary of an employee's date of hire.

Under most circumstances, leave under federal and state law will run at the same time and the

Appendix 1-3 Employee Handbook Feb 2016

eligible employee will be entitled to a total of 12 weeks of family and medical leave in the designated 12-month period.

For leave to care for a covered service member, the 12-month period begins on the first day of the leave, regardless of how the 12-month period is calculated for other leaves. Leave to care for a covered service member is for a maximum of 26 workweeks during a 12-month period.

Leave Procedures

The following procedures shall apply when an employee requests family medical leave:

- Please contact Human Resources as soon as you realize the need for family/medical leave. If the leave is based on the expected birth, placement for adoption or foster care, or planned medical treatment for a serious health condition of the employee or a family member, the employee must notify the University at least 30 days before leave is to begin. The employee must consult with his or her supervisor regarding scheduling of any planned medical treatment or supervision in order to minimize disruption to the operations of the University. Any such scheduling is subject to the approval of the health care provider of the employee or the health care provider of the employee's child, parent, or spouse.
- If the employee cannot provide 30 days' notice, the University must be informed as soon as is practical.
- If the Family and Medical Leave Act/California Family Rights Act request is made because of the employee's own serious health condition, the University may require, at its expense, a second opinion from a health care provider that the University chooses. The health care provider designated to give a second opinion will not be one who is employed on a regular basis by the University.
- If the second opinion differs from the first opinion, the University may require, at its expense, the employee to obtain the opinion of a third health care provider designated or approved jointly by the employer and the employee. The opinion of the third health care provider shall be considered final and binding on the University and the employee.

Certification

California Northstate University requires the employee to provide certification. You will have 15 calendar days from the University's request for certification to provide it to the University, unless it is not practicable to do so. The University may require recertification from the health care provider if the employee requests additional leave upon expiration of the time period in the original certification. *(For example, if an employee needs two weeks of family and medical leave, but following the two weeks needs intermittent leave, a new medical certification will be requested and required.)* If the employee does not provide medical certification in a timely manner to substantiate the need for family and medical leave, the University may delay approval of the leave, or continuation thereof, until certification is received. If certification is never received, the leave may not be considered family and medical leave.

If an employee cites his/her own serious health condition as a reason for leave, the employee must provide a certification from the health care provider stating:

Appendix 1-3 Employee Handbook Feb 2016

- Date of commencement of the serious health condition;
- Probable duration of the condition; and
- Inability of the employee to work at all or to perform any one or more of the essential functions of his/her position because of the serious health condition.

If an employee is absent because of his/her own serious health condition, the University will also require a medical release to return to work form or certification from the employee's health care provider that the employee is able to resume work. Failure to provide a release to return to work certificate from the employee's health care provider will result in denial of reinstatement for the employee until the certificate is obtained.

If the leave is needed to care for a sick child, spouse, or parent, the employee must provide a certification from the health care provider stating:

- Date of commencement of the serious health condition;
- Probable duration of the condition;
- Estimated amount of time for care by the health care provider; and
- Confirmation that the serious health condition warrants the participation of the employee.

When both parents are employed by the University, and request simultaneous leave for the birth or placement for adoption or foster care of a child, the University will not grant more than a total of 12 workweeks family/medical leave for this reason.

Certification of Leave Related to Military Service

A leave taken due to a "qualifying exigency" related to military service must be supported by a certification of its necessity. A leave taken due to the need to care for a service member shall be supported by a certification by the service member's health care provider or other certification allowed by law. Special certification requirements apply to leaves related to military service.

Health and Benefit Plans

An employee taking family medical leave will be allowed to continue participating in any health and welfare benefit plans in which he/she was enrolled before the first day of the leave (for a maximum of 12 workweeks, or 26 workweeks if the leave is to care for a covered service member) at the level and under the conditions of coverage as if the employee had continued in employment for the duration of such leave. The University will continue to make the same premium contribution as if the employee had continued working. The continued participation in health benefits begins on the date leave first begins. In some instances, the University may recover from an employee premiums paid to maintain health coverage if the employee fails to return to work following family/medical leave.

Employees on pregnancy disability leave will be allowed to continue to participate in group health coverage for up to a maximum of four months of pregnancy disability leave (if such insurance was provided before the leave was taken) on the same terms as if you had continued

Appendix 1-3 Employee Handbook Feb 2016

to work. The right to continued group health coverage during pregnancy disability leave is a separate and distinct entitlement from the CFRA entitlement.

Payment is due when it would be made by payroll deduction.

Substitution of Paid Leave

FMLA/CFRA leave is unpaid. The University may require, or employees may choose, to use accrued paid leave while taking FMLA leave. In order to use paid leave for FMLA leave, employees must comply with the University's normal paid leave policies. For more information on those specific circumstances requiring or allowing the substitution of paid leave contact Human Resources.

Reinstatement

Under most circumstances, upon return from family/medical leave, an employee will be reinstated to his or her original job or to an equivalent job with equivalent pay, benefits, and other employment terms and conditions. However, an employee has no greater right to reinstatement than if he or she had been continuously employed rather than on leave. For example, if an employee on family/medical leave would have been laid off had he or she not gone on leave, or if the employee's job is eliminated during the leave and no equivalent or comparable job is available, then the employee would not be entitled to reinstatement. In addition, an employee's use of family/medical leave will not result in the loss of any employment benefit that the employee earned before using family/medical leave.

Reinstatement after family/medical leave may be denied to certain salaried "key" employees under the following conditions:

- An employee requesting reinstatement was among the highest-paid 10 percent of salaried employees employed within 75 miles of the worksite at which the employee worked at the time of the leave request;
- The refusal to reinstate is necessary because reinstatement would cause substantial and grievous economic injury to the University's operations;
- The employee is notified of the University's intent to refuse reinstatement at the time the University determines the refusal is necessary; and
- If leave has already begun, the University gives the employee a reasonable opportunity to return to work following the notice described previously.

Time Accrual

Please contact Human Resources with any questions regarding accrual or use of other university provided paid leave benefits (such as vacation or sick leave) during unpaid FMLA/CFRA leave.

Appendix 1-3 Employee Handbook Feb 2016

Carryover

Leave granted under any of the reasons provided by state and federal law will be counted as family/medical leave and will be considered as part of the 12-workweek entitlement (26-workweek entitlement if leave is to care for a service member) in any 12-month period. No carryover of unused leave from one 12-month period to the next 12-month period is permitted.

Intermittent Leave

Employees may take Family and Medical Leave Act/California Family Rights Act leave intermittently (in blocks of time, or by reducing their normal weekly or daily work schedule) if the leave is for the serious health condition of the employee or a qualifying family member and the reduced leave schedule is medically necessary as determined by the health care provider of the person with the serious health condition. The smallest increment of time that can be used for such leave is one hour.

See also the discussion of Pregnancy, Childbirth or Related Medical Conditions above.

3.5 Jury Duty and Witness Leave

California Northstate University encourages employees to serve on jury duty when called. Employees who have completed their introductory periods will receive full pay while serving up to 5 days of jury duty. You should notify your supervisor of the need for time off for jury duty as soon as a notice or summons from the court is received. You may be requested to provide written verification from the court clerk of performance of jury service. If work time remains after any day of jury selection or jury duty, you will be expected to return to work for the remainder of your work schedule.

Fees Paid by the Court

You may retain any mileage allowance or other fee paid by the court for jury services.

3.6 Military Leave

Employees who wish to serve in the military and take military leave should contact Human Resources for information about their rights before and after such leave. You are entitled to reinstatement upon completion of military service, provided you return or apply for reinstatement within the time allowed by law.

3.7 Military Spouse Leave

Employees who work more than 20 hours per week and have a spouse in the Armed Forces, National Guard or Reserves who have been deployed during a period of military conflict are

Appendix 1-3 Employee Handbook Feb 2016

eligible for up to 10 unpaid days off when their spouse is on leave from (not returning from) military deployment.

Employees must request this leave in writing to Human Resources within two business days of receiving official notice that their spouse will be on leave. Employees requesting this leave are required to attach to the leave request written documentation certifying the spouse will be on leave from deployment.

3.8 Organ and Bone Marrow Donor Leave

Employees who are donors for organ or bone marrow may take paid time off as follows:

- Employees may take up to 30 business days of leave in any one-year period for the purpose of donating an organ to another person. The one-year period is calculated from the date the employee begins his/her leave.
- Employees may take up to 5 business days of leave in any one-year period for the purpose of donating bone marrow to another person. The one-year period is calculated from the date the employee's leave begins.
- During the leave for organ/bone marrow donors, California Northstate University will continue to provide and pay for any group health plan benefits the employee was enrolled in prior to the leave of absence.
- Leave taken for the purpose of organ or bone marrow donation is not leave for the purpose of family medical leave under state law, The California Family Rights Act.
- Employees who wish to take a leave of absence to donate bone marrow or an organ will be required to provide written verification of the need for leave, including confirmation that the employee is an organ or bone marrow donor and that there is a medical necessity for the donation of the organ or bone marrow.

California Northstate University requires that employees taking leave for organ donation use two weeks of accrued but unused sick leave, and/or vacation.

California Northstate University requires that employees taking leave for bone marrow donation use five days of accrued but unused sick leave, and/or vacation.

Once a Donor has exhausted the required paid sick, and/or vacation leave, the employee will be paid for the remaining leave of absence, if additional leave is needed, up to the maximum allowed by law.

3.9 Personal Leave

A personal leave of absence without pay may be granted at the discretion of California Northstate University. Requests for personal leave should be limited to unusual circumstances requiring an absence of longer than two weeks. Approved personal absences of shorter duration are not normally treated as leaves, but rather as excused absences without pay.

Concurrent Personal and Family/Medical Leave

Any leave taken under this provision that qualifies as leave under the state and/or federal Family and Medical Leave Acts will be counted as family/medical leave and charged to your entitlement of 12 workweeks of family/medical leave in a 12-month period.

3.10 Pregnancy Disability Leave (PDL)

Any female employee planning to take pregnancy disability leave should advise the HR Department as early as possible. The individual should make an appointment with Human Resources to discuss the following conditions:

- Duration of pregnancy disability leave will be determined by the advice of the employee's physician, but employees disabled by pregnancy may take up to four months. Part-time employees are entitled to leave on a pro rata basis. The four months of leave includes any period of time for actual disability caused by the employee's pregnancy, childbirth, or related medical condition. This includes leave for severe morning sickness and for prenatal care.
- California Northstate University will also reasonably accommodate medical needs related to pregnancy, childbirth, or related conditions or temporarily transfer you to a less strenuous or hazardous position (where one is available) or duties if medically needed because of your pregnancy.
- Employees who need to take pregnancy disability must inform California Northstate University when a leave is expected to begin and how long it will likely last. If the need for a leave, reasonable accommodation, or transfer is foreseeable, employees must provide reasonable advance notice at least 30 days before the pregnancy disability leave or transfer is to begin. Employees must consult with Human Resources regarding the scheduling of any planned medical treatment or provision in order to minimize disruption to the operations of the University. Any such scheduling is subject to the approval of the employee's health care provider;
- If 30 days' advance notice is not possible, notice must be given as soon as practical;
- Failure to give reasonable advance notice may result in delay of leave, reasonable accommodation, or transfer;
- Pregnancy leave usually begins when ordered by the employee's physician. The employee must provide California Northstate University with a written certification from a health care provider for need of PDL, reasonable accommodation or transfer. The certification must be returned within 15 calendar days. Failure to do so may, in some circumstances, delay PDL leave, reasonable accommodation or transfer. The certification indicating the need for disability leave should contain:
 - A statement that the employee needs to take pregnancy disability leave because she is disabled by pregnancy, childbirth or related medical condition;
 - The date on which the employee became disabled due to pregnancy;
 - The probable duration of the period or periods of disability;
 - If the employee needs a reasonable accommodation or transfer, a medical certification is sufficient if it contains all of the following: a description of the requested reasonable accommodation or transfer; a statement that describes the

Appendix 1-3 Employee Handbook Feb 2016

medical advisability of the reasonable accommodation or transfer because of pregnancy; and the date on which the need for reasonable accommodation or transfer became/will become medically advisable and the estimated duration of the reasonable accommodation or transfer;

- Leave returns will be allowed only when the employee's physician sends a release;
- An employee will be allowed to use accrued sick time (if otherwise eligible to take the time) during a pregnancy disability leave. An employee will be allowed to use accrued vacation during a pregnancy disability leave; and
- Leave does not need to be taken in one continuous period of time and may be taken intermittently, as needed. Leave may be taken in increments of one hour.

If intermittent leave or leave on a reduced work schedule is medically advisable the employee may, in some instances, be required to transfer temporarily to an available alternative position that meets the employee's needs. The alternative position need not consist of equivalent duties, but must have the equivalent rate of pay and benefits. The employee must be qualified for the position. The position must better accommodate the employee's leave requirements than her regular job. Transfer to an alternative position can include, at the University's discretion, altering an existing job to better accommodate the employee's need for intermittent leave or a reduced work schedule.

Upon submission of a medical certification that an employee is able to return to work from a pregnancy disability leave, an employee will be reinstated to her same position held at the time the leave began or, in certain instances, to a comparable position, if available. There are limited exceptions to this policy. An employee returning from a pregnancy disability leave has no greater right to reinstatement than if the employee had been continuously employed.

Employees on pregnancy disability leave will be allowed to continue to participate in group health insurance coverage for up to a maximum of four months of disability leave (if such insurance was provided before the leave was taken) at the level and under the conditions that coverage would have been provided if the employee had continued in employment continuously for the duration of the leave. In some instances, an employer can recover from an employee premiums paid to maintain health coverage if the employee fails to return following pregnancy disability leave.

PDL may impact other benefits or a seniority date. Please contact the Human Resources Department for more information.

3.11 School and Child Care Activities Leave

Employees are encouraged to participate in the school or child care activities of their child(ren).

The absence is subject to all of the following conditions:

- Time off under this policy can only be used by parents, guardians, grandparents, stepparents, foster parents or a person who stands *in loco parentis* to one or more children of the age to attend kindergarten through grade 12 or a licensed child care provider;

Appendix 1-3 Employee Handbook Feb 2016

- The amount of time off for school or child care activities described below cannot exceed a total of 40 hours each year;
- Covered employees can use the time off to find, enroll or reenroll a child in a school or with a licensed child care provider or to participate in activities of the child's school or licensed child care provider. The time off for these purposes cannot exceed eight hours in any calendar month. Employees planning to take time off for these purposes must provide reasonable advance notice to their supervisor;
- Covered employees can also use time off to address a "child care provider or school emergency" if the employee gives notice to the employer. A child care provider or school emergency means that the employee's child cannot remain in a school or with a child care provider;
- Employees must provide their supervisor with documentation from the school or licensed child care provider verifying that they were engaged in these child related activities on the day and time of the absence;
- If more than one parent is employed by California Northstate University, the first employee to request such leave will receive the time off. Another parent will receive the time off only if the leave is approved by his or her supervisor;
- Employees must use vacation leave in order to receive compensation for this time off; and
- Employees who do not have accrued sick and/or vacation time available will take the time off unpaid.

3.12 School Appearances Involving Suspension

If an employee who is the parent or guardian of a child facing suspension from school is summoned to the school to discuss the matter, the employee should alert his or her supervisor as soon as possible before leaving work. In agreement with California Labor Code Section 230.7, no discriminatory action will be taken against an employee who takes time off for this purpose.

3.13 Sick Leave

As of July 1, 2015, California law provides for mandatory paid sick leave under the Healthy Workplaces, Healthy Families Act (the "Act"). This paid sick leave policy is intended to comply with the requirements of the Act.

Employees cannot be discriminated or retaliated against for requesting or using accrued paid sick time.

If you have any questions about paid sick leave, please contact Human Resources.

Eligible Employees

Beginning July 1, 2015, all employees who have worked in California for the same employer for 30 or more days within a year from the start of their employment will be entitled to paid sick time.

Appendix 1-3 Employee Handbook Feb 2016

However, employees are not eligible to take paid sick time until they have worked for the University for three months from their date of hire.

Sick Pay Amount

Eligible employees will receive sick leave as follows:

Eligible full-time employees accrue 8 hours of sick time per month; Part-time employees accrue 2.68 hours of sick time per month. At a minimum, employees will: (1) have at least one day or eight hours of paid sick time within **three months** of employment, each calendar year or each 12-month period; **and** (2) be eligible to earn at least three days or 24 hours of sick leave within **nine months** of employment.

You will need to meet the **three months** employment requirement before taking any leave.

Full-time employees can earn a maximum of 96 hours paid sick time and part-time employees can earn a maximum 32 hours paid sick time. After an employee has reached this maximum amount, no additional paid sick time will be earned until some or all of the employee's accrued paid sick time is used.

The University does not pay employees for unused paid sick leave. Accumulated unused paid sick leave is not redeemable for pay at time of separation or under any other circumstances. Employees who are rehired with one year of separation from employment may be eligible for reinstatement of previously accrued and unused paid sick time.

Qualifying Reasons for Paid Sick Leave

Paid sick time can be used for the following reasons:

- Diagnosis, care or treatment of an existing health condition for an employee or covered family member, as defined below.
- Preventive care for an employee or an employee's covered family member.
- For certain, specified purposes when the employee is a victim of domestic violence, sexual assault or stalking.

For purposes of paid sick leave, a covered family member includes:

- A "child" defined as a biological, foster or adopted child; a stepchild; or a legal ward, regardless of the age or dependency status of the child. A "child" also may be someone for whom you have accepted the duties and responsibilities of raising, even if he or she is not your legal child.
- A "parent" defined as a biological, foster or adoptive parent; a stepparent; or a legal guardian of an employee or the employee's spouse or registered domestic partner. A parent may also be someone who accepted the duties and responsibilities of raising you when you were a minor child, even if he or she is not your legal parent.
- A spouse.

Appendix 1-3 Employee Handbook Feb 2016

- A registered domestic partner.
- A grandparent.
- A grandchild.
- A sibling.

Use of Paid Sick Leave

If the need for paid sick leave is foreseeable, employees shall provide advance oral or written notification to their manager. If the need for paid sick leave is not foreseeable, employees shall provide notice to their manager as soon as practicable.

Paid sick leave for non-exempt employees can be used in two hour increments.

If an employee is absent from work for more than three consecutive workdays due to illness, medical evidence of illness (a doctor's note) is required prior to the employee being permitted to return to full duties. If the employee cannot return to full duties, a physician must specify the employee's limitations in sufficient detail to determine whether a reasonable accommodation should be made.

Paid sick leave is a benefit that also covers absences for work-related illness or injury. Employees who have a work-related illness or injury are covered by workers' compensation insurance. However, workers' compensation benefits usually do not cover absences for medical treatment. When you report a work-related illness or injury, you will be sent for medical treatment, if treatment is necessary. You will be paid your regular wages for the time you spend seeking initial medical treatment.

Any further medical treatment will be under the direction of the health care provider. Any absences from work for follow-up treatment, physical therapy or other prescribed appointments will not be paid as time worked. If you have accrued and unused paid sick leave, the additional absences from work will be paid with the use of paid sick leave.

Except when prohibited by law, employees are required to exhaust all accrued and unused sick leaves before taking unpaid leaves or having unpaid absences. If you do not have accrued sick leave, or if you have used all of your sick leave, you may choose to substitute vacation time for further absences from work related to your illness or injury. An employee's use of paid sick time may run concurrently with other leaves under local, state or federal law.

3.14 Time Off for Voting

If an employee does not have sufficient time outside of working hours to vote in an official state-sanctioned election, the employee may take off enough working time to vote. Such time off shall be taken at the beginning or the end of the regular working shift, whichever allows for more free time, and the time taken off shall be combined with the voting time available outside of working hours to a maximum of two hours combined. Under these circumstances, an employee will be allowed a maximum of two hours of time off during an election day without loss of pay. When possible, an employee requesting time off to vote shall give his or her supervisor at least two days' notice.

3.15 Vacation

Vacation Accrual from First Day

Full-time staff employees are entitled to accrue, pro-rated over 24 pay periods per year:

Date of hire to completion of 5th year = 80 hours per year
 Beginning of 6th year to completion of 10th year = 120 hours per year
 Beginning of 11th year and thereafter = 160 hours per year

Full-time faculty and administrative employees with a Vice President Title or higher are entitled to accrue a maximum of 160 hours of vacation each year, pro-rated over 24 pay periods.

Active service commences with an employee's first day of work and continues thereafter unless broken by an absence or leave of absence without pay or termination of employment. Temporary and part-time employees do not accrue paid vacation.

Vacation can accrue up to a maximum of 80 hours for full-time staff employees from their first year of continuous employment to the completion of their fifth year of continuous employment, then 120 hours beginning their sixth year of continuous employment to the completion of their tenth year of continuous employment, and 160 hours beginning their 11th year of continuous employment. Full-time faculty employees earned vacation time accrues to a maximum of 160 hours. Upon accrual of the maximum number of hours, no additional vacation will be earned until accrued vacation time is used. Once some vacation time is taken, accrual will recommence at the usual rate. Employees will not be retroactively granted any unearned vacation hours that he/she would have earned, had he/she not reached the cap. Employees are responsible for tracking their accrued vacation time.

Employees become eligible to take accrued vacation immediately as accrued, as work schedules permit. Vacation schedules must be coordinated and cleared with your supervisor. Vacations shall be scheduled to provide adequate coverage of job responsibilities and staffing requirements. The scheduling of your vacation depends in part on California Northstate University's operational needs and the requests for vacations and leaves of absences of other employees. Vacation leave generally will not be approved while school is in session, unless the person requesting leave has no classroom or practice experience obligation on those days. All vacations must be requested in advance on a Vacation Authorization Request Form and approved by the employee's direct supervisor.

The University encourages employees to take vacation annually, generally within the year following accrual. No exempt or non-exempt employee will receive pay in lieu of vacation, except on the termination of his or her employment. Accrued vacation pay that has not been used will be paid at the time of resignation or termination. Vacation pay is paid at the employee's final rate of pay at the time of separation.

Required Use of Vacation Before Unpaid Leave

You are required to take accrued and unused vacation before taking unpaid leave, or having unpaid absences. Family and Medical Leave (under both state and federal law) is included in

Appendix 1-3 Employee Handbook Feb 2016

this requirement, unless the absence is pregnancy-related or the leave is FMLA-related and you are receiving wage replacement through a disability benefit plan (regardless of whether the plan is employer-provided or mandatory under state or federal law, such as state disability insurance).

If you are absent for a reason that qualifies you for Paid Family Leave (PFL) or because of a disability that qualifies you for State Disability Insurance (SDI) benefits, please contact immediate supervisor to discuss coordination of your benefits.

3.16 Victims of Crime Leave

An employee who is themselves a victim or who is the family member of a victim of certain serious crimes may take time off from work to attend judicial proceedings related to the crime or to attend proceedings involving rights of the victim.

A family member of a crime victim may be eligible to take this leave if he/she is the crime victim's spouse, parent, child or sibling. Other family members may also be covered depending on the purpose of the leave.

The absence from work must be in order to attend judicial proceedings or proceedings involving rights of the victim. Only certain crimes are covered. You must provide reasonable advance notice of your need for leave, and documentation related to the proceeding may be required. If advance notice is not possible, you must provide appropriate documentation within a reasonable time after the absence.

Any absence from work to attend judicial proceedings or proceedings involving victim rights will be unpaid, unless you choose to take accrued vacation or sick time.

For more information regarding this leave (including whether you are covered, when and what type of documentation is required, and which type of paid time off can be used), please contact Human Resources.

3.17 Victims of Domestic Violence, Sexual Assault or Stalking

Employees who are victims of domestic violence, sexual assault and stalking are eligible for unpaid leave. Although the leave is unpaid, employees can use their paid sick time under California's Healthy Workplaces, Healthy Families Act for the purposes described below.

You may request leave if you are involved in a judicial action, such as obtaining restraining orders, or appearing in court to obtain relief to ensure your health, safety or welfare, or that of your child. Please provide reasonable advance notice of the need for leave to Human Resources unless advance notice is not feasible.

Employees who are victims of domestic violence, sexual assault or stalking and need a reasonable accommodation for their safety at work should contact Human Resources to discuss the need for an accommodation. If you are requesting such a reasonable accommodation, you will need to submit a written statement signed by you, or by an individual acting on your behalf,

Appendix 1-3 Employee Handbook Feb 2016

to Human Resources, certifying that the accommodation is for the purpose of your safety at work.

For reasonable accommodation requests, the University will also require certification demonstrating that you are the victim of domestic violence, sexual assault or stalking. Any of the forms of certification described above for leave purposes will suffice. The University may request recertification every six months from the date of the previous certification.

The University will engage in an interactive process with the employee to identify possible accommodations, if any, which are effective and will make reasonable accommodations unless an undue hardship will result. California Northstate University will, to the extent allowed by law, maintain the confidentiality of an employee requesting leave or accommodation under these provisions.

You should notify the University if an approved accommodation is no longer needed.

3.18 Victims of Domestic Violence, Sexual Assault or Stalking - Treatment

Employees who are victims of domestic violence, sexual assault or stalking are eligible for unpaid leave. Although the leave is unpaid, employees can use their paid sick time under California's Healthy Workplaces, Healthy Families Act for the purposes described below.

You may request leave for any of the following purposes:

- To seek medical attention for injuries caused by domestic violence, sexual assault or stalking;
- To obtain services from a domestic violence shelter, program or rape crisis center as a result of domestic violence, sexual assault or stalking;
- To obtain psychological counseling related to experiencing domestic violence, sexual assault or stalking;
- To participate in safety planning and take other actions to increase safety from future domestic violence, sexual assault or stalking including temporary or permanent relocation.

Please provide reasonable advance notice of the need for leave unless advance notice is not feasible to Human Resources.

California Northstate University will, to the extent allowed by law, maintain the confidentiality of an employee requesting leave under this provision.

The length of unpaid leave an employee may take is limited to 12 weeks provided for in the federal Family and Medical Leave Act of 1993 for eligible employees.

3.19 Volunteer Civil Service Personnel

No employee shall be disciplined for taking time off to perform emergency duty as a volunteer firefighter, peace officer, or emergency rescue personnel. Employees who perform emergency duty as a volunteer firefighter, reserve peace officer, or emergency rescue personnel may take up to a total of fourteen days unpaid leave time per calendar year to engage in required fire, law enforcement, or emergency rescue training. Please alert your supervisor as soon as possible that you may have to take time off for emergency duty or emergency duty training. The employee may elect to take this leave as unpaid or elect to use any paid vacation time previously accrued and unused.

4. Benefits

Appendix 1-3 Employee Handbook Feb 2016

4.1 Benefits Overview

California Northstate University is committed to providing certain benefits for eligible employees. Benefit eligibility may be dependent upon your employee classification (full-time versus part-time, for example) and on length of continuous employment at California Northstate University. Benefit eligibility requirements may also be imposed by the plans themselves.

Upon becoming eligible for certain employee benefit plans, you will receive Summary Plan Descriptions which describe the benefits in greater detail. For information regarding employee benefits and to answer any questions you may have contact Human Resources.

The University reserves the right to modify, amend or terminate benefits and to modify or amend benefit eligibility requirements at any time and for any reason, subject to any legal restrictions.

The University offers the following benefits for full-time employees:

- Medical Insurance
- Dental Insurance
- Vision Coverage
- Long Term Disability Insurance
- 401(k) Retirement Plan (conditional upon meeting 401(k) plan eligibility requirements)

Part-time employees who work at least 30 hours per week are eligible for the following California Northstate University benefits:

- Medical Insurance
- Dental Insurance
- Vision Coverage
- 401(k) Retirement Plan (conditional upon meeting 401(k) plan eligibility requirements)

Part-time employees who work at least 20 hours per week but less than 30 hours per week are eligible for the following California Northstate University benefits:

- 401(k) Retirement Plan (conditional upon meeting 401(k) plan eligibility requirements)

Important Note: This handbook provides only a general overview of the benefits provided to eligible employees. Employees should refer to the separate publication distributed by the third party benefit/service carrier contracted by the University for each benefit for more details. In the event there is a conflict between the handbook and the separate publication, the separate publication will control. California Northstate University reserves the right to alter, modify, suspend or eliminate any California Northstate University-sponsored benefits (this does not include State Disability Insurance or Paid Family Leave, which are operated by the State of California).

Appendix 1-3 Employee Handbook Feb 2016

Health Insurance

The University provides a medical, dental, and vision insurance plan for eligible employees and their dependents. Employees who work 30 or more hours per week are eligible to participate on the first day of the month following 30 consecutive days of employment. For example, if an employee starts work on March 1st, the employee is eligible to participate in the University's medical insurance plan on April 1st. Unless health benefits extension is covered by state or federal law, benefits will terminate according to our insurance carrier's policy. Contact Human Resources for more information.

Disability Insurance

Each employee contributes through payroll tax to California's state disability insurance programs. Disability insurance is mandated by the California Unemployment Insurance Code and administered by the Employment Development Department. Disability insurance is payable when you cannot work because of illness or injury not caused by employment at the University. An additional tax funds the state's Paid Family Leave program, and provides partial wage replacement for absences related to care of a family member, or bonding with a new child. Specific rules and regulations governing disability are available from Human Resources. The SDI claim form can be obtained from EDD website: www.EDD.ca.gov.

Unemployment Compensation

The University contributes each year to the California Unemployment Insurance Fund on behalf of its employees.

Social Security

Social Security is an important part of every employee's retirement benefit. The University pays a matching contribution to each employee's Social Security taxes.

4.2 Bonuses

Occasionally, the University may award a discretionary bonus to qualifying employees. Bonuses are based on such factors as business performance and individual merit and are awarded at the sole discretion of University management. Award of a bonus does not establish the right to or expectation of future bonuses.

4.3 External Employee Education/ Faculty and Staff Development

Some employees may need to attend offsite training programs, seminars, conferences, lectures, meetings, or other outside activities for the benefit of California Northstate University or the individual employees. Attendance at such activities, whether required by the University or requested by individual employees, requires the written approval of the College Dean or appropriate University Administrator, and is subject to the availability of budgeted funds. To obtain approval, any employee wishing to attend an activity must submit a written request detailing all relevant information, including date, hours, location, cost, expenses, and the nature, purpose, and justification for attendance.

Appendix 1-3 Employee Handbook Feb 2016

Faculty are authorized up to a maximum of five paid offsite professional development days per each year with approval from the College Dean. Development must fulfill the requirements as stated in the Faculty Development portion of this policy below.

Staff are authorized up to a maximum of three paid offsite professional development days per each year with the approval from the College Dean. Development must fulfill the requirements as stated in the Staff Development portion of this policy below.

Attendance at any such event is subject to the following policies on reimbursement and compensation. For attendance at events required or authorized by the University, customary and reasonable expenses will be reimbursed upon submission of proper receipts. Acceptable expenses generally include registration fees, materials, meals, transportation, and parking. Reimbursement policies regarding these expenses should be discussed with the College Dean or appropriate University Administrator in advance. Employees are required to take advantage of early registration for conferences, advance booking of hotel and flights, and other available discount programs, when available; reimbursement will be at rates based on early registration, advance booking and other available discount programs.

Employee attendance at authorized outside activities will be considered hours worked for non-exempt employees and will be compensated in accordance with normal payroll practices.

This policy does not apply to an employee's voluntary attendance, outside of normal working hours, at formal or informal educational sessions, even if such sessions generally may lead to improved job performance. While California Northstate University generally encourages all employees to improve their knowledge, job skills, and promotional qualifications, such activities do not qualify for reimbursement or compensation under this policy unless prior written approval is obtained as described previously.

Faculty Development

Faculty development is an ongoing process designed to enhance the teaching and research skills of academics throughout the careers of University faculty. The goal is to increase both teaching effectiveness and scholarly productivity. The success of the program is highly dependent on the sustained commitment of the administration to provide the appropriate space and resources and the faculty's commitment to continuous development of their skills. The purpose is to provide an academic environment that stimulates innovation in teaching, research, and scholarly activity and encourages University faculty to develop and grow intellectually and professionally and maximize their academic productivity.

Basic resources needed for a successful faculty development program include:

- Encouragement and support from administration for developmental activities
- Release time away from certain faculty and patient care responsibilities
- Funds for travel, research expenses, and equipment consistent with the University's budget
- Appropriate space and routine equipment to conduct research

Programmatic responsibility for the Faculty Development Program is shared between the Department Chairs and the individual faculty. It is the responsibility of the Department Chair to provide the guidance and counseling necessary to assist the faculty member in focusing on

Appendix 1-3 Employee Handbook Feb 2016

specific needs and facilitating activities to address those needs. Ultimate success of a Faculty Development Program rests with the individual faculty member. Each faculty member should address his or her own needs, and through discussions with the Department Chair, focus on and address those needs through the Faculty Development Program.

Staff Development

Staff development is an ongoing process designed to enhance the skills University staff need throughout their careers. The goal is to increase both effectiveness and productivity. The success of the program is highly dependent on the sustained commitment of the administration to provide the appropriate space and resources and the staff's commitment to continuous development of their skills. The purpose is to provide an environment that stimulates innovation in administration and related activities and encourages University staff to develop and grow intellectually and professionally and maximize their productivity.

Basic resources needed for a successful staff development program include:

- Encouragement and support from administration for developmental activities
- Release time away from certain staff responsibilities
- Funds for developmental activities consistent with the University's budget.

Responsibility for the Staff Development Program is shared between University Administration, supervisors and the individual staff. It is the responsibility of the individual staff's supervisor to provide the guidance and counseling necessary to assist the staff member in focusing on specific needs and facilitating activities to address those needs. Ultimate success of a Staff Development Program rests with the individual staff member. Each staff member should address his or her own needs and through discussions with his or her manager.

4.4 Holidays

For the calendar year, California Northstate University observes the following paid holidays:

- January 1 (New Year's Day)
- Martin Luther King Jr.'s Birthday
- Presidents' Day
- Memorial Day
- July 4th (Independence Day)
- Labor Day
- Thanksgiving Day and the Friday after
- December 25 (Christmas Day)

When a holiday falls on a Saturday or Sunday, it is usually observed on the preceding Friday or the following Monday. However, California Northstate University may grant another day off in lieu of closing. Holiday observance will be announced in advance.

To be eligible for holiday pay, you must be regularly scheduled to work on the day on which the

Appendix 1-3 Employee Handbook Feb 2016

holiday is observed and must work your regularly scheduled working days immediately preceding and immediately following the holiday, unless an absence on either day is approved in advance by your supervisor or the absence is otherwise protected by law.

Non-exempt employees may not work on paid holidays. Any exceptions must be approved in advance by Human Resources.

4.5 Lactation Policy

California Northstate University accommodates lactating employees by providing a reasonable amount of break time to any employee who desires to express breast milk for an infant child. The break time shall, if possible, run concurrently with any break time already provided to the employee. Any break time provided to express breast milk that does not run concurrently with break time already provided to the employee shall be unpaid.

We will make reasonable efforts to provide employees who need a lactation accommodation with the use of a room or other private location that is located close to the employee's work area.

Employees who desire lactation accommodations should contact their supervisor or Human Resources to request accommodations.

Discrimination on the basis of sex includes discrimination based on breastfeeding and related medical conditions, and is unlawful.

4.6 Paid Family Leave

During an authorized unpaid leave of absence, employees may receive Paid Family Leave (PFL) from the State of California's Employment Development Department (EDD) up to six paid weeks off in a 12 month period to: 1) care for a seriously ill family member (parent, spouse, child, domestic partner or child of a domestic partner or to bond with a child); or to 2) bond with a new child during the first year after the birth or placement of the child in connection with foster care or adoption. For bonding, PFL is limited to the first year after the birth, adoption or foster care placement of a child. A separate certification must be completed for leave associated with bonding.

A seven calendar day waiting period exists before an employee may draw PFL. If an employee is absent for a reason that qualifies him/her for PFL payments, he/she is required first to use any accrued and unused vacation, up to a maximum of 10 days in a 12-month period. Thereafter, at the employee's option, PFL benefits may be supplemented with any accrued and unused vacation or sick time (as PFL benefits do not replace all of the employee's usual wages).

Eligibility for benefits is determined by the State. Benefits under PFL include approximately fifty-five percent (55%) of lost wages for employees who contribute to SDI. PFL does not create any rights to a leave of absence or reinstatement, but simply provides partial wage replacement for qualified employees. Employees must meet all EDD eligibility requirements to qualify for PFL benefits. Employees may contact the EDD or gather additional information regarding PFL

Appendix 1-3 Employee Handbook Feb 2016

benefits by visiting www.edd.ca.gov.

Employees collecting workers' compensation, unemployment or SDI are not eligible to collect PFL.

4.7 Workers' Compensation

California Northstate University, in accordance with state law, provides insurance coverage for employees in case of work-related injury. The workers' compensation benefits provided to injured employees may include:

- Medical care;
- Cash benefits, tax free, to replace lost wages; and
- Assistance to help qualified injured employees return to suitable employment.

To ensure that you receive any workers' compensation benefits to which you may be entitled, you will need to:

- Immediately report any work-related injury to your supervisor, Chair of the Safety Committee and Human Resources;
- Seek medical treatment and follow-up care if required;
- Complete a written *Employee's Claim for Workers' Compensation Benefits* (DWC Form 1) and return it to Human Resources; and
- Provide the University with a certification from your health care provider regarding the need for workers' compensation disability leave, as well as your eventual ability to return to work from the leave.

Upon submission of a medical certification that an employee is able to return to work after a workers' compensation leave, the employee under most circumstances will be reinstated to his or her same position held at the time the leave began, or to an equivalent position, if available. An employee returning from a workers' compensation leave has no greater right to reinstatement than if the employee had been continuously employed rather than on leave. For example, if the employee on workers' compensation leave would have been laid off had he or she not gone on leave, or if the employee's position has been eliminated or filled in order to avoid undermining the University's ability to operate safely and efficiently during the leave, and no equivalent or comparable positions are available, then the employee would not be entitled to reinstatement.

An employee's return depends on his or her qualifications for any existing openings. If, after returning from a workers' compensation disability leave, an employee is unable to perform the essential functions of his or her job because of a physical or mental disability, the University's obligations to the employee may include reasonable accommodation, as governed by the Americans with Disabilities Act.

The law requires California Northstate University to notify the workers' compensation insurance company of any concerns of false or fraudulent claims.

Appendix 1-3 Employee Handbook Feb 2016

University-Provided Physician

California Northstate University provides medical treatment for work-related injuries through a medical provider network, which the University has chosen to provide medical care to injured employees because of their experience in treating work-related injuries.

Workers' Compensation and FMLA/CFRA

Employees who are ill or injured as a result of a work-related incident, and who are eligible for family and medical leave under state and federal law (Family Medical Leave Act (FMLA) and the California Family Rights Act (CFRA)), will be placed on FMLA/CFRA during the time they are disabled and not released to return to work. The leave under these laws runs concurrently with Workers' Compensation Coverage, and eligible employees will be on FMLA/CFRA for a maximum of 12 weeks in a 12-month period calculated using a rolling year, which is defined as a year beginning on a yearly anniversary of an employee's date of hire.

5. Management

5.1 Employee Property

An employee's personal property, including but not limited to lockers, packages, purses, and backpacks, may be inspected upon reasonable suspicion of unauthorized possession of California Northstate University property, possession of dangerous weapons or firearms, or abuse of the University's drug and alcohol policy.

5.2 Employment of Relatives

Relatives of employees may be eligible for employment with California Northstate University only if individuals involved do not work in a direct supervisory relationship, or in job positions in which there is a conflict of interest. The University defines "relatives" as spouses, registered domestic partners, children, siblings, parents, in-laws, and step-relatives. Present employees who marry or become registered domestic partners will be permitted to continue working in the job position held only if they do not work in a direct supervisory relationship with one another or in job positions involving conflict of interest.

5.3 Names and Addresses Policy

California Northstate University is required by law to keep current all employees' names and addresses. Employees are responsible for notifying the University in the event of a name or address change.

5.4 Open-Door Policy: Suggestions and Complaints

Suggestions for improving California Northstate University are always welcome. At some time, you may have a complaint, suggestion, or question about your job, your working conditions, or the treatment you are receiving. Your complaints, questions, and suggestions also are of concern to the University. We ask you to first discuss your concerns with your supervisor, following these steps:

- Within a week of the occurrence, bring the situation to the attention of your immediate supervisor, who will then investigate and provide a solution or explanation.
- If the problem persists, you may describe it in writing and present it to your department manager, who will investigate and provide a solution or explanation. If you need assistance with your complaint, or you prefer to make a complaint in person, contact your department manager. We encourage you to bring the matter to your department manager as soon as possible after you believe that your immediate supervisor has failed to resolve it.
- If the problem is not resolved, you may present the problem in writing to the next level up of uninvolved institutional management, who will attempt to reach a final resolution. If you need assistance with the written complaint or who should review it, contact your department manager or Human Resources for help.

If you are not comfortable speaking to your immediate supervisor, please bring the issue to Human Resources or another member of management.

This procedure, which we believe is important for both you and the University, cannot guarantee that every problem will be resolved to your satisfaction. However, California Northstate University values your observations and you should feel free to raise issues of concern without

Appendix 1-3 Employee Handbook Feb 2016

the fear of retaliation.

5.5 Performance Evaluations

Each employee will receive annual performance reviews conducted by his or her supervisor. The frequency of additional performance evaluations may vary depending upon length of service, job position, past performance, changes in job duties, or recurring performance problems.

Your performance evaluations may review factors such as the quality and quantity of the work you perform, your knowledge of the job, your initiative, your work attitude, and your attitude toward others. The performance evaluations are intended to make you aware of your progress, areas for improvement, and objectives or goals for future work performance. Favorable performance evaluations do not guarantee increases in salary or promotions. Salary increases and promotions are solely within the discretion of California Northstate University and depend upon many factors in addition to performance. After the review, you will be required to sign the evaluation report simply to acknowledge that it has been presented to you, that you have discussed it with your supervisor, and that you are aware of its contents.

It is a requirement that all employees are to perform their respective job duties with due diligence and care, fulfilling their respective responsibilities with good will and commitment. Each and every employee is expected to recognize meeting performance expectations as a condition to maintaining employment status with the University.

5.6 Personnel Records

You have a right to inspect or receive a copy of the personnel records that California Northstate University maintains relating to your performance or to any complaint concerning you. Certain documents may be excluded or redacted from your personnel file by law, and there are legal limitations on the number of requests that can be made.

Any request to inspect or copy personnel records, subject to the above exclusions, redactions, and limitations, must be made in writing to Human Resources. You can obtain a form for making such a written request from Human Resources.

The personnel records may be made available to you either at the place where you work or at a mutually agreeable location (with no loss of compensation for going to that location to inspect or copy the records). The records will be made available no later than 30 calendar days from the date California Northstate University receives your written request to inspect or copy your personnel records (unless you/your representative and California Northstate University mutually agree in writing to a date beyond 30 calendar days). If you request a copy of the contents of your file, you will be charged the actual cost of copying.

You may designate a representative to conduct the inspection of the records or receive a copy of the records. However, any designated representative must be authorized by you in writing to inspect or receive a copy of the records. California Northstate University may take reasonable steps to verify the identity of any representative you have designated in writing to inspect or receive a copy of your personnel records.

Appendix 1-3 Employee Handbook Feb 2016

Disclosure of personnel information to outside sources, other than your designated representative, will be limited. However, California Northstate University will cooperate with request from authorized law enforcement or local, state, or federal agencies conducting official investigations and as otherwise legally required.

5.7 Privacy of Health Information (HIPAA)

Pursuant to state and federal law, including the Health Insurance Portability and Accountability Act (HIPAA), the University must take certain measures to protect employees' "protected health information." Protected health information is information relating to an individual's medical condition, the provision of medical care for that individual, or the payment for that individual's medical care, which can identify the individual to whom it relates. The University will not intimidate, threaten, coerce, discriminate against, or take other retaliatory action against an individual for exercising his/her HIPAA rights, filing a complaint, participating in an investigation or opposing any improper practice. Employees will not be required to waive these rights as a condition of treatment, payment enrollment or eligibility.

Information regarding an employee's medical condition is maintained in files separate from personnel files. Only those University officials who need to be informed regarding an aspect of the employee's personnel record or medical condition will be allowed access to these records. Confidential medical information may also be available to first aid or safety personnel in the event of an emergency.

5.8 Workplace Privacy - Audio/Video Recordings

California Northstate University is committed to the protection of privacy rights and proprietary or confidential information, as well as the prevention of sexual and other forms of harassment. Consequently employees may not make unauthorized audio or video recordings while on working time. Such recordings must be approved by your supervisor and are subject to legal review and oversight. Employees may not use any audio or video recordings in work areas that California Northstate University has identified as confidential, secure or private (e.g., restrooms, locker rooms, changing areas).

The University uses or may use video surveillance in public areas (not in restrooms, locker rooms or changing areas). The video surveillance will not include sound recording.

6. University Property

6.1 Employer Property

University owned or provided lockers, furniture, desks, computers, cell phones, and data processing equipment/software, are California Northstate University property and must be maintained according to University rules and regulations. They must be kept clean and are to be used only for work-related purposes. California Northstate University reserves the right to inspect all University property including computer or phone data or messages to ensure compliance with its rules and regulations, with or without notice to the employee and at any time, not necessarily in the employee's presence. Prior authorization must be obtained before any University property may be removed from the premises.

All your work product created in your employment or with University resources are the property of the University. As a result you must preserve, protect, and safeguard such work product, and you shall not destroy, delete, mutilate, or remove your work product.

University voice mail and/or electronic mail (e-mail) including texting, pagers and mobile email are to be used for business purposes. California Northstate University reserves the right to monitor voice mail messages, and e-mail messages, and texts to ensure compliance with this rule, with or without notice to the employee and at any time, not necessarily in the employee's presence.

California Northstate University may periodically need to assign and/or change "passwords" and personal codes for:

- Email
- Voicemail
- Computer access
- Alarm codes

These communication technologies and related storage media and databases are to be used only for University business and they remain the property of California Northstate University.

California Northstate University reserves the right to keep a record of all passwords and codes used and/or may be able to override any such password system. Messages on the University voice-mail and email systems are subject to the same University policies against discrimination and harassment as are any workplace communications. Offensive, harassing or discriminatory content in such messages will not be tolerated.

For security reasons, employees should not leave personal belongings of value in the workplace. Terminated employees should remove any personal items at the time they leave California Northstate University. Personal items left in the workplace are subject to disposal if not claimed at the time of an employee's termination.

6.2 Bulletin Boards

California Northstate University maintains bulletin boards located in the breakrooms. Bulletin boards are used to provide information to employees concerning pictures, events, notices, etc.

Appendix 1-3 Employee Handbook Feb 2016

Employees may not post items on University bulletin boards unless the following conditions are met:

- Postings may be made by University employees only;
- The information to be posted must first be approved by the immediate supervisor;
- Postings are limited to 8.5" x 11" in size;
- Bulletin boards will be updated monthly; and
- Posted items will be dated and will be removed after three months.

6.3 Electronic and Social Media

This policy is intended to protect the University's computer systems and electronic information.

For purposes of these policies, the following definitions apply:

"Computers" are defined as desktop computers, laptops, handheld devices (including but not limited to iPhones, Black berries, smart phones, iPads, and other electronic tablets and cell phones), computer software/hardware and servers.

California Northstate University also uses various forms of "electronic communication." "Electronic communications" includes e-mail, text messages, telephones, cell phones and other handheld devices (such as Blackberries, smart phones or writing tablets or iPads), fax machines, and online services including the Internet.

"Electronic information" is any information created by an employee using computers or any means of electronic communication, including but not limited to, data, messages, multimedia data, and files.

The following general policies apply:

- Computers and all data transmitted (by uploading, downloading, sending, or receiving) through California Northstate University servers are University property owned by the University for the purpose of conducting University business. These items must be maintained according to California Northstate University rules and regulations. Computers must be kept clean and employees must exercise care to prevent loss and damage. Prior authorization must be obtained before any University property may be removed from the premises.
- All electronic communications also remain the sole property of California Northstate University and are to be used for University business. For example, email messages are considered University records.
- Electronic information created by an employee using any computer or any means of electronic communication is also the property of California Northstate University and remains the property of California Northstate University.
- Information stored in California Northstate University computers and file servers, is the property of the University and may not be distributed outside the University in any form whatsoever without the written permission of the Legal Counsel, including but not limited to:

Appendix 1-3 Employee Handbook Feb 2016

- New business ideas;
- University financial information, strategies and plans;
- Information related to potential acquisitions or investments;
- Databases and the information in them;
- Student financial/personal information;
- Computer software source codes and computer/network access codes;
- Terms of the University's agreements with vendors, suppliers, landlords, consultants, and others doing business with the University;
- Information that has been identified as confidential or proprietary by the University;
- Employee, vendor, and student information are to be handled in accordance with the University procedures regarding confidentiality and privacy, including the University's HIPAA privacy policies. All documents containing employee, vendor, and student information are to be handled and disposed of in accordance with University privacy procedures;
- Accreditation, licensing, and related documents;
- Laboratory documents;
- Research and experimental research activities.

Violation of any of the provisions of this policy, whether intentional or not, will subject California Northstate University employees to disciplinary action, up to and including termination.

Monitoring of University Property

California Northstate University reserves the right to inspect all University property to ensure compliance with its rules and regulations, with or without notice to the employee and at any time, not necessarily in the employee's presence. California Northstate University computers and all electronic communications and electronic information are subject to monitoring, and no one should expect privacy regarding such use. The University reserves the right to access, review and monitor electronic files, information, messages, text messages, e-mail, Internet history, browser-based webmail systems and other digital archives and to access, review and monitor the use of computers, software, and electronic communications to ensure that no misuse or violation of University policy or any law occurs.

E-mail may be monitored by the University and there is no expectation of privacy. Assume that e-mail may be accessed, forwarded, read or heard by someone other than the intended recipient, even if marked as "private."

Employee passwords may be used for purposes of security but the use of a password does not affect the University's ownership of the electronic information or ability to monitor the information. The University may override an employee's password for any reason. System security features such as passwords and message delete functions do not neutralize or inhibit California Northstate University's ability to access such materials.

Employees are not permitted to access the electronic communications of other employees or third parties unless directed to do so by California Northstate University management.

Portable Electronic Storage Devices

To prevent the unauthorized release of proprietary or confidential information, all portable

Appendix 1-3 Employee Handbook Feb 2016

electronic storage devices are prohibited from use on campus (e.g. USB, CD, DVD, all other portable electronic storage devices).

Prohibited Use

All existing University policies apply to employee use of computers, electronic communications, electronic information, and the Internet. This includes policies that deal with misuse of University assets or resources. It is a violation of California Northstate University policy to use computers, electronic communications, electronic information, or the Internet, in a manner that: is discriminatory, harassing or obscene; constitutes copyright or trademark infringement; violates software licensing rules; is illegal; or is against California Northstate University policy. It is also a violation of policy to use computers, electronic communications, electronic information, or the Internet to communicate confidential or sensitive information or trade secrets.

The communication or display of any kind of sexually explicit or suggestive multimedia content, racial slurs, or any other offensive comment related to gender, age, sexual orientation, religious or political beliefs, national origin, or disability on any University property is prohibited. Employees should refrain from putting any information on University-owned equipment that is inappropriate, unlawful or that could prove embarrassing.

University provided computers; electronic communications, electronic information, telephone systems, and the Internet are to be used only for work-related purposes. No personal use of this University property is permitted at any time.

Employees that engage in such prohibited actions will be subject to discipline and/or immediate termination.

Social Media

When engaging in social networking, it is the expectation that employees are respectful of our University, our employees, our students, our products and services, our competitors, and other business related individuals and organizations (e.g., vendors, community service affiliates, entertainers, etc.) at all times. Communications in breach of confidentiality and University proprietary interests or that disparage the University to third parties shall be grounds for discipline and/or immediate termination.

Personal Use of University Computer and Electronic Mail Systems

Employees may not install personal software on University computer systems. Employees are not permitted to access the electronic communications of other employees or third parties unless directed to do so by University management. No employee may install or use anonymous e-mail transmission programs or encryption of e-mail communications, except as specifically authorized by management.

All non-exempt employees are prohibited from having CNSU email or access to CNSU email on their personal cell phones, tablets, or smart phones.

6.4 Guests and Visitors

It is extremely important that the impression left with California Northstate University visitors is that of a professional organization with the highest standards of conduct. Employees must recognize that the University may have an insurance liability for persons visiting University business locations. Therefore, it becomes necessary for the University to establish this policy, the intent of which restricts business hours and work location visitation, excluding suppliers, vendors, business associates, applicants, and students. Friends, relatives, or other unauthorized persons, including employees who are not scheduled for work, will not be permitted to visit an employee during working hours or at work locations without the express permission of supervisory personnel. If warranted by the nature of an unforeseen visit, the employee may request taking an authorized unscheduled break from work away from University property, the time of which may be non-compensated. Friends, relatives, or other unauthorized persons, including employees who are not scheduled for work, will not be permitted to ride in University vehicles. The University reserves its right in its sole discretion to deny such a request for reasons including, but not limited to, the requested guest or visitor has been disruptive in the past, there is a special event scheduled on the date(s) requested, or the work environment is not appropriate for the visitor or guest due to safety or other reasons.

6.5 Housekeeping

All employees are expected to keep their work areas clean and organized. People using common areas such as lunch rooms, conference rooms, and restrooms are expected to keep them sanitary. Please clean up after meals and dispose of trash properly.

6.6 Off-Duty Use of Facilities

Employees are prohibited from unreasonably remaining on California Northstate University premises or unreasonably making use of University facilities while not on duty, unless specifically authorized. Employees are prohibited from unreasonably using University facilities, University property, or University equipment for personal use.

6.7 Parking

Employees may park their vehicles in designated areas, if space permits. If space is unavailable, employees may park in permissible public areas in the vicinity of California Northstate University property. Employees may not use parking areas specifically designated for visitors or vendors. Parking spaces specifically designated for Administrators should be used only by those Administrators. California Northstate University is not responsible for any loss or damage to employee vehicles or contents while parked on University property. All vehicles must clearly display a California Northstate University parking placard.

Parking areas may be monitored with video or other surveillance for purposes of protecting University property. Employees should not rely upon the surveillance system to provide them with personal security.

6.8 Smoking

Smoking is not allowed in any enclosed area of the facility. This also includes e-cigarettes.

6.9 Solicitation and Distribution of Literature, Commercial Interests/Products

In order to ensure efficient operation of the University's business and to prevent disruption to employees, the University has established control of solicitations and distribution of literature, outside and unrelated commercial interests/products on University property. California Northstate University has enacted rules applicable to all employees governing solicitation, distribution of written material, and entry onto the premises and work areas. All employees are expected to comply strictly with these rules. Any employee who is in doubt concerning the application of these rules should consult with his or her supervisor.

No employee shall solicit or promote support for any outside cause or organization during his or her working time or during the working time of the employee or employees at whom such activity is directed. No employee shall distribute or circulate any such written or printed material in work areas at any time, or during his or her working time, or during the working time of the employee or employees at whom such activity is directed.

Under no circumstances will non-employees be permitted to solicit or to distribute written material for any purpose on University property.

7. Employee Conduct

7.1 Business Conduct and Ethics

This Ethics Policy Statement applies to all employees and members of California Northstate University, its Board of Trustees, and California Northstate University LLC, and its affiliates' Board of Directors/ Managers.

Honesty and integrity is the cornerstone upon which California Northstate University was founded and upon which we operate. We are proud that California Northstate University employees have always maintained a high standard of behavior. We intend that California Northstate University always conducts its affairs according to the highest standards of corporate performance, and that its business and the actions of all California Northstate University employees comply with the spirit and intent of the law and moral codes under which we operate and live. Form and appearance are important. We expect California Northstate University employees to behave in a manner that is consistent with the highest standards of both corporate and personal behavior.

Our overriding principle is integrity, and we pledge ourselves to be honest in our relationships with each other, with individuals outside the University, and with other organizations. In the final analysis, there is no way to insure proper behavior except through the desire of the individual. There is no way to provide rules of conduct that will apply to every possible situation. This Ethics Policy Statement establishes a broad code of conduct which sets minimum goals and provides guidelines to cover the most common and the most sensitive situations. All Officers, department chairs, and managers of the University, its subsidiaries, and affiliates are responsible for the monitoring and enforcement of this policy statement within their specific areas of supervisory responsibility.

Any employee of the University who discovers any event of a questionable, fraudulent, or illegal nature which is, or may be, in violation of the University's policies, is to immediately report such event to the General Counsel or other officers of the University. Such reports may be made without fear of retaliation of any kind.

Business Transactions

- All employees shall at all times adhere to all laws and regulations that may be applicable to the University's business.
- The use of funds, property, or things of value of the University or any of its subsidiaries for any purpose which would be in violation of any applicable law or regulation is strictly prohibited.
- Compliance with generally accepted accounting rules and controls is required. No false, artificial, or misleading entries on the books and records of the University or its subsidiaries shall be made for any reason whatsoever.
- No fund or asset which is not fully and properly recorded on the books and records of the University, its subsidiaries and affiliates, as appropriate, shall be created or permitted to exist.
- No transaction shall be effected and no payment shall be made on behalf of the University, any of its subsidiaries, or affiliates, with the intention or understanding that the

Appendix 1-3 Employee Handbook Feb 2016

transaction or payment is other than that as described in the documentation evidencing the transaction or supporting the payment.

- No promise or statement shall be made on behalf of the University which the author or speaker knows to be false or misleading.
- No employee shall engage in any illegal or unethical act, including but not limited to payments or promises to make payments, to obtain special favors or consideration, or to obtain business for the University.

Unless explicitly approved in writing by the Office of the President, no employee is allowed or permitted to enter into any binding contract on behalf of the University or its colleges. Only the University President has the signatory authority and authority to represent the University or its colleges and enter into contracts or binding agreements on behalf of the University or its colleges. All contracts or binding agreements must be reviewed by the University General Counsel before execution by the Office of the President.

International Business Laws

Employees are required to comply with the applicable laws in all countries to which they travel, in which they operate, and where the University otherwise does business, including laws prohibiting bribery or corruption. In addition, employees are required to comply with U.S. laws, rules, and regulations governing the conduct of business by its citizens and corporations outside the U.S., including the Foreign Corrupt Practices Act, the U.S. Embargoes or Sanctions Program, Export Controls, and Anti-boycott Compliance.

7.2 Conducting Personal and Other Business

Employees should conduct only California Northstate University business while at work. Personal business should be kept to a minimum in a way that does not interfere with the employee's work performance, take away from work time or violate any University policy. Employees may not conduct business for another employer during their scheduled working hours, without explicit written authorization from University General Counsel.

7.3 Confidential Information and Privacy

Each employee is responsible for safeguarding the confidential information obtained during employment.

In the course of your employment you will be exposed to information that California Northstate University considers and protects as confidential, proprietary and trade secret information. It is your responsibility to in no way reveal or divulge any such information in the performance of your duties. Access to confidential information should be on a "need-to-know" basis and must be authorized by the appropriate University official. Any breach of this policy will not be tolerated and the University may take legal action. Even after your employment with California Northstate University terminates, you are required to maintain the confidentiality of this information and not disclose it for any reason.

Appendix 1-3 Employee Handbook Feb 2016

The confidential information to which you are privy and which you must maintain as confidential includes, but is not limited to: student names and contact information; billing, payment, budget, and pricing information; other financial information relating to students; business and marketing strategies or practices; any information disclosed to the University; student files and all information contained in those files; computer files and access information.

Employees shall not use information that is confidential and proprietary to the University for their own benefit or purposes unrelated to University business or disclose it, directly or indirectly, to anyone outside the University during or at any time after employment with the University. Such information includes, but is not limited to:

- Financial information.
- New business ideas.
- University strategies and plans (excluding the published strategic plan).
- Information related to potential acquisitions or investments.
- Databases and the information in them.
- Student financial/personal information.
- Computer software source codes and computer/network access codes.
- Terms of the University's agreements with vendors, suppliers, landlords, consultants, and others doing business with the University.
- Information that has been identified as confidential or proprietary by the University.
- Employee, vendor, and student information are to be handled in accordance with the University procedures regarding confidentiality and privacy, including the University's HIPAA privacy policies. All documents containing employee, vendor, and student information are to be handled and disposed of in accordance with University privacy procedures.
- Accreditation, licensing, and related documents.
- Laboratory documents.
- Research and experimental research activities (excluding the publications).

Attorney-Client Confidentiality

On occasion, you may be a participant in discussions involving confidential University business, including matters that are the subject of a pending or potential lawsuit. The dissemination of this information to you and others is necessary to communicate litigation strategy and implement the advice of counsel. You must maintain the confidentiality of this information. The information is protected by the attorney-client privilege. The privilege is owned by the University. As a result, only the President or the Board of Directors can authorize the dissemination of any litigation

Appendix 1-3 Employee Handbook Feb 2016

information. You cannot discuss the information with others including co-workers, spouses or friends.

Document Retention

In some cases, such as when litigation is pending or foreseeable, you may have a duty to stop normal purging procedures and preserve existing data. The University will provide notice to affected employees if this duty arises. Altering or deleting documents during a purging or litigation hold will be considered grounds for discipline up to and including termination.

7.4 Conflicts of Interest

All employees must avoid situations involving actual conflict of interest. All employees are expected to have read the University's entire Conflict of Interest Policy and complete the required annual Acknowledgement and Disclosure form including the required updates throughout the year.

Personal, financial, or romantic involvement with a competitor, supplier, or subordinate employee of California Northstate University, which impairs an employee's ability to exercise good judgment on behalf of the University, can create an actual conflict of interest. Supervisor-subordinate romantic or personal relationships also can lead to supervisory problems, possible claims of sexual harassment, and morale problems.

An employee involved in any of the types of relationships or situations described in this policy should immediately and fully disclose the relevant circumstances to his or her immediate supervisor, or any other appropriate supervisor, for a determination about whether an actual conflict exists. If an actual conflict is determined, California Northstate University may take whatever corrective action appears appropriate according to the circumstances. Failure to disclose facts shall constitute grounds for disciplinary action.

All employees have a duty to the University to be free from the influence of any conflicting interest when representing the University in negotiations, or when making recommendations with respect to dealing with third parties. Such employees are expected to deal with students, suppliers, students, contractors, landlords, and all others doing business with the University on the sole basis of what is in the best interest of the University, without favor or preference to third parties based on personal considerations.

Financial Interests

Employees who deal with suppliers, students, contractors, landlords, or anyone else doing business with the University – or who make recommendations with respect to such dealings or pass judgment upon them – shall not own any interest in, or have any personal contract, agreement, or understanding of any nature whatsoever with those individuals who might tend to influence the decision of the employee with respect to the business of the University.

Ownership of publicly offered stock in any of our suppliers or in any competitive organization is permissible, provided that the interest is of an investment nature and constitutes no more than 5% of the outstanding capital stock.

Appendix 1-3 Employee Handbook Feb 2016

Employees shall not do business with a close relative on behalf of the University unless expressly authorized in writing to do so by the Conflict of Interest Committee after the relationship has been disclosed.

Employees are prohibited from exploiting their positions with the University for personal gain, or for the gain of any other person or outside organization. Employees may also not engage in a business that competes with the University.

Any deviation from the foregoing statements must have the written consent of the President or delegated University official who has the final authority and responsibility, to determine what steps are to be taken to correct any situation deemed not in the best interest of the University.

Gift Policy

Every vendor, student and other person dealing with California Northstate University is entitled to efficient and courteous service. Since such service is given impartially to all, gratuities and gifts are not appropriate. In addition, all vendors are contracted based on level of service and operations demands. To maintain a fair marketplace and minimize the perception of obligation or entitlement, employees are not allowed to accept gifts from students or vendors. If an individual presses an employee to accept such a gift, the employee should thank him/her, but explain that University policy prohibits accepting gifts valued at \$25 or greater unless the gift or favor is disclosed to and approved in advance in writing by the appropriate University official.

No employee may accept a gift or gratuity from any student, vendor, supplier, or other person doing business with the University outside the scope of their job. Doing so may give the appearance of influencing business decisions, transactions, or service. Please discuss expenses paid by such persons for business meals or trips with the University in advance.

Employees shall not seek or accept, directly or indirectly, payments, loans, services, entertainment, or gifts from any individual or from the representative of any business doing or seeking to do business with the University. Routine loans of reasonable amounts from commercial banks are excluded from this restriction.

Executive officers and members of the Board of Trustees and Board of Directors/Managers may not accept personal loans from any person or entity doing business with the University, nor may any such person or entity guarantee any personal obligation of such executive officer or director. The foregoing shall not prohibit an executive officer or member of the Board of Trustees or Board of Directors/Managers from accepting a loan from a commercial bank or lender doing business with the University, provided that such loan is made in the ordinary course of such bank or lender's business on commercially reasonable terms. Executive officers and members of the Board of Trustees and Board of Directors/Managers also may not request or accept loans or payroll advances from the University.

Employees may not furnish or offer to furnish any gifts, entertainment, meals, or anything of value to a person who has business dealings with the University under circumstances that might create the appearance of impropriety. Such items may be provided, other than to governmental officials and employees, if they are reasonable complements to business relationships, or modest value, and not against the law or the policy of the recipient's University. These items must also be documented on an expense report. Giving or receiving money or a cash equivalent as a business gift is prohibited.

Appendix 1-3 Employee Handbook Feb 2016

Giving gifts or entertainment to any domestic or foreign government official or employee is highly regulated and often prohibited. A government employee is any individual employed by the federal, state, or local entity, or a consultant acting on behalf of the entity. For this reason, employees shall not directly or indirectly pay, give, offer, or promise any entertainment or gift of value to any government official or employee without the prior approval of the General Counsel.

Meals and entertainment are only to be offered or accepted when both the employee and individual or representative of a business concern are present and a substantial business discussion takes place during, directly before, or directly after the activity, and only with the prior approval of the responsible University official. Sponsored events that are a part of University authorized attendance at trade shows, seminars, or conventions do not require prior notice.

The solicitation, purchase, or acceptance of entertainment or sporting event tickets for personal use is prohibited. There may be special circumstances in which terms such as entertainment tickets are converted to use by and for the benefit of the University. In such cases, adequate documentation must be maintained and prior approval of the responsible University official is required.

Government Programs

The University is committed to compliance with all federal and state higher education statutes, rules, regulations, guidelines, and programs that may be applicable. The University is also committed to preparing and submitting accurate billings consistent with applicable and appropriate procedures. It is the University's policy to comply strictly with all laws that regulate government contracting and to prohibit employees from submitting false, fraudulent, or misleading information in connection with goods and services reimbursable by the federal or state government.

Anti-Kickback

It is the University's policy to comply with all laws that regulate business transactions. Employees acting on behalf of the University may not demand, extract, give, or receive anything of value for their own benefit or for the unlawful benefit of others, including but not limited to entertainment or free or below cost services, in exchange for referring or receiving referrals, contracts, goods, or services.

Vendor Responsibility

California Northstate University requires all trading companies with which it does business and all final assembly manufacturers of goods to California Northstate University to comply with all applicable laws and regulations that relate to the conduct of their business. Representatives of the University will not knowingly purchase products from a supplier using child labor, as defined by the country of origin, prison labor, or involuntary labor. Any employee who becomes aware of a supplier violating this policy will immediately cease all relationships with that supplier and report the occurrence to a corporate attorney.

Reporting and Non Retaliation

Employees should feel free to report what they believe, in good faith, to be violations of ethics policies set forth above, without fear of retaliation. Employees may report or discuss violations with their supervisor, Human Resources, or General Counsel.

Appendix 1-3 Employee Handbook Feb 2016

Employees who receive complaints or concerns, whether verbal or written, related to any applicable law or University policy, should communicate those complaints or concerns to their supervisor, Human Resources, or General Counsel.

Employees who receive complaints, concerns, whether verbal or written, related to accounting, internal accounting controls, or auditing matters should communicate those complaints to the General Counsel or Human Resources for review and investigation.

7.5 Dress Codes and Other Personal Standards

California Northstate University considers the presentation of its image to students, other employees, and the public to be an important factor in our success. As such, the University requires all employees to dress in good taste and observe good habits of grooming and personal hygiene. The University strives to present a professional image that will inspire confidence in our ability to represent the University. Clothing should be neat, clean, not create undue distractions, and consistent with safety guidelines. Hair must be trimmed and neat. Beards and mustaches may be worn if they are kept neat and well-trimmed. Make-up, jewelry and other accessories should be appropriate for our business and the employee's specific job function. Dress code requirements may vary based on job function, gender, level of client contact, safety issues and other business considerations.

Your professional appearance on campus reflects the overall impression of the University. Therefore, business casual attire is required for all employees during working hours. Business casual attire includes: suits, sport coats, or dress shirts and slacks with ties, collared shirts, blouses and sweaters with skirts or dress slacks or dresses. All clothing should be clean and without rips or holes. The following clothing is not considered business casual and should not be worn: jeans, sweatpants, shorts, mini-skirts, T-shirts, sweatshirts, halter tops, low-cut tops and tops which do not completely cover the midriff, all overly tight or revealing clothing, sneakers or sport shoes, flip-flops, or hiking boots.

California Northstate University observes occasional casual dress days. Some employees who have important business interactions may not be permitted to participate in the casual dress day. Employees who do participate in a casual dress day still are expected to report to work properly groomed. Acceptable casual dress **excludes** ripped or torn clothing, T-shirts of any kind (with or without a written message), tennis shoes, sweats, mini-skirts, tank or halter tops, or shorts. Employees required to wear safety equipment or clothing still must do so on a casual dress day. Department managers may issue more specific guidelines concerning any exceptions to this policy.

The College Deans have the discretion to administer more specific dress code requirements within these standards for their respective colleges. Employees who report to work inappropriately dressed may be asked to clock out and return in acceptable attire.

If you are uncertain as to the appropriateness of a specific clothing item, accessory or style of dress, please consult the appropriate University official. Employees who need a reasonable accommodation because of religious beliefs, observances or practices should contact Human Resources and discuss the need for accommodation.

7.6 Drug and Alcohol Abuse

California Northstate University is concerned about the use of alcohol, illegal drugs, or controlled substances as it affects the workplace. Use of these substances, whether on or off the job, can detract from an employee's work performance, efficiency, safety, and health, and therefore seriously impair the employee's value to the University. In addition, the use or possession of these substances on the job constitutes a potential danger to the welfare and safety of other employees and exposes the University to the risks of property loss or damage, or injury to other persons.

The following rules and standards of conduct apply to all employees either on University property or during the workday (including meals and rest periods). Behavior that violates University policy includes:

- Possession or use of an illegal or controlled substance, or being under the influence of an illegal or controlled substance while on the job;
- Driving a University vehicle while under the influence of alcohol; and
- Distribution, sale, or purchase of an illegal or controlled substance while on the job.

Violation of these rules and standards of conduct will not be tolerated. California Northstate University also may bring the matter to the attention of appropriate law enforcement authorities.

In order to enforce this policy, California Northstate University reserves the right to conduct searches of University property or employees and/or their personal property, and to implement other measures necessary to deter and detect abuse of this policy.

An employee's conviction on a charge of illegal sale or possession of any controlled substance while off University property will not be tolerated because such conduct, even though off duty, reflects adversely on California Northstate University. In addition, the University must keep people who sell or possess controlled substances off University premises in order to keep the controlled substances themselves off the premises.

Any employee who is using prescription or over-the-counter drugs that may impair the employee's ability to safely perform the job, or affect the safety or well-being of others, must notify a supervisor of such use immediately before starting or resuming work. Furthermore, the use of prescription drugs and/or over-the-counter drugs also may affect an employee's job performance and may seriously impair the employee's value to the University.

California Northstate University will encourage and reasonably accommodate employees with alcohol or drug dependencies to seek treatment and/or rehabilitation. Employees desiring such assistance should request a treatment or rehabilitation leave. The University is not obligated, however, to continue to employ any person whose performance of essential job duties is impaired because of drug or alcohol use, nor is the University obligated to re-employ any person who has participated in treatment and/or rehabilitation if that person's job performance remains impaired as a result of dependency. Additionally, employees who are given the opportunity to seek treatment and/or rehabilitation, but fail to successfully overcome their dependency or problem, will not automatically be given a second opportunity to seek treatment and/or rehabilitation. This policy on treatment and rehabilitation is not intended to affect the University's treatment of employees who violate the regulations described previously. Rather, rehabilitation

Appendix 1-3 Employee Handbook Feb 2016

is an option for an employee who acknowledges a chemical dependency and voluntarily seeks treatment to end that dependency.

7.7 News Media Contacts

Employees may be approached for interviews or comments by the news media. Only contact people designated by General Counsel may comment to news reporters on California Northstate University policy or events relevant to California Northstate University. If you are approached by a news medium for this purpose please immediately contact General Counsel.

7.8 Off-Duty Conduct

While California Northstate University does not seek to interfere with the off-duty and personal conduct of its employees, certain types of off-duty conduct may interfere with the University's legitimate business interests.

Off-duty conduct by an employee that directly conflicts with the University's essential business interests and disrupts business operations and conduct which reflects poorly on the University will not be tolerated.

7.9 Other Employment

While employed by California Northstate University, employees are expected to devote their energies to their jobs with the University. Employment that directly conflicts with the University's essential business interests and disrupts business operations is strictly prohibited. Below are prohibited conflicts:

- Additional employment that conflicts with an employee's work schedule, duties, and responsibilities at the University;
- Additional employment that creates a conflict of interest or is incompatible with the employee's position with the University;
- Additional employment that impairs or has a detrimental effect on the employee's work performance with the University;
- Additional employment that requires the employee to conduct work or related activities on University property during the employer's working hours or using University facilities and/or equipment; and
- Additional employment that directly or indirectly competes with the business or the interests of the University.

Employees who wish to engage in additional employment that may create a conflict of interest must submit a written request to California Northstate University explaining the details of the additional employment. If the additional employment is authorized, California Northstate University assumes no responsibility for it. California Northstate University shall not provide

Appendix 1-3 Employee Handbook Feb 2016

workers' compensation coverage or any other benefit for injuries occurring from or arising out of additional employment. Authorization to engage in additional employment can be revoked at any time.

7.10 Political Activity

Many employees participate in political activities on their own time. University time, facilities, property or equipment (including all computers, networks, and electronic equipment) must not be used for an employee's outside political activities. California Northstate University will not reimburse any employee for political contributions, and employees should not attempt to receive or facilitate such reimbursements.

Absent a formal statement by California Northstate University announcing any political endorsements, employees must not, through their own actions, speech, contributions, or written communication, mislead others to believe that California Northstate University officially endorses or opposes any political position or candidates for political office that California Northstate University itself has not publicly announced. University employees are entitled to their own personal position.

The University will not discriminate against employees based on their lawful political activity engaged in outside of work.

7.11 Prohibited Conduct

Employees are expected to conduct themselves in a manner to further the University's objectives. The following conduct is prohibited and will not be tolerated by California Northstate University. This list of prohibited conduct is illustrative only; other types of conduct that threaten security, personal safety, employee welfare and University operations also may be prohibited and will result in disciplinary action up to and including termination.

- Falsifying employment records, employment information, or other University records;
- Inefficient or careless performance of job responsibilities or inability to perform job duties satisfactorily;
- Recording the work time of another employee or allowing any other employee to record your work time, or falsifying any time card, either your own or another employee's;
- Theft and deliberate or careless damage or destruction of any University property, or the property of any employee or student;
- Removing or borrowing University property without prior authorization;
- Unauthorized use or misuse of University equipment, time, materials, or facilities;
- Provoking a fight or fighting during working hours or on University property;
- Participating in horseplay or practical jokes on University time or on University premises;
- Carrying firearms or any other dangerous weapons on University premises at any time;
- Engaging in criminal conduct whether or not related to job performance;
- Causing, creating or participating in a disruption of any kind during working hours on University property;

Appendix 1-3 Employee Handbook Feb 2016

- Insubordination, including but not limited to: improper conduct, failure or refusal to obey the orders or instructions of a supervisor or member of management, refusal to obey order to perform job assignments, disrespectful behavior, or the use of abusive or threatening language toward a supervisor or member of management;
- Using abusive, threatening or intimidating language at any time on University premises;
- Violation of University punctuality and attendance policies. Absences protected by state or federal law do not count as violations of this policy. Protected paid sick time under California law does not count as a violation of this policy;
- Failing to obtain permission to leave work for any reason during normal working hours, not including meal periods;
- Failing to observe working schedules, including rest and lunch periods;
- Sleeping or malingering on the job;
- Making or accepting personal telephone calls, including cell phone calls, of more than three minutes in duration during working hours, except in cases of emergency or extreme circumstances;
- Working overtime without authorization or refusing to work assigned overtime;
- Violation of dress code standards;
- Violating any safety, health, security or University policy, rule, procedure or violation of the University's drug and alcohol policy;
- Committing a fraudulent act or a breach of trust under any circumstances;
- Violating the University's anti-harassment or equal employment opportunity policies; and
- Failing to promptly report work-related injury or illness.

The foregoing is not all-inclusive, but only serves as examples of conduct that will not be tolerated. This statement of prohibited conduct does not alter the University's policy of at-will employment. Either you or California Northstate University remain free to terminate the employment relationship at any time, with or without reason or advance notice.

7.12 Prohibited Use of Cell Phone While Driving

California Northstate University employees are prohibited from the unlawful use of cell phones while driving on University business and/or University time. This prohibition extends to spoken, text, and other communication prohibited by law.

7.13 Punctuality, Attendance, and Job Abandonment

As an employee of California Northstate University, you are expected to be punctual and regular in attendance. Any tardiness or absence causes problems for your fellow employees and your supervisor. When you are absent, your assigned work must be performed by others.

Employees are expected to report to work as scheduled, on time, and prepared to start work. Employees also are expected to remain at work for their entire work schedule, except for meal periods or when required to leave on authorized University business. Late arrivals, early departures or other unanticipated and unapproved absences from scheduled hours are

Appendix 1-3 Employee Handbook Feb 2016

disruptive and must be avoided.

If you are unable to report for work on any particular day, you must provide reasonable advance notice to your supervisor before the time you are scheduled to begin working for that day. You must inform your supervisor of the expected duration of any absence. If you fail to provide reasonable advance notice to your supervisor at least two hours before your scheduled time to begin work and do not arrive on time for your assigned shift, you will be considered tardy for that day. If the circumstances for your tardiness or absence were unforeseen, inform your supervisor as soon as practicable of the reason for the tardiness or absenteeism.

Excessive absenteeism or tardiness, providing false information or abuse of leave laws will not be tolerated. If you fail to report for work without any notification to your supervisor and your absence continues for a period of three consecutive days of scheduled work, California Northstate University will consider that you have voluntarily abandoned or quit your employment.

Absences protected by local, state and federal law do not count as a violation of the punctuality and attendance policy. Paid sick time protected under California law does not count as a violation of this policy.

7.14 Student Relations

Employees are expected to be polite, courteous, prompt, and attentive to every student. When an employee encounters an uncomfortable situation that he or she does not feel capable of handling, your immediate supervisor should be called immediately. You must respond to inquiries from students, whether in person or by telephone, promptly and professionally. Student success is our first priority.

All correspondence and documents, whether to students or others, must be neatly prepared and error-free. Attention to accuracy and detail in all paperwork demonstrates your commitment to those with whom we do business.

Never argue with a student. If a problem develops or if a student remains dissatisfied, ask your supervisor to intervene.

Confidentiality of Student Lists and No Solicitation of Students

The employee agrees that student lists of California Northstate University, for which the employee has or will have access to during the employee's employment, are trade secrets and shall be solely the property of the employer. The employee agrees that he/she shall neither directly nor indirectly solicit business as to products or services based on information from the student lists.

FERPA

To ensure the California Northstate University campus community is in compliance with FERPA regulations, all employees are required to complete the online FERPA training module and quiz at least once during their employment at the University. After having completed the training, all employees will be required to attest to the Code of Confidentiality. FERPA training will be provided on a yearly basis for all employees whether online or in-person.

8. Wages

8.1 Advances

California Northstate University does not permit advances against paychecks or against unaccrued vacation or sick time.

8.2 Deductions for Exempt Employees

Employees paid on a "salary basis" regularly receive a predetermined amount of compensation each pay period. Subject to the exceptions listed below, exempt employees will receive full salary for any workweek in which they perform any work, regardless of the number of days or hours worked. Exempt employees may not be paid for any workweek in which they perform no work, subject to California Northstate University benefits programs and policies.

No deductions from salary may be made for time when work is not available, provided the exempt employee is ready, willing, and able to work. Deductions from pay are permissible when an exempt employee:

- Is absent from work for one or more full days for personal reasons other than sickness or disability;
- Is absent for one or more full days due to sickness or disability if the deduction is made in accordance with a bona fide plan, policy, or practice of providing full compensation for salary lost due to illness and the employee has exhausted his or her leave under this policy;
- Is absent for military duty for a full week and performs no work during the week; or
- Works less than a full week during the initial or final week of employment.

Partial day deductions from available accrued vacation or sick leave balances will also be made by the University when applicable.

It is University policy to comply with these salary basis requirements. Therefore, California Northstate University prohibits all University managers from making any improper deductions from the salaries of exempt employees. The University wants employees to be aware of this policy and know that the University does not allow deductions that violate federal or state law.

If you believe that an improper deduction from your salary has been made, you should immediately report this information to your direct supervisor, or to the bookkeeper. Reports of improper deductions will be investigated promptly. If it is determined that an improper deduction has occurred, you will be promptly reimbursed for any improper deduction made.

8.3 Expense Reimbursement

California Northstate University expects the employee to act responsibly and professionally when incurring and submitting his/her expense reimbursement. The employee will be reimbursed for reasonable expenses on pre-approved business activities. This includes, for example, travel fares, accommodations, meals, tips, taxi charges, and any other business transaction purchases made on behalf of California Northstate University.

Appendix 1-3 Employee Handbook Feb 2016

Should an employee use his/her personal vehicles for business travel, mileage will be reimbursed as per the current IRS standard business mileage rate. However, the employee is still responsible for any expenses associated with operating his/her own vehicle during business travel time, including but not limited to insurance deductible. California Northstate University will not be responsible for fuel, maintenance, traffic or parking violations.

Personal and/or vacation travel may be combined with business travel provided there is no additional cost to California Northstate University, and it meets with approval of the immediate supervisor. California Northstate University credit cards are not to be used for personal expenses.

General guidelines:

- Original receipts are required for reimbursement for all expenses.
- Receipts must be accompanied by the Expense Reimbursement Form itemizing each receipt on its own line. The Expense Reimbursement Form must include the following:
 - The nature of the expense
 - The name and title of the individuals involved
 - The purpose for the expense
 - Signature of the individual involved
 - Signature of Supervisor
 - Signature of the Dean for all faculty members
- All expense reimbursement forms and supporting documentation must be submitted to Accounting Department no later than the 30th of each month in which the expenses incurred.
- Any incomplete expense reimbursement form will be returned to the requester or manager/supervisor.
- Any expense reimbursement form without proper supporting documentation and or proper signature will be returned to the requester or manager/supervisor.

Travel guidelines:

- Employee is encouraged to fly coach class with the lowest available airfare.
- If a car rental is required, employee is requested to rent mid-sized or compact vehicles. The employee will be reimbursed for the fuel costs associated with the renting a vehicle with its original receipt(s).
- Employee will be reimbursed for reasonable hotel accommodations. Discounted room rates should be requested at the time of room booking.
- California Northstate does not honor Per Diem rates for meals while on business trip; therefore, receipts are required for all business transactions. No receipts, no reimbursement. The guidelines on how much to spend for breakfast, lunch, and dinner for an employee traveling on business trip are:
 - Under \$10.00 for breakfast
 - Under \$20.00 for lunch
 - Under \$30.00 for dinner
- The following are examples of non-reimbursable expenses:

Appendix 1-3 Employee Handbook Feb 2016

- Personal travel insurance
- Personal reading materials
- Childcare
- Pet care
- Toiletries, cosmetics, or grooming products
- Expenses incurred by spouses, children, or relatives
- In-room movies or video games
- Alcohol
- Sporting activities, shows, etc.

If you have any questions about the University's expense reimbursement policy, contact your immediate supervisor.

8.4 Makeup Time

California Northstate University allows the use of makeup time when non-exempt employees need time off to tend to personal obligations. Employees may take time off and then make up the time later in the same workweek, or may work extra hours earlier in the workweek to make up for time that will be taken off later in the workweek. Makeup time worked will not be paid at an overtime rate.

Makeup time requests must be submitted in writing to your supervisor, with your signature, on the University-provided form. Requests will be considered for approval based on the legitimate business needs of the University at the time the request is submitted. A separate written request is required for each occasion the employee requests makeup time.

If you request time off that you will make up later in the week, you must submit your request at least 24 hours in advance of the desired time off. If you request to work makeup time first in order to take time off later in the week, you must submit your request at least 24 hours before working the makeup time. Your makeup time request must be approved in writing before you take the requested time off or work makeup time, whichever is first.

All makeup time must be worked in the same workweek as the time taken off. The University's seven-day workweek is Sunday through Saturday. Employees may not work more than 11 hours in a day or 40 hours in a workweek as a result of making up time that was or would be lost due to a personal obligation.

If you take time off and are unable to work the scheduled makeup time for any reason, the hours missed will normally be unpaid. However, your supervisor may arrange with you another day to make up the time if possible, based on scheduling needs. If you work makeup time in advance of time you plan to take off, you must take that time off, even if you no longer need the time off for any reason.

An employee's use of makeup time is completely voluntary. California Northstate University does not encourage, discourage, or solicit the use of makeup time.

8.5 Meal and Rest Periods

Rest Breaks

All non-exempt employees are entitled to rest break periods during their workday. If you are a nonexempt employee, you will be paid for all such break periods, and you will not clock out. You are required to remain on the work premises during your rest break(s). You are expected to return to work promptly at the end of any rest break.

Number of Rest Breaks

You will be authorized and permitted one (1) 10-minute net rest break for every four (4) hours you work (or major fraction thereof, which is defined as any amount of time over two [2] hours). A rest break need not be authorized for employees whose total daily work time is less than three and one half (3.5) hours.

If you work a shift from three and one-half (3.5) to six (6) hours in length you will be entitled to one (1) ten-minute rest break. If you work more than six (6) hours and up to 10 hours, you will be entitled to two (2) ten-minute rest breaks. If you work more than 10 hours and up to 14 hours, you will be entitled to three (3) ten-minute rest breaks.

Timing of Rest Breaks

You are authorized and permitted to take a rest break in the middle of each four hour work period.

Your rest break will be scheduled by your supervisor.

Meal Period

All non-exempt employees will be provided an uninterrupted unpaid meal period of at least 30 minutes if you work more than five (5) hours in a workday. You must clock out for your meal period. You will be permitted a reasonable opportunity to take this meal period, and you will be relieved of all duty. During your meal period, you are free to come and go as you please and are free to leave the premises. You are expected to return to work promptly at the end of any meal period.

If your total work period for the day is more than five hours per day but no more than six hours, you may waive the meal period. This cannot be done without the mutual consent of you and your supervisor. The waiver must be in writing. You must discuss any such waiver with your supervisor in advance.

Appendix 1-3 Employee Handbook Feb 2016

Timing of Meal Period

Your meal period will be provided no later than the end of your fifth hour of work. For example, if you begin work at 8:00 a.m., you must start your meal period by 12:59 p.m. (which is before the end of your fifth hour of work).

Your meal period will be scheduled by supervisor.

Second Meal Period

If you work more than 10 hours in a day, you will be provided a second unpaid meal period of at least 30 minutes. Again, you must clock out for your meal period. You will be permitted a reasonable opportunity to take this meal period, and you will be relieved of all duty. There will be no control over your activities during your meal period. During your meal period, you are free to leave the premises and are free to come and go as you please. You are expected to return to work promptly at the end of any meal period.

Depending on the circumstances, you may be able to waive your second meal period if you took the first meal period and if your total hours worked for the day is no more than twelve hours. This cannot be done without the mutual consent of you and your supervisor and must be in writing. You must discuss any such waiver with your supervisor in advance.

Timing of Second Meal Period

This second meal period will be provided no later than the end of your 10th hour of work.

Your second meal period will be scheduled by supervisor.

Recording Meal Periods

You must clock out for any meal period and record the start and end of the meal period. Employees are not allowed to work "off the clock." All work time must be accurately reported on your time record.

If for any reason you are not provided a meal period in accordance with our policy, or if you are in any way discouraged or impeded from taking your meal period or from taking the full amount of time allotted to you, please immediately notify Human Resources.

Anytime you miss a meal period that was provided to you (or you work any portion of a provided meal period), you will be required to report to your supervisor and document the reason for the missed meal period or time worked.

Please also refer to the California Northstate University Timekeeping Policy.

8.6 No Work from Home

California Northstate University does not have a policy that allows working from home, in lieu of working at the workplace. All employees are required to work their scheduled shift on University campuses or as dictated by job requirements.

8.7 Overtime for Non-Exempt Employees

Employees may be required to work overtime as necessary. Only actual hours worked in a given workday or workweek can apply in calculating overtime. California Northstate University will attempt to distribute overtime evenly and accommodate individual schedules. All overtime work must be previously authorized by a supervisor. California Northstate University provides compensation for all overtime hours worked by non-exempt employees in accordance with state and federal law as follows:

- All hours worked in excess of eight hours in one workday or 40 hours in one workweek will be treated as overtime. A workday begins at 12:01 a.m. and ends at midnight 24 hours later. Workweeks begin each Sunday at 12:01 a.m.;
- Compensation for hours in excess of 40 for the workweek, or in excess of eight and not more than 12 for the workday, and for the first eight hours on the seventh consecutive day of work in one workweek, shall be paid at a rate one and one-half times the employee's regular rate of pay;
- Compensation for hours in excess of 12 in one workday and in excess of eight on the seventh consecutive workday in a workweek shall be paid at double the regular rate of pay; and
- Exempt employees may have to work hours beyond their normal schedules as work demands require. No overtime compensation will be paid to exempt employees.

Make-up time worked in accordance with the make-up time policy is not paid at the overtime rate. Please refer to the make-up time policy.

8.8 Pay for Mandatory Meetings/Training

California Northstate University will pay non-exempt employees for their attendance at meetings, lectures, and training programs under the following conditions:

- Attendance is mandatory;
- The meeting, course, or lecture is directly related to the employee's job;
- The employee who is required to attend such meetings, lectures, or training programs will be notified of the necessity and approval for such attendance by his or her supervisor;
- The employee will be paid at their regular wage for time spent at meetings, lectures, and training programs; and
- Any hours in excess of eight in a day or 40 in a week will be paid at the appropriate overtime rate, at the hourly rate in effect at the time the overtime work is being performed.

8.9 Payment of Wages

Paydays normally occur and paychecks are normally available at the 15th and last day of each month. If a regular payday falls on a weekend or holiday, employees will be paid on the preceding business day. If one of these days falls on a weekend or a holiday, paychecks will be distributed the preceding Friday or the following Monday. Please refer to the University payroll schedule for specific dates.

If you observe an error on your check, please report it immediately to the bookkeeper.

California Northstate University offers automatic payroll deposit. You may begin and stop automatic payroll deposit at any time.

To begin automatic payroll deposit, you must complete a form (available from the payroll department) and return it to the bookkeeper at least 3 days before the pay period for which you would like the service to begin. You should carefully monitor your payroll deposit statements for the first two pay periods after the service begins.

To stop automatic payroll deposit, complete the form available from the payroll department and return it to the bookkeeper at least three days before the pay period for which you would like the service to end. You will receive a regular payroll check on the first pay period after the receipt of the form, provided it is received no later than three days before the end of the pay period.

8.10 Reporting-Time Pay

California Northstate University will comply with all applicable regulations regarding reporting-time pay for non-exempt employees.

California Northstate University will pay a minimum of two hours of pay to employees who are required to report to work on a day other than their normally scheduled workday.

California Northstate University will not pay employees who report to work but are unable to work under the following circumstances:

- Interruption of work because of the failure of any or all public utilities; or
- Interruption of work because of natural causes or other circumstances beyond the University's power to control.

8.11 Timekeeping Requirements for Non-Exempt Employees

All non-exempt employees are required to use timesheets to record time worked for payroll purposes. All time worked must be accurately reported on your time record.

Employees must record their own time at the start and at the end of each work period. Employees must clock out for their meal period and record the start and end of the meal period. Employees also must record their time whenever they leave the building for any reason other than California Northstate University business.

Appendix 1-3 Employee Handbook Feb 2016

Employees are not allowed to work "off the clock." Working off the clock violates University policy. Any work performed before or after a regularly scheduled shift must be approved in advance by your supervisor. If you perform any off-the-clock work, please report the work to your supervisor.

Employees will be required to certify that their time record is accurate.

Any handwritten marks or changes on the timecard must be initialed by a supervisor. Altering another employee's timecard or allowing another employee to alter your timecard is not permissible and is subject to disciplinary action.

Any errors on your timecard should be reported immediately to your supervisor.

Please also refer to California Northstate University's Meal and Rest Periods Policy.

8.12 Work Schedules

California Northstate University is normally open for business between the hours of 8:00a.m. to 7:00p.m., Monday through Friday. Your supervisor, with approval from the Dean of the College, will assign your individual work schedule. All employees are expected to be at their desks or workstations at the start of their scheduled shifts, ready to work.

Exchanging work schedules with other employees is discouraged. However, if you need to exchange schedules, notify your supervisor, who may authorize, with approval from the Dean of the College an exchange if possible. Work schedule exchanges will not be approved for the mere convenience of an employee or if the exchange interferes with normal operations or results in excessive overtime.

The workweek begins at 12:01 a.m. Sunday and ends at midnight on Saturday.

9. Safety and Health

9.1 Employees Who Are Required to Drive

Employees whose job duties require them to drive a University vehicle or their own vehicles for University business will be required to show proof of current valid driving licenses and proof of insurability under the University's policy or current effective insurance coverage before the first day of employment.

California Northstate University reserves the right to participate in a system that regularly checks state Department of Motor Vehicles (DMV) records of all employees who are required to drive as part of their job.

If an employee is required to drive as part of his or her job, California Northstate University retains the right to transfer to an alternative position, suspend, or terminate an employee whose license is suspended or revoked, who fails to maintain personal automobile insurance coverage, or who is uninsurable under the University's policy. The employee's direct supervisor is responsible for obtaining proof of insurance and a valid driver's license from the employee and then submit it to Human Resources.

Employees who drive their own vehicles on University business will be reimbursed at the Internal Revenue Service mileage reimbursement rate (54 cents per mile as for 2016). The mileage reimbursement rate will be adjusted each January 1 and/or when the IRS changes the rate, to the current rate allowed by the IRS. Mileage in excess of the distance driven from your home to the office will be paid. Where air travel is more feasible than driving, reimbursement will be to the extent of airfare unless approved otherwise. Receipts must be submitted for all expenses to be reimbursed. If necessary, advances can be obtained from the University for travel expenses.

9.2 Ergonomics

California Northstate University is subject to Cal/OSHA ergonomics standards for minimizing workplace repetitive motion injuries. The University will make necessary adjustments to reduce exposure to ergonomic hazards through modifications to equipment and processes and employee training. The University encourages safe and proper work procedures and requires all employees to follow safety instructions and guidelines.

California Northstate University believes that reduction of ergonomic risk is instrumental in maintaining an environment of personal safety and well-being, and is essential to our business. The University intends to provide appropriate resources to create a risk-free environment. If you have any questions about ergonomics, please contact Human Resources.

9.3 Fragrance Policy

California Northstate University strives to maintain a fragrance-free workplace. Employees may not wear an excessive amount of any of the following in the workplace or when on the job, regardless of location, if they may come in contact with coworkers or students: cologne, after shave lotion, perfume, perfumed hand lotion, fragranced hair products, fragranced deodorants and/or similar products.

9.4 Health and Safety

All employees are responsible for their own safety, as well as that of others in the workplace. To help us maintain a safe workplace, everyone must be safety-conscious at all times. Report all work-related injuries or illnesses immediately to your supervisor or to the Human Resources Department. In compliance with California law, and to promote the concept of a safe workplace, California Northstate University maintains an Injury and Illness Prevention Program. The Injury and Illness Prevention Program is available for review by employees and/or employee representatives in the lab manager's office.

Environmental Matters

The University desires to preserve and protect human health and the environment and is committed to compliance with all related laws and regulations. All materials which may contain toxic or hazardous substances must be properly disposed. It is essential that the University comply fully with all applicable state and federal laws and regulations concerning the receipt, storage, and shipment of any chemicals, dangerous drugs, and medications.

In compliance with Proposition 65, California Northstate University will inform employees of any known exposure to a chemical known to cause cancer or reproductive toxicity.

9.5 Heat Illness

The University is concerned with employee health and safety. Employees who work outside may be exposed to extreme temperatures or adverse working conditions, particularly in the summer months. All supervisors are trained in the recognition and prevention of heat illness. Employees who work outside are encouraged to frequently drink water. Employees who work outside are also allowed and encouraged to take a cool-down rest in the shade of at least five minutes (in addition to the time needed to access the shade) when needed to protect themselves from overheating. These preventative cool-down rests are paid time.

Please refer to the University's Injury Illness and Prevention Program or talk to your supervisor for details on how to ensure you are protected from heat illness dangers.

9.6 Inclement Weather/Natural Disasters

In the event of severe weather or a natural disaster that prevents employees from safely traveling to and from work, the following leave policies will apply:

- Inclement weather: Conditions that excuse absence from work include: flood, extreme storm, earthquake, or road closure. If weather conditions prevent you from safely traveling to work, you must notify your supervisor by phone, if telephone service is functional, or by any other available means. Employees may be paid for up to one day(s) per year when weather conditions prevent them from reaching the worksite. Absences in excess of one day(s) will be unpaid or will be deducted from accumulated vacation time.

Appendix 1-3 Employee Handbook Feb 2016

- In the event of a natural disaster, the office will be closed if the building is damaged or highways leading to the office are damaged. For instructions on reporting to another location, contact the University immediately, if possible.
- Employees are to keep abreast of important emergency communications generated from the University's Emergency Notification System.

9.7 Recreational Activities and Programs

California Northstate University or its insurer will not be liable for payment of workers' compensation benefits for any injury that arises out of an employee's voluntary participation in any off-duty recreational, social, or athletic activity that is not part of the employee's work-related duties.

9.8 Security

California Northstate University has developed guidelines to help maintain a secure workplace. Be aware of persons loitering for no apparent reason in parking areas, walkways, entrances and exits, and service areas. Report any suspicious persons or activities to security personnel. Secure your desk or office at the end of the day. When called away from your work area for an extended length of time, do not leave valuable and/or personal articles in or around your workstation that may be accessible. The security of facilities as well as the welfare of our employees depends upon the alertness and sensitivity of every individual to potential security risks. You should immediately notify your supervisor when known or unknown persons are acting in a suspicious manner in or around the facilities, or when keys, security passes, or identification badges have been reported missing.

The University's workplace security program is described in detail in the University's Illness and Injury Prevention Program (IIPP) and Annual Security Report. Please refer to the Annual Security Report for detailed information on reporting crimes and accessing personnel to help in time of crises or perceived threat. Employees are to keep abreast of important emergency communications generated from the University's Emergency Notification System.

9.9 Workplace Violence

California Northstate University has adopted the following workplace violence policy to ensure a safe working environment for all employees.

The University has zero tolerance for acts of violence and threats of violence. Without exception, acts and threats of violence are not permitted. All such acts and threats, even those made in apparent jest, will be taken seriously, and will lead to discipline up to and including termination.

It is every employee's responsibility to assist in establishing and maintaining a violence-free work environment. Therefore, each employee is expected and encouraged to report any incident which may be threatening to you, your co-workers, students or any event which you

Appendix 1-3 Employee Handbook Feb 2016

reasonably believe is threatening or violent in nature that could affect the campus community at large. You may report an incident to any supervisor or manager.

Possession of non-work related weapons on University premises and at University-sponsored events shall constitute a threat of violence.

A threat includes, but is not limited to, any indication of intent to harm a person or damage University property. Threats may be direct or indirect, and they may be communicated verbally or nonverbally. The following are examples of threats and acts that shall be considered violent - this list is in no way all-inclusive:

Example	Type of Threat
Saying, "Do you want to see your next birthday?"	Indirect
Writing, "Employees who kill their supervisors have the right idea."	Indirect
Saying, "I'm going to punch your lights out."	Direct
Making a hitting motion or obscene gesture	Nonverbal
Displaying weapons	Extreme
Stalking or otherwise forcing undue attention on someone, whether romantic or hostile	Extreme
Taking actions likely to cause bodily harm or property damage	Acts of violence

The University's workplace violence program is described in detail in the University's Illness and Injury Prevention Program (IIPP) and Annual Security Report.

10. Termination

10.1 Employee References

All requests for references must be directed to Human Resources. No other manager, supervisor, or employee is authorized to release references for current or former employees.

By policy, California Northstate University discloses only the dates of employment and the title of the last position held of the former employees. If you authorize disclosure in writing, California Northstate University also will inform prospective employers of the amount of salary or wage you last earned.

10.2 Involuntary Termination and Progressive Discipline

Violation of California Northstate University policies and rules may warrant disciplinary action. The University has a system of progressive discipline that may include verbal warnings, written warnings, performance improvement plans, and suspension. The system is not formal, and California Northstate University may, in its sole discretion, utilize whatever form of discipline is deemed appropriate under the circumstances, up to, and including, immediate termination of employment. The University's policy of progressive discipline in no way limits or alters the at-will employment relationship.

All University-owned property, including vehicles, keys, uniforms, identification badges, portable computer equipment, and credit cards, must be returned immediately upon termination of employment.

10.3 Reductions in Force

Under some circumstances, California Northstate University may need to restructure or reduce its workforce. If restructuring our operations or reducing the number of employees becomes necessary, the University will attempt to provide advance notice, if possible, to help prepare affected individuals. If possible, employees subject to layoff will be informed of the nature of the layoff and the foreseeable duration of the layoff, whether short-term or indefinite.

In determining which employees will be subject to layoff, California Northstate University will take into account, among other things, operation and requirements, the skill, productivity, ability, and past performance of those involved, and also, when feasible, the employee's length of service.

10.4 Voluntary Resignation

Voluntary resignation results when an employee voluntarily quits his or her employment at California Northstate University, or fails to report to work for three consecutively scheduled workdays without notice to, or approval by, his or her supervisor (unless the absence is protected by law). All University-owned property, including vehicles, keys, uniforms, identification badges, and credit cards, must be returned immediately upon termination of employment.

11. Confirmation of Receipt

Appendix 1-3 Employee Handbook Feb 2016

11.1 Confirmation of Receipt

I confirm my receipt of my copy of the University's employee handbook. I understand that it is my responsibility to read and familiarize myself with the policies and procedures contained in the handbook. I have read the entire handbook including but not limited to sections 1.2, 1.3, 1.4, 1.5, 1.6, and 1.7.

Closings and Openings of Dental Schools*

American Dental Education Association

- ▣ 1982 and 2000: seven dental schools closed
- ▣ Class sizes at many remaining schools were reduced
- ▣ 6,300 dental graduates in 1977
- ▣ 3,979 dental graduates in 1989
- ▣ ~4,700 dental graduates in 2008

*Numbers are approximate

Closings and Openings of Dental Schools*

American Dental Education Association

- ▣ 4 accredited dental schools have opened since 2000
 - ▣ Nova Southeastern, University of Nevada-Las Vegas, Arizona School of Dentistry and Oral Health, Midwestern University (Arizona Campus)
- ▣ 2 new dental schools are seeking accreditation
 - ▣ Western University of Health Sciences, East Carolina University
- ▣ 6 new dental schools are under consideration
 - ▣ Arkansas, California, Illinois, Maine, Nevada, Texas
- ▣ 12 new schools since 2000, but net increase of only 5 compared to 1982
 - ▣ 7 of these are associated with universities that have osteopathic medical schools

Observations

American Dental Education Association

- ▣ Increases in the U.S. dentist workforce are not consistent with increases in the U.S. population
- ▣ Closure of dental schools and reductions in class sizes between 1982 and 2000 are having a long-term impact on the U.S. dentist workforce

Observations

American Dental Education Association

- ✧ The effect of the openings of new dental schools will be in the long-term and not the short-term
- ✧ There are definite trends reflecting increasing percentages of women and under-represented minorities in the U.S. dentist workforce

American Dental Education Association

THANK YOU

Appendix 1-4 Diversity and Inclusion Policy

Diversity and Inclusion Policy

I. Policy Statement

- A. California Northstate University (CNU) considers diversity an integral part of the entire academic enterprise. Blending of different life and cultural experiences is of prime importance in the hiring of staff, faculty and administrators and in the selection of students and the education of future healthcare providers.
- B. CNU seeks to foster a broad and diverse community of students, faculty, staff, and administrators to enrich the educational environment and expand the knowledge base for our students.
- C. The value of this diversity emphasis for CNU educational programs and institutional environment will be realized by the production of culturally competent healthcare providers who can serve our nation's increasing diverse population.

II. Purpose

- A. Diversity enhances the educational environment and enriches the experience of the students, faculty, staff, and administrators.
- B. CNU aims to create a culture in which everyone feels valued and included. This culture of inclusion fully appreciates differences in perspective, not only in composition, but of thought, expression, desires, and goals.
- C. CNU values all dimensions of diversity among students, faculty, staff and administrators, including but not limited to age, race/ethnicity, gender, gender identity, gender expression, sexual orientation, physical ability, geographic locations, and socioeconomic up-bringing.
- D. CNU aims to increase the numbers of "racial and ethnic populations that are underrepresented in the healthcare professions" among CNU students, faculty, staff and administrators. Diversity goals include:
 - i. Recruiting and retaining diverse student body, faculty, staff and administrators;
 - ii. Creating and evaluating diversity initiatives;
 - iii. Developing educational and training sessions for students, faculty, staff and administrators to ensure cultural competency;
 - iv. Engaging the community through programs to increase diversity in the health care profession.

III. Scope/Coverage

This policy applies to all University students, faculty, staff, and administrators.

IV. Procedure

- A. A University-wide Diversity and Inclusion Committee is constituted on the University level, and populated by representatives from the student body, faculty, staff, and administration from each separate college as appointed by their respective Dean. The Chair for the University level committee will be appointed by the University President who will charge the committee with their duties and responsibilities. The purpose of this committee is to monitor the efforts and progress being made towards recruiting and retaining a diverse student body, faculty, staff and administrators, and creating and evaluating diversity and inclusion initiatives across campus. This committee will be responsible for providing on-going reports to the Office of the President of the progress being made on these important and compelling issues.
- B. Each college may have its committee or form a subcommittee from the main committee responsible for Diversity and Inclusion, whose representatives will serve on the University's Committee on Diversity and Inclusion. The members of the committee will be appointed by the Dean of the respective college and will be charged with the oversight of the programs and initiatives set forth on the college level that are geared towards accomplishing the institution's interests in recruiting, retaining, and including a diverse faculty, staff and students, that contributes to the educational and societal benefits associated with having a diverse and inclusive university committee.
- C. The College Admissions Committees will conduct a holistic admissions process whereby the University's compelling interests towards creating a diverse student population that will contribute to the educational depth and breadth of the campus will be realized.
- D. Faculty Search Committees will be charged with keeping the University's compelling educational interests in recruiting a diverse faculty as a central tenet of the academic search and hiring process.
- E. Staff and Administrators Hiring: Those charged with the responsibility for hiring qualified staff and administrators to work in the various capacities necessary to operate a University, will be expected to keep as a central tenet of the hiring process the University's compelling need to recruit and maintain a diverse support staff and administrators.
- F. The Human Resource's Office is responsible for working with representatives from each college to develop educational and training sessions for students, faculty, staff and administrators to ensure cultural competency.
- G. On an annual basis, a report of diversity and inclusion achievement will be presented to the Board of Trustees.

Approval record:

APPROVED: PEC: 2/13/17

APPROVED BOT: 8/13/17

REVIEW: every two years (or more often if required)

Good evening CNU Faculty and Staff!

CNU's **Diversity and Inclusion Committee** is so pleased to announce that Dr. Stacie Walton will be on campus March 4th to give a talk titled, "Strategies for Developing a Culturally Competent Mindset in Healthcare". *This is a university wide event – all students, faculty, and staff are invited and encouraged to attend.*

Date: Monday, March 4th

Time: 12pm – 1pm

Location: COM Classroom 1B

Objectives:

- 1) Understanding the significance of cultural competence
- 2) Defining cultural competence
- 3) Learning how unconscious bias impacts cultural competence

Light refreshments will be provided.

If you are interested in attending this presentation, please accept this invitation.

Stacie Walton, MD, MPH, recently retired from a large HMO as a clinical Pediatrician serving in the roles of both Diversity Champion and Communication Consultant. She has been a teacher and consultant for healthcare providers and institutions for over 25 years. After over 10 years as an academic Pediatrician and adjunct professor in public health, she has provided Grand Rounds, lectures, interactive workshops, and facilitated conferences on cultural competence for healthcare providers in medicine, dental, public health and nursing in multiple venues across the United States, including Puerto Rico.

Recently, her cultural competency themes highlight the impact of Implicit Bias and Privilege in patient interactions and health outcomes, as well as, how effective patient provider communication between cultures requires empathy, emotional intelligence, as well as cultural competence.

Dr. Walton attended Stanford University, majoring in Cultural Anthropology. She received her MD from Columbia University Vagelos College of Physicians and Surgeons in New York City. She completed her residency training at the Children's Hospital Philadelphia. She received her MPS in Maternal Child Health with a policy focus from the University of California at Berkeley.

Working Pro forma**CNUCDM****April 3, 2019**

Expenses: assumptions include faculty hiring per plan, operation of first clinic beginning in 2020-2021 and second clinic in 2022-2023. Second clinic will be purchased for 8 million dollars with \$5,000,000 down. This is due to presumed size of 70 units, within 25 miles of campus per WASC requirement at 36,000 feet.

MEMORANDUM OF UNDERSTANDING
BETWEEN
ASIAN HEALTH SERVICES
AND CALIFORNIA NORTHSTATE UNIVERSITY

This Memorandum of Understanding ("MOU") is entered into by and between Asian Health Services (hereinafter referred to as "Site"), and California Northstate University, on behalf of its College of Dental Medicine DMD program (hereinafter referred to as "CNU").

WITNESSETH:

Whereas, Site and CNU are entering into this MOU for the purpose of establishing supervised community-based clinical education experiences, also known as "clinicals", in the sequence of professional training of students in CNU's dental medicine education program, designed to meet the training goals of the doctorate program.

NOW, THEREFORE, it is mutually agreed between the parties hereto as follows:

I. Term and Termination

The term of this MOU shall commence as of February 4, 2019, and shall continue for a period of three (3) years thereafter. This MOU may be extended by the written agreement of both parties, and may be terminated at any time by the written agreement of both parties or upon 30 days' advance written notice by one party to the other.

II. Nature and Scope of Affiliation

The affiliation between Site and CNU will be established by an agreement between them, which will address their respective responsibilities in regard to the Clinicals, including but not limited to the following areas:

- CNU and Site will share responsibility for creating and maintaining an appropriate learning environment for DMD students participating in the Practicum;
- Site will provide dental students, and faculty if applicable, access to their facilities, appropriate supporting resources, and practicing dentists to support the students' participation in the Practicum;
- CNU will retain ultimate responsibility for the dental education program and academic affairs including but not limited to grades and dental student assessment, and will retain primary responsibility for appointing and hiring faculty members for dental student teaching.

III. Nature of Relationship with Patients

Site will provide students and faculty with access to patients at Site's facilities in an appropriately supervised environment, in which the students can complete CNU's curriculum. Site will retain full authority and responsibility for patient care and quality standards, and will maintain a level of care that meets generally accepted standards conducive to satisfactory instruction. While at Site's facilities, students will have the status of trainees, are not to replace Site's staff, and, are not to render unsupervised patient care and/or services. All services rendered by students must have educational value and meet the goals of the dental education program. Site and its staff will provide such supervision of the educational and clinical activities as is reasonable and appropriate to the circumstances and to the student's level of training.

IV. Students Not Employees; No Agency Relationship Between Parties

The students participating in the Clinicals will not be considered employees or agents of Site or CNU for any purpose. Students will not be entitled to receive any monetary or other compensation from Site or CNU or any benefits of employment from Site or CNU, including but not limited to, health care or workers' compensation benefits, vacation, sick time, or any other benefit of employment, direct or indirect.

The parties hereto are independent contractors as to each other; this MOU does not create any agency, employer/employee, partnership, joint venture, or fiduciary relationship between the parties. No payments will be made between the parties in connection with this MOU.

V. Injuries, Insurance, and Indemnity

The affiliation agreement will define responsibility for obtaining emergency treatment for students who are injured or exposed to an environmental hazard by a patient or otherwise during the Clinicals. Students will be responsible for obtaining their own health insurance, and shall be financially responsible to the extent that they require any emergency treatment as described in the preceding sentence or other treatment as the result of an injury or environmental hazard occurring while participating in the Clinicals.

The affiliation agreement will set forth the insurance requirements for the parties.

The parties will defend, indemnify, and hold each other and each other's respective officers, employees, and agents harmless from and against any and all liability, loss, expense (including reasonable attorneys' fees), and claims for injury or damages arising out of the performance of this Agreement, in proportion to and to the extent such liability, loss, expense, attorneys' fees, or claims for injury or damages are caused by or result from the negligent or intentional acts or omissions of the indemnifying party, or its officers, employees, or agents.

VI. No Discrimination

In performing the terms of this MOU, the parties shall not unlawfully discriminate against any person on the basis of race, ethnicity, color, ancestry, national origin, gender identity or expression, sexual orientation, marital status, religion, veteran status, age, physical or mental disability, medical condition, or other protected category.

VII. General Provisions**A. Notices**

Notices required under this MOU shall be sent to the parties at the addresses set forth below:

California Northstate University
College of Dental Medicine
9700 West Taron Drive
Elk Grove, CA 95757
Attn: Leon Assael, DMD, Dean
Email: leon.assael@cnsu.edu

Site: Asian Health Services
101 8th Street, Suite 100
Oakland, CA 94607

Attn: Huong Le, DDS, Chief Dental Officer
Email: huongle@ahschc.org

B. Applicable Law

This MOU shall be construed in accordance with and governed by the laws of the State of California.

C. Severance

If any provision of this MOU shall be determined by a court of law with proper jurisdiction to be illegal or otherwise unenforceable, that provision will be given effect to the extent not illegal or unenforceable and remaining within the intent of the parties, and the remaining provisions shall remain in full force and effect.

D. Non-Assignable

This MOU shall not be assigned or otherwise transferred by either party without the prior written consent of the other.

E. Entire Agreement; Amendments

This MOU sets forth the entire agreement of the parties relating to the subject matter hereof, and supersedes any and all prior agreements and understandings, written and oral, between the parties relating to the subject matter hereof. This MOU may be amended or modified at any time if in writing signed by both parties, or as otherwise set forth in this MOU.

VIII. Execution; Counterparts

This MOU is effective when signed by all parties, and may be signed in counterparts, all of which together constitute one complete MOU. The individuals executing this MOU certify that they are authorized to sign on behalf of their institutions, and by doing so agree to bind their respective institutions to all the terms, provisions, and conditions contained in this MOU.

MEMORANDUM OF UNDERSTANDING
BETWEEN
SHINGLE SPRINGS BAND OF MIWOK INDIANS
AND CALIFORNIA
NORTHSTATE UNIVERSITY

This Memorandum of Understanding ("MOU") is entered into by and between the Shingle Springs Band of Miwok Indians a federally recognized Tribe that owns and operates the Shingle Springs Health and Wellness Center (hereinafter referred to as "Site"), and California Northstate University, on behalf of its College of Dental Medicine DMD program (hereinafter referred to as "CNU").

WITNESSETH:

Whereas, Site and CNU are entering into this MOU for the purpose of establishing supervised community-based clinical education experiences, also known as "clinicals"), in the sequence of professional training of students in CNU's dental medicine education program, designed to meet the training goals of the doctorate program.

NOW, THEREFORE, it is mutually agreed between the parties hereto as follows:

I. Term and Termination

The term of this MOU shall commence as of February 14, 2019, and shall continue for a period of three (3) years thereafter. This MOU may be extended by the written agreement of both parties, and may be terminated at any time by the written agreement of both parties or upon 30 days' advance written notice by one party to the other.

II. Nature and Scope of Affiliation

The affiliation between Site and CNU will be established by an agreement between them, which will address their respective responsibilities in regard to the Clinicals, including but not limited to the following areas:

- CNU and Site will share responsibility for creating and maintaining an appropriate learning environment for DMD students participating in the Practicum;
- Site will provide dental students, and faculty if applicable, access to their facilities, appropriate supporting resources, and practicing dentists to support the students' participation in the Practicum;
- CNU will retain ultimate responsibility for the dental education program and academic affairs including but not limited to grades and dental student assessment, and will retain primary responsibility for appointing and hiring faculty members for dental student teaching.

Appendix 1-6 MOUs Clinical

III. Nature of Relationship with Patients

Site will provide students and faculty with access to patients at Site's facilities in an appropriately supervised environment, in which the students can complete CNU's curriculum. Site will retain full authority and responsibility for patient care and quality standards, and will maintain a level of care that meets generally accepted standards conducive to satisfactory instruction. While at Site's facilities, students will have the status of trainees, are not to replace Site's staff, and are not to render unsupervised patient care and/or services. All services rendered by students must have educational value and meet the goals of the dental education program. Site and its staff will provide such supervision of the educational and clinical activities as is reasonable and appropriate to the circumstances and to the student's level of training.

IV. Students Not Employees; No Agency Relationship Between Parties

The students participating in the Clinicals will not be considered employees or agents of Site or CNU for any purpose. Students will not be entitled to receive any monetary or other compensation from Site or CNU or any benefits of employment from Site or CNU, including but not limited to, health care or workers' compensation benefits, vacation, sick time, or any other benefit of employment, direct or indirect.

The parties hereto are independent contractors as to each other; this MOU does not create any agency, employer/employee, partnership, joint venture, or fiduciary relationship between the parties. No payments will be made between the parties in connection with this MOU.

V. Injuries, Insurance, and Indemnity

The affiliation agreement will define responsibility for obtaining emergency treatment for students who are injured or exposed to an environmental hazard by a patient or otherwise during the Clinicals. APPENDIX C -Policy Applicable to Faculty with Relationships with Start-Up Companies

APPENDIX D – Policy and Procedure on Conflict of Commitment

APPENDIX E – Compartmentalization of Decision Authority Table

I. PRINCIPLES

Founding principles:

1. California Northstate University (CNU) originally was and continues to be established with private funding by financial sponsors who believe that a great university is defined by its principal goals of education mission, education effectiveness, student success, and long term sustainability.
2. The financial sponsors who are mainly physicians and pharmacists strongly believe that the University will succeed in discharging its mission only if education is second to no other priority and education effectiveness is defined by student outcomes and efficient and appropriate deployment of resources.
3. Accordingly, the financial sponsors expect the University administrators, faculty, and staff (collectively known as the employees) to act not only in the best interest of fulfilling these principal goals, but also to engage in activities such as research, scholarship, service, consulting, and self-development that benefit the students, the University itself, and the larger public. While recognizing the benefit of such activities, CNU is also committed to ensuring that they are conducted properly and consistently, in accordance with the principal goals that are fundamental to the existence and well-being of a university and with the responsible management of the University's business.

At the inception of the institution and to avoid perceived conflicts between education interest and financial interest, the Board of Trustees was reconstituted to perform the oversight and governance of the institution ensuring the fulfillment of education mission, protection of the students, education effectiveness, integrity of scholarly activities, and service to the larger public. The Board of Trustees is composed of members from the community with no financial relationship with the institution and is self-perpetuating with its own nomination and vetting process, and maintains its continuity of function with multi-year staggering terms.

The appointment of a qualified individual who has no financial relationship with the organization which established the College of Medicine to serve as the Dean and Chief Academic Officer, whose responsibilities include the day-to-day operations and management of the on-going medical education further ensures that the principal goals of the University are fulfilled optimally.

In pursuit of its mission California Northstate University has formulated the following policy to identify and address actual conflicts of interest and conflicts of commitment. The fundamental premise of this policy is that each member of the California Northstate community has an

obligation to act in the best interest of the University and in furtherance of the University's mission, and must not let financial interest interfere with principal goals of the University. This policy is intended to increase the awareness of all the University employees and the Trustees to the potential for conflicts of interest, and to establish procedures whereby such conflicts may be avoided or properly managed.

A. Conflict of Interest

A conflict of interest exists when an individual has a significant financial interest (SFI) that could directly and significantly affect his or her University activities. Generally, this will occur when the external interest provides an **incentive** to affect the individual's conduct of his or her University activities and when the individual has the **opportunity** to affect a University decision or other activity (for example, because he or she is the decision-maker or the principal investigator for a research project). Conflicts of interest can arise naturally from an individual's engagement with the world outside the University, and the mere existence of a potential or perceived conflict of interest does not necessarily imply wrongdoing on anyone's part. When conflicts of interest do arise, however, they must be recognized, disclosed and either properly managed or eliminated.

Conflicts of interest may exist with respect to University financial decisions in which the individual is involved, for example, regarding investments, loans, purchases or sales of goods or services, and financial accounting decisions. They may also exist with respect to the conduct of research, the care of patients, the protection of human research subjects, and the treatment of students and faculty colleagues. Conflicts may also exist with respect to matters with both financial and non-financial implications, such as decisions about the use of University equipment and facilities and the negotiation of research agreements and license agreements.

B. Fundamental Principles

The following principles form the basis that underlies the University's policy on conflicts of interest:

1. When conducting University functions, all employees perform such functions with fiduciary duties: the duty of care (perform the work a prudent individual would do under the same circumstances); the duty of conformance (perform the work in adherence to education mission, policies, standards (including accreditation standards), regulations, laws), and the duty of loyalty (perform the work with the best interest and well-being of the University in mind).
2. The University does not permit any individual with an interest in the financial success of the institution to serve at the University unless the following criteria are met:
 - a. The individual is subject to either supervisory oversight by an individual of higher authority whose compensation is not directly dependent upon the financial success of the Medical College (known as financially disinterested supervisor) or oversight of the Board of Trustees which collectively has no financial relationship with the College of Medicine.

- b. The individual is subject to annual performance evaluation by a financially disinterested supervisor whose assessment and opinion are independent or by a Trustees Committee.
 - c. The individual must disclose the presence of financial relationship annually.
 - d. The individual is not the Dean or the Chief Academic Officer of the College.
 - e. The individual must subscribe to the notion that the mission of education is second to no other priority.
 - f. The individual must adhere to the "Compartmentalization of Decision Authority" table and mitigate conflicts of interest.
3. External activities must not compromise an individual's ability to perform all the activities expected of him or her as an employee of CNU.
 4. An individual may not receive remuneration for the conduct of his or her research or other California Northstate activity except through University channels (such as salary).
 5. An individual may not conduct research or clinical activity at CNU or carry on other CNU activities under circumstances in which there exists an unmanaged conflict of interest.
 6. CNU researchers may not be precluded from publishing their work by agreements with external sponsors or on account of the interest of an external organization in which a faculty mentor or supervisor has a financial interest.
 7. CNU facilities, equipment, and personnel may be used only for CNU activities and purposes, except when the University specifically authorizes other uses.
 8. An individual may not participate directly in the negotiation of research agreements, license agreements, equipment purchases or other arrangements between the University and an organization in which the individual has a **significant** financial interest.
 9. Authors must fully disclose related significant financial interests and outside activities when submitting for publication (including articles, abstracts, manuscripts submitted for publication), in presentations at professional meetings, and in applications for funding.
 10. In all scientific and scholarly publications and all manuscripts submitted for publication, authors must acknowledge the sources of support for all activities leading to and facilitating preparation of the publication or manuscript.
 11. Participation by any individual responsible for the design, conduct or reporting of research involving human subjects and holding a related significant financial interest that may be affected by the research must receive especially rigorous review and must not compromise the objectivity of the research or the well-being of research subjects.
 12. Research that is proposed to be sponsored by a privately held entity in which the faculty member who would conduct such research has an equity interest or Board seat or other significant financial interest (SFI) must be reviewed and approved in advance by the Office of the Vice President of Research (VPR) for conflict of interest evaluation.

C. Conflicts of Interest in Human Subjects Research

Conflicts of interest related to research involving human subjects pose special concerns. The University and its researchers have ethical obligations to honor the rights and protect the safety of persons who participate in research conducted at the University. SFIs held by those conducting the research may compromise the fulfillment of those ethical obligations and the well-being of the research subjects, as well as the integrity of the related research. Accordingly,

a person with an unmanaged conflict of interest is prohibited from participating in the conduct of such research. In addition, research involving human subjects where there is a financial conflict of interest may only go forward if the design and circumstances of the human subjects research are such that they serve to protect both the human subjects and the objectivity of the data obtained. For example, research that includes multiple independent sites, or where the intervention or choice of device is blinded to the investigators, has an independent data and safety monitoring board, or has other such protective elements, may be allowed to proceed with an appropriate conflict of interest management plan. In order to address these special concerns, when human subjects are involved in the research, conflict of interest review will be coordinated with the appropriate CNU Institutional Review Board (IRB).

D. Start-up Companies

Individual relationships with "startup" ventures - relatively newly formed, privately held, for-profit companies that often may be based on intellectual property developed by the individual at California Northstate or elsewhere - present opportunities for development and commercialization of inventions, but may also create conflicts of interest and commitment. In particular, while close involvement of the individual is often critical to the further development of the technology, multiple relationships of the individual with the start-up venture magnify the concern regarding the individual's commitment to their University responsibilities.

Generally, use of CNU space by a startup is not permitted, except when using CNU equipment or laboratories subject to a written agreement with the University, with strict limitations as to time and extent, and only after review and approval by the Office of VPR. For faculty members, the Faculty Handbook and other relevant policies govern the relationships. Policy guidelines specific to faculty relationships with such ventures appear as Appendix C to this general policy statement.

E. Significant Financial Interests (SFIs)

Income and other financial interests that are large compared to the individual's institutional salary pose a special challenge. They can create a perception that calls into question the individual's commitment and obligation to CNU. Some may find it difficult to believe that such high value interests do not compromise the individual's objectivity. And, indeed, high value financial interests do have the potential for greater bias, and are also inherently more difficult to manage. An Independent Committee on Conflicts of Interest (ICOCI) will be established to review the case of SFIs, and carefully consider the greater likelihood of conflict they represent.

In order to provide sufficient information to the ICOCI to enable it to determine whether actual undue bias exists and to recommend appropriate management schemes for relevant conflicts of interest, the independent ICOCI Committee will likely solicit additional detailed information from disclosers whose significant financial interests (excluding University compensation) exceed \$50,000 in the past twelve months and that are related to their institutional responsibilities. Such supplemental questions might request more specificity on the total amounts received, the time that such financial interests demand, a detailed explanation of the relationship of the financial interest to an individual's research or, if the individual is in an academic leadership role, whether and how, the financial interests are related to the purpose of the unit for which the individual has administrative or academic responsibility.

II. PROCEDURE

A. Disclosure

The responsibility for addressing conflict of interest rests, in the first instance, with the individual. An essential step is for the individual involved to make full disclosure of relevant information to the Conflicts of Interest Office. As described in greater detail below, certain individuals are required to make regular, annual disclosures, with updates as needed; others need only disclose on an ad hoc basis. When a disclosure is required, it will be reviewed by the Independent Committee on Conflicts of Interest (ICOCI), which will determine what should be done to avoid or manage any conflict of interest appropriately.

The confidentiality of the disclosures will be respected as far as possible. In particular, the information on the forms will not be shared except with authorized individuals in the conduct of their official University responsibilities.

1. Required initial and annual disclosures

All faculty members with University appointments of greater than 50% time; all faculty who hold administrative positions; all faculty and staff who serve as members of a research reviewing committee (e.g., IRB, IACUC, Radiation Safety); and all faculty and staff who are responsible for the design, conduct or reporting of research are required to submit an annual external interest disclosure form describing their external activities and financial interests. The disclosures must be in writing, on the forms approved by the ICOCI, and must be submitted to the Conflicts of Interest Office within Human Resources Department.

Whenever an application for funding of any research project is submitted, each individual responsible for the design, conduct or reporting of the research is required to have an up-to-date disclosure on file with the Conflicts of Interest Office.

Any individual carrying out research or other activities supported by the federal Public Health Service (PHS) or supported by another sponsor that mandates compliance with the PHS regulations, must refer to and comply with Appendix A. Any individual carrying out research or other activities supported by the National Science Foundation (NSF) or other sponsor that mandates the NSF policy, must refer to and comply with Appendix B. Any individual that is not carrying out research or other activities supported by PHS or NSF must comply with the procedures as prescribed below in this general procedure.

All faculty, irrespective of funding support, that have relationships with startup companies must also comply with Appendix C. All faculty and full time non-faculty employees must also comply with the Policy and Procedure on Conflict of Commitment contained in Appendix D.

2. Material change from annual disclosure

Whenever SFIs or internal responsibilities change materially from those described in the annual disclosure, the disclosure should be resubmitted as soon as possible, but no later than 30 days

after the individual's knowledge of such events.

3. Other required annual disclosures

Certain senior administrators, with or without faculty appointments, designated by the President are also required to submit disclosures of outside activities and financial interests and thereafter annually submit disclosures of outside activities and financial interest for as long as the individual continues to be designated by the President as being required to submit such disclosures. These disclosures must be prepared on the Conflicts of Interest Disclosure Form and submitted to the Conflicts of Interest Office for review.

4. Ad hoc disclosures by those not required to file annual disclosures

Postdoctoral appointees, non-faculty employees other than designated senior administrators, and students are not required to submit annual disclosure forms unless they are identified as being responsible for the design, conduct, or reporting of research. If there is any possibility of a conflict of interest with respect to an individual's non-research activities, the individual should consult with his or her supervisor, a senior administrator in the department, the Dean of the College, or the Conflicts of Interest Office.

B. Review by the Independent Committee on Conflicts of Interest (ICOCI)

The ICOCI is composed of members with no financial relationship with the institution and are jointly appointed by the Human Resource Director, the President, and a member of the Board of Trustees.

ICOCI reviews disclosures submitted to the Conflicts of Interest Office to determine whether the Discloser's SFI(s) present(s) a conflict of interest with the Discloser's University responsibilities, and if so, by what means the conflict should be managed, reduced or eliminated. A conflict exists when a SFI could directly and significantly impact the individual's ability to carry out their University responsibilities without undue bias.

The Committee may delegate review of routine matters to one of its members or supporting staff. If necessary, the Committee may discuss disclosure-related matters with the individual involved and may also consult with others who may have relevant information. A Discloser is entitled to meet with the ICOCI.

The Committee will review any SFIs in the context of the individual's overall California Northstate responsibilities, i.e., academic, clinical or administrative (commonly referred to as an "Activities Review") and with respect to each research award on which the Discloser is identified as responsible for the design, conduct, or reporting of the research to determine if a SFI is related to the award and whether the SFI creates a conflict of interest related to that research award (commonly referred to as "Transactional Review").

C. Guidelines for Determining Conflict of Interest on Research Awards

The Committee will determine whether a Discloser's SFI is related to the funded or proposed

research and, if so, whether the SFI is a financial conflict of interest (FCOI). A Discloser's SFI is related to funded or proposed research when the Committee reasonably determines that the SFI: could be affected by the research; or is in an entity whose financial interest could be affected by the research. The Committee may consult with the Investigator in the determination of whether a SFI is related to the research.

A financial conflict of interest exists when the Committee reasonably determines that the SFI could directly and significantly affect the design, conduct, or reporting of the research.

Among the factors that should be taken into consideration in the determination of an FCOI include the role of the Discloser and the opportunity to bias the results, the nature of the research being proposed, whether the work is funded by an entity in which the Investigator holds a SFI, and consideration of the value of the SFI in relation to the size and value of the entity. The factors that should be considered include:

1. Whether the research is of a basic or fundamental nature directed at understanding basic scientific processes; or
2. Whether the degree of replication and verification of research results is such that immediate commercialization or clinical application is not likely; or
3. Whether the goal of the research is to evaluate an invention linked to the SFI (such as where the SFI is a patent, or an interest in a company that has licensed the invention); or
4. Where the research involves human subjects whether there are double blind conditions or the involvement of a data and safety monitoring board; or
5. Where the SFI is in a privately held company, whether the researcher's SFI could result in the researcher having influence over company decisions, or whether the research could have a significant impact on the company's business or financial outlook (excluding Phase I SBIRs and STTRs); or
6. The magnitude of the SFIs (e.g., the amount of consulting, or the percentage or value of equity); or
7. Where the SFI is in the sponsor of the research, and the sponsor is a licensee of the Discloser's technology, the amount of commercialization payments received by the faculty member from that technology, both currently or in the future; or
8. The number and nature of relationships a Discloser has with an entity. Multiple entanglements can create a relationship with an outside entity that is stronger than the sum of the parts; or
9. Whether the goal of the research is to validate or invalidate a particular approach or methodology that could affect the value of the SFI; or
10. Whether other scientific groups are independently pursuing similar questions; or
11. Whether sufficient external review of the research conducted and the reporting of research results exist to mitigate undue bias; or
12. Whether the goal of the project is a comparative evaluation of a technology in which the Discloser has a SFI; or
13. Whether the project involves a subaward to an entity in which the Discloser has a SFI.

D. Management of Significant Financial Interests that Pose a Conflict of Interest

If a conflict of interest exists, the Committee will determine by what means – such as the individual's recusal from decisions affecting the conflicting entity, abstention from the external activity, modification of the activity, and/or monitoring of the activity by a subcommittee -- the conflict should be avoided or managed in order to mitigate undue bias. In making those determinations, the ICOCI will be guided by the principles discussed in this Policy and in the Faculty Handbook, and may be informed by the deliberations of the relevant Institutional Review Board (IRB), as appropriate. The Committee will also take into consideration whether the Discloser's ongoing role is necessary to continue advancing the research, based upon the factors such as the uniqueness of his or her expertise and qualifications.

Examples of conditions that might be imposed to manage a financial conflict of interest include, but are not limited to:

- Public disclosure of financial conflicts of interest (e.g., when presenting or publishing the research);
- For research projects involving human subjects research, disclosure of financial conflicts of interest directly to human participants;
- Appointment of an independent monitor capable of taking measures to protect the design, conduct, and reporting of the research against bias resulting from the financial conflict of interest;
- Modification of the research plan;
- Change of personnel or personnel responsibilities, or disqualification of personnel from participation in all or a portion of the research;
- Reduction or elimination of the financial interest (e.g., sale of an equity interest);
- Severance of relationships that create financial conflicts;
- For research projects involving human subjects research, use of a data and safety monitoring board;
- Double-blind conditions;
- Provisions to conduct the work simultaneously at multiple sites;
- Written disclosure of the conflict to all individuals working on the research project; and
- Annual reports on the research progress to the Committee.

If the Committee determines that a conflict exists, it will communicate this determination and the means it has identified for eliminating or managing the conflict, in writing, to the individual, to the relevant Principal Investigator in the case of sponsored research, and to the appropriate Dean and Department Chair where conflicts of interest arise with respect to teaching, clinical, or administrative responsibilities. The Committee will also communicate with the Office of VPR the fact that the disclosure has been reviewed and its summary determination, but not the substance of the disclosure. The Committee will keep a record of the disclosure and other relevant information for at least three years. If the Committee prescribes monitoring of the activity, it will describe what monitoring shall be performed and what records are to be kept.

If the individual is not satisfied with the decision of the Committee, he or she may request in writing to the Committee that the matter be referred to the Office of VPR for a decision. A written statement of the findings and recommendations of the Committee shall accompany any matter referred to the VPR, with copies to the individual, and the appropriate Dean and

Department Chair. The VPR will notify the individual, the Committee, and the Dean and Department Chair of his or her decision after receiving the Committee's report. The VPR's decision will be final, and any failure by the individual to adhere to the decision will be cause for disciplinary action, including, in severe cases, termination.

E. Significant Financial Interest Relating to Specific Areas

Conflicts of interest procedures relating to certain specific areas are addressed in the following Appendices:

APPENDIX A – Conflict of Interest Procedures Applicable to Public Health Services Funding

APPENDIX B - Conflict of Interest Procedures Applicable to National Science Foundation Funding

APPENDIX C - Policy Applicable to Faculty with Relationships with Start-Up Companies

APPENDIX D - Policy and Procedure on Conflict of Commitment

F. Compartmentalization of Decision Making Authority to Ayojd Conflicts of Interest

Each individual with decision making authority within the College of Medicine must adhere to the "Compartmentalization of Decision Authority" table and mitigate conflicts of interest. The table accompanies as follows:

APPENDIX E – Compartmentalization of Decision Authority Table

APPENDIX A

CALIFORNIA NORTHSTATE UNIVERSITY

CONFLICT OF INTEREST PROCEDURES APPLICABLE TO PUBLIC HEALTH
SERVICE FUNDING

The federal Public Health Service (PHS) has adopted regulations (42 CFR Part 50 and 45 CFR Part 94) on *Promoting Objectivity in Research*. These regulations describe the actions an individual and the institution must take in order to promote objectivity in research. The regulations apply to all grants, cooperative agreements, and research contracts (but not Phase 1 Small Business Innovation Research or Small Business Technology Transfer program grants) funded by the PHS. The regulations require that applicants for PHS funding (e.g., funding from the National Institutes of Health, the Food and Drug Administration, the Centers for Disease Control, et al.), prior to application for PHS funds, disclose to the institution any significant financial interests related to their institutional responsibilities.

Definitions

Solely for those applying for or receiving funds from the PHS, *Institutional responsibilities* means an Investigator's professional activities on behalf of the Institution (e.g., teaching, administration, research or clinical care). Specifically, these include:

- Externally sponsored research or scholarly activities (includes activities such as proposing, conducting, and analyzing research and disseminating results);
- Departmental/University research (includes participation in study sections, peer review of manuscripts, or effort on non-sponsored research);
- Instruction/University Supported Academic activities (including preparation for and presentations of formal and informal courses to students/trainee groups, mentoring students and trainees, and participation in resident training);
- Clinical service activities such as performing services for the California Northstate Medical Group and affiliated hospitals;
- Administrative activities including serving as Department Chair, Program Director, or service on institutional committees, participation in department activities or faculty advisory boards, etc.; or
- Special Service activities on behalf of the University including institutional community service.

Institutional responsibilities do not include:

- Volunteer individual community or public service unrelated to one's responsibilities on behalf of the University; or
- Other activities over and above or separate from responsibilities in the primary position.

Investigator means the project director or principal Investigator and any other person, regardless of title or position, who is responsible for the design, conduct, or reporting of research funded by the PHS, or proposed for such funding, which may include, for example, collaborators or consultants. The Principal Investigator (Project Director), upon consideration of the individual's role and degree of independence in carrying out the work, will determine who is responsible for the design, conduct, or reporting of the research.

The definition of Significant Financial Interest set forth herein replaces II[E] of the general policy and procedure.

Significant Financial Interest means:

(1) A financial interest consisting of one or more of the following interests of the Investigator (and those of the Investigator's spouse and dependent children) that reasonably appear to be related to the Investigator's institutional responsibilities (e.g., consulting and other outside compensated professional work including service on Scientific Advisory Boards or similar boards directly related to one's University research or scholarship; or service in external professional organizations and societies related to one's work):

- (i) With regard to any publicly traded entity, a *significant financial interest* exists if the value of any remuneration received from the entity in the twelve months preceding the disclosure and the value of any equity interest in the entity as of the date of disclosure, when aggregated, exceeds \$5,000. For purposes of this definition, remuneration includes salary and any payment for services not otherwise identified as salary (e.g., consulting fees, honoraria, paid authorship); equity interest includes any stock, stock option, or other ownership interest, as determined through reference to public prices or other reasonable measures of fair market value;
- (ii) With regard to any non-publicly traded entity, a *significant financial interest* exists if the value of any remuneration received from the entity in the twelve months preceding the disclosure, when aggregated, exceeds \$5,000, or when the Investigator (or the Investigator's spouse or dependent children) holds any equity interest (e.g., stock, stock option, or other ownership interest); or
- (iii) With regard to intellectual property rights and interests (e.g., *patents*, *copyrights*), a *significant financial interest* exists upon receipt of income of greater than \$5,000 related to such rights and interests;
- (iv) With respect to the Investigator only (but not the Investigator's spouse or dependent children), a *significant financial interest* exists if the Investigator is a member of the Board of Directors or serves as a fiduciary officer of any entity.

(2) Any reimbursed or sponsored travel (i.e., that which is reimbursed to or paid on behalf of the Investigator, the Investigator's spouse or dependent children), related to the Investigator's responsibilities, if the cost or value received from a single entity exceeds \$5,000 for the preceding twelve (12) months. This disclosure requirement does not apply to travel that is reimbursed or sponsored by a federal, state, or local government agency, an Institution of Higher Education as defined at 20 U.S.C. § 1001(a), an academic teaching hospital, a medical center, or a research institute that is affiliated with an Institution of Higher Education. The details of this

disclosure will include, at a minimum, the purpose of the trip, the identity of the sponsor/organizer, the destination, and the duration.

(3) The term *significant financial interest* does not include the following types of financial interests:

- (i) Salary, royalties, or other remuneration paid by the Institution to the Investigator if the Investigator is currently employed or otherwise appointed by the Institution, including intellectual property rights assigned to the Institution and agreements to share in royalties related to such rights;
- (ii) Income from investment vehicles, such as mutual funds and retirement accounts, as long as the Investigator does not directly control the investment decisions made in these vehicles;
- (iii) Income from seminars, lectures, or teaching engagements sponsored by a federal, state, or local government agency, an Institution of higher education as defined at 20 U.S.C. 1001(a), an academic teaching hospital, a medical center, or a research institute that is affiliated with an Institution of higher education; or
- (iv) Income from service on advisory committees or review panels for a federal, state, or local government agency, an Institution of higher education as defined at 20 U.S.C. 1001(a), an academic teaching hospital, a medical center, or a research institute that is affiliated with an Institution of higher education.

Disclosure

Prior to the submission of an application for funding from a PHS agency, the Principal Investigator and all other Investigators must have disclosed to the Conflicts of Interest Office an up-to-date listing of their Significant Financial Interests [SFI] (and those of their spouse and dependent children), as defined above. Any new Investigator, who, subsequent to the submission of an application for funding from a PHS agency, or during the course of the research project, plans to participate in the project, must similarly disclose their SFI to the Conflicts of Interest Office promptly and prior to participation in the project.

Each Investigator who is participating in the PHS-funded research must submit an updated disclosure of SFI at least annually, during the period of the award. Such disclosure must include any information that was not disclosed initially to California Northstate, pursuant to this Policy, or in a subsequent disclosure of SFI (e.g., any financial conflict of interest [FCOI] identified on a PHS-funded project that was transferred from another Institution), and must include updated information regarding any previously disclosed SFI (e.g., the updated value of a previously disclosed equity interest).

Each Investigator who is participating in the PHS-funded research must submit an updated disclosure of SFI within thirty (30) days of discovering or acquiring (e.g., through purchase, marriage, or inheritance) a new SFI.

Review by the Independent Committee on Conflicts of Interest (ICOCI)

The Independent Committee on Conflict of Interest (ICOCI) will conduct reviews of disclosures submitted to the Conflicts of Interest Office. The Committee will review any SFI that has been identified in a disclosure; these interests will be compared to each PHS research award on which the Investigator is identified as responsible for the design, conduct, or reporting of the research to determine if a SFI is related to the award and, if so, whether the SFI creates a Financial Conflict of Interest (FCOI) related to that research award.

Guidelines for Determining "Relatedness" and Financial Conflict of Interest

The Committee will determine whether an Investigator's SFI is related to the PHS-funded research and, if so, whether the SFI is a financial conflict of interest. An Investigator's SFI is related to PHS-funded research when the Committee reasonably determines that the SFI: could be affected by the PHS-funded research; or is in an entity whose financial interest could be affected by the research. The Committee may involve the Investigator in the determination of whether a SFI is related to the PHS-funded research.

A financial conflict of interest exists when the Committee reasonably determines that the SFI could directly and significantly affect the design, conduct, or reporting of the PHS-funded research.

In determining if an Investigator's SFI is related to PHS-funded research, and if so, whether the relationship creates a FCOI, the Committee considers the role of the Investigator and the opportunity (if any), to bias the results, the nature of the research being proposed, and the value of the SFI in relation to the size and value of the entity. In addition, the Committee may also consider the following factors:

1. Whether the research is of a basic or fundamental nature directed at understanding basic scientific processes; or
2. Whether the degree of replication and verification of research results is such that immediate commercialization or clinical application is not likely; or
3. Whether the goal of the research is to evaluate an invention linked to the SFI (such as where the SFI is a patent, or an interest in a company that has licensed the invention); or
4. Where the research involves human subjects, whether there are double blind conditions or the involvement of a data and safety monitoring board; or
5. Where the SFI is in a privately held company, whether the researcher's SFI could result in the researcher having influence over company decisions, or whether the research could have a significant impact on the company's business or financial outlook (excluding Phase I SBIRs and STTRs); or
6. The magnitude of the SFIs (e.g., the amount of consulting, or the percentage or value of equity); or
7. Where the SFI is in the sponsor of the research, and the sponsor is a licensee of the Investigator's technology, the amount of commercialization payments received by the faculty member from that technology, both currently or in the future; or
8. The number and nature of relationships an Investigator has with an entity. Multiple entanglements can create a relationship with an outside entity that is stronger than the sum of

the parts; or

9. Whether the goal of the research is to validate or invalidate a particular approach or methodology that could affect the value of the SFI; or
10. Whether other scientific groups are independently pursuing similar questions; or
11. Whether sufficient external review of the research conducted and the reporting of research results exist to mitigate undue bias; or
12. Whether the goal of the project is a comparative evaluation of a technology in which an Investigator has a SFI; or
13. Whether the project involves a subaward to an entity in which the Discloser has a SFI.

Management of Significant Financial Interests that Pose Financial Conflict(s) of Interest

If a conflict of interest exists, the Committee will determine by what means – such as the individual's recusal from decisions affecting the conflicting entity, abstention from the external activity, modification of the activity, and/or monitoring of the activity by a subcommittee- the conflict should be avoided or managed in order to mitigate undue bias. In making those determinations, the Committee will be guided by the principles discussed in this Policy and in the Faculty Handbook, and may be informed by the deliberations of the relevant Institutional Review Board (IRB), as appropriate. The Committee will also take into consideration whether the Investigator's ongoing role is necessary to continue advancing the research, based upon the factors such as the uniqueness of his or her expertise and qualifications.

Examples of conditions that might be imposed to manage a financial conflict of interest include, but are not limited to:

- a) Public disclosure of financial conflicts of interest (e.g., when presenting or publishing the research);
- b) For research projects involving human subjects research, disclosure of financial conflicts of interest directly to human participants;
- c) Appointment of an independent monitor capable of taking measures to protect the design, conduct, and reporting of the research against bias resulting from the financial conflict of interest;
- d) Modification of the research plan;
- e) Change of personnel or personnel responsibilities, or disqualification of personnel from participation in all or a portion of the research;
- f) Reduction or elimination of the financial interest (e.g., sale of an equity interest);
- g) Severance of relationships that create financial conflicts;
- h) For research projects involving human subjects research, use of a data and safety monitoring board;
- i) Double-blind conditions;
- j) Provisions to conduct the work simultaneously at multiple sites;
- k) Written disclosure of the conflict to all individuals working on the research project; and
- l) Annual reports on the research progress to the Committee.

If the Committee determines that a conflict exists, it will communicate its determination and the means it has identified for eliminating or managing the conflict, in writing, to the individual, to the relevant Principal Investigator (Project Director), and the appropriate dean or department

chair. The Conflicts of Interest Office will keep a record of the disclosure and other relevant information for at least three years. If the Committee prescribes monitoring of the activity, it will describe what monitoring shall be performed and what records are to be kept.

If the individual is not satisfied with the decision of the Committee, he or she may request that the matter be referred to the Vice President of Research (VPR) for a decision. A written statement of the findings and recommendations of the Committee shall accompany any matter referred to the VPR, with copies to the individual, and the appropriate Dean or Department Chair. The VPR will notify the individual, the Committee, and the Dean or Department Chair of his or her decision after receiving the Committee's report. The VPR's decision will be final, and any failure by the individual to adhere to the decision may be cause for disciplinary action, including, in severe cases, termination.

No expenditures on PHS awards will be permitted until the Investigator has complied with the Disclosure requirements of this Policy and has agreed, in writing, to comply with any plans determined by the Committee necessary to manage the Conflict of Interest. The Conflicts of Interest Office will communicate with the PHS Awarding Component to notify it of the existence and the nature of a Financial Conflict of Interest and whether the conflict has been managed, reduced, or eliminated.

The Conflicts of Interest Office will keep a record of Investigator disclosures of financial interests and the Committee's review of, and response to, such disclosure and all actions under this policy. Such records will be maintained and kept for three years from the date the final expenditures report is submitted for grants, for three years from the date of final payment for contracts, or, where applicable, for time periods as otherwise specified in relevant PHS Regulations.

Public Accessibility to Information Related to Financial Conflicts of Interest

Prior to the expenditure of any funds under a PHS-funded research project, California Northstate will ensure public accessibility, via a publicly accessible Web site or by written response to any requestor within five business days of a request, of information concerning any SFI disclosed that meets the following three criteria:

- (i) The Significant Financial Interest was disclosed and is still held by the senior/key personnel. Senior/key personnel are the PD/PI and any other person identified as senior key personnel by the University in the grant application, progress report or any other report submitted to the PHS by the University;
- (ii) California Northstate has determined that the Significant Financial Interest is related to the PHS- funded research; and
- (iii) California Northstate has determined that the Significant Financial Interest is a Financial Conflict of Interest.

The information that California Northstate will make available via a publicly accessible Web site or in a written response to any requestor within five days of request will include, at a minimum, the following:

- (i) The Investigator's name;
- (ii) The Investigator's title and role with respect to the research project;
- (iii) The name of the entity in which the Significant Financial Interest is held;
- (iv) The nature of the Significant Financial Interest; and
- (v) The approximate dollar value of the Significant Financial Interest in the following ranges: \$0-\$4,999; \$5,000-9,999; \$10,000- \$19,999; amounts between \$20,000-\$100,000 by increments of \$20,000; amounts above \$100,000 by increments of \$50,000), or a statement that the interest is one whose value cannot be readily determined through reference to public prices or other reasonable measures of fair market value.

If California Northstate uses a publicly accessible Web site to comply with the public disclosure requirements of the PHS regulations, the information posted will be updated at least annually, and within sixty days of receipt or identification of information concerning any additional SFI of the senior/key personnel for the PHS-funded research project that had not been previously disclosed, or upon the disclosure of a SFI of senior/key personnel new to the PHS-funded research project, if it is determined by the Committee that the SFI is related to the PHS-funded research and is a Financial Conflict of Interest.

If California Northstate responds to written requests for the purposes of public accessibility, it will ascertain from the Investigator that the information provided is current as of the date of the correspondence, and will note in its written response that the information is subject to updates, on at least an annual basis and within 60 days of the California Northstate's identification of a new financial conflict of interest, which should be requested subsequently by the requestor.

Information concerning the SFI's of an individual, as limited by this Policy, will remain available, for responses to written requests or for posting via California Northstate's publicly accessible Web site for at least three years from the date that the information was most recently updated.

Reporting of Financial Conflicts of Interest

Prior to the expenditure of any funds under a PHS-funded research project, California Northstate will provide to the PHS Awarding Component an FCOI report compliant with PHS regulations regarding any Investigator's SFI found to be conflicting and will ensure that the Investigator has agreed to and implemented the corresponding management plan. While the award is ongoing (including any extensions with or without funds), California Northstate will provide to the PHS Awarding Component an annual FCOI report that addresses the status of the FCOI and any changes in the management plan.

For any SFI that is identified as conflicting subsequent to an initial FCOI report during an ongoing PHS-funded research project (e.g., upon the participation of an Investigator who is new to the research project), California Northstate will provide to the PHS Awarding Component, within sixty days, an FCOI report regarding the financial conflict of interest and ensure that

California Northstate has implemented a management plan and the Investigator has agreed to the relevant management plan.

Training Requirements

Each Investigator must complete training on *The California Northstate Conflict of Interest Policy Applicable to Public Health Service Funding*. For PHS Investigators, California Northstate has imbedded training on conflict of interest into its annual disclosure form. Each Investigator must complete the disclosure form prior to engaging in research related to any PHS-funded grant, and immediately (as defined below) when any of the following circumstances apply:

- 1) California Northstate revises this Policy, or procedures related to this Policy, in any manner that affects the requirements of Investigators (training will be completed in the manner and within the time frame specified in communications announcing such changes) ;
- 2) An Investigator is new to California Northstate (training must be completed through completion of the disclosure form within 30 days of joining California Northstate); or
- 3) California Northstate finds that an Investigator is not in compliance with this Appendix to California Northstate's Conflict of Interest Policy or a management plan issued under this Appendix (training must be completed within 30 days in the manner specified by the COIC).

Subrecipient Requirements

California Northstate shall as part of a written subrecipient agreement with a subrecipient under a PHS prime award, establish whether the financial conflicts of interest policy of California Northstate or that of the subrecipient will apply to the subrecipient's investigator(s). If the subrecipient relies on its conflicts of interest policy, the subrecipient shall certify as part of the subrecipient agreement, that its policy complies with 42 CFR Part 50 and 45 CFR Part 94, as appropriate. In either case, the subrecipient agreement will include time periods to meet the disclosure and/or Financial Conflict of Interest reporting requirements of California Northstate to PHS.

Failure to Comply with California Northstate's Conflict of Interest Policy Applicable to Public Health Service Funding

Whenever an FOIC is not identified or managed in a timely manner, including, for example, because the underlying Significant Financial Interest is not disclosed timely by an Investigator or, because an FCOI was not timely reviewed or reported by a sub-recipient or by California Northstate); or because an investigator failed to comply with a management plan; then California Northstate will complete a retrospective review to determine whether any PHS-funded research, or portion thereof, conducted during the period of noncompliance was biased in the design, conduct, or reporting of such research. The VPR will appoint one or more individuals to determine if the research was biased. If bias is found, California Northstate will develop and implement a plan to mitigate the bias. California North state will notify the PHS Awarding Component promptly and will submit a mitigation report to the PHS Awarding Component within 120 days of the determination of noncompliance.

No expenditures of funds on PHS awards will be permitted unless the Investigator has complied with the Disclosure requirements of this Appendix and has agreed, in writing, to comply with any Committee-approved FCOI management plan.

In any case in which the Department of Health and Human Services determines that a PHS-funded project of clinical research whose purpose is to evaluate the safety or effectiveness of a drug, medical device, or treatment has been designed, conducted or reported by an Investigator with a financial conflict of interest that was not managed or reported by the Institution as required by the PHS regulations, California Northstate will require the Investigator involved to disclose the financial conflict of interest in each public presentation of the research and to request an addendum to previously published presentations.

Any failure by an individual to adhere to this Policy may be cause for disciplinary action, including, in severe cases, termination.

APPENDIX B

CALIFORNIA NORTHSTATE UNIVERSITY

CONFLICT OF INTEREST PROCEDURES APPLICABLE TO NATIONAL SCIENCE FOUNDATION FUNDING (NSF)

The National Science Foundation (NSF) requires each grantee institution employing more than fifty persons to maintain an appropriate written and enforced policy on conflict of interest and that all conflicts of interest for each award be managed, reduced or eliminated prior to the expenditure of the award funds. Therefore, for every NSF application for funding, each Investigator must disclose to the Conflicts of Interest Office all significant financial interests of the Investigator (including those of the investigator's spouse and dependent children):

- (i) That would reasonably appear to be affected by the research or educational activities funded or proposed for funding by NSF; or
- (ii) In entities whose financial interests would reasonably appear to be affected by such activities.

Definitions

The term "**Investigator**" means the principal investigator, co-principal investigators, and any other person at the institution who is responsible for the design, conduct, or reporting of research or educational activities funded or proposed for funding by NSF.

For those applying for or receiving funds from the NSF, the definition of Significant Financial Interest described herein replaces II[E] of the general policy and procedure. The term "**significant financial interest**" means anything of monetary value, including, but not limited to, salary or other payments for services (e.g., consulting fees or honoraria); equity interest (e.g., stocks, stock options or other ownership interests); and intellectual property rights (e.g., patents, copyrights and royalties from such rights). With respect to the Investigator only (and not the investigator's spouse and dependent children), a *significant financial interest* exists if the Investigator is a member of the Board of Directors of any entity, or serves as a fiduciary officer of such an entity.

The term does not include:

- (i) Salary, royalties or other remuneration from the applicant institution;
- (ii) Any ownership interests in the institution, if the institution is an applicant under the Small Business Innovation Research Program or Small Business Technology Transfer Program;
- (iii) Income from seminars, lectures, or teaching engagements sponsored by public or non-profit entities;
- (iv) Income from service on advisory committees or review panels for public or nonprofit entities;
- (v) An equity interest that, when aggregated for the investigator and the investigator's spouse and dependent children, meets both of the following tests: does not exceed

- \$10,000 in value as determined through reference to public prices or other reasonable measures of fair market value, and does not represent more than a 5% ownership interest in any single entity; or
- (vi) Salary, royalties or other payments that, when aggregated for the investigator and the investigator's spouse and dependent children, are not expected to exceed \$10,000 during the twelve month period.

Disclosure

All Investigators must have a current financial disclosure on file with the University's Conflict of Interest Office at the time the proposal is submitted to NSF. Financial disclosures must be updated during the period of the award, either on an annual basis, or as new reportable significant financial interests are obtained.

Review by the Independent Committee on Conflicts of Interest (ICOCI)

The Independent Committee on Conflicts of Interest (ICOCI) will review financial disclosures, determine whether a conflict of interest exists, and determine what conditions or restrictions, if any, should be imposed to manage, reduce or eliminate such conflict of interest. A conflict of interest exists when the Committee reasonably determines that a significant financial interest could directly and significantly affect the design, conduct, or reporting of NSF-funded research or educational activities.

Guidelines for Determining Conflict of Interest

The Committee will determine whether an Investigator's SFI is related to the NSF-funded research and, if so, whether the SFI is a financial conflict of interest. An Investigator's SFI is related to NSF-funded research when the Committee reasonably determines that the SFI: could be affected by the NSF-funded research; or is in an entity whose financial interest could be affected by the research. The Committee may involve the Investigator in the determination of whether a SFI is related to the NSF-funded research or educational activity.

A financial conflict of interest exists when the Committee reasonably determines that the SFI could directly and significantly affect the design, conduct, or reporting of the NSF-funded research or educational activity.

Factors that may be taken into consideration in this determination include the role of the Investigator and the opportunity to bias the results, the nature of the research being proposed, and consideration of the value of the SFI in relation to the size and value of the entity. Other factors that might be considered include:

1. Whether the research is of a basic or fundamental nature directed at understanding basic scientific processes; or
2. Whether the degree of replication and verification of research results is such that immediate commercialization or clinical application is not likely; or
3. Whether the goal of the research is to evaluate an invention linked to the SFI (such as where the SFI is a patent, or an interest in a company that has licensed the invention); or

4. Where the research involves human subjects whether there are double blind conditions or the involvement of a data and safety monitoring board; or
5. Where the SFI is in a privately held company, whether the researcher's SFI could result in the researcher having influence over company decisions, or whether the research could have a significant impact on the company's business or financial outlook (excluding Phase I SBIRs and STTRs); or
6. The magnitude of the SFIs (e.g., the amount of consulting, or the percentage or value of equity); or
7. Where the SFI is in the sponsor of the research, and the sponsor is a licensee of the Discloser's technology, the amount of commercialization payments received by the faculty member from that technology, both currently or in the future; or
8. The number and nature of relationships a Discloser has with an entity. Multiple entanglements can create a relationship with an outside entity that is stronger than the sum of the parts; or
9. Whether the goal of the research is to validate or invalidate a particular approach or methodology that could affect the value of the SFI; or
10. Whether other scientific groups are independently pursuing similar questions; or
11. Whether sufficient external review of the research conducted and the reporting of research results exist to mitigate undue bias; or
12. Whether the goal of the project is a comparative evaluation of a technology in which an Investigator has a SFI; or
13. Whether the project involves a subaward to an entity in which the Discloser has a SFI.

Management of Significant Financial Interests that Pose Financial Conflict(s) of Interest

If a conflict of interest exists, the Committee will determine by what means – such as the individual's recusal from decisions affecting the conflicting entity, abstention from the external activity, modification of the activity, and/or monitoring of the activity by a subcommittee-- the conflict should be avoided or managed in order to mitigate undue bias. In making those determinations, the Committee will be guided by the principles discussed in this Policy and in the Faculty Handbook, and may be informed by the deliberations of the relevant Institutional Review Board (IRB), as appropriate.

Examples of conditions that might be imposed to manage a financial conflict of interest include, but are not limited to:

- a) Public disclosure of financial conflicts of interest (e.g., when presenting or publishing the research);
- b) For research projects involving human subjects research, disclosure of financial conflicts of interest directly to human participants;
- c) Appointment of an independent monitor capable of taking measures to protect the design, conduct, and reporting of the research against bias resulting from the financial conflict of interest;
- d) Modification of the research plan;
- e) Change of personnel or personnel responsibilities, or disqualification of personnel from participation in all or a portion of the research;
- t) Reduction or elimination of the financial interest (e.g., sale of an equity interest); or

- g) Severance of relationships that create financial conflicts;
- h) For research projects involving human subjects research, use of a data and safety monitoring board;
- i) Double-blind conditions;
- j) Work being conducted simultaneously at multiple sites;
- k) Written disclosure of the conflict to all individuals working on the research project; and
- l) Annual reports on the research progress to the Committee.

If the Committee determines that a conflict exists, it will communicate its determination and the means it has identified for eliminating or managing the conflict, in writing, to the individual, to the relevant Principal Investigator (Project Director), and the appropriate dean or department chair. The COI Office will keep a record of the disclosure and other relevant information for at least three years. If the Committee prescribes monitoring of the activity, it will describe what monitoring shall be performed and what records are to be kept.

If the individual is not satisfied with the decision of the Committee, he or she may request that the matter be referred to the Vice-President of Research (VPR) for a decision. A written statement of the findings and recommendations of the Committee shall accompany any matter referred to the VPR, with copies to the individual, and the appropriate Dean and Department Chair. The VPR will notify the individual, the Committee, and the Dean and Department Chair of his or her decision after receiving the Committee's report.

Any failure by an individual to adhere to this Policy may be cause for disciplinary action, including, in severe cases, termination.

No expenditures of funds on NSF awards will be permitted unless the Investigator has complied with the Disclosure requirements of this Policy and has agreed, in writing, to comply with any plans determined by the Committee necessary to manage the Conflict of Interest.

California Northstate will keep NSF's Office of the General Counsel appropriately informed if it finds that it is unable to satisfactorily manage a conflict of interest.

APPENDIX C

POLICY APPLICABLE TO FACULTY WITH RELATIONSHIPS WITH STARTUP COMPANIES

One important aspect of the University's research endeavors is to enable the dissemination of research and new technologies to the benefit of society. Licensing activities and the start-up of new companies to further develop new technologies are important means of accomplishing this goal. Faculty relationships with "startup" ventures -relatively newly formed, privately held, for-profit companies that often are based on intellectual property developed by the faculty member at California Northstate or elsewhere -- present opportunities for development and commercialization of inventions but may also create conflicts of interest and commitment. In particular, while close involvement of the faculty member is often critical to the further development of the technology, multiple relationships of the faculty member with the start-up venture magnify the concern regarding the faculty member's commitment to their University responsibilities. This Policy, the Faculty Handbook and other relevant policies govern the following relationships.

1. ***Equity interests.*** Faculty may hold equity interests in startups that license intellectual property developed either at California Northstate or at other entities. Such equity ownership must be promptly disclosed (i.e., within 30 days) to the COI Office on the prescribed form. Faculty accepting equity in such ventures should recognize that their ability to conduct research sponsored by that venture - especially research involving human subjects -may be restricted because of the conflict created by their ownership interest in the sponsoring entity. Therefore California Northstate faculty should consult with the Independent Committee on Conflicts of Interest (ICOCI) prior to accepting either an equity interest or financial sponsorship of research by the entity.
2. ***Membership on Boards of Directors.*** Faculty may be permitted to serve on the Board of Directors of a startup (or, as the Faculty Handbook provides, of any company). In accordance with the policy stated in the Faculty Handbook with respect to all for-profit companies, the prospect of Board membership must be disclosed in advance to the Conflicts of Interest Office, and a Board seat may be accepted only with permission of the Committee, because of the fiduciary obligation that the seat creates and its potential for conflict with the faculty member's California Northstate duties and obligations. A faculty member who has personally assumed a Board seat should recognize that his or her ability to conduct research at California Northstate that is sponsored by the venture - especially research involving human subjects - **may be** restricted because of the conflict created by the fiduciary relationship with the venture. Faculty members who assume Board seats on startups should also be sensitive to the need to recuse themselves from all Board decisions that involve the University.
3. ***Service as an Operating Officer.*** A full-time faculty member may not serve as an operating officer of a startup (or, as the Faculty Handbook provides, of any company) while not on leave. If a faculty member believes it is essential for the success of the venture to serve as an operating officer, he or she should request a full or partial leave from the Human Resources Director for a specified period of time, consistent with policies on leave in the Faculty Handbook. Such a leave would be without compensation by the University.

4. *Student employment by a Startup.* Except in special and unusual circumstances, students under a faculty member's direction, paid for by a faculty member's grant, or in a faculty member's research group, may not be employed part- or full-time by a startup in which the faculty member has an SFI. Such special circumstances might exist, for example, where the student sought summer employment with the startup and planned to work in a field unrelated to his or her academic program. These circumstances must be approved in advance by the Vice-President of Research (VPR).
5. *Employment of postdoctoral fellows and associates by a startup.* Postdoctoral fellows and associates under a faculty member's direction, paid for by a faculty member's grant, or in a faculty member's research group, should not be employed by a startup in which the faculty member has an SFI, to conduct research that overlaps with the fellow's university research or is to be conducted on University premises. The VPR must approve in advance any proposed employment of a post-doctoral fellow or associate by a startup.
6. *Use of California Northstate space.* Use of California Northstate space by a startup is not permitted, except as provided in the next paragraph.
7. *Use of California Northstate equipment or laboratory training.* A startup may use California Northstate equipment or laboratories only subject to a written agreement with the University, and with strict limitations as to time and extent and only after review and approval by the VPR.

APPENDIX D

POLICY AND PROCEDURE ON CONFLICT OF COMMITMENT

A. Policy

The responsibility for addressing conflict of commitment rests, in the first instance, with the individual. An essential step is for the individual involved to make full disclosure of relevant information to the Conflicts of Interest Office. A conflict of commitment occurs when the commitment to external activities of a faculty or staff member adversely affects his or her capacity to meet University responsibilities. This form of conflict is easily defined and recognized since it involves a perceptible reduction of the individual's time and energy devoted to University activities.

California Northstate's Faculty Handbook provides guidance about the amount of time that may be given by faculty members to outside activities; it stipulates, for example, that a faculty member may not accept salaried employment at another institution while a full-time employee of California Northstate, that faculty may not spend more than one day in a seven-day work week on consulting activities, and that faculty ownership or management of private enterprises is subject to review and approval by the President and subject to limitations. It is important to recognize, however, that the obligations of California Northstate faculty move beyond the letter of these obligations to their spirit. The University requires that its faculty will meet their class schedules, but it also expects that they will be available to students outside of the classroom, will carry their share of committee responsibilities, will remain productively involved in their research and other scholarly pursuits, and, where applicable, will meet their clinical obligations. External activities that compromise or diminish a faculty member's capacity to meet these obligations represent a conflict of commitment. Deans and Department Chairs are responsible for ensuring that faculty meet their University obligations.

Full-time non-faculty employees are expected to satisfy all of the requirements of their jobs, and should not permit outside activities to interfere with the performance of their California Northstate obligations. Some departments prohibit staff employees from consulting or engaging in other outside employment because of the likelihood of such interference. Other departments may permit certain outside activities, with appropriate notice to and written approval by the employee's supervisor, so long as they do not interfere with employees' California Northstate obligations.

B. Procedure

All faculty members with University appointments of greater than 50% time and all faculty members who hold administrative positions must make full disclosure of their external activities to the Conflicts of Interest Office. The Conflicts of Interest Office will prepare a summary report of an individual's external activities from the disclosure. This report will be provided to the relevant Dean or Chair for a determination of whether a conflict of commitment exists. If such a conflict exists, the Dean or Chair will discuss with the individual steps to be taken to resolve the matter. The Dean or Chair may consult with the President's Office as appropriate.

APPENDIX E
COMPARTMENTALIZATION OF DECISION AUTHORITY
TABLE

Compartmentalization of Decision Authority to Prevent Direct Conflict of Interest

Compartmentalization of Decision Authority to Prevent Direct Conflict of Interest										
Category of decision authority										
A = Approval (integral position authority)										
AD = Approval on the Authority of Board of Trustees										
I = In-charge (execution, implementation, maintaining, monitoring, if more than one entities designated, then all designated entities have shared responsibility), and accountable to the Dean of College of Medicine.										
R = Recommendation (proposing via committee action, advocacy, or supporting after review)										
	Board of Trustees	University President	University Vice President	Dean	Senior Associate Dean of Medical Education	Senior Associate Dean of Clinical Medicine	Other Deans/Chairs	Clinical Governance Committee	Faculty Committees	Faculty
Standard 1: Mission, Planning, Organization, and Integrity										
1.1 Strategic Planning and Continuous Quality Improvement	A	R		R	I			I	I	R
1.2 Conflict of Interest Policies	A	R		R						
1.3 Mechanisms for Faculty Participation in decision making	A			R		R				
1.4 Alliances/Agreements-medical education is under the control of the faculty	A	A		I		R				
1.5 Bylaws- describe the responsibilities and privileges of its administrative officer, faculty, medical students, and committees	A	R		R		R				
1.6 Eligibility Requirements- all eligibility requirements of the LCME for initial and continuing accreditation				I		R				
Standard 2: Leadership and Administration										
2.1 Administrative Officer and Faculty Appointments		OA		LR					R	
2.2 Dean's Qualifications- listed by the President on authority of BOT	A	R						R	R	
2.3 Access and Authority of the Dean to President				Yes						
2.4 Sufficiency of Administrative Staff- a sufficient number of associate or assistant deans, leaders of organizational units, and senior administrative staff				I						
2.5 Responsibility of and to the Dean The principal academic officer at each campus is administratively responsible to the dean				I						
2.6 Functional Integration of the Faculty- the faculty at the departmental and medical school levels at each campus are functionally integrated by appropriate administrative mechanisms				A	I	I	I	R		
Standard 3: Academic and Learning Environments										
3.1 Resident Participation in Medical Student Education				I						
3.2 Community of Scholars/Research Opportunities provide sufficient opportunities, management, and support for medical student participation in research and other scholarly activities of its faculty				I	I		A		R	
3.3 Diversity/Equity Programs and Partnerships- These activities include the use of programs and/or partnerships aimed at achieving diversity among qualified applicants for medical school admission and the retention of students	A		OA					I		
3.4 Anti-Discrimination Policy- does not discriminate on the basis of age, creed, gender, ethnicity, national origin, race, sex, or sexual orientation	A		I	R				R	R	
3.5 Learning Environment/Professionalism The medical school and its clinical affiliates the ongoing development of explicit and implicit professional behaviors in its medical students, faculty, and staff at all facilities, share the responsibility for periodic evaluation, identify and promptly correct violations of professional standards			A				I	I	R	
3.6 Student Misconduct- defines and publishes its code of professional conduct for faculty-student relationships in the medical education program, develops effective action policies that address violations of the code, has effective mechanisms in place for a prompt response to any complaints, maintains for reporting violations without fear of retaliation		OA		I	R	R	I	R	R	
Standard 4: Faculty Preparation, Productivity, Participation, and Policies										
4.1 Sufficiency of Faculty	A	A	R		R					

Compartmentalization of Decision Authority to Prevent Direct Conflict of Interest

Compartmentalization of Decision Authority to Prevent Direct Conflict of Interest										
Category of decision authority										
A = Approval (Integral position authority)										
AO = Approval on the Authority of Board of Trustees										
I = In-charge (execution, implementation, maintaining, monitoring, if more than one entities designated, then all designated entities have shared responsibility), and accountable to the Dean of College of Medicine.										
R = Recommendation (proposing via committee action, advocacy, or supporting after review)										
	Board of Trustees	University President	University Vice President	Dean	Senior Associate Dean of Medical Education	Senior Associate Dean of Clinical Medicine	Other Deans/Chairs	Clinical Governance Committee	Faculty Committee	Board of Directors
4.2 Scholarly Productivity				A	R	R	I	R	R	
4.3 Faculty Appointment Policies-A medical school has clear policies and procedures in place for faculty appointment, renewal of appointment, promotion, granting of tenure, reappointment, and dismissal that involve the faculty, the appropriate department heads, and the dean	A	AO		I,R		R			R	
4.4 Feedback to Faculty				A	R	R	I	R	R	
4.5 Faculty Professional Development							A,I	R	R	
4.6 Faculty/Dean Responsibility for Educational Program Policies-, the dean and a committee of the faculty determine programmatic policies.				A	I		R	R	R	
Standard 5: Educational Resources and Infrastructure										
5.1 Adequacy of Financial Resources- any derived from diverse sources and are adequate to sustain a sound program of medical education and to accomplish other programmatic and institutional goals.	A	R		I	R		R	R	R	A
5.2 Dean's Authority/Resources for Curriculum Management- The Dean has sufficient resources and budgetary authority to fulfill his or her responsibility for the management and evaluation of the medical curriculum.				A,I	I			R	R	
5.3 Pressure for Self-Financing- A medical school admits only as many qualified applicants as its total resources can accommodate and does not permit financial or other influences to compromise the school's educational mission.				A,I				R	R	
5.4 Sufficiency of Buildings and Equipment A medical school has, or is assured the use of, buildings and equipment sufficient to achieve its educational, clinical, and research missions.			A	I,R				R	R	
5.5 Resources for Clinical Instruction- A medical school has, or is assured the use of, appropriate resources for the clinical instruction of its medical students in ambulatory and inpatient settings and has adequate numbers and types of activities (e.g., history, case mix, age, gender)				A	I	I	R	R	R	
5.6 Clinical Instructional Facilities/Information Resources- has sufficient information resources and instructional facilities for medical student education.				A	I	I	R	R	R	
5.7 Security, Student Safety, and Disaster Preparedness- took measures that adequate security systems are in place at all locations and publishes policies and procedures to ensure student safety and to address emergency and disaster preparedness.		OA		R				R	R	
5.8 Library Resources/Staff- supervised by a professional staff that is familiar with regional and national information resources and data systems and is responsive to the needs				A					R	R
5.9 Information Technology Resources/Staff- well-maintained information technology resources sufficient in scope to support its educational and other missions			I		A				R	R
5.10 Resources Used By Transfer/Visiting Students- do not significantly diminish the resources available to already enrolled medical students.				A			I			R
5.11 Study/Lounge/Storage Space/Call Rooms- ensure that its medical students have, at each campus and affiliated clinical site, adequate study space, lounge areas, personal lockers or other secure storage facilities, and secure call rooms if students are required to participate in late night or overnight clinical learning experiences.				I	A					
5.12 Equalized Facilities for the LOM- neither the LOM of any substantial change in the number of enrolled medical students, nor decrease in the resources available to the institution for its medical education program.				I,A	R	R	R	R	R

and to enhance medical education program quality. These data are collected during program evaluation and after program completion.										
8.5 Use of Student Evaluation Data in Program Improvement- A medical school has formal processes to place in effect and transfer medical student evaluations of their courses, clerkships, and teachers, and other relevant information.				A	R	R	R	R	I	R
8.6 Monitoring Of Completion of Required Clinical Experiences- A medical school has in place a system with oversight that monitors and ensures completion by all medical students of required clinical experiences in the medical education program and completes any identified gaps.				A	I	I	R	R	R	R
8.8 Monitoring Student Workload- Faculty committee responsible for the medical curriculum and the program's administration and leadership ensure the development and implementation of effective policies and procedures regarding the amount of time medical students spend in required activities, including the total number of hours medical students are required to spend in clinical and educational activities during clerkships.				A	R	R	I	R	R	R
Standard 9: Teaching, Supervision, Assessment, and Student and Patient Safety										
9.1 Preparation of Resident and Non-Faculty Instructors- In a medical school, residents, graduate students, postdoctoral fellows, and other non-faculty instructors in the medical education program who supervise or teach medical students are familiar with the learning objectives of the course or clerkship and are prepared for their roles in teaching and assessment. The medical school provides resources to monitor residents' and non-faculty instructors' teaching and assessment skills, with varied monitoring of their participation in these opportunities provided.				A		I	R			
9.2 Faculty Appointments- A medical school ensures that supervision of medical student learning experiences is provided throughout required clerkships by members of the school's faculty.	AO			I			R	R	R	
9.3 Clinical Supervision of Medical Students- A medical school ensures that medical students in clinical learning situations involving patient care are appropriately supervised at all times in order to ensure patient and student safety, that the level of responsibility delegated to the student is appropriate to his or her level of training, and that the activities supervised are within the scope of practice of the supervising health professional.				A		I	I	R	R	R
9.4 Variety of Measures of Student Achievement / Direct Observation of Core Clinical Skills- A medical school ensures: A medical school ensures that, throughout its medical education program, there is a diversified system to assess student achievement, including student's acquisition of the knowledge, core clinical skills (e.g., medical history-taking, physical examination, behavior, and attitudes specified in medical education program objectives), and that ensures that all medical students achieve the same medical education program objectives.				A	R	R	I	R	R	R
9.5 Narrative Assessment- A medical school ensures that a narrative description of a medical student's performance, including his or her non-negative achievement, is included as a component of the assessment in each required course and activity of the medical education program, document teaching/clinical interaction given in this form of assessment.				A	R	R	I	R	R

	Board of Trustees	University President	University Vice President	Dean	Senior Associate Dean of Medical Education	Senior Associate Dean of Clinical Medicine	Other Deans/Chairs	Clinical Governance Committee	Faculty Committees	Faculty
3.6 Setting Standards of Achievement: A medical school ensures that faculty members with appropriate knowledge and expertise set standards of achievement to which required learning experiences in the medical education program.				A	I	R	R	R	R	R
3.7 Formative Assessment and Feedback: A medical school ensures that each medical student is assessed and provided with formative feedback early enough during each required course or clerkship (four or more weeks in length) to allow sufficient time for remediation.				A	R		I		R	R
3.8 Fair and Timely Summative Assessments: A medical school has in place a system of fair and timely summative assessment of medical students' achievement in each course and clerkship of the medical education program. Final grades are available within a week of the end of a course or clerkship.				A	R	R	I		R	R
3.9 Single Standard for Promotion/Graduation and Appeal Process: A medical school ensures that the medical education program has a single standard for the promotion and graduation of medical students across all locations and a fair and timely process for taking any action that may affect the status of a medical student, including timely notice of the impending action, disclosure of the evidence on which the action could be based, an opportunity for the medical student to respond, and an opportunity to appeal any adverse decision related to promotion, graduation, or dismissal.				A	R	R	I		R	R
Standard 10: Medical Student Selection, Assignment, and Progress										
10.1 Pre-medical Education/Required Coursework: A medical school encourages potential applicants to the medical education program to acquire a broad undergraduate education that includes the study of the humanities, natural sciences, and social sciences, and satisfies the specific premedical course requirements to those deemed essential preparation for successful completion of its medical curriculum.							I		A	R
10.2 Final Authority of Admission Committee: The final responsibility for admitting students to a medical school rests with a formally constituted admission committee. The authority and composition of the committee and the rules for its operation, including voting privileges and the definition of a quorum, are specified in bylaws or other similar school policies. A single person cannot exercise the majority of voting members in all meetings. The selection of individual medical students for admission is not influenced by any political or financial factors.							I		A	R
10.3 Policies Regarding Student Selection/Progress and Their Discontinuation: The faculty of a medical school establish criteria for student selection and develop and implement effective policies and procedures regarding, and make decisions about, medical student application, selection, admission, retention, discontinuation, and any disciplinary action.							I		A	R
10.4 Characteristics of Accepted Applicants: A medical school selects applicants for admission who possess the intelligence, integrity, and personal and academic characteristics necessary for them to become competent physicians.				R	R	R	I		A	R
10.5 Technical Standards: A medical school develops and publishes technical standards for the admission, retention, and graduation of applicants as medical students, such as conditions of attendance with high requirements.				R	R	R	I		A	R
10.6 Content of Informational Materials: A medical school's catalog and other informational, recruiting, and recruitment materials present a balanced and accurate representation of the nature and objectives of the medical education program, state the academic and other (e.g., nonacademic) requirements for the M.D. degree and all associated joint degree programs, provide the most	R	A	R	R	R	R	I		A	R

procedures in place that permit a medical student to review and to challenge his or her educational records, including the Medical Student Performance Evaluation, if he or she completes the information contained therein to his satisfaction, including on suspension									
Standard 12: Medical Student Health Services, Personal Counseling, and Financial									
12.1 Financial Aid/Over Management Counseling/ Student Educational Debt: A medical school provides its medical students with effective financial aid and debt management counseling and has mechanisms in place to minimize the impact of direct educational expenses (i.e., tuition, fees, books, supplies) on medical students' indebtedness.				A		I		R	R
12.2 Tuition Refund Policy: A medical school has clear, reasonable, and fair policies for the refund of a medical student's tuition, fees, and other allowable payments.				A		I		R	R
12.3 Personal Counseling/Well-Being Programs: A medical school has in place an effective system of personal counseling for its medical students and includes programs to promote their well-being and to facilitate their adjustment to the physical and emotional demands of medical education.				A		I		R	R
12.4 Student Access to Health Care Services: A medical school provides its medical students with timely access to needed diagnostic, preventive, and therapeutic health services at sites in reasonable proximity to the locations of their required educational experiences and has policies and procedures in place that permit students to be excused from their responsibilities for work-related care.				A		I		R	R
12.5 Non-Involvement of President of Student Health Services in Student Assessment/ Location of Student Health Records: The health organizations who provide health services, including psychiatric/psychological counseling, on a medical student have no involvement in the students' assessment or provision of the medical student requiring those services. A medical school ensures that medical student health records are maintained in accordance with legal requirements for security, privacy, confidentiality, and accessibility.						I			
12.6 Student Access to Health and Disability Insurance: A medical school ensures that health insurance is available to each medical student and his or her dependents, and that each medical student has access to disability insurance.				A				R	
12.7 Immunization Guidelines: A medical school follows accepted guidelines in determining immunization requirements for its medical students.				A		I, R			
12.8 Student Exposure Policies/Procedures: A medical school has policies in place that effectively address medical student exposure to infectious and environmental hazards.				A		I, R

2003 - 2012	Russell Street HIV clinic	oral surgeon community volunteer
2012 - 2017	Union Gospel Mission, health professions program	oral surgeon community volunteer
2012 - 2015	Mission of Mercy: Duluth, Mankato, and Bemidji, Minnesota	oral surgeon volunteer
2017 -	dental therapy development review committee Oregon Department of Health	member
2017 -	Mahubay community clinic, San Francisco	volunteer
2017 -	episcopal community services, health services for recently domiciled homeless	assistant

CONTRIBUTIONS TO DIVERSITY

CONTRIBUTIONS TO DIVERSITY

As a Hispanic Jewish American, I was educated in a very diverse NY school system and immediately became involved with CORE and NAACP including their fight to end de facto school based segregation in the north and concomitant block busting in NYC communities and redlining of retail businesses in Harlem. I lived in Harlem during that time as a student at Columbia and worked for Bobby Kennedy when he ran and as NY senator and in Adam Clayton Powell's campaign in congress as well as other civil rights leaders efforts. When Columbia set out to build a gymnasium in Morningside Park that would not allow community access, I was among the activists that ensured Harlem residents would be welcome at this new site and for other Columbia activities. I marched on Washington 4 times and was involved with civil rights and antiwar activities at various other levels. As a student in Boston after the Cambodia invasion, I helped organize the Boston Common protests and spoke at those rallies and elsewhere.

I entered dental medicine because I could see the adverse effects of poor oral health on the poor and minorities and those discriminated against through unconscious and conscious bias. I entered practice in a safety net hospital and have spent most of my career in safety net hospitals. Among many such activities such as above I have continued in this vein, most recently protesting in Minneapolis, along with a few of my students over the murder by policeman of an innocent man Philando Castile.

In a formal way, I have founded two chapters of the Hispanic Dental Association. Governor Patton of Kentucky appointed me to the diversity commission which has worked on immigrant and African American issues. I have also worked with the tribal communities in Minnesota and Oregon regarding health care access and the development of dental therapy, a new profession founded on the premises of improving diversity, access to care and oral health outcomes.

Also, commitment to diversity includes serving rural communities which are rapidly changing demographically to becoming hispanic and refugee communities. Outreach to 26 rural sites resulted in a HRSA grant to develop rural minority health called MnCROP, headed by Naty Lopez with my personal development in concept and execution of this idea.

As Dean at Minnesota, at my direction the school developed holistic admissions, called UMAST with Naty Lopez who was appointed Dean of admissions and diversity. We developed a diversity committee, a standing committee of the Dean, had annual school wide workshop which included all staff students and faculty enrolling over 850 in our program in one year. We performed outreach into Somali, Hmong, African American, and American Indian communities in Minneapolis, opening seven Tribal sites for clinical care and two in the urban Somali, Hmong communities and we are in development of an additional site in the African American community. We increased our URM enrolment from 12% to 28%. Dental therapy largely enrolled students from underserved minority communities. With these changes, 30% of our 2016 graduates went to practice in underserved urban and rural communities.

As Chair of the Board of the American Dental Education Association, I continue to serve as liaison to the diversity and inclusion committee and to speak at workshops supporting holistic admissions, and diverse faculty development with ADEA.

TEACHING AND MENTORING

TEACHING SUMMARY

I have been graduate program director from 1981-1989 at Mount Sinai, and from 1989-1997 at Connecticut, and from 2003-2012 at OHSU. I have directed four predoctoral courses at Connecticut, and 3 at OHSU. This year I was course director for the dental therapy students in oral surgery didactic and clinical course.

My educational philosophy has evolved over the years, the early years being considerably devoted to the Halsteadian model of surgical education with full time faculty in a vertical team care system and case based learning that considered the Socratic method of questioning at the core. The development of formal coursework for graduate surgical education in OMS evolved nationally and with me personally in the second decade of my career as an educator. In this fashion organized course were developed by me in craniofacial disorders, tumors, other pathology, trauma management, anesthesia and medical assessment of the dental patient. Regarding DDS level education I developed new courses in ambulatory oral surgery, patient assessment, local anesthesia and pain and anxiety control that have continued to evolve to this day. The past five years has brought a new oral health profession forward, dental therapy. I have been faculty and course director of one course to educate dental therapy students in patient assessment and minor surgical procedures. I believe I was the first dentist certified as an ACLS instructor in the early 1980's and have since continued in that role.

Regarding MD level education I have taught in head and neck anatomy, with clinical correlations, in the development of OSCE cases, known as CMPS (correlated medical problem solving), as well as teaching didactically and as a preceptor for medical students in ICM (introduction to clinical medicine)

My general philosophy today as a clinician educator is to be devoted to adult learning theory and contemporary means of accessing and utilizing just in time information when it is needed to use with clinical foundational knowledge and experience to formulate the basis of evidence based medical practice. I use simulated cases in my didactic courses for about 50% of effort and grade which replaces much of the rote aspects of courses in earlier years.

	2017 -	PCC 148 community based education	course director	Dentistry	90

MENTORING SUMMARY

My current activity as a mentor has been both formal and informal. To summarize those activities as a mentor today that lead students and faculty towards career advancement, especially in oral and maxillofacial surgery, academic dentistry, leadership and science are the most meaningful. Currently at UCSF I am the mentor for 8 DDS students in the class of 2021. Several of these students have expressed interest in the leadership aspects of dental medicine as well as interest in specialty education. Currently, several junior and senior students meet with me about potential careers especially in OMFS. Two junior faculty at UCSF have been meeting with me about academic career development.

Regarding my past activities, each of my residents in OMS had semiannual meetings with me a program director to provide career mentorship in addition to the formal mentor experiences noted below.

PREDOCTORAL STUDENTS SUPERVISED OR MENTORED

Dates	Name	Program or School	Mentor Type	Role	Current Position
1991 - 1993	Aurelie Marjoreu	University of Connecticut	Research/Scholarly Mentor, Project Mentor	Master's Thesis-Masticatory Function Following Orthognathic Orthodontic Post- Doctoral Program,	University of Paris

POSTDOCTORAL FELLOWS AND RESIDENTS MENTORED

Dates	Name	Fellow	Mentor Role	Faculty Role	Current Position
1990 - 1997	all OMS residents	Oral and Maxillofacial Surgery Resident Research Advisor University of Connecticut, 1990-1997.	Research/Scholarly Mentor, Project Mentor, Career Mentor	advise on required research projects	
1991 - 1992	Robert Drozd, Dan Geelan, Melissa Pray,	Dental Student Summer Research Internal Fixation of Discontinuity Defects of the Rabbit Mandible, 1991	Research/Scholarly Mentor, Project Mentor, Career Mentor	advisor	

Appendix 1-7 Assael CV 2019

Dates	Name	Fellow	Mentor Role	Faculty Role	Current Position
1992 - 1993	Silvia Castillo	Masters Co-Advisor Imaging for Dental Implants and Clinical Decision Making, University of Connecticut	Research/Scholarly Mentor, Project Mentor	advisor	
1993 - 1994	Luis Chammoro,	Dental Student Summer Research Outcome Assessment of Alveolar Bone Grafts in Cleft Lip and Palate Patients, 1993		advisor	
1993 - 1994	Matt Goldschmidt	Dental Student Summer Research Outcome Assessment of Internal Fixation of Maxillofacial Fractures, 1993	Research/Scholarly Mentor, Project Mentor, Career Mentor	advisor	

Appendix 1-7 Assael CV 2019

Dates	Name	Fellow	Mentor Role	Faculty Role	Current Position
1994 - 1995	Gregory Hack,	Master's Thesis- Long Term Stability and Prediction of Soft Tissue Changes Following LeFort I Surgery Orthodontic Post-doctoral Program University of Connecticut	Research/Scholarly Mentor, Project Mentor	advisor	
1996 - 1997	Yuen, Lim,	"Evaluation of submerged and nonsubmerged implants", 1996	Research/Scholarly Mentor, Project Mentor	advisor	
1996 - 1997	Christine Reardon	Co-Advisor- "Early morbidity associated with facial trauma", 1996		advisor	
2002 - 2003	Karen West	Women's Health Center Grant, Advisory Committee University of Kentucky College of Medicine, 2002	Research/Scholarly Mentor, Project Mentor, Career Mentor	advisor	UNLV Dean

Appendix 1-7 Assael CV 2019

Dates	Name	Fellow	Mentor Role	Faculty Role	Current Position
2004 - 2006	Nathan Lenox, Sharokh Baghieri,	"Assessment of advances in the oral and maxillofacial surgery literature" Oregon Health and; Science University, 1971-2004		advisor	Emory University
2004 - 2006	Hardeep Daliwal	Assessment Fanconi's Anemia Protein Expression in Oral Premalignant Lesions and Squamous Cancer, 2004, OHSU	Research/Scholarly Mentor, Project Mentor	advisor	Case Western University, asst prof

RESEARCH AND CREATIVE ACTIVITIES**RESEARCH AND CREATIVE ACTIVITIES SUMMARY**

Dean, University of Minnesota , Oral Health Research center 27 PI's with \$7.8 million dollars in NIH funding and 5.4 million from other agencies and entities 2012-2017

SCIENTIFIC CONSULTANTSHIPS WITH CORPORATE, EDUCATIONAL AND VOLUNTARY INSTITUTIONS

The PEW foundation , childrens dental care project
 The Kellogg Foundation: dental access project
 Academy of Osseointegration
 America's Promise
 American Association of Oral and Maxillofacial Surgeons
 Association for the Study of Internal Fixation
 Connecticut Association of Oral and Maxillofacial Surgeons
 Farmington Public Schools
 Indian Health Service Alaskan Native Dental Therapist Program
 American Dental Association
 Indiana University/Purdue University Indianapolis

SIGNIFICANT PUBLICATIONS

1. Assael L. Current status of postdoctoral and graduate programs in dentistry. J Dent Educ 2017;81(8 Suppl):eS41–9.
Assael L Graduated Dental Education at the Crossroads, the Gies 21st century report
I contributed the Graduate dental education component of the 21st century Gies report for the section on DDS and graduate education by Dr. Alan Formicola and Howard Bailit
2. Assael L. Oral bisphosphonates as a cause of bisphosphonate-related osteonecrosis of the jaws: clinical findings, assessment of risks, and preventive strategies. J Oral Maxillofac Surg. 2009 May;67(5 Suppl):35-43.

This presents my work on the characterization of clinical phenotype of a rare subset of BRONJ cases, those that are associated with oral bisphosphonate use for osteoporosis
3. Assael LA: Vision 2030, the future of dental education, Journal of Dental Ed, Accepted for publication April 2017. E publish June 2017 J Dent Educ 2017 81:772-774

I contributed the concept and action plan for Vision 2030, the American Dental Education Association initiative to influence the future of dental education across the domains of society, environment, technology, and pedagogy.
4. Assael L Oral and Maxillofacial Surgery 2025: Fifty years of evolution of a surgical specialty. J Oral Maxillofac Surg. 73S: 155-159, 2015

I contributed the assessment of oral and maxillofacial surgery at the crossroads to provide context for the specialty over the status and trends in dental education.

5. Osborn TM, Assael LA, Bell RB, Deep space neck infection: principles of surgical management. *Oral Maxillofac Surg Clin North Am.* 2008 Aug;20(3):353-65.

I contributed OHSU clinical cases and most importantly new concepts for management of deep space infection including new chemotherapy, means of airway management and patient recovery.. Osborn was resident/student author and Bell was complementary faculty at Emanuel

Admissions Flowchart

Admissions Process for Fall 2020 Applicants

Important Communication Policy for Fall 2020 College of Dental Medicine Applicants:

To ensure that all applicants have an equal and ethical assessment of their application, all inquiries regarding your application and material are to be directed and submitted to the Admissions Office only at (916)378-3505 or via e-mail to CDMAdmissions@cnsu.edu

Any type of communication made by the applicant (or applicant's parents, employers/supervisors, and faculty/advisors) to the CNU President, College of Dental Medicine Dean, or Admissions Committee Members is strictly prohibited. Any attempt to do so will be viewed as "inappropriate communication" and may negatively impact your application due to failing to follow the Communication Policy as stated.

1. Complete CNUCDM admission prerequisites.
2. CNUCDM accepts DAT scores from the last 3 years.
3. Complete your application via the centralized application service AADSAS, administered through WebAdmit and the American Dental Association.

NOTE: CNUCDM will be listed in AADSAS informationally but will not go live to accept applications until the Initial Accreditation of the program by the Commission on Dental Accreditation and with subsequent communication of that action to AADSAS.

4. Completed AADSAS application will be reviewed by the CNUCDM Admissions Committee and Admissions Office.
5. Submit three letters of recommendation, including one (1) from a professor in the sciences (i.e., Biology, Chemistry, Physics), one (1) from a professor not in the sciences, and one (1) from someone who has known the applicant for a substantial amount of time (e.g., research principal investigator, shadowed dentist, volunteer coordinator, organization leader, work supervisor, etc.). These letters should be submitted through AADSAS.

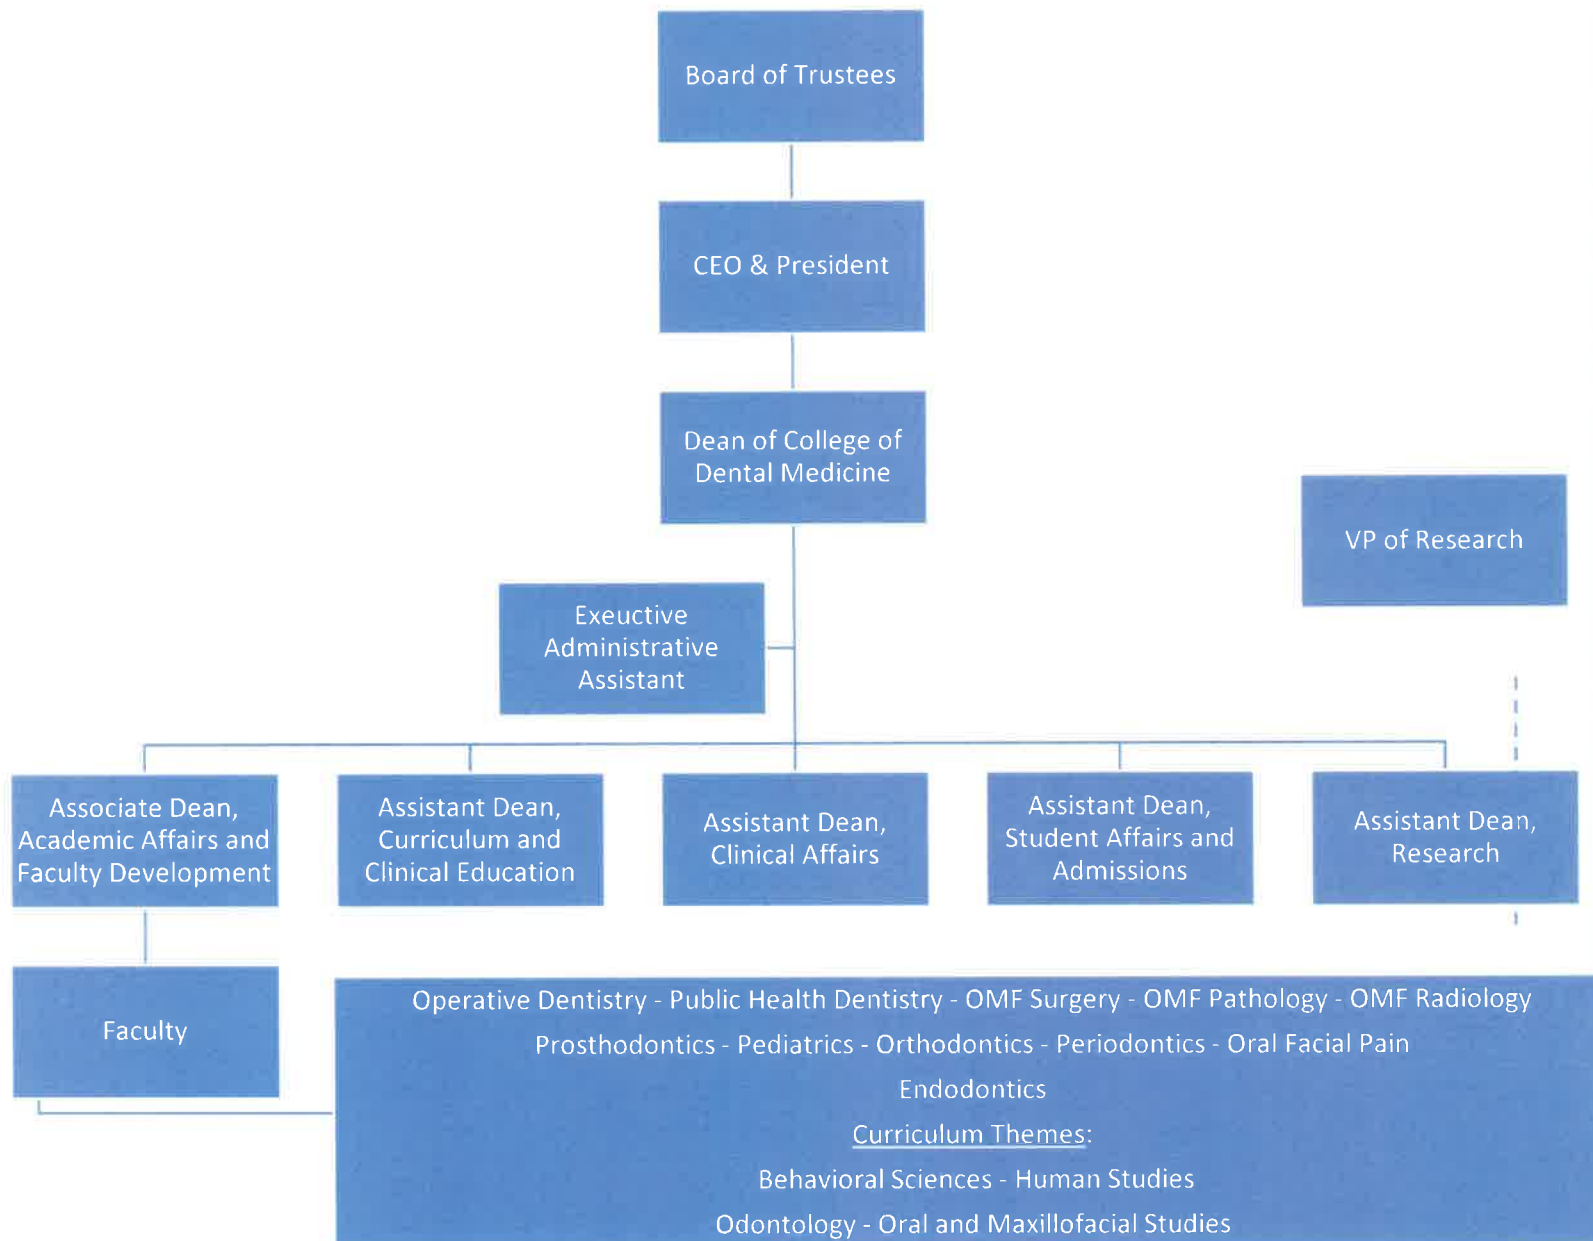

Applicants are encouraged to submit two (2) additional letters from any source.

All letters of recommendation should address the applicant's preparedness to become a doctor. It is recommended that you submit letters written within the past three years and that each letter be written by an individual with whom the applicant has formed a strong ongoing relationship, and not simply someone who has given the applicant a high grade. CNUCDM is particularly interested in references to the applicant's work ethic, integrity, compassion, emotional stability and judgment. Please consider, among others, professors who have taught in your upper-division courses, or individuals who have seen you interact in professional health settings or have witnessed your personal development. Submit all letters of recommendation to the AADSAS letter service only.

6. Completed applications will be thoroughly reviewed. Highly qualified candidates will be sent an invitation to participate in an on-campus interview. All applications that are not selected will remain under review until the end of the cycle.
7. Successfully complete an on-campus interview
8. The Admissions Committee will confidentially review and vote on completed application packages as Accepted, Waitlisted or Rejected.
9. The Admissions Office staff will then communicate the final vote and next steps, if applicable, to candidates.
 - All admission decisions are final. Requests for admission decision appeals will not be accepted.
 - The College of Dental Medicine is not accepting transfer students from other medical schools and/or programs.
 - At this time, the College of Dental Medicine DMD program is only open to U.S. citizens and legal residents with Green Cards.

Appendix 1-7 College of Dental Medicine Organizational Chart

Appendix 1-7 Job Description Dean CDM

JOB DESCRIPTION AND SPECIFICATIONS

JOB TITLE:	Dean of College of Dentistry
SUPERVISOR:	President/CEO of California Northstate University (CNU)
QUALIFICATIONS:	<p>Education: D.D.S. Degree, licensed to practice in California</p> <p>Experience: Extensive experience in teaching and academic administration</p>

California Northstate University is dedicated to educating, developing, and training the next generation of healthcare professionals. After establishing the College of Pharmacy, College of Medicine, College of Psychology, and the College of Health Sciences, CNU now is seeking a Dean that can successfully develop, inaugurate, and manage the new College of Dentistry. Graduates will have the knowledge, skills, and training necessary to take the next steps in becoming a practicing, licensed dentist.

It will be the Dean's responsibility to create this program within the established tenants of the University. Under the general guidance of the President and the other university officers, the Dean must develop the policies and procedures governing the program, create a comprehensive budget, and hire both the faculty and support staff to deliver high quality dental education. The Dean must maintain oversight of the faculty that are responsible for the overall curriculum, admission criteria, and degree requirements of the College.

I. Obligations of the Dean:

The information provided below is a general description of responsibilities; it is not intended to provide an all-inclusive list of responsibilities.

Hours: The Dean of the College of Dentistry shall have a full-time equivalent ("FTE") of 1.0 to be performed from his office.

B. Responsibilities:

1. The Dean is currently recognized as the chief academic officer of the College of Dentistry. As such, s/he will provide extraordinary leadership to enhance the academic, cultural, and fiscal environments of the College.
2. The Dean shall forward and advocate the policies of the College at all academic and public levels and shall be further responsible for keeping the faculty and staff informed of any decisions, activities or

Appendix 1-7 Job Description Dean CDM

plans generated which affect the operation of the system at large, be it at the university or governmental level.

3. The Dean is directly responsible for the recruitment and recommendation of appointments of departmental chairs who serve at the pleasure of the Dean. The Dean establishes periodic review of the achievements and performance of administrators and chairs within the College of Dentistry.
4. The Associate and Assistant Deans (and Directors) are recruited and recommended by the Dean of the College of Dentistry for approval of the hiring and appointment the President who has the delegated authority by the Board of the Trustees.
5. The Dean or his/her designated representative shall confer on a regularly scheduled basis with the Departmental Chairs and the various committees established by the College of Dentistry.
6. The Dean shall assist in the appointment of those committees (faculty-based) which aid in their ability to perform their duties, except where prohibited by established procedure or policy. The Dean shall also appoint those institutional committees as required by accrediting and governmental agencies.
7. The Dean shall convene annually with the faculty to review the general progress of the College of Dentistry at all pertinent levels of development and administration.
9. The Dean is responsible for ensuring that all accreditation requirements of the CODA and WSCUC are successfully met, including the timely submission of all reports and notices of planning for substantive changes.
10. The Dean shall provide oversight and maintain accountability of Department Chairs and faculty performance.
11. The Dean shall be responsible for budgetary compliance and financial sustainability through responsible budgeting and spending oversight. Additionally, other fiscal responsibilities shall include revenue enhancement (when the opportunity arises), participation in University efforts to cultivate philanthropic endowments and annual donation and gift giving campaigns or initiatives.
12. The Dean is responsible for Approval authority, fiscal authority within the approved college budget, personnel decisions, student success, and educational effectiveness.
13. The Dean is responsible for establishing and maintaining a campus environment that is conducive to collegiality, teaching, learning, intellectual discourse, and character and citizenship.

Appendix 1-7 Job Description Dean CDM

II. Performance Expectations: The following is a list, but not limited to, of performance areas that will be subject to annual and or periodic performance appraisal.

1. Leadership:

- Provide effective leadership in carrying out the mission of the College

2. Management:

- Serve as the chief academic officer of the college
- Maintain an effective team of college administrators which shall be responsible for all aspects of the operations of the college and shall be accountable to the University Administration
- Provide oversight of the oral health clinics and training dental operatories to ensure quality of care, provision of care, and fiscal sustainability.
- Establish a management structure to operate oral health clinics and training dental operatories that are in compliance to all applicable the laws and regulations.
- Lead the College to meet and maintain all applicable accreditation requirements
- Establish keep performance indexes to assess and evaluate the effectiveness of the teaching, learning, and training processes of the dental education program
- Maintain and establish a full compendium of policies and procedures
- Maintain oversight of curriculum development to ensure compliance with all State and Federal regulations, as well as industry standards
- Implement an effective personnel system, i.e. recruitment, development, retention, evaluation of the College Administrators, faculty and staff
- Establish, design, and supervise an effective administrative structure that promotes performance, accountability, sub-structure within the College
- Make effective use of, and appropriately allocate, all resources (personnel, money, equipment, space)
- Manage and maintain institutional facilities in a satisfactory manner within available resources
- Implement institutional objectives by proper planning and budgeting

Appendix 1-7 Job Description Dean CDM

- Ensure sound fiscal management
- Ensure academic soundness in activities of students and faculty

3. Planning:

- Provide a clear and well-defined vision of the College consistent with the Strategic Plan and the education mission of the University

4. Academic Quality:

- Understands differences among educational programs
- Promotes efforts to improve quality in academic programs and achieves professional accreditation
- Recruits and retains able faculty
- Encourages institutional efforts to promote student success as defined as student progression, retention, and graduation rates
- Ensure curricular success in Student performance

5. Human Relations and Public Relations:

- Demonstrate effective human relation skills with subordinates, faculty, staff, students, community leaders, and others associated with the institution
- Establish a system of annual performance evaluation of the faculty and staff
- Maintain excellence in public relations with the internal and external communities
- Be a strong and persistent advocate for the institution in its relations with state and local governments, private sector, and the general public

6. Responsibility to the President's Office:

- Inform the University President regarding significant matters affecting the institution
- Participate in fulfilling CNU vision and implementing strategic initiatives
- Insure that all decisions are legal, ethical, and in compliance with policies and procedures of the University

Appendix 1-7 Job Description Dean CDM

7. Resource Development:

- Engage in effective external resource development

IV. Reporting Relationship: The Dean of Medicine will report directly to the University President and shall prepare an annual composite report, in addition to providing intermediate summaries as dictated by the University President and the Board of Trustees.

Qualifications:

Specific requiring qualifications include, but not limited to:

- A D.D.S. from an CODA accredited program
- A license to practice in the state of California
- A minimum of 5 years management experience with 3 at the executive level
- Experience developing large, full scale programs
- Experience managing a staff, both professional and ancillary
- Experience submitting and managing detailed budgets
- A proven track record of writing and approving policies and procedures
- Experience evaluating program and employee effectiveness
- Experience hiring, retaining, and disciplining staff
- Knowledge of accrediting standards, including WSCUC and CODA
- Experience in overseeing or managing a dental clinic or equivalent experience in an academic training dental operatory.
- Comprehensive knowledge of the discipline of dentistry

Additional preferred qualifications:

- Experience working on teams with a variety of healthcare professionals
- Experience in academic affairs or curriculum management
- Experience in precepting or teaching in postgraduate dental residency program
- Experience in either endodontics, oral and maxillofacial pathology, oral and maxillofacial radiology, oral and maxillofacial surgery, orthodontics and dentofacial orthopedics, pediatric dentistry, periodontics, prosthodontics, or dental public health
- Experience in overseeing or managing or establishing a governmental funded dental care clinic
- Knowledge of local training opportunities
- Prior teaching experience at various academic levels
- The ability to analyze complex problems and provide solutions
- Excellent leadership skills
- The ability to speak and write clearly and concisely
- Establishment of positive and harmonious relationships with others
- Proven excellence in public speaking
- Previous experience representing a large organization to the public
- In-depth prior experience with both human and public relations

9700 West Taron Drive, Elk Grove, CA 95757

Appendix 1-7 Job Description Dean CDM

APPLICANT SHOULD SUBMIT

- Cover letter that addresses qualification, experience, and career goals
- Resume/CV
- Name, addresses, and telephone numbers of at least (3) professional references

Please send all application materials to the HR Department at hr@cnsu.edu, or California Northstate University, 9700 West Taron Drive, Elk Grove, CA 95757. CNU is an Equal Opportunity and Affirmative Action Employer. All qualified candidates are encouraged to apply.

****This is an anticipatory search.**

***** Competitive Salary and benefits information will be available to those selected for interview.**

Minutes

Members present: Kevin Keating, Samer S. Alassaad, Craig Alpha, Jenny Apekian, Leon Assael, Amardeep Bains, Aneet S. Bal, Wallace J. Bellamy, Prescilla Bradshaw, Michael Cadra, Wai Chan, Clifford A. Chow, Scott P. Churchill, Tom Clements, Matthew Comfort, Jean Creasey, Margaret M. Delmore, Craig Dial, Robert Fong, Steven Frank, David C. Hatcher, Jagdev S. Heir, Timothy Herman, Carl M. Hillendahl, Paul A. Johnson, Bryan G. Judd, Gregory J. Kolber, Merlin L. Lai, Timothy E. Mickiewicz, Aneel Nath, Charles N. Newens, Vireenchandra R. Patel, Rika Proadhan-Ashraf, Karthik B. Raghuraman, Hana R. Rashid, Shikha Rathi, John Reed, Lindsey Robinson, Stepahnie L. Sandretti, Rajbir K. Sanghvi, Waleed Soliman, Michael Stout, Sang Tran, Brittany N. Vacura, Joel K. Whiteman, Eric Wong, Jamson Wu, Rosemary Wu, Kim Wallace, Gina Savani, Marsha Henry, Mark Zablotsky, Camille Gannam, Tiffany Bal

Dr. Kevin Keating, Chair, called the meeting to order at 6:10pm

Dr. Keating welcomed the attendees and introduced Dr. Leon Assael, Founding Dean of CNU College of Dental Medicine.

Dr. Assael presented the College of Dental Medicine Strategic Plan.

A motion was made for **SDDS CNU College of Dental Medicine Advisory Committee to approve the CNUCDM Strategic Plan to be presented to CODA as part of the application process of accreditation for the CNU College of Dental Medicine.**

Motion passed unanimously.

Dean Assael presented the Curricular themes.

Dean Assael presented the Process for Faculty Appointments.

Dean Assael presented the Accreditation Update (CODA and WASC)

Members were divided into the following 8 workgroups.

Group 1: basic dental sciences: dental anatomy, occlusion, oral anatomy, oral physiology, growth and development

Group 2: dental caries, operative dentistry, endodontology

Group 3: fixed and removable prosthodontics

Group 4: Periodontology

Group 5: public health dentistry, preventive dentistry, behavioral sciences, practice management, health systems, social determinants of health

Group 6: pediatric dentistry, orthodontics, geriatric dentistry, special needs patient dentistry

Group 7: oral and maxillofacial surgery, oral medicine/oncology, oral pathology, anesthesiology, orofacial pain medicine

Group 8: oral diagnosis, radiology, treatment planning, case presentation

Members were informed that work groups discussion results will be incorporated in curriculum design.

Discussion results were presented to members by each workgroup representative.

Meeting was adjourned at 8:10 pm

AGENDA

California Northstate University
College of Health Sciences
2910 Prospect Park Drive, Room 108
Rancho Cordova, CA 95670

6:00 – 8:00 p.m.

1. Approval of Agenda: Changes or additions
2. Debrief February 4th meeting of the SDDS/CNU Advisory Committee
3. CODA Tasks
 - a. Curriculum Development for Year 1 Students
 - i. Course and specific instructional objectives
 - ii. Review Foundations of Odontology
 - iii. Review dental anatomy
 - iv. Learning activities
 - v. Evaluation instruments (laboratory evaluation forms, sample tests, quizzes and grading criteria)
 - b. Faculty Development
4. Timelines and Volunteer Assignments
5. Your help
 - a. Does anyone have a good radiation control policy, biohazard policy
 - b. Patients' rights policies
 - c. Clinical manual
 - d. Curriculum Committee, Clinical Quality Assurance Committee, Admissions Committee
6. Adjournment

CNU Task Force

College of Dental Medicine

Meeting minutes February 20, 2019

California Northstate University
College of Health Sciences
2910 Prospect Park Drive, Room 108
Rancho Cordova, CA 95670

Members present: Kevin Keating (Chair), Leon Assael (Founding Dean, College of Dental Medicine), Wai Chan, Jag Heir, Stephanie Sandretti, Eric Wong, Rosemary Wu, Huong Le (phone)

Chair Kevin Keating called the meeting to order at 6:10pm

1. Approval of Agenda.

- a. Added item on different objective of academic/curriculum portion of College of Dental Medicine from the fundraising group.

Kevin had talked with Paul Wagstaff, CNU Legal Counsel. The fundraising for College of Dental Medicine should be separated from the Academic advisory group.

2. Debrief February 4th meeting of the SDDS/CNU Advisory Committee

About 50 members had submitted their interest to be involved. Holly had placed them in groups according to their field of interest. Kevin will be contacting them.

3. CODA Tasks

Leon gave a briefing on:

- a. Curriculum Development for Year 1 Students

i. Course and specific instructional objectives

ii. Leon gave an overview of the course syllabus of Odont 521 Dental Anatomy and Odont 501 Foundation of Odontology

In Odont 501, students will be following a "didactic, lab, clinic" format. Students will start their hands-on experiences early on.

iii. Learning activities

iv. Evaluation instruments (laboratory evaluation forms, sample tests, quizzes and grading criteria)

b. Faculty

We will need faculty in prosthodontics (especially removable prosthodontics), Oral Pathology/Oral Medicine, Behavior sciences, and a faculty that is good in application of basic science into clinical practices.

Jag suggested looking into Journal of Family Practice Medicine for cases to be used in Case Based Learning.

4. Timelines and Volunteer Assignments

Leon will be working with architects in the hospital space design to provide room for hospital based programs and a possible 24 hours emergency dental clinic.

The task force is informed of a dental school building close by Interstate 5. Building has approximately 16000 square ft. Upstairs is sim lab and haptic units. Downstairs will be a 30 Chair clinic. A separate clinic at a different site is needed.

Potential Dental supply/support vendors were discussed. Potential Dental equipment vendors were discussed. Academic pricing from vendors.

5. Help needed:

a. Radiation control policy, biohazard policy

b. Patients right policies

c. Clinical manual

Jag said he can share his copy for the above three items.

d. Members are invited to submit their names and their interest in serving in the following College of Dental Medicine committees - Curriculum Committee, Clinical Quality Assurance Committee, and Admissions Committee. Please email Holly of your interest.

e. Members are asked to think about and/or develop elective classes for students.

Meeting adjourned 7:23pm

00:00:00	S1	...there's an area [inaudible 00:00:01] two different at the front so to speak. And the first [inaudible 00:00:08] dental anatomy and function and build that into ways of dental anatomy and function [inaudible 00:00:15]. We'll get to this linear segment here in a second. And then we'll look into the basic sciences and of that, we went into the oral environment which

		has to do with spit and chewing, the oral biology, and then [inaudible 00:00:33] microbiology and [inaudible 00:00:34] morphology, histology, et cetera et cetera et cetera. Right? Yes. It's up. You made it. Good. Good. And then we went linear and as far as the year one and the basic morphology dental anatomy micro and histo, general anatomy, [inaudible 00:00:54] then that transition then from the general learning into the why it's crossing over into removable and the fix, growth oral biology physiology micro materials and since this was a basic, the basics and beginning classes of dentistry did not go onto years three and four. That's our report.
00:01:18	S2	Questions?
00:01:23	S1	There are no [inaudible 00:01:23], it's okay.
00:01:29	S3	Thank you. Group two. That was very an organised group on one hand.
00:01:39	S4	Right. So [inaudible 00:01:40] the group two which includes caries operative and [inaudible 00:01:45]. So if we start all of it on the far end then [inaudible 00:01:48] have a timeline of historical dentistry, operative dentistry, starting with [inaudible 00:01:54] all the way up to modern dentistry. That doesn't have to be a one course necessarily because there's so much technology out now, [inaudible 00:02:02] them through the entire curriculum. So going over caries, you got to start out and have the biology, etiology, pathology , microbiology and everything, with that there's going to be jump in and talk about prevention and camera and intervention which also includes things that are involved with camera now, like we used to have [inaudible 00:02:26] and other restorative materials like GI [inaudible 00:02:31] and other items, and also the tools [inaudible 00:02:37] looking at saliva and testing that. In addition in operative, this has kind of crosses right over, there's also [inaudible 00:02:47] intervention, so you want to look at like a symptomatic crack and other things that you could treat in that way. And then there's also a breakdown between just doing that, doing the operative dentistry for treatment of disease and then looking to aesthetics as well because that's important for people. And then another thing we track down is biological width and so with that, we won't take away from [inaudible 00:03:17]. So then we [inaudible 00:03:20] and we could start brainstorming, going down the list and say [inaudible 00:03:23] including the immune systems, again microbiology, pathology including [inaudible 00:03:30] infection and diagnosis [inaudible 00:03:34]. We want to look at dealing with differential diagnosis. You know, is it [inaudible 00:03:41], and then the other treatment options. Look at comorbidity, risk benefits and alternatives, single treatment versus multi-appointment treatment. Also vital pulp therapy, materials we're using such as [inaudible 00:03:58] and also surgical interventions [inaudible 00:03:59]. And appropriate use for

		antibiotics because I saw other people out there that were going to just shoot antibiotics whatever come to their way. And then prognosis, success versus survival, and some restorative and [inaudible 00:04:19].
00:04:21	S2	Great. Questions? There got to be a question.
00:04:30	S3	I just have a comment. I think that both first groups had a really biological and evidence based approach to looking at the problem and not a procedural approach, whereas we remember dental since we were counting how many widgets we did. I think this is exciting to see this approach. Just as a comment, most dental education and dental students experience were procedurally based. Again this is evidence and scientifically based approach and that's really, really wonderful to see.
00:05:06	S2	Go group three.
00:05:13	S5	All right, I'll put mic. You can get the [inaudible 00:05:14]. (Laughs) Plus it has a couple of main feature, you get fixed or the removable, right? One of our main things, and especially from [inaudible 00:05:32] was talking about is minimally invasive. You know today we had so many options with minimally invasive in comparison to what we use [inaudible 00:05:38]. Now we have all kinds of [inaudible 00:05:41]. So minimally invasive actually covers [inaudible 00:05:42] dentistry. We also have [inaudible 00:05:49] and a proper preparation and uses of all those things because how many times are we seeing somebody do practise that were horrible and now they've created on a problem, there's all kind of operations that we're running into. We also going to need to understand material that we should be using. There are so many materials that exist these days that didn't exist 15, 20, 25 years ago. We need understanding that the concepts were... how to use them properly in those situations, it's doing work properly, and it was one of the things [inaudible 00:06:21] end results of fixed dentistry. You know, how you're using these materials and this partly driven [inaudible 00:06:26] to restore patients appropriately to their desired results, but the end result would last [inaudible 00:06:35] what they want because they're going to last as long-term, which [inaudible 00:06:38] to fixed or removable, what's better for the patient, what do they want, you know. We talked about one of the major things, especially here in the capital town, provisionalisation, are you able to make a good provisional when you come out of the school so that somebody will notice that there is something there. What if they're on TV, what if they were at the [inaudible 00:06:59] that needed a great smile, what if they're running for—something that actually has happened to me, they were running for something and needed something they could smile with, which leads us into the basics of things like impression taking, PVS or digital. Digital's taking over. Digital dentistry is the way to the future as we've discussed

		<p>and everybody in the practises or anywhere else has probably seen, as well as photography. Photography allows us to visualise something in clinic and do the best for our patients. You know we talked about there's always the material [inaudible 00:07:31] out there. This is the best, I'm only going to use this, and that was the only thing that we can never use in this situation. Are we willing to get out of that [inaudible 00:07:38] and say, what's the best for this patient in this situation. Go beyond as the average. You know there's always the basics of removable partial or full dentures where we can really lead into the things like occlusion. I best understood occlusion when we did removable fixed, because we had to create it, we had to understand it, we had to be able to put things in [inaudible 00:08:00] it's actually worked. As I said, with digital dentistry we have digital impression taking, knowing 3D printing and all of that's kind of taking over. And then we went into the sort of modern part in which the implant side of dentistry, you have implant dentures, you have supported, you have retained, you have [inaudible 00:08:22] but even more so for the new graduate because they might not be doing some of that but that's [inaudible 00:08:28] implant that you're going to be restoring. There's so many type of that, you have the anterior and all the challenges that an anterior implant will take. You have the posterior, and so again, [inaudible 00:08:38], but one thing that always do comes back to you, it's always historically driven treatments. Is that young grad going to be able to take and lead the train instead of let them being led by somebody else, because we all—whoever restores implant is the... and all the specialist know, if you're restoring—doctors leading the train, it sort of sometimes goes askew very easily. When you could tell them this is what I want, this is how we want doing this, the end result is everything starts working much better but also there's things like what's impression you're technically using, [inaudible 00:09:15], are you using customer [inaudible 00:09:17] in these situations and what's best and what's going to work best. Understanding connections that implant's going to have, what's that going to do to your [inaudible 00:09:26] success. And so I think that's where we sort of focused on this.</p>
00:09:32	S2	Thank you. Any questions? Okay, we've only got three groups and the curriculum's pretty packed. (Laughter)
00:09:45	S5	Yes?
00:09:47	S6	Do you want to create occlusion as a separate entity or it's all incorporated in that?
00:09:54	S5	The hard part with occlusion is it focuses on everything. Occlusion has a sort of a [inaudible 00:10:00]. It's functional when you have it here. It's periodontal because the periodontal situation will change that. So you

		<p>have—occlusion's a hard part, it's unless you want to make a specific [inaudible 00:10:15] philosophy, I think this is a great place for it because we're doing the removable, it's a great way to start learning the concepts and basics of occlusion. That way you understand, okay, this is how the occlusion's supposed to be generally, it's not going to work for every single individual as we all know. But it helps give you the basics of occlusion and how to [inaudible 00:10:39] courses, that's how they teaches occlusion is based on what we've learned in removable. And I know there are all kinds of other philosophies out there but for me and the way I think, that's the first step in occlusion. Now there's other concepts in occlusion that go beyond that, that like sort of beat my head in all over the years, but that's I think the basics of occlusion and then you can start building that beyond with things like [inaudible 00:11:06] pain where it then takes a whole different dynamics. You can have a beautiful balanced occlusion based on that and then people in extreme pain.</p>
00:11:19	S3	<p>That was great, thank you. We're actually doing great on time so don't worry about—everybody's been keeping the three minutes, you've all been wonderful, so.</p>
00:11:42	S7	<p>Okay, so our [inaudible 00:11:43], we broke it up into three main things, periodontal disease, systemic considerations, and implantology. I think a lot of the schools have done a great job with periodontal disease and management starting up with diagnosis, how do you come up with your diagnosis based on etiology, post response looking at occlusion anatomy, nonsurgical versus surgical therapy, when does that patient start to transition from something that's [inaudible 00:12:10] where they need surgical approach needs to be involved. Outcomes; how do you evaluate the outcomes after [inaudible 00:12:18] after surgical therapy and they'll [inaudible 00:12:20], how do we maintain this, how do we get the hygiene programme involved, periodontal maintenance and how to maintain the patient. Also regarding soft tissue, pretty prosthetic soft tissue [inaudible 00:12:35] tissue underneath your bridge or implant supported bridge or implant supported prosthesis. So the systemic considerations, the post response factor, the inflammation diabetes resorted to therapy that many of the older outpatients were started being on [inaudible 00:12:54] how do you manage it as well as diabetic control. And this is the big thing that we discuss was on the latter education, like I graduated in 2009, the implantology was glassed over, we took an impression on a [inaudible 00:13:08] restore, right? So I think the diagnosing starting off with treatment planning, getting students to understand digital workflow as well as conventional workflow and most importantly, being restoratively driven starting with the outcome in mind, where you want to end up and how to get there [inaudible 00:13:30] surgical considerations looking at the</p>

		medical background, anatomy and physiology. And then provisionalising, how you get the patient to leave with something that they're happy with, as well as when you go to your final prosthesis and that retain screwed versus screw-retained, how to get the patient outcome that you want.
00:13:55	S2	And don't forget those complex bases of [inaudible 00:13:58].
00:14:02	S7	Yeah. And also talking about how to manage the patient with this [inaudible 00:14:05] has had them in the past and how to manage complications that could arise or dealing with complications that walked into your office prior .
00:14:18	S2	Thank you. Questions?
00:14:19	S7	Any questions?
00:14:20	S8	Very little question. What about integrating lasers, there, there, there and there and here, I mean...?
00:14:29	S7	Yeah I think, you know, I think that actually it depends. Different schools are now incorporating lasers, perio lasers therapy, I think that would be if the school could afford the training. And because the problem with the perio lasers [inaudible 00:14:43], so that's a problem that different schools will run into. So that's kind of isolated the [inaudible 00:14:49] programme but I believe that if we could teach diode soft tissue management and any laser incorporation I think would be great.
00:15:00	S8	And there's also laser fulltime activated irrigation techniques or kind of the cutting edge, but the problem is [inaudible 00:15:06], but it's just you know it's probably [inaudible 00:15:15] a great question, but there is a cutting edge of [inaudible 00:15:21].
00:15:25	S9	All right. So our group had public health, disease prevention, behavioural sciences, practise management, health assistance and social. I think, you know, we have quite a unique opportunity with the school to integrate all the different schools we have. We have medical, we have pharmacy, dentals, and we're coming up as well, so we had a good opportunity which we try and integrate all the schools together to try and really have an interdisciplinary approach to public health moving forward. With regards to prevention, and if we were to obviously look at camera and that's—your main focus on of teaching in schools around the country at the moment, it's also going to be [inaudible 00:16:02] deliver this information. A lot of schools now, you know, they're coming to a point where [inaudible 00:16:09] the material just before class and they come and [inaudible 00:16:12] focus on problem based learning approach. That's something you may want to consider with regards to (overlapping background noise)

		<p>teaching the students different techniques with regards to prevention of risk, how do we recognise [inaudible 00:16:24] and so on. With regards to health delivery systems, let's talk about the third party compensation, how does the people (overlapping background noise) the public health needs, there's different healthcare model as well, and this [inaudible 00:16:36] something that we need to explore with students that are going to be graduating because soon after graduating, they're going to be exposed to [inaudible 00:16:44] which they hopefully are going to be exposed through our system as well. As well as, you know, open dentistry, private dentistry and so on. And with that [inaudible 00:16:53] to how these organisations work, which leads us all to practise management, and now [inaudible 00:17:06] working in clinical practises already and that's a good opportunity for the students actually to come out of [inaudible 00:17:13] practises, and that's probably unique opportunity that we have to encourage the students to see what is [inaudible 00:17:19] or shadow in the private practise and a lot of us are already in private clinic so I think of the communities are quite open to having some of the students onboard [inaudible 00:17:30] we can facilitate that I think that'd be quite a good opportunity for the students to get some exposures to what real life private practise industry's like. They'll get [inaudible 00:17:40] experience, they're going to integrate the [inaudible 00:17:42] health services as well that'd be a good opportunity for them to see that. So all these things would hopefully give them quite a well round experience, something out of the dental curriculum. We also explored what would be a good time for these students to look at these different systems, private clinics and so on, have some exposure in third year moving to fourth year might be a good time because it's after the first semester of fourth most of the students are looking for jobs and so and so, you know, you want to get them exposure because it's always that kind of [inaudible 00:18:13] to get a job, what type of job and then they don't really know what open dentistry is all about, what private practise is all about. So if we can give them as much exposure as we can in the school before the full semester of fourth year that might be a good opportunity for them. With regards to social, you know, [inaudible 00:18:33] groups that are going to be looking in [inaudible 00:18:37], different ethnicities, access to care and so on, so we want to expose the students to the different, you know, populations that are out there and at least made them aware of, you know, the different various that can occur. This [inaudible 00:18:51] population that we have [inaudible 00:18:53] good, well rounded student population. With regards to communication as well, that tends to be [inaudible 00:19:03] behavioural sciences, we will look at the communication with these patients, communication with the [inaudible 00:19:08] populations and also communication in terms of how [inaudible 00:19:13] being understood, you want to have like layman's terms, let's try and get the</p>
--	--	---

		students to understand and don't just throw at them all the dental jargon and encourage communication on the patient [inaudible 00:19:26]. With regards to public health, so we want to encourage global [inaudible 00:19:30] and this is one of the things that a lot of dental school are trying to push out. I gives the students a great experience, a well round experience so if we can push that as well on top of [inaudible 00:19:40] health services, [inaudible 00:19:41] and so on, you normally gives them a good experience in terms of perhaps ability to perform tasks outside but also gives them good memories of the dental school and that gives them a great, you know, when they look back on the experience on dental school you might be given quite a good positive feedback then. School [inaudible 00:19:58] as well, that will promote access to get you on awareness to these students, it also encourage dentistry as a community and perhaps expose the world of dentistry that students perhaps will even know what dentistry was. So that's a good opportunity there. And yeah, do you have question?
00:20:19	S2	Questions?
00:20:23	S10	I think it's a good spot but why organised dentistry is a good place?
00:20:38	S9	Can you say that again? Why organised dentistry...
00:20:42	S10	Is a good place, is a good—the organisation, ADA , CDA , and CDS , why (overlapping conversation)? As an education [inaudible 00:20:51], do you want to give an opinion that it's a good place or do you want to teach students about preparing one form of dentistry (overlapping conversation)?
00:21:00	S9	I think this is (overlapping conversation).
00:21:03	S3	Could I have the mic for a sec? So I completely agree in that I said to my students we're [inaudible 00:21:21] schools the same thing. I usually say [inaudible 00:21:25] where the president say that was [inaudible 00:21:30] usually presented, and I say to the students you cannot be a good dentist unless you're involved in organised dentistry. And the reason is, were you going to [inaudible 00:21:42] with your colleagues, were you going to actually continue your education, were you going to understand the policies that are affecting your practise, were you going to understand the policies that are going to affect the public that you serve, you have to be involved with the profession. I'm not saying with organisation because I'm know perfectly good ADD members that are in the ADA and that's their choice, and I don't [inaudible 00:22:07] with that but I do think that, just like all of us tonight or with our colleagues, the person who isolates themselves from their colleagues is making a terrible mistake and this is a

		big problem now because what used to be 87, 88% penetration, at some states it's like getting to down to 50% and there are some dental schools in which it's less than 50%, and I don't think that those students are well-served. I agree with you 100%. So I think that it's part of our education programme and it's part of what we can teach, what can organised dentistry do to make you more effective with your patients, more effective in the practise.
00:22:51	S2	And I'd like to make a comment. You know, these are first component for school in the country, it's actually how the local component [inaudible 00:22:58] dental school as evidenced by all of you here, by all the people that are [inaudible 00:23:02] there's opportunity. So it is involvement of the local dental community that will have an impact on the school and what are the challenges within dental education, there is old models where the guys my age pushing them back because they [inaudible 00:23:17] teach something different. And [inaudible 00:23:20]. And you have the ability like [inaudible 00:23:28] round up but what they will like to change their programme to and build [inaudible 00:23:36] because of all your involvement here so that speaks [inaudible 00:23:39] being involved with organised dentistry [inaudible 00:23:43] have a voice and shape the future. So we'll move on to [inaudible 00:23:47].
00:23:50	S11	Yeah, I think the organised dentistry, one of the challenges that [inaudible 00:23:53], the corporate dentistry will have [inaudible 00:24:05] for a thousand dentist than our [inaudible 00:24:07] just for that corporate entity. So a lot of those dentists don't feel the need to be connected to organised dentistry because they're getting everything they think they need. And so I'm part of the large [inaudible 00:24:22] now and I still try to get all my doctors to continue to be part of the ADA and CDA and CDS but it's a hard sell for some of them because they don't think they need it like, you know, where did you get insurance when you come out of dental school, you joined ADA, [inaudible 00:24:40], they don't need that anymore because they're on together on insurance. So it's a different thing and a lot of the graduates from here will go into corporate models because that's how they're going to pay the bills.
00:24:53	S2	And being active at CDA for the last decade, it's all part of the strategy for trying to engage those [inaudible 00:25:00] the corporate members involved and so [inaudible 00:25:06] as we typically do unfortunately to say [inaudible 00:25:10]. But anyway, great comments.
00:25:17	S12	Okay, so we have paediatrics, orthogeriatrics for special needs, we did a poor job on geriatrics [inaudible 00:25:25] right now.
00:25:27	S6	[Inaudible 00:25:27].

00:25:29	S12	<p>Yeah, yeah, thank you. So in paediatrics and [inaudible 00:25:33] prevention, prevention, prevention, and more prevention [inaudible 00:25:37] guidance, nutrition, risk and also prevention of injury. We also talk about getting teaching about the dental homes starting early [inaudible 00:25:50]. We also want to talk about anatomy because anatomy's different in kids so to speak than adults, and if you remember when you're in dental school [inaudible 00:26:02] was scary. We have to have the materials as paediatric materials are different, we use a lot of different materials, and [inaudible 00:26:12] in general dentistry, so with that we talk about childhood diseases or pathology and we got to talk about special needs, psychology, behavioural stuff and sedation, we want to talk about traumas that are commonly in childhood and then kind of partly into early orthodontic intervention. And then we also want to talk about paediatric medications and also anaesthetic. All around the other side, ortho [inaudible 00:26:49] good diagnosis, knowing when to refer and what are the options to treat. Of course occlusion is important, case analysis, classification of occlusion, [inaudible 00:27:06], airway assessment, snoring, [inaudible 00:27:08]. Early intervention, when do these [inaudible 00:27:12] maintenance and oral habits, when to intervene. And then there's all about [inaudible 00:27:19] treatment. And radiographic assessment, and a simple ortho [inaudible 00:27:28].</p>

Appendix 1-8 CNU Action Accreditation Letter

June 30, 2017

Dr. Alvin H. Cheung
 President
 California Northstate University
 9700 West Taron Drive
 Elk Grove, CA 95757

Dear President Cheung:

This letter serves as formal notification and official record of action taken concerning California Northstate University (CNU) by the WASC Senior College and University Commission (WSCUC) at its meeting June 21-23, 2017. This action was taken after consideration of the report of the review team that conducted the Accreditation Visit to California Northstate University on March 7-9, 2017. The Commission also reviewed the institutional report and exhibits submitted by California Northstate University prior to the Offsite Review (OSR), the supplemental materials requested by the team after the OSR and the institution's April 6, 2017 response to the team report. The Commission appreciated the opportunity to discuss the visit with you and your colleagues: Dr. Karen McClendon, Vice President for Institutional Research and ALO, and Dr. Joseph Silva, Dean and Chief Academic Officer. Your comments were very helpful in informing the Commission's deliberations. The date of this action constitutes the effective date of the institution's new status with WSCUC.

Actions

1. Receive the Accreditation Visit team report
2. Reaffirm accreditation for a period of eight years
3. Schedule the next reaffirmation review with the Offsite Review in fall 2024 and the Accreditation Visit in spring 2025
4. Schedule the Mid-Cycle Review in spring 2021
5. Request an Interim Report to be submitted by November 21, 2021 to address
 - a. Program Reviews: provide evidence of completed program reviews, including retention and graduation data, for the newly implemented programs in the College of Medicine and the College of Health Science. These programs include the four-year BS, the non-degree 30-unit post-baccalaureate program, and the accelerated professional tracks leading to the MD and Pharm D;
 - b. An updated review of the recently created senior administrative positions and how each functions effectively in relation to the overall mission of the university;
 - c. An update on steps taken by CNU to ensure long-term stability through the retention of administrators, faculty, and staff.

Appendix 1-8 CNU Action Accreditation Letter

985 Atlantic Avenue, Suite 100, Alameda, CA 94501 • phone: 510.748.9001 • e-fax: 510.995.1477 • www.wscuc.org

Commendations

The Commission commends California Northstate University in particular for the following:

1. A strong sense of institutional identity and a clearly articulated mission shared by faculty, staff, and students;
2. Dedication to and engagement with the community outside of the university;
3. A student-centered approach to learning and a commitment to the implementation of innovative educational practices;
4. A thoughtful and realistic approach to expanding the current infrastructure to provide increased support for students;
5. The positive engagement of the Board of Trustees with evidence-based decision-making and accreditation processes.

Recommendations

The Commission identifies the following issues for further development:

1. CNU graduate culture, with special attention and focus on supporting faculty as they conduct research, publish in peer reviewed journals, present at national and regional conferences, and seek grant funding (CFR 2.8, 2.9, 3.4, 3.5);
2. Recruitment and retention of faculty, staff, and administrators (CFR 3.1, 3.3, 4.6);
3. Critically examine organizational structures including roles, responsibilities, reporting structures, and communication expectations, to ensure that CNU continues to achieve its mission. (CFR 3.7);
4. Efforts to provide evidence of student learning, the effective use of program reviews as a basis for decisions regarding increasing educational effectiveness, and clear strategies for communicating student achievement in terms of both graduation rates and levels of student learning (CFR 2.7).

In taking this action to reaffirm accreditation, the Commission confirms that CNU has addressed the three Core Commitments and has successfully completed the two-stage institutional review process conducted under the 2013 Standards of Accreditation. Between this action and the time of the next review for reaffirmation, the institution is encouraged to continue its progress, particularly with respect to student learning and success.

In accordance with Commission policy, a copy of this letter will be sent to the chair of California Northstate University's governing board in one week. The Commission expects that the team report and this action letter will be posted in a readily accessible location on the CNU's website and widely distributed throughout the institution to promote further engagement and improvement and to support the institution's response to the specific issues identified in these documents. The team report and the Commission's action letter will also be posted on the WSCUC website. If the institution wishes to respond to the Commission action on its own website, WSCUC will post a link to that response on the WSCUC website.

Finally, the Commission wishes to express its appreciation for the extensive work that California Northstate University undertook in preparing for and supporting this accreditation review. WSCUC is committed to an accreditation process that adds value to institutions while contributing to public accountability, and we thank you for your continued support of this process. Please contact me if you have any questions about this letter or the action of the Commission.

Sincerely,

Mary Ellen Petrisko
President

Substantive Change Report

Proposal Information:

Proposal Review Date	April 25, 2019
Institution	California Northstate University
Type of Substantive Change	New Degree: Professional Doctorate
Program Name/Location	Doctor of Dental Medicine
ALO	Karen McClendon
WSCUC Staff	Karen Graham
Committee Reviewers	Robyn M. Nelson Mitsue Yokota

Committee Recommendation and Date

Additional Information¹

Interim Approval on 4/25/2019	<input checked="" type="checkbox"/> Notification of Implementation <input type="checkbox"/> Federal Site Visit Required <input type="checkbox"/> International Visit Required <input type="checkbox"/> Fast Track <input type="checkbox"/> Non Compliance <input type="checkbox"/> Competency Based Degree
-------------------------------	---

¹Items listed above must be fulfilled in order to finalize Substantive Change Approval.

Commission Approval and Date (for Institutional Tracking)^{2,3}:

Implementation of an approved change must occur within two years of Commission approval. If the change will be implemented more than two years after the approval date, contact your WSCUC Staff Liaison to determine if the change requires re-approval.

² Commission approval of a new degree program signifies that the program is covered by the accreditation of the institution as a whole. Approval by WSCUC should not be represented, in marketing materials or other forms of communication, as program-specific accreditation, such as that bestowed by specialized professional, or programmatic accrediting organizations.

³ Record the date that the Commission took action on this Substantive Change proposal for your records.

Findings of the Committee:

Commendations:

1. The proposed program is clearly aligned with the institution's mission.
2. The institution is commended for its responsiveness to previous substantive change and commission recommendations.
3. The faculty are commended for the organization and efficiency of the proposal itself.

Recommendations:

1. Program faculty and administration must ensure that the marketing materials sent to prospective students are more comprehensive and detailed in regard to the length of the program, start date, clinical experience/hours requirements, and bachelor level degree requirements/recency and accommodations (CFR 1.6, 2.2)

Retain this document and attachments for your permanent records.

Substantive Change Report

2. The program faculty are encouraged to highlight the opportunity and potential support for research projects within the program which appear to be a distinctive attribute of the proposed program. (CFR 2.2)

3. Institutional administrators should review the availability of library resources and computers for student use on all days of the week. (CFRs 2.13, 3.5)

WSCUC Liaison Signature:

A rectangular box containing a handwritten signature in black ink. The signature is cursive and appears to read "Karen J. Smith".

Date: 4/25/2019

Additional Information (if applicable):

Notification of Implementation:

Under Standard One, it is the institution's responsibility to notify WSCUC when a program begins. You are required to confirm implementation of the program in order for the program or location to be listed on the WSCUC website for purposes of financial aid eligibility verification by the U.S. Department of Education.

Login to the Accreditation Management Portal and mark this program as Active within 30 days of implementation. Failure to report implementation may result in the suspension of financial aid eligibility for enrolled students. Repeated non-compliance with this requirement could also lead to a sanction of the entire institution under Standard One.

Retain this document and attachments for your permanent records.

Section I: Institutional and Program Overview

A. Program Overview

1. Name of Proposed degree program.

Doctor of Dental Medicine (DMD)

2. Initial date of offering.

Fall of 2019

3. Percent of the program being offered via distance education and/or off campus, if applicable.

N/A

4. Identify the language of instruction, if 50% or more of the program will not be in English.

N/A

B. Descriptive Background, History, and Context

1. Provide a brief description of the institution, including the broader institutional context in which the new program will exist. Connect the anticipated substantive change with the mission, purpose, and strategic plan of the institution.

California Northstate University (CNU) is an institution of higher education dedicated to developing and training professionals who are leaders in healthcare science, education, and research. As an attempt to address the continued deficits faced by California in the production of healthcare professionals, the College of Pharmacy (COP) was founded in 2006 and gained approval to operate as a degree-granting college from the Bureau for Private Postsecondary Education (BPPE) on April 15, 2007, according to the standard operations as set forth in California Education Code 94705.

The College of Pharmacy (COP) welcomed its inaugural class in the fall of 2008, and CNU was granted WSCUC accreditation in June 2012. In continuing the mission of CNU to advance the art and science of healthcare by providing innovative education and delivery systems, the College of Medicine was added through WSCUC's substantive change process in August 2013 and accepted its first class in fall of 2015. In May 2015 WSCUC approved the addition of an undergraduate program in Health Sciences. The College of Pharmacy and the College of Medicine offer a PharmD and MD respectively, and the college of Health Sciences offers a BS degree in Health Sciences. The College of Pharmacy is accredited by the Accreditation Council for Pharmacy Education (ACPE), and the College of Medicine is accredited (Preliminary Status) by the Liaison Committee on Medical Education (LCME).

The doctorate of psychology (PsyD) program was planned in 2016 and created in 2017 to further CNU's mission of advancing the art and science of healthcare by adding another important healthcare-related professional doctoral degree to the current offerings. The PsyD program teaches scientifically proven

interventions and provide hands-on clinical experience to students who are educated to become solo practitioners or work within multidisciplinary treatment teams. Upon graduation, students will possess and demonstrate the knowledge and skills needed to treat diverse and complex mental health populations. This program was added through the Substantive Change process via a proposal in the fall of 2017 and approval in the spring of 2018, and a small class started in September 2018.

The CNU Graduate School was another natural extension of the University's mission *to advance the art and science of healthcare*. The MS in Pharmaceutical Sciences program was added to program offerings within the College of Pharmacy via a substantive change, approved in the summer of 2018.

The new program in dental medicine is strategically aligned with CNU's Vision to provide innovative education and healthcare delivery systems for the Northern California region and beyond. The DMD program will provide a venue for integrating oral health into human health science education and practice. The establishment of graduate courses in health sciences provides an opportunity for CNU to expand its range of scholarly activities and continue its development of an innovative, integrated curriculum; providing development opportunities for existing faculty from other colleges to contribute to another program that speaks to their expertise. The program serves as an additional venue for CNU to prepare a new workforce for a modern, fast-evolving healthcare sector, specifically in the areas of access to care, public health, and technology development and implementation. Dental medicine will assist the other health professional programs in developing oral health as integral to primary care medicine, pharmacy practice and behavioural health among others. It further helps the university expand and advance research opportunities.

2. If this is a joint program, identify the roles and responsibilities of each institution in developing, delivering, and addressing the program.

N/A

3. List the number, variety and longevity of other doctoral programs currently being offered, including student enrollment and projected time to graduation, if applicable, to each doctoral program. At least three and no more than five years of data should be provided. If this is a joint doctoral program, provide this data for each institution.

There are currently three doctoral programs offered at CNU: the MD, PharmD, and PsyD. The College of Pharmacy's inaugural class was in 2008, and it is a four-year program. The College of Medicine's inaugural class was in 2015, and students will graduate in 2019. The College of Psychology's inaugural class was in fall of 2018.

Entering/Graduating	2013/2017	2014/2018	2015/2019	2016/2020	2017/2021	2018/2022
PharmD	114	120	68	125	137	144
MD	N/A	N/A	60	90	94	96
PsyD	N/A	N/A	N/A	N/A	N/A	11

4. If 50% or more of the program will be offered via distance education, describe the institution's prior experience offering distance education. For joint programs, provide this information for each institution.

N/A

5. If the institution currently offers a joint doctorate in this discipline, indicate whether the program will continue and provide details on how the proposed program fits into the strategic plan of the institution. If the joint program will be discontinued, refer to Section VI on teach-out requirements.

N/A

C. Institutional Accrediting History Relevant to Substantive Change

1. Provide a brief response to issues noted in prior substantive change reviews since the institution's last comprehensive review, even if the programs reviewed were at a different degree level or offered in a different discipline. If this is a joint program, provide this information for each institution.

In the new most recent substantive change reviews, the following issues were identified:

The Committee's Action Report, dated 2- 27-2018, with respect to the PsyD program, made the following recommendations:

1. Future substantive change proposals which include clinical experiences must include a completed Memorandum of Understanding specific for the proposed program as requested in the proposal template. (CFR 1.7)
2. Program faculty must monitor carefully the sufficiency of IT and library hours as well as staff support in these areas to assure that resources support the intensity level of doctoral programs. (CFR 3.5)

In response to the issues identified by the Substantive Change Committee, signed MOUs are now a required component of the CNU's Substantive Change process. For the proposed program, MOUs are in place with Health and Life Organization Inc. (HALO) serving 70,000 dental patients in four clinics, Asian Health in Oakland serving nearly 100,000 patients in Oakland, and with correspondences from Shingle Springs Indian Health, Sacramento Native American Health Center, the Yolo County Health Authority, and Colusa Indian Health. Note that the Year 4 community clinic rotation of eight weeks will be accommodated by 14 clinical spots. The plan is for Shingle Springs to take six students for rotations throughout the year and for each of four other sites to have 2-4 spots per year, an excess capacity based upon the current curriculum plan (MOU docs).

The librarian, Scott Minor, monitors library resources to ensure that programs have appropriate resources. Deans incorporate library resource needs and requests into their budget, and faculty determine needed resources. Should the librarian not have a resource that is needed, CNU will buy that individual resource file for the faculty member or student. Additionally, CNU administers an annual survey student survey (as well as a faculty and staff survey) that asks about the sufficiency of library resources, training, and support. Further, the library has Service Area Outcomes that are assessed annually, as well as an SLO for information literacy that is also assessed annually.

The IT Department monitors the sufficiency of IT services, training, and support, and the university administers a survey to students (as well as faculty and staff) regarding satisfaction with IT resources, training, and support. Additionally, the IT department has its own Service Area Outcomes that are assessed annually through a rubric that articulates benchmarks and performance levels as well as assessment by various constituencies (faculty/staff and students) through satisfaction surveys.

For students the following pedagogical and educational technology support services are currently available to students:

- IT staff provide training on relevant software, including Canvas, TurningPoint, and ExamSoft and teaching equipment maintenance.
- Online textbooks and additional expertise and training in literature and database search and other library services from the university library staff: Mr. Scott Minor, MSLS (Director) and Ms. Melania Sukiasyan (Library assistant).
- Access for preceptors to the CNU Health Science Library (<http://pharmacy.cnsu.edu/student-services/library-learning-resources>) for their commitment to educating future pharmacists.
- Library admittance allows access to physical text references, online journals and databases. For any student or faculty needs, the contact is Scott Minor, Health Science Librarian, at (916) 686-8363 or SMminor@CNSU.edu. Students and faculty access library resources via the E*Value Home Page. Updated login information is listed here for all active preceptors.

Recent survey results for the recent IT survey show that a majority of CNU students agree or strongly agree that the library has sufficient resources and are able to acquire needed resources (Overall: 72.6%; PharmD: 65.6%; MD: 78.6%), that the library is accessible during the hours in which they need (Overall: 88.6%; PharmD: 72.8%; MD: 97.2%), and that IT provides quality service in a timely fashion (Overall: 93.3%; PharmD: 96.3%; MD: 92.0%) (refer to IT Resources Report, 2019).

The following databases are available through the Library webpage for all the University community:

- **AccessMedicine** - from McGraw-Hill is an online resource containing electronic copies of major medical and health related textbooks.
- **AccessPharmacy** – from McGraw-Hill is an online curricular resource designed to meet the changing demands of pharmacy education. Containing electronic copies of major pharmacy textbooks. AccessPharmacy allows students to select a core curriculum topic, browse by organ system, review textbooks, or search across leading pharmacy online references.
- **APhA PharmacyLibrary** – features content from a selection of APhA's authoritative textbooks, an interactive NAPLEX® review, case studies, and a variety of news sources.
- **Bates Visual Guide** – A collection of physical examination videos for different systems.
- **Clinical Pharmacology** – a complete drug and toxicology information solution for improved decisions and prevention of clinical quality shortfalls at any point of care.

- EBSCO Academic Search Premiere – A bibliographic multi-disciplinary full-text database, with more than 8,500 full-text periodicals, including more than 7,300 peer-reviewed journals.
- Micromedex – a suite of databases including Drugdex which provides evidence-based, unbiased, fully referenced information and independently reviewed data from major drug centers and pharmacology services worldwide; Identidex which identifies pharmaceuticals by the imprint code and secondary characteristics such as color, size and shape; and Poisindex which identifies ingredients for hundreds of thousands of commercial, biological, and pharmaceutical products.
- Natural Standards) – is a database founded by clinicians and researchers to provide high quality, evidence-based information about complementary and alternative therapies.
- OVID – A collection of approximately 50 full-text journals from the American Journal of Cardiovascular Drugs to Therapeutic Drug Monitoring. An additional 3000+ journals have indices and abstracts available here.
- Resources A-Z – A searchable electronic listing of all our current electronic journals over all our platforms.
- Online public access card catalog for books and other physical items.
- Interlibrary Loan Request form

For the new PsyD program, the Dean is currently adding additional library resources (including PsyInfo and a large collection of psychology articles) based on feedback from faculty. As a result of the important recommendation made by the Substantive Change Committee, in addition to keeping track of database usage and asking questions about satisfaction regarding the library and resources, more specific questions regarding hours, access, and resources have been added to of the satisfaction survey to be administered later this spring.

The Committee's Structural Change Team Report, from the visit of 5-10-2018, with respect to the M.S. in Pharmaceutical Sciences program, made the following recommendations:

- 1) CNU should demonstrate institution-wide commitment to quality assurance practices by consistently implementing assessment practices and program review and involving all relevant groups and individuals. As CNU's programs grow and mature, the institution will need to ensure new faculty understand the importance of assessment and exercise their vital part in institutional culture of learning and improvement (CFR 2.4; 4.3, 4.4).**
- 2) As the program grows, CNU should continue to ensure that there is a sufficient number of qualified faculty to support student/faculty ratios for quality graduate-level culture, mentorship, and collaborative research.**

In response to the substantive change team's thoughtful recommendations, the institution has taken key steps to ensure that this and other new programs will undergo the same program evaluation and assessment processes as other programs in the university. The university has a policy that each program undergo a full academic program review and that they utilize CNU's Program Review Handbook and Assessment Guidebook to help them conduct thorough reviews. The MPS faculty will continue to develop plans for the direct and indirect assessment of student learning, as outlined in the MPS PLO and ILO Assessment Plan. The next programs at the university to be scheduled for program review in later

2019 are the College of Medicine's MD program and the College of Health Science's BS program. Both programs will adhere to institutional and good practices guidelines for program review, which include the requirement for the direct assessment of student learning and an external review component (see 1502 – Academic Program Review Policy).

To ensure that faculty receive training in assessment, MPS faculty will attend the annual Assessment training session provided by the Office for Institutional Research and Assessment. During this last training session in August 2018, the training session was recorded for documentation and the professional development of faculty. The Office for Institutional Research and Assessment will work with program faculty to ensure good practices are utilized, data are captured, and results are analyzed and utilized in the creation of action plans.

Each college's department and/or program regularly monitors student-to-faculty ratios as well as conducts workload analyses to ensure the appropriate numbers of faculty in each area to carry out faculty responsibilities, ranging from teaching to assessing student learning to advising and mentoring to service and research. Currently, this ratio for the MPS program is 1:1. For the PharmD program, this ratio is 12.9: 1, and for the COM, the ratio is 10.45:1. For the PsyD program, the ratio is 5:1.

Refer to Attachment I.C.1 CNUCDM_AHS_MOU.pdf, Attachment I.C.1 CNUCDM_HALO_MOU.pdf, Attachment I.C.1 IT Resources Report, 2019.pdf, Attachment I.C.1 1502 – Academic Program Review Policy.pdf, Attachment I.C.1 Assessing Student Learning and Creating a Culture of Assessment.pdf

2. Provide the institutional response to issues relevant to doctoral level education noted in the last Commission or Interim Report Committee letters or in related team reports. If this is a joint program provide information for each institution.

On June 30, 2017, CNU received an action letter from WSCUC (CNU Action Letter doc), reaffirming CNU's accreditation for a term of eight years. The recommendations include further support of faculty as they conduct research, recruitment and retention of faculty and staff, a critical examination of organizational structures, and evidence of student learning and educational effectiveness for the MD program (including conducting a full program review).

CNU fully agrees with the team's and commission's evaluation and recommendations and has already made progress in response to the issues identified in the action letter from WSCUC and the visiting team's report. CNU has developed and is implementing the following improvements: an advanced recruitment training for search committees and hiring managers, development of an enhanced review process for evaluation of the organizational structure, a committee to improve flow and organization of the CNU website to increase ease of use and access to documentation, increased numbers of faculty to keep each college at the appropriate student-to-faculty ratio and to ensure greater balance of research and teaching duties, a systematic annual review of staff benefits, the creation and use of a task force focus groups for employee satisfaction (Task Force Meeting Notes doc), two new policies geared to faculty and staff retention (tuition reimbursement and legacy policy docs), an increase in research support, and the initiation of a new faculty development seminar series (refer to Faculty and Staff Retention Policy and Procedures doc).

Recently, the CNUCOM has increased support for faculty research in various ways:

Appendix 1-8 WSCUC 2019 CNUCDM

1) The COM has established a mini-grant program to foster research by the faculty. The research mission of the COM is to promote research spanning basic research, translational and clinical research, population sciences and education research. In 2017 funding totaling \$40,000 was provided. This was increased with the recruitment of more research-oriented faculty by 50% to \$60,000. In 2019, the first (winter) cycle of funding was for an amount of \$60,000 with the potential of a second request for applications in the summer cycle. Through the availability of start-up funds dedicated to research, with the expectation that faculty mentor medical students in their research projects and be able to obtain sufficient preliminary data to submit extra-mural grants to NIH and other funding organizations. Additional funding is available to the Course Directors to offset expenses associated with student research in the self-directed student scholarly research program (SDSSP) course for poster preparation and travel to national meetings. Also, the Dean provides protected time for faculty who have a major focus on research to enable them to generate preliminary data and submit extra-mural grants. Further support for grants, collaborations and capital equipment as requested by faculty is processed through the COM Office of Research. In addition to the budgeted allotment for funding for new research, there is also a budget line item for continued research.

2) Establishment of Institutional Regulatory Boards including IRB and IACUC to ensure all faculty follow responsible conduct in research.

3) For the new Center for Translational Medicine we recently hired the Director for the Center in 2018. This will allow for further expansion of research endeavors within the college.

4) Both the Assistant Dean of Research and the Vice-President of Research advise junior faculty in grant writing and critique their research proposals prior to submission to extra-mural funding agencies.

To fulfill the College's commitment to research, CNUCOP's research focuses on laboratory, clinical, pedagogical areas of scholarship, and educational outcomes. The College provides funding to promote faculty development, collaboration, innovation, and discovery in research/scholarship. Each year the college provides \$3000 per faculty member for individual faculty development, and over the last three years the college has provided nearly \$100,000 for internal seed grants, \$33,000 for the student summer research fellowship program and 4 external grants with values of \$323,000. The COP has developed four laboratories for clinical sciences (i.e., Compounding, IV preparation, Simulation patient mannequins, Advance Pharmacy Practice Simulation) and expanded the Research lab. The College also initiated the Summer Research Fellow program in 2016 for students to work with faculty in research and developed the Translational Research Symposium where students, residents, faculty from all Colleges at CNU and the surrounding areas can participate in. As a result, the faculty and students published 55 manuscripts from 2015 through 2017 and 9 in 2018. The College provides short and long-term mentoring programs for new and current faculty. Short-term mentors orient new faculty to University and College policies, procedures, and resources available at CNU. Long-term mentors provide continued guidance to faculty to assist the mentee in achieving his or her professional goals. The College, in collaboration with CNU College of Medicine, regularly provides seminars related to research and teaching

Additionally, to cultivate a climate of inclusion, wellness, and enhanced appreciation of employees, two committees were created: the University Wellness Committee and the Diversity and Inclusion Committee. The University Wellness Committee was created to serve as a base of communication for all of the college-specific wellness committees, with the inclusion of representation for the new PsyD

program. The Diversity and Inclusion Committee has expanded and included student representation, and also planned events, discussions and forums related to race, gender, and other demographics. Colleges within the University have hosted employee appreciation events, and employee of the quarter awards are given at every quarterly town hall meeting (see Meeting Minutes from Wellness Committee doc).

In the 2019 Staff Satisfaction Survey, overall 86% of staff indicated they receive timely feedback from their supervisors regarding their work (PharmD: 100%; MD: 83%; University level: 90%), 78% indicated that CNU fosters a culture of diversity and inclusion (PharmD: 100%; MD: 67%; University level: 71%), and 100% indicated that their work is respected and valued by their supervisor.

Refer to Attachment I.C.2 CNU Action Letter.pdf, Attachment I.C.2 CNUCOP Research Summary (2016-2018).pdf, Attachment I.C.2 Faculty Retention Report, 2019.pdf, Attachment I.C.2 1307 - Faculty and Staff Retention Policy and Procedures.pdf, Attachment I.C.2 Meeting Minutes from Wellness Committee.pdf, Attachment I.C.2 Task Force Notes.pdf

- 3. If the program is within a school accredited by a professional accrediting agency, or is related to a program that is accredited by a professional accrediting agency, list the agency, year accredited, and attach a copy of the most recent team evaluation report and agency action. Also indicate whether the specialized agency needs to review and approve the proposed program prior to implementation and when the review will be completed.**

The College of Dental Medicine DMD program must receive "Initial Accreditation" by the Commission on Dental Accreditation (CODA) before enrolling its first class of students. The Initial Accreditation includes at least one site visit and conveys that the developing program is likely to be successful in meeting the CODA accreditation standards once fully operational. The Self Study for the Initial Accreditation is currently underway. The CNUCDM is completing its Self Study report with plans to submit by the end of February 2019. This will allow for the opportunity to receive Initial Accreditation in Summer 2019 with enrollment of students in Fall 2019.

4. CODA

Section II: Program Need and Approval

A. Program Need

1. **Identify the program need/rationale framed by the institution's mission and strategic goals. Local program need should be documented in addition to any national or statewide need. For joint programs, provide this information for each institution.**

The DMD program supports the institution's mission of preparing future professionals to advance the art and science of healthcare and the vision of the university towards primary care, community service, and social consciousness and accountability. California Northstate University (CNU) currently offers an array of healthcare programs whose students would benefit from the addition of a dental education program and the interprofessional education opportunities that such a program would afford. Currently, the university provides interprofessional education experiences for students in the medical, pharmacy, and psychology doctoral programs.

Sacramento is an ideal location due to its strong professional community, strong need for a dental school, the lower cost of living within California, and access to very prepared students and excellent faculty. CNU's DMD program would be in a position to partner with health systems and the state to improve oral health access and oral health outcomes for Sacramento, the east bay, the central valley and mountain regions of California. Additionally, the dental school would be able to partner with community resources, foundations and charities for care for underserved Californians in Sacramento and beyond.

Sacramento is in need of a dental school, as one of the 30 largest metropolitan areas in the nation, Sacramento and San Diego are the only ones without a single dental school associated with their region. Dentistry is the health profession in the highest demand: The 66 US dental schools have about 6000+ spaces for about 13,000 US applicants and an equal number of non US dental graduates seeking a US dental degree. Graduates of dental schools have virtually 100% employment in professional related activities on day of graduation. California residents seek dental education outside of California at the highest rate of any state.

There is a great need for dental schools due to what is considered a "hidden epidemic": Dental disease is the greatest untreated and undertreated of all diseases in children, the elderly, disabled, special needs patients, the poor and medically compromised. California dental schools have an inadequate record in providing dentists to rural, mountain and central California cities. There are 25,604 dentists in California for a population of 38,441,747, meaning one dentist for every 1,500 people. Academic health centers benefit from the full array of health science education with dentistry integrated into the fabric of healthcare. Policy makers in California have awakened to oral health disparities and increased attention and support for oral health.

Additionally, this program is responsive to the needs within California and beyond for qualified dentists to fill the demand for dentists. According to the Bureau of Labor Statistics, the demand for dentists will continue to grow nationwide as the US populations continues to exponentially grow and age. The aging US populations are more likely to retain their teeth due to advancements in healthcare and the increased risk of oral cancer demands have created an increase in the demand for dental professionals.

The projected employment change from 2016 to 2026 for dentists is a 19% growth, which was determined to be much faster than the projected average US job growth.² Due to this exciting time of growth and possibility for innovation within dentistry, it is important that CNU stays on the cutting edge in training the best and most competent future dentists.

Refer to Attachment II.A.1 CDM Strategic Plan.pdf

2. Describe the process and results used to establish need. Please provide summary of findings, not the full study.

The process used to establish need began with a review of oral health services nationally and in California, the number of current providers, and the projected deficit in dentists. These findings are summarized in A.1. According to a compilation of 2016-2017 admissions data retained by the American Dental Education Association, it was shown that 6,100 first year enrollees were accepted from a total of 12,058 applicants (50.6% acceptance rate). The report showed that the majority of applicants (per million population) to US dental schools were from the Pacific Northwest¹. California has six schools that offer programs for dentistry – two are in San Francisco and four are in the Los Angeles area. There is a need to have an established dental school within California's central valley for prospective students living in the region and outlying locations. Of the 30 largest metropolitan areas in the nation, Sacramento and San Diego are the only ones without a single dental school associated to their region. A total of 1,951 individuals applied to dental programs within the Western US, and a total of 1,031 were enrolled. By establishing more dental programs in this region, more qualified students may be able to attend dental programs.¹

The following attachment shows all six monitored dental schools in California as well as information regarding CODA accreditation status, their applicant pools, and enrollment rates. These numbers indicate that student desire for dental program placements outnumbers current availability. Additionally, the quality of applicants has improved over the years, in spite of the limited number of programs available to them. The DAT average for applicants in 2000 was 17.8 and had risen to 19.3 by 2017. Similarly, GPAs grew from 3.2 in 2000 to 3.4 by 2017.ⁱ This indicates a robust pool of qualified applicants are simply unable to enroll because the number of dental programs is insufficient.

Refer to Attachment II.A.2 Monitored Dental Programs

3. What evidence (surveys, focus groups, documented inquiries, etc.) was used to support enrollment projections and to support the conclusion that interest in the program was sufficient to sustain it at expected levels?

According to the Commission on Dental Accreditation (CODA), there are six dental programs in California, the closest two being in San Francisco at University of the Pacific, Arthur A. Dugoni School of Dentistry (97mi) and UCSF School of Dentistry (101mi). In 2017, University of the Pacific had 2,364 applications and 142 enrollees (6% acceptance rate), and UCSF had 2,022 applications and 86 enrollees (4% acceptance rate)³. Due to the lower acceptance rate, coupled with the scarcity of dental programs within 50 miles of the Sacramento region, it can be determined that there is a need for a dental school in the region. Of the 30 largest metropolitan areas in the nation, Sacramento and San Diego are the only ones without a single dental school associated to their region.

In early fall of 2018, a survey was created and disseminated to CNU College of Health Sciences undergraduate students. The survey contained questions regarding students' interest in the field of dentistry, their desire for more information about CNU's dental program, and whether and when they might wish to submit an application to CNU's dental program. It was found that 76% of CHS students wanted further information about the program, 51% were interested in pursuing dentistry as a career choice, and 50% would apply to CNU's dental program. The majority of respondents who indicated that they would apply to the dental program also indicated that they would desire to do so as soon as they have completed their undergraduate coursework at CHS. Multiple students have indicated that the dental program at CNU fits well within the scope of the university, which reflects CNU's mission, "to advance the art and science of healthcare" (see CHS Dental School Interest Survey doc).

- 1 Wanchek, T., Cook, B. J., & Valachovic, R. W. (2017) US dental school applicants and enrollees, 2016 entering class. *Journal of Dental Education*, 81(11), 1373-1382. Doi: 10.21815/JDE.017.096

- 3 Commission on Dental Accreditation, *Search for Dental Programs*. Retrieved from <https://www.ada.org/en/coda/find-a-program/>

Refer to Attachment II.A.3 CHS Dental School Interest Survey.pdf

4. Attach the recruitment and/or marketing plan for the program. Describe the geographic scope of the program.

California Northstate is committed to being a California school committed to gaining a student body from underserved communities, including rural California communities, immigrant and migrant communities, underrepresented minorities and other chronically underserved communities. Through our pipeline program we will identify, mentor, and support community members who will seek careers in the health professions broadly and dental medicine specifically.

Refer to Attachment II.A.4 DMD Marketing and Recruitment Plan.pdf

B. Planning/Approval Process

- 1. Describe the planning and approval process within the institution, indicating how the faculty and other groups (administrators, trustees, stakeholders, etc.) were involved in the review and approval of the program. Include any campus established criteria for doctoral level work. Attach documentation of necessary approvals. CSU campuses must attach a letter of approval from the Chancellor's office.**

CNU is engaged in continuous assessment of the critical elements of the institution-- from assessing how well the college achieves its mission to assessing how effectively the institution's strategic thinking and planning advance the institutional mission, vision, values, and goals. Assessment drives programmatic improvements, which are subsequently incorporated into the institution's strategic planning and the budgeting process.

Strategy 6.3 of the University's Strategic Plan is to "research viability of new programs that are consistent with the Mission for implementation." The tactics for this plan include the following: conduct

appropriate research to explore plans for potential growth, create plans for new program development, develop substantive change proposals for new programs, and implement new programs that are good matches.

Initial planning for the DMD program began in 2016 when California Northstate University was exploring the possibility of other doctoral programs within the healthcare professions that not only provided a good fit with the current program offerings but which also was greatly needed in California and beyond. The DMD program emerged as the best fit with the current offerings of CNU due to the mounting dental care needs of Californians.

On September 18, 2017, the Dental School Task Force was created in order to examine the need for a regional dental school in the Sacramento area, as well as the shortage of dentists nationwide. Cost and affordability were discussed within the initial meeting, as well as the responsibility of CNU to provide a quality education and reasonable costs to the students. On November 13, 2017, administration was given an update on the program in the President's Executive Counsel and further feedback and discussion was solicited.

At the February 10, 2018, meeting, the task force discussed the process of accreditation, including planning the timing for the WSCUC change and CODA accreditation processes. Further, Dr. Leon Assael was referred to the group, the person who would eventually be hired as Dean of the College of Dental Medicine after a search conducted in the fall of 2018.

On May 26, 2018, Dr. Leon Assael met with the task force as a consultant, and the group discussed the important goals and creation of curriculum, accreditation timeline, and overall cost. On August 4, 2018, a more detailed idea of the curriculum strategy was discussed, as well as the creation of the dental clinics and student training. On August 6, 2018, the DMD program was introduced to the full faculty and staff in a Town Hall meeting.

On October 30, 2018, Dr. Leon Assael addressed the Board of Trustees and gave a brief description of his background, and his plans on the timeline for accreditation and process for the creation of the dental program. The application for WSCUC was submitted November 29, 2018, and the substantive change review is scheduled for April 2019. The Faculty Senate reviewed and discussed the proposed program during their November 6, 2018, meeting, and final Faculty Senate approval was given on November 12, 2018. After completion of the search for the dental dean, Dr. Leon Assael was hired on a part time basis on November 1, 2018, and as a full-time employee on December 1, 2018.

Refer to Attachment II.B.1 1501 –Attachment II.B.1 DMD Development Meeting Minutes.pdf, New Program Approval Process.pdf, Attachment II.B.1 Faculty Senate Approval Letter.pdf

- 2. If the institution is part of a university system, describe the review process at the system level, including any system requirements for doctoral level work. Attach documentation of approval.**

N/A

C. Collaborative/Cooperative Agreements

1. If the proposed program includes collaboration or cooperation with outside agencies, institutions or other entities, please describe the purpose and nature of the relationships. Attach relevant signed Memoranda or Agreement or other documentation. If this is the first program to be offered 50% or more online, or if the LMS provider has recently changed, please attach the contract with the provider.

	2019-2020	2020-2021	2021-2022	2022-23
Class 1	80	80	80	80
Class 2	N/A	80	80	80
Class 3		N/A	80	80
Class 4			N/A	80
TOTAL STUDENTS NEEDING PLACEMENT	80	160	240	320 80

The planned DMD class size of 80 will engage about 160 students in clinical care at all times beginning in 2021, which may include international dental graduates to the level of 80 or greater. The economies of scale in dental education have kept the average dental school class sizes between 80 and 110. The largest dental school in the US is NYU with 400 per year and the smallest is Harvard with about 45 per year. In assessing the workforce needs of California, the 31,000 dentists of California need to replace and add to their workforce at about 4% per year meaning 1240 dentists. Matriculating dentists in the six dental schools in California include the following:

	Number of First Year Dental Students
University of the Pacific	141
USC	148
Loma Linda	103
Western University	70
UCSF	90
UCLA	87

Thus the total matriculating dentists in California schools is 638 per year A DEFICIT of 600 dentists per year. Within the capacity of the University, CNU acceptance of 80 matriculates a years from this underserved region will address this issue.

To incorporate the DMD program, CNU will build a preclinical laboratory and a clinical simulation at the Elk Grove campus. For clinical facilities, CNU will work in two phases. The first phase will be the development of a clinic in Elk Grove with 30 clinical treatment units in 2019-20. A second clinic, also with 30 clinical treatment units, will be built at another location and completed in 2021. Both clinics will have core radiology, digital clinical facilities, operational electronic health record systems, sterilization and equipment management programs. The College will also partner with primary care clinics, dental specialties and advanced practice clinics associated to health and hospital systems, and community health centers with a FQHC model. These partnerships will be a part of the clinical experience for Year 4 students (see MOU docs).

The DMD program at CNU will partner with health systems and the state to improve oral health access and oral health outcomes for Sacramento, the East Bay, the Central Valley, and mountain regions of California. The program will partner with community resources, foundations, charities for care for underserved Californians, and international dental schools.

Section III: Program Description

A. Curriculum

1. Provide an overall description of the program including the alignment of the program philosophy, curricular design, pedagogical methods, and degree nomenclature selected. Identify the program's emphasis as a professional-practice (applied research, practice-oriented, or clinical) degree or a scholarly research-oriented degree.

California Northstate College of Dental Medicine (CNUCODM)

The proposed dental program culminates in a clinical doctoral degree: the Doctor of Dental Medicine (DMD). The Mission of the College of Dental Medicine is to advance the art and sciences of healthcare through excellence in oral health education, practice, research, service, and social accountability.

Education: Create skilled and knowledgeable clinicians who will constantly advance their capabilities throughout life

Practice: Produce clinical leaders in oral health who will serve in private practice, health systems practice, and in interprofessional settings

Research: Promulgate scientific inquiry throughout the curriculum and support student and faculty research that creates an environment of scientific curiosity and an evidence-based foundation for clinical practice

Service: Provide individual patient care services at all clinical sites under the auspices of CNUCODM that produces the very best oral health outcomes and clinical value

Social Accountability: Advocate for and help build stronger communities in California and globally through improved oral health care, disease prevention, health promotion and protection from oral diseases through community based approaches

The Vision of the College of Dental Medicine is to provide constructive innovation in its education programs and leadership in integrating oral health care into human health care systems.

Values:

- Providing patient-centered didactic and clinical education that always puts improved health outcomes first
- Building stronger communities and creating a better world through improved oral health
- Understanding the professional responsibility of the dentist as the head of the oral health care team
- Practicing health promotion and disease prevention and protection
- Advancing California Northstate University through excellence in all we do

Appendix 1-8 WSCUC 2019 CNUCDM

The integration of oral health into overall human health requires dentists who are capable of performing at the highest level in an ever more complex and demanding environment of emerging technology, social change, human disease management, and evolving health systems.

In response, the California Northstate College of Dental Medicine (CNUCODM) has developed a curriculum with four basic themes: Human Systems, Odontology, Oral and Maxillofacial Studies, and Behavioral and Social Sciences. All four themes will be delivered in a diagonal curriculum to provide both horizontal and vertical integration of clinical and basic sciences in order to build students' competency in both the art and science of dentistry. Patients' assessment and management decisions need to be made through consideration of individual patient's health status and selection of the most appropriate interventions. The curriculum therefore is reflective of the necessary integration of the biomedical, behavioral, and social sciences.

The DMD curriculum will include concurrent didactic, small group learning, simulation and clinical experiences at all phases of the curriculum with increasing clinical experiences and decreasing didactic experiences gradually through all four years. While basic clinical encounters begin in the fall of the first year, advanced clinical practice occurs in the fourth year.

While emphasis on didactic foundations is at a high level in the first year, some didactic components with seminars and case-based didactic experiences continue through the fourth year. Specific types of pedagogical methods during classroom learning include the following: presentation, demonstration, simulations, team-based learning, problem-based learning, and clinical case studies.

CNU's dental program will utilize a common pathway with the Colleges of Health Sciences, Medicine, Pharmacy, and Psychology to build a solid foundation in the medical sciences and to provide a rich interprofessional education for students who will be working in healthcare teams for the benefit of patients. The following principles will be employed throughout the DMD curriculum:

- Interprofessional education experiences
- Collaborative practice models in clinical education
- Strong basic medical sciences with systems-based block segments
- Immediate and continuous clinical correlation
- Patient-centered care with practitioner/faculty led care teams
- Education in health systems and community clinics integrated with CNU based clinical education
- A competency-based clinical practicum
- Eclectic curriculum with "selectives" (electives that students choose) to guide students towards areas of clinical, research and societal interests. Selectives are among an array of clinical experiential, research or didactic courses available as part of the academic calendar to be selected by students in the developed block time.

These principles and designated educational experiences are designed to provide a strong foundation for building competency in the practice of dentistry.

2. **If 50% or more of the program will be offered via distance education, provide a detailed description of the modality and format being proposed (i.e., synchronous, asynchronous, online, correspondence, teleconference, video on demand, etc.). Provide guest log-in access to the**

learning management system for this program for at least one course for which a syllabus is provided. The course must be part of the proposed program, not from another program.

N/A

3. If 50% or more of the program will be offered via distance education, describe how the curricular design and pedagogical approach has been adapted to the modality of the program.

N/A

4. If applicable, describe each track within the program being proposed including the capacity of the institution to support each track. Each track will be acted on independently.

N/A

5. Describe how a doctoral level culture will be established to support the proposed program, including such elements as doctoral level course requirements, nature of the research environment, balance between applied and research components of the degree, and type of culminating experience (full dissertation or a culminating project). Also include plans for faculty research, faculty hires, library resources, and peer and campus collaboration. Discuss how students (both full-time and part-time) will be integrated into the intellectual community of the department and institution. If this is a joint program, provide this information for each institution.

CNU currently has a well-established doctoral culture on campus with students enrolled in both the PharmD and MD programs and, more recently, in the PsyD program. The doctoral culture is pervasive across the university—with research opportunities and support for faculty and students. Research groups at the University have produced over 54 publications, 23 grants, 73 presentations, 37 scholarships and fellowships, four book chapters, and two patents.

For the DMD program, establishment of a graduate culture will begin before students enter the program through appropriately rigorous admission requirements. These include a baccalaureate degree, demonstrated academic excellence and high GPA, evidence of scholastic engagement through letters of recommendation, and a driven desire to succeed in the profession as evidenced by their statement of purpose. Doctoral level course requirements are sequential and increase in difficulty and complexity as the student moves through the program gaining the skills and experience necessary to become a dentist. To ensure that students develop the skills and cultivate the attitudes and values needed for the profession, students will be mentored throughout the entire program.

Students in the DMD program will be integrated into the intellectual community of CNU in three fundamental ways. First, they will share the same semester schedule as the College of Pharmacy and the College of Medicine so that students are encouraged to interact through the same break times, vacations, and active class periods. Within this semester schedule, students in the DMD program will take common pathways courses with their fellow students in the College of Medicine. These courses in Human Systems will provide opportunities for collaboration in coursework and projects.

Students will also be sharing learning spaces in the library and study halls. Additionally, each college has dedicated laboratory spaces, serving various functions inside the spectrum of research and clinical training. For instance, the College of Medicine has approximately 2,100 square feet of dedicated research space for benchtop research applications for faculty and their student mentees. In addition, the COM possesses a 619 square feet simulation lab composed of two digital manikins, PC read outs and emergency response equipment (crash carts, blood pressure cuffs, pseudo-meds, etc.). This space is allocated for simulated emergency room, trauma applications and ultrasound equipment. The manikins are highly interactive and give the students the opportunity to practice their clinical skills without the guilt or stress of potentially injuring a live patient. . CNUCOP has 3 classrooms of 5,000 square feet each, one sterile compounding lab, an IV sterile compounding lab. It shares the manikin lab with COM as well as an interprofessional education program. The COP has an Advanced Pharmacy Practice Simulation Lab and a new lab with 700 square feet finished in 2018 for drug discovery, pharmacology and virology.

CNU recognizes and promotes appropriate linkages among scholarship, teaching, assessment, student learning, and service. Each college of the university allots a percentage of faculty's time for pursuit of research and/or scholarly activities, including mentoring students in these. The institution clearly defines expectations for research, scholarship, and creative activity for its students. In the COM, students participate in a self-directed scholarly project. In the College of Pharmacy, students participate in scholarly activities, create scientific posters, participate in research with faculty mentors, participate in the CNUCOP Summer Research Fellowship Program, and receive travel assistance to represent the college at professional organization conferences. Additionally, students and faculty participate in a multitude of healthcare-related community service events each year. In fact, the COP students participated in 58 health fairs, health education and related health events from July of 2015 to July of 2016.

Students from the dental program also share certain courses and study groups with the students from the other graduate programs. These include sessions covering Statistics, pharmacology, and the yearlong Leadership in Health Professions course in the senior medicine seminar. Each of the common pathway courses in hematology, musculoskeletal/cutaneous, cardiovascular, pulmonary, neurology, gastroenterology and nephrology will have common small group learning sessions. While on clinical rotations in clinics and hospitals, dental students will have interprofessional learning experiences with students in medicine, pharmacy, psychology and allied health programs from affiliated schools.

Another component of creating a doctoral level culture is the appointment of appropriately qualified faculty members. The Rank and Promotion Committee of CNU will examine the CV of each candidate for examples of accomplishments in the areas of teaching, scholarly activity, and professional service to determine their placement in one of four academic ranks: Instructor, Assistant Professor, Associate Professor, and Professor.

At the Instructor level the applicant must have a DDS or DMD and they must have teaching or extensive professional experience. Applicants will need to have experience in the areas of teaching, research, and professional service. Those faculty who were previously hired as Instructors must have at least one year of experience at that rank. An Associate Professor must meet all the qualifications for an Assistant, with the addition of significant accomplishments in teaching, research, and professional service. They must

have at least five years of experience as an Assistant Professor at CNU. This timeframe may be amended by the Rank and Promotion Committee due to previous time and service as determined by the Dean and awarded by the President. They must excel in two of three core competencies: teaching, research, or service. To reach the rank of Professor, a candidate must meet all the requirements for Associate Professor at CNU with the addition of a significant and outstanding record of teaching, research, and professional service. They must have spent a minimum of five years at the rank of Associate, though they may apply for early promotion (refer Hiring Plan doc).

Refer to Attachment III.A.5 Hiring Plan.pdf

6. Provide the student learning outcomes for the proposed program.

The development of the Program Learning Outcomes (PLOs) was informed by the Commission on Dental Accreditation (CODA) standards and are aligned with those expected learning outcomes for similar programs across the nation. The following PLOs represent the intellectual, practical, and professional knowledge and skills that students are expected to demonstrate by the time that they graduate:

1. Patient-Centered Care: Demonstrate understanding of healthcare disparities and cultural awareness in patient counseling and patient advocacy
2. Evidence-Based Care: Apply current, evidence-based oral healthcare within the scope of general dentistry
3. Culturally competent, empathic communication: Demonstrate patient centered, empathic, and culturally competent communication and interpersonal skills
4. Oral and Written Communication: Demonstrate sound oral and written communications in patient care
5. Critical Thinking: Utilize critical thinking, problem solving skills and systemic thinking in assessing and making reasoned, evidence-based decisions in patient care
6. Ethics and Professionalism: Demonstrate professionalism and ethical decision making
7. Biomedical Sciences Knowledge: Demonstrate an understanding of the fundamentals of biomedical sciences and apply them appropriately in oral healthcare
8. Practice Management: Apply legal, regulatory and business management concepts related to provision of oral healthcare services

Attached are detailed descriptions of institution learning outcomes, the program learning outcomes, and the co-curricular learning outcomes.

Refer to Attachment III.B.6 DMD ILO Rubric.pdf, Attachment III.B.6 DMD PLO Rubric.pdf, Attachment III.B.6, DMD CoCuLO Rubric.pdf

7. Attach a curricular map aligning program learning outcomes with course learning outcomes, and demonstrating the progression from introductory to advanced levels.

Refer to Attachment III.A.7 CDM PLO Curricular Map Landscape.pdf, Attachment CDM ILO Curricular Map Landscape.pdf

8. Include a list of all courses in the program, identifying which are required.

All courses are required, with the exception of those chosen as selectives.

Refer to Attachment III.A.8 CNUCDM Curriculum Overview with Course Descriptions

9. Describe the process by which syllabi are reviewed and approved to ensure that 1) course learning outcomes are described and are linked to program learning outcomes; 2) materials are current; and 3) pedagogy is appropriate for the modality of the course.

As part of the syllabus review procedure, a curriculum committee will examine format as well as content considering course learning outcomes, assessment rubrics, the mapping to program learning outcomes, a content outline based on the academic calendar, a schedule of all assignments, credit hours, necessary information about library resources, and all relevant university/departmental policies. The syllabi are also reviewed to ensure that content is appropriate to the level and goals of the DMD program. If significant changes are needed, the committee will provide guidance to the faculty and require resubmission of the syllabus before final approval.

The Associate Dean of Academic Affairs will work with faculty course coordinators to ensure that mapping from courses up to Program Learning Outcomes (PLOs) and Institutional Learning Outcomes (ILOs) is appropriate, such that students are able to fully develop the learning outcomes at appropriate levels of learning over the course of the program. It is the responsibility of the faculty coordinating the course to ensure that appropriate learning outcomes have been created that map to the appropriate PLOs and ILOs. Faculty are encouraged to review CNU's Assessment Handbook for guidance in building their learning outcomes. Training in writing learning outcomes and developing rubrics is available to faculty through an annual training session and by appointment from the Office of IR and Assessment.

10. Attach three sample syllabi and the syllabus for the dissertation or culminating experience, which are adapted to the modality of the course. Sample syllabi must demonstrate rigor appropriate to a doctoral-level course in terms of required reading, course content/topics, and assignments/grading policy. Course syllabi should reflect a learning outcomes orientation and be linked to program outcomes. Syllabi should demonstrate that extensive research, including applied research as applicable, is required.

Syllabi must include:

- specific student learning outcomes for the course
- a course schedule including a schedule of all assignments
- the number of course credit earned in the course and expectations for how those hours are earned both in and out of class (seat time, lab time, homework, etc.)
- use of the library
- relevant university/departmental policies

Syllabi should also be adapted to the modality of the course, and be appropriate to the level of the degree. Online courses must include information about the learning management system and expectations for students participating in the online modality, netiquette, and other considerations specific to the modality.

Refer to Attachment III.A.10 DMD Syllabi.pdf

WSCUC 2019 Sub Change Report

11. Describe the clinical, practicum, or internship requirements and monitoring procedures, if required. Attach a sample MOU or agreement with a clinical, practicum, or internship site (if applicable).

All dental students will begin clinical training in their first year, utilizing the preclinical laboratory and clinical simulation labs, as well as with initial clinical experiences as part of the care team in the clinic. The clinical training will be linked to the Program Learning Outcomes and Institutional Learning Outcomes of the university, including such outcomes as professionalism and ethics, patient care, practice management, and biomedical sciences knowledge. The clinical labs will be located near the main campus at an acquired facility.

Second year dental students will undergo supervision in the clinical labs while learning how to practice clinical dentistry, including periodontics, restorative dentistry, orthodontics, and endodontics. Second year students will practice within the labs for 12 hours, under 12 hours of supervision per week. Third year students will also undergo supervision as well and will gain competency in key areas of practice such as oral diagnosis and treatment planning, operative dentistry, and emergencies. Third year students will practice within the labs for six hours, under six hours of supervision per week (see Sample CDM MOU doc).

Another required element of the CNUCDM is the community based clinical practicum, in which each of 80 students per cohort will have 10 encounters per week in general dentistry at CNUCDM operated sites for 12 months. Each clinical site will accommodate 1-3 students for the entire year based on a rotation schedule of 8-week rotations, meaning CNUCDM will partner with as many as 12 clinical sites. Each student will have four months of selectives in other health care settings or in a dental specialty setting, including but not limited to radiology, primary care medicine, community health, oral pathology, orthodontics, and mobile units.

Clinical faculty will monitor student performance to ensure competency at expected performance levels, articulated in the learning outcomes' rubrics and published in course syllabi. Additionally, students must maintain satisfactory academic progress, as stated below and articulated in the SAP Policy (doc). The consequence if a student earns a letter grade lower than 75% in any course in the curriculum is as follows:

Grades	Consequence
2 60-75%	Remediate all courses; Academic Probation at College's option if remediation is unsuccessful
3 or 4 60-75%	Remediate all courses; mandatory Academic Probation if remediation is unsuccessful in three or more courses
5 or 6 60-75%, 1 or 2 below 60%	Repeat both course(s); mandatory Academic Probation
3 below 60%	Dismissal

Students will be allowed to remediate a maximum of 4 courses over the duration of the CDM Program; students will be dismissed if cumulative GPA falls below 60%; GPA will be calculated on completion of remediation; failed courses must be repeated; a failed course can be repeated only once.

Refer to Attachment III.A.11 Sample CDM MOU.pdf, Attachment III.A.11 Satisfactory Student Progress.pdf

12. List any special requirements for graduation.

Requirements for graduation include the following:

1. A 3.0 grade point average and completion of all coursework
2. Approval from Academic Advisor
3. Removal of any probationary status
4. Completion and acceptance by the program of the student's dissertation
5. Completion of all practicum requirements
6. Completion of the first semester of internship

Once the above conditions have been met a student may apply for admission to candidacy to obtain the doctorate degree. The student's record will be reviewed and a contract created stipulating that once the student completes their internship they will have graduated from the doctoral program.

B. Schedule/Format Requirements

1. Describe the length of time that the typical student is expected to complete all requirements for the program.

The DMD program is organized as a full-time cohort based program to be completed in four years. All courses are required with the exception of those not chosen as selectives.

2. Describe the cohort or open registration model being used. Provide minimum attendance/participation requirements and provisions made for students to make up assignments or for students who withdraw and seek to re-enroll. Include a matrix showing the number of students per cohort throughout the first five years of the program and the faculty resources to support such estimates.

CNUCDM will utilize a cohort registration model. All students will be admitted as full-time only. The program will initially admit 80 students to the program and 80 in each subsequent year of the program. Class attendance and attendance in laboratories and clinics is required. Incomplete is offered as a grade per policy as contained in the student handbook and each syllabus.

Year	BMS Educat or	Preclin ical Ed	Clinical Ed (gen)	Clinical Ed (spec)	Total Teaching Faculty	Cohort Size	Enroll ment	Total Classes Covered (yr)	Student: Teacher Ratio
1	6	5	2	2	15	80	80	20	6:1
2	6	8	10	6	30	80	160	36	6:1
3	6	8	20	11	45	80	240	62	6:1
4	6	8	30	16	60	80	320	76	6:1
5	6	8	30	16	60	80	80	76	6:1

* Fifth year in this chart represents our ability to accommodate students who fall behind cohort and need to make up coursework

Utilizing a competency-based grading system, all students must reach a threshold for clinical competency in knowledge and skill set at 75%. Structured remediation activities for each didactic course will ensure a higher level of knowledge for the cohort of students earning a Y, 60-75%. Students earning below 60% receive an F requiring repeat of the course or further academic action. Expectations for classes are defined on individual syllabi with any opportunity for make-up assignments. Students who miss two or more sessions are required to work with the faculty of each class to define make-up opportunities.

If a student fails to meet the above minimum requirements, he or she will be placed on probation. Probation formally begins with a written notification to the student from the advisor. It will include the reason for probation, probationary conditions, and the duration of probation. Students can be removed from probation by addressing the area of concern.

Students may be terminated from the program if they fail to return from probation in the timeframe allotted, if they receive two Cs or lower within an academic year, if they are acting in a manner that violates the ethical and professional standards of CODA as determined by faculty vote, if they fail to return from a leave of absence by the date specified, or if their academic or professional actions have created a situation for which a warning or probation is inappropriate or impossible.

A student may petition for readmission to the program with an endorsement from his or her advisor. The petition will be voted on by the DMD, and the approval must be unanimous. The petition is then sent to the Dean for final approval or rejection.

Students will have the opportunity to remediate a maximum of four (4) courses that resulted in a grade below 75% throughout the didactic program; hence more than 4 courses with a grade of 60-75% (before remediation) will require that additional courses resulting in that grade be repeated. Remediation is not available for a course that resulted in a score of 60% or below. A particular course can be repeated only once. Failing more than two (2) courses (before repeating), below 60%, will result in dismissal.

Incomplete or Withdrawal from a Course

During a semester, a student may withdraw or fail to complete all required assignments and/or examinations due to extenuating circumstances, such as, but not limited to, an illness or a family emergency. In such cases, the course coordinator may give a grade of Incomplete for the course. All missed assignments and exams must normally be completed within 10 business days after the end of the semester in which the Incomplete was received, or within a timeframe determined by the course coordinator. Failure to successfully complete the course will result in an earned F grade for the course and placement on Academic Probation. Withdrawal from a course must first be approved by the course coordinator and the Office of Academic Affairs. Where a student has had to withdraw from a course a grade of W will be applied and the student will have to repeat the course next time it is offered.

Dismissal

A student may be dismissed from CNUCDM if any of the following conditions exist and the Professional and Academic Standards Committee determines that dismissal is warranted: a. Failure to meet any terms of Remediation or Academic Probation b. Conduct subject to dismissal as

described in the Honor Code section of the Student Handbook c. Foregoing an academic semester without obtaining an approved leave of absence d. Failure to complete the degree requirements in five consecutive academic years from the date of the first day the student begins the program.

Appeal of Dismissal

Students dismissed from the College may appeal the decision in writing within thirty (30) calendar days of notification of dismissal to the Dean of the College. The Dean will render a decision in writing within 15 calendar days of receipt of the formal written appeal. The Dean's decision is final.

Students will be allowed to remediate a maximum of 4 courses over the duration of the CDM Program; students will be dismissed if cumulative GPA falls below 60%; GPA will be calculated on completion of remediation; failed courses must be repeated; a failed course can be repeated only once.

Students are not permitted to begin a course if prerequisite course(s) has/have not been successfully completed and passed. Consequently, if a prerequisite course is not passed, the student's academic progression may be delayed by at least one academic year.

3. Describe the typical class size throughout the program.

Class sizes are kept to 20 students or below for small group learning and 80 in large group learning formats. In preclinical laboratory, classes will be 40 students per section.

4. Describe how timely and appropriate interactions between students and faculty, and among students will be assured, including detailed information for online courses. For programs being offered via distance education, describe the provisions available to faculty to ensure that the enrolled student is the student completing the coursework.

Courses will be offered in the regular semester manner. There are no distance or online courses.

Students will meet with their academic advisor four times a year to gauge their progress in the program and to determine if additional resources are necessary to ensure their success. Classes designed to prepare students for practicum work, a class to guide them through the internship application process, and workshops to provide support and encouragement through the completion of the dissertation are built into the program. Students may also utilize the resources available through the Associate Dean of Academic Affairs, whose responsibilities include informing students about degree requirements, leaves of absence, registration for classes, how to obtain fellowships and grants, procedures regarding violations, transfers, withdraws, and degree deadlines. University-wide support includes academic advising and educational planning, a computer lab and library, academic success and financial literacy workshops, and peer mentoring.

Timely and appropriate interactions between faculty and students are fostered through course and program electronic support. E-mail is frequently used to allow for continuous communications and many courses include supplementary web-based tools that include forums and discussion boards.

5. Describe the timeframe of courses, i.e. accelerated, weekend, traditions, etc. If courses are not offered in the traditional 10 week quarter or 15-16 week semester system, please explain how

credit hour and course content expectations can be met within the timeframe established for the program. An institution must allow adequate time for students to reflect on the material presented in class. Faculty using the accelerated course format should be expected to require pre- and post-course assignments, as appropriate. The Committee will expect course syllabi for accelerated courses to be adjusted accordingly to reflect pre- and post-course assignments, the accelerated nature of the curriculum, and conformance to the institution's Credit Hour policy.

Courses will be delivered on the standard 15-week semester schedule with three semesters per year. There are no accelerated courses planned for the DMD program.

6. Attach the institution's Credit Hour Policy, in compliance with WSCUC's Credit Hour Policy, adopted in September 2011. For programs that contain courses that include requirements other than traditional seat time (i.e., laboratory work, internships, practica, studio work, hybrid courses, online courses, and other academic work leading to the award of credit hours), please identify these courses and explain how the time requirements are equivalent to the credit hour requirements as described in WSCUC's Credit Hour Policy.

For each 15-week semester at CNU, one (1) hour of credit is assigned per hour each week of classroom or direct faculty didactic instruction (that is, per hour of lecture or student in-class time) and a minimum of two (2) hours of out-of-class student work (homework). For practicum and internship time, one (1) hour of credit is assigned per three (3) hours each week of student time spent in this activity.

Credit Hours for the DMD program and its corresponding Credit Hour Policy, in accord with the university policy and WSCUC's requirements, are assigned to courses at the time of course creation and syllabus approval by the Curriculum Committee.

Consistent with the policy, 1 credit is assigned for each 15 lecture hours in a course and its associated 30 preparation/ homework hours. 1 credit is assigned for every 25 small group learning hour and its associated 25 preparation/homework hours, and 1 credit for every 30 laboratory hours and 30 preparation/labwork hours.

All courses in the DMD program have assigned one credit for each 15 lecture hours in a course and its associated 30 preparation/homework hours. One credit is assigned for every 25 small group learning hours and its associated 25 preparation/homework hours, and one credit for every 30 laboratory hours and 30 preparation/lab work hours.

When students are in clinic, they will also attend seminars which in the curriculum are noted in the 3rd and 4th year as dental medicine seminars which are counted as small group learning at one unit per 25 hours. Workshops to obtain clinical instruction in simulation environments such as for dental implants and digital dental reconstruction techniques are counted as laboratory hours with one credit per 30 hours per California Northstate policy.

Refer to Attachment III.B.6 Credit Hour Policy.pdf

7 .Provide a sample schedule of courses for a full cycle of the program, with faculty assignments if available.

Refer to Attachment III.B.7 Schedule of Courses.pdf

C. Admissions Requirements

1. List the admissions requirements.

Students seeking admission to the DMD program will use the centralized application service for dental school admission called ADSAS, administered through WebAdmit and the American Dental Education Association. Minimum requirements for entrance to the program are: undergraduate minimum GPA of 2.8 (preferred 3.2), DAT score of 17 or greater with a preferred DAT of 19.

Minimum Requirements

California Northstate University College of Dental Medicine prefers a baccalaureate degree from a regionally accredited, four-year institution within the United States; or a non-U.S. equivalent institution. Required minimum coursework:

- 2 semesters, 3 quarters, or 1 year of college level English (*IB or AP credits may be considered if they are accepted by the undergraduate program*)

IB or AP credits not accepted for the following:

- 2 semesters, or 3 quarters, or 1 year of Biology with Laboratory
- 2 semesters, or 3 quarters, or 1 year of Inorganic (General) Chemistry with Laboratory
- 2 semesters, or 3 quarters, or 1 year of Organic Chemistry with Laboratory
- 2 semesters, or 3 quarters, or 1 year of Physics
- 2 semesters, or 3 quarters, or 1 year of college level Math (*Statistics and/or Calculus preferred*)
- 1 semester, 1 quarter, or 3 units of Biochemistry

Recommended Coursework, but not required:

- Social sciences
- Anatomy
- Microbiology
- Behavior Sciences
- Physiology
- Immunology
- Foreign languages

Standards in five areas must be met by all candidates: Observation, Communication, Motor Function, Cognitive, and Professional.

Each application will be thoroughly reviewed by the admissions committee and all areas of the application will be carefully considered. The ADSAS application has a required personal statement and a required section that asks whether the student is from a disadvantaged background. The personal statement prompt pertains to a student's community engagement and community service background.

Appendix 1-8 WSCUC 2019 CNUCDM

It is important that the student body of the DMD program represents the best of future clinicians, and the admissions committee will pay particular attention to professional, research, education, and life experiences. Along with academic excellence, the committee will be looking for students with diverse cultural, socioeconomic, work, and educational backgrounds. CNU has a diverse faculty and student body and it is the admissions policy of the University that no applicant will be discriminated against on the basis of race, religious creed, color, national origin, ancestry, citizenship status, sex, gender, gender identity, sexual orientation, mental disability, medical condition, genetic information, age, military or veteran status, physical appearance, or any other consideration made unlawful by federal, state, or local laws.

In the interview, we are looking for demonstration of each of the following: 1) Demonstrated academic ability/capacity, 2) critical thinking skills, 3) interpersonal and social skills, 4) commitment to diversity, 5) commitment to community service, 6) a candidate's match in terms of the culture and expectations of CNUCDM (i.e., commitment to the profession and to becoming a healer).

Refer to Attachment III.C.1 DMD Admission Requirements.pdf

2. Identify the type of student targeted and qualifications required for the program.

The DMD program admits students who demonstrate sufficient preparation, potential for professional education, and ability to perform the essential functions needed to practice as a licensed dentist.

Proposed Student Body Profile for California Northstate University College of Dental Medicine

Public and private dental education in the United States has not served the needs of the emerging demographics of American citizens. Current dental students are weighted heavily into those who have family members who are dentists or physicians, students from the most densely populated urban and coastal centers, those from the most competitive public and private universities and those with incomes more than two times the national average. Nearly all dental schools are located in the major population areas of their regions and generate more than substantial workforce for the major cities and suburbs, while inner city communities and rural areas and small cities are left behind. These are referred to as Dental Health Professional Shortage Areas (DHPSA) by HRSA. Inner city California and most of interior California, the Sierras, desert and Northstate are all heavily represented as DHPSA shortage areas. Students applying from underserved communities, from these areas have usually attended regional universities and though qualified, do not perform as highly on the DAT, the Dental Admissions Test. While over 6000 of the 13,000 applicants to dental school will gain admission, those who do not get in or must travel hundreds to thousands of miles to attend are disproportionately from these areas, nowhere more so than in California where over ten million people live in these areas.

In addition, as a health profession dentistry is unable to keep pace with peer professions such as medicine in the recruitment of underrepresented minorities, especially black, Hispanic and American Indian students. For example, California's dental schools bring fewer dentists to rural and/or economically distressed communities than any other state system (4-6% as compared to over 30% for states such as Minnesota and Oregon) DHPSA areas are also heavily represented by the immigrant and migrant communities for whom the barriers to health services are the greatest.

California Northstate is committed to being a California school committed to gaining a student body from underserved communities, including rural California communities, immigrant and migrant communities, underrepresented minorities and other chronically underserved communities. Through our pipeline program we will identify, mentor, and support community members who will seek careers in the health professions broadly and dental medicine specifically. These programs are presented elsewhere in these documents regarding admissions.

In addition, we are committed to having a faculty that broadly reflects the communities we serve. Partnerships with Asian Health, Indian Health, La Clinica de la Raza, West Oakland Community Health, San Diego homeless Veterans clinic, and rural sites in Shasta Lakes will produce community based faculty to serve as role models for our students while assisting in developing the pipeline for future community health leaders. These efforts will have inestimable benefits in advancing the lives of patients and improve the health related quality of life in populations impacted by these programs.

Special efforts will be made to recruit and select a diverse set of candidates from Sacramento and its surrounding counties.

1 HPSA Find (<https://data.hrsa.gov/tools/shortage-area/hpsa-find>)

3. If any part of the program will be offered via distance education, describe how the student's ability to succeed in distance education programs will be addressed and linked to admissions and recruiting policies and decisions.

N/A

4. Describe the residency requirements and policies on the number of credits that students may transfer into the program.

There are no residency requirements for the program. No transfer students will be accepted into the program, though consideration of transfers might be requested after the graduation of the first class. At such time policies will be developed to consider this option consistent with accreditation requirements.

5. Attach a sample brochure or admissions material for the program that will be made available to prospective students. (Note that this material must clearly state, "Pending WSCUC approval" prior to Commission approval.)

Refer to Attachment III.C.5 DMD Program Brochure

Section IV: Education Effectiveness

A. Plan for Evaluating Educational Effectiveness

Assessment should be described at three levels:

1. **Annual assessment leading to the program review:** Describe the annual assessment process for year one and subsequent years leading to the overall program review. Attach an assessment plan for the first several years of the program that describes how core faculty review the performance of the students in each cohort as it progresses annually to determine satisfactory progress. The assessment plan should include the review of student work and achievement of program learning outcomes as well as rubrics for assessment of the qualifying exam, dissertation, and clinical work, as applicable.
2. **Program review:** Describe how and when this program will be incorporated into the department, school and institution's regular assessment and program review process.
3. **Describe any plans for external review of the program.** (External refers to the evaluation of the program by one or more evaluators unaffiliated with the institution. Please note that professional accreditation reviews can be included, but are not expected to be the sole source evaluating the effectiveness of the program.)

1. Annual assessment leading to program review:

All programs at CNU utilize an Assessment Committee to assess student learning at appropriate points across the curriculum and analyze assessment results to make changes in instruction, pedagogy, assignments, and student learning. Students who are not achieving at the appropriate level of learning are issued academic alerts to notify them of any deficiencies; students then work with faculty to remediate deficiencies as needed.

Refer to Attachment IV.A.1 PLO and ILO Assessment Plan.pdf, Attachment IV.A.1 PLO Palooza Results.pdf, Attachment IV.A.1 Assessment Handbook.pdf

Student Learning Outcomes and Assessment

The dental school dean and a group of dental consultants and advisors who will be joining the university as dental school faculty, along with key Ph.D. and MD faculty, collectively developed the learning outcomes for the dental program. These PLOs are based on professional standards and expected competencies. Course Learning Outcomes (CLOs) and corresponding rubrics are created by faculty and are published in syllabi. The Program Learning Outcomes (PLOs) are published in the catalog, printed on posters in the classrooms, and published on the program's website.

PLO rubrics are used to assess student learning through designated signature assignments; these include papers, performances, projects, presentations, and exam questions mapped to learning outcomes. Expectations regarding student learning are defined and articulated through assessment rubrics, course assignments, and regular formative assessments of student learning. Assessments provide needed feedback to both students and instructors so that improvements in learning, teaching, and curriculum can be made. Students' CLO, PLO, ILO, and Co-Curricular (CoCuLO) performance is assessed and

documented; results are used by course coordinators, Department Chairs, and faculty advisors—as well as the Assessment Directors and all interested constituencies.

Institutional Assessment Processes Leading to Program Review: College of Dental Medicine's Plan

The Office of Institutional Research and Assessment provides guidance and support for faculty in planning and conducting assessments of student learning. The assessment of student learning happens at all levels of assessment; for the first year, the assessment will focus on Course Learning Outcomes (CLOs)—which are assessed each term—and formative assessments with a goal of building proficiency (across the course of the program) for Program Learning Outcomes (PLOs), Institutional Learning Outcomes (ILOs), and Co-Curricular Learning Outcomes (Co-CuLOs) .

Assessment activities for the program are outlined in the CODM's Assessment Plan, which includes multiple assessments across various areas of the program. The plan includes the direct assessment of student learning at all levels (course, program, institutional, and co-curricular); assessment results will be shared with the Curriculum Committee and course coordinators for planning and improvement purposes.

A companion document to the Assessment Plan, called the PLO and ILO Assessment Plan is utilized by each program. This plan identifies the Program Learning Outcomes and Institutional Learning Outcomes that are to be assessed within an academic year, the courses identified as those in which students are expected to master those particular learning outcomes, and the specific signature assignments that are to be utilized in the assessment (along with the assessment method). Each program utilizes an annual curricular review process, in which course and faculty evaluations, student survey results, and student learning outcomes are compiled each year in the Assessment Report and are used to make improvements in courses and in teaching and learning. (see Learning Outcomes Palooza Results doc; Assessment Report doc)

Once the first cohort reaches year two, faculty will begin to host an annual event in which they undergo a rater calibration session, followed by an assessment and validation of student learning outcomes through rubric-based assessments of de-identified student artifacts from signature assignments that are embedded at critical points in the curriculum. All of these assessment activities lead to changes in curriculum, pedagogy, assignments, and assessments and all inform the comprehensive program review process, which includes the direct assessment of student learning and which is described in the Assessment and Program Review Handbooks.

Teaching effectiveness will be evaluated during the annual faculty review and during consideration for rank and promotion. Multiple data points will be evaluated including student survey results and performance, peer evaluations, and direct observation of classroom teaching. Faculty are required to solicit student feedback at the conclusion of their courses using a standardized student survey developed by the Assessment Committee.

Practicum and Experiential Education Evaluations

In years one through four, students will be engaged in practicums. Two types of clinical practicums reflect two types of experiences. First, the college will operate two clinics for clinical experiences led by faculty in all aspects of general dentistry including diagnostic, preventive, and procedural dental care.

Secondly students will rotate for eight weeks into regional oral health systems, predominantly community health centers for the provision of oral healthcare. The bulk of clinical practicum will occur in facilities operated by CNU.

Practicums and experiential faculty supervisors must supply the DMD program with written evaluations of students' performance each semester. These evaluations are collected and reviewed by the Field Placement Office if community based, and by the Dean of clinical affairs if based at CNU clinics. All reviews and grades are submitted to the Dean of academic affairs subsequently. They are then copied and sent to the academic advisors. If there are concerns from the practicum or internship sites about student performance, the Field Placement Office relates these issues to academic advisors as soon as they arise, regardless of whether it is time for a formal evaluation. The advisor will then speak with the student and a remedial plan can be created to ensure that the student is meeting the expectations of the program and the practicum site. The student's written performance reviews from practicum and internship sites become an official part of their academic record and is incorporated into each quarterly review completed by the Academic Advisor.

Ongoing Assessment of Student Performance and Satisfactory Academic Progress

Throughout the DMD program, students will meet with their assigned academic advisor quarterly to review progress towards completion of program requirements, the student's expectations, and their career goals.

The dental school Faculty will monitor students' work through the following: (1) Review of student course performance by academic advisors, (2) experiential education evaluations, (3) the direct assessment of Student Learning Outcomes at the course and programmatic levels and (4) the Cumulative Exam. The program will also be monitoring the pass rates of the National Board of Dental Examiners Part 1 and 2 and the outcome of the Western Regional Dental Board examination with expectations that results will exceed national norms.

Resources for Quality Improvement

The Office of Institutional Effectiveness ensures that faculty receive appropriate training in the assessment of student learning, and the Vice President of Institutional Research & Assessment serves as an Ex-Officio member of the CODM's Assessment Committee. In addition to faculty development provided within the CODM, the Vice President of University Operations, Faculty and Program Development ensures that faculty receive additional university-wide faculty development. When quality improvement plans and initiatives involve the need for additional resources, each program utilizes a Dean's Advisory Council that makes recommendations that are passed on to the President's Executive Council for approval and budgetary resolutions.

2. Program Review

The DMD program will be incorporated into the institutional program review process established at CNU. Program effectiveness data will be collected and analyzed on an ongoing basis, and a full program review will be conducted every five years.

Each of CNU's academic programs undergoes a comprehensive program review process, which includes a self-study, analyses of statistical data summaries and learning outcomes' results, feedback from students and course evaluations, a program review report, and an external review. The results of the program review process are used to make improvements in teaching, learning, resources, and support services

CNU's institutional standards and guidelines for the program review process are outlined in the Program Review Handbook and in the Assessment Handbook. The Office of Institutional and Education Effectiveness provides guidance and support in their implementation.

3. Plans for external review of the program

The program review process includes an external review component; this process is outlined in the Program Review Handbook, which is based on WSCUC's good practices for program review. External reviewers evaluate the curriculum, student learning outcomes, training opportunities, research, faculty, facilities, and student support services and resources; they identify deficiencies and propose ideas for improvement and further program development. The external review component leads to an external review report, which includes recommendations for improvement, which the program then considers in its planning and assessment processes.

Refer to Attachment IV.A.3 DMD Assessment Plan.pdf, Attachment IV.A.3 Program Review Handbook.pdf, Attachment IV.A.3 1502 – Academic Program Review Policy

If the program will be offered via distance education:

- 4. How will the education effectiveness of the program (including assessments of student learning outcomes, student retention, and student satisfaction) be evaluated? Include appropriate comparisons with campus-based programs.**

N/A

- 5. Describe procedures to evaluate teaching effectiveness in the distance education modality.**

N/A

Section V: Resources

A. Faculty

1. List the number and type (full-time, part-time, tenured, non-tenured) of faculty allocated to support the program in terms of developing the curriculum, delivering instruction to students, supervising internships and dissertations, and evaluating educational effectiveness.

The College of Dental Medicine at CNU will provide didactic, laboratory and simulation education and experiential patient care education with a team of full and part time faculty. CNU does not offer tenure.

There will also be a dean and four associate deans.

	Year 1	Year 2	Year 3	Year 4
Research Faculty	1	2	2	2
Teaching Faculty	14	28	43	58
Total	15	30	45	60

CNUCDM anticipates 42 FTE salaried faculty, 30 of whom will be full time, making the salaried faculty make-up of 71% full-time. Our target is to have at least 50% of the faculty full-time and the other 50% part-time up to .8. 18 FTE non-salaried Volunteer Community Faculty will be utilized at health systems for which we have or are developing MOUs.

Teaching faculty will be expected to provide instruction for two classes per semester, while research faculty will be expected to teach one course per semester. Each class will be taught for 3-12 hours a week.

Faculty will also be expected to develop curriculum, with their focus on developing student learning outcomes, and faculty will be responsible for assessing student learning. Additionally, faculty will mentor students and serve on dissertation committees. Faculty members are expected to be academic advisors for a maximum of ten students. Research faculty are allotted 30 hours a week for research.

The associate Deans of Academic affairs, curriculum, student affairs and clinical affairs will lead the assessment of educational effectiveness by monitoring set norms and developing programs to address ongoing issues.

Supervision of students while at practicums and internships will occur on site. It is the responsibility of the training locations to have a clinical supervisor on staff to provide supervision and mentorship to the students. Separate faculty are not hired by the university for this purpose, though the Associate Dean of Clinical Training and the Field Placement Office will monitor placements to ensure that students are being trained in area of the key areas of the practice of dentistry and at the expected level proficiency.

Types of Faculty

- Basic Medical Sciences educators (in addition to COM common pathway educators)
- Preclinical educators
- Clinical educators general dentistry
- Clinical educators dental specialties
- Part time clinical educators
- Volunteer Clinical Adjunct Faculty 18 FTE (no cost)

For a breakdown of faculty duties into hours per week, including a list of responsibilities, please refer to the attachments below. The number and type of all CNUCDM faculty are outlined in the hiring plan (doc).

2. Provide information about the balance of full- and part-time faculty members involved, and how that balance will ensure quality and consistency in instruction and advertising.

The College of Dental Medicine at CNU will provide didactic, laboratory and simulation education and experiential patient care education with a team of primarily full-time faculty. Our target is to have at least 50% of the faculty full-time and the other 50% part-time up to .8. While the part time faculty will include the administrative team and content experts across the spectrum of dental medicine, its disciplines and its specialties, part time clinical educators from the Northstate region will provide clinical preceptorship/education, mentorship, lecture and small group learning seminars at the primary campus and in community based education sites.

A planning group of 47 future faculty associated to the Sacramento District Dental Society has met several times to develop curriculum. The 12 original members of the planning group for the College of Dental Medicine will also serve in part time faculty capacity. The hiring plan for 60 FTEs comprised of full- and part-time faculty; this plan provides a comprehensive mix to accommodate instructional, clinical, service and scholarly needs of the college.

3. Describe the plan to orient and mentor junior faculty to support their doctoral-level research, scholarship, and dissertation supervision responsibilities.

The Mentoring Program at CNU provides new faculty with regular feedback and role models to assist in the planning of their careers and attainment of academic goals. Senior faculty share their experiences and techniques in obtaining a balance between academic, service, and personal responsibilities; gaining professional goals such as promotions; securing grants or funding for research; and managing scheduling demands to ensure continued participation in professional activities.

Refer to Attachment V.A.3 Faculty_Mentoring_Program.pdf

4. Provide an analysis of the impact the proposed program will have on the overall faculty workload, including teaching, research, and scholarship. Who will teach courses no longer being taught by the faculty reassigned to this doctoral program? How will the units be assigned for dissertation work (i.e., how many for serving as the chair as opposed to serving on the committee)? What will

be the maximum number of students that each faculty member can advise? Discuss the implication of the faculty resource matrix included in the program description section, particularly to show the workload implications when one cohort is in the dissertation phase and others are in the coursework phase of the program.

The dental program will not place an additional burden on current faculty as new professors and administrators are being hired for the program. The only time in which current faculty will teach within the DMD program is in the case of the common pathway courses; in this case, a common core of courses are taught to dental, pharmacy, psychology, and medical students—and expenses are shared by all programs and faculty workloads are carefully planned and managed.

The DMD program does not require students to complete a dissertation.

5. Describe the support/resources for faculty to develop a doctoral level culture, engage in research, and if applicable, receive an orientation in order to chair dissertation committees.

The basic resources available include the following: encouragement and support from administration for developmental activities, release time away from certain responsibilities when necessary, funds for travel and research expenses, equipment consistent with the University's policies and budget, and appropriate space and routine equipment to conduct research. These funds allocated in the program's budget to assist faculty in starting or continuing their research and can be obtained through approval by the Associate Dean of Research.

The Dean will through the Deans Fund for Excellence (DFE) offer faculty development opportunities in the areas of research development, other scholarship, pedagogy and community/university service each year. The budget will allow for \$250,000 per year to the DFE for this purpose.

The DMD program does not require dissertations.

Refer to Attachment V.A.5 Faculty Handbook.pdf

6. Describe each core faculty member's workload within and beyond this program.

The workload of full time faculty members is based upon explicit teaching and research assignments. Full time faculty are not given a workload by the University beyond the DMD program. Faculty members are expected to work at CNU full time and are not given a workload by the University beyond the DMD program. Faculty responsibilities include the teaching and course preparation, assessment of student learning and grading, mentoring and conducting office hours, and service responsibilities. Included in those responsibilities are service on college and university committees. There will be seven standing committees at CNUCDM: Assessment and Student Performance, Academic Affairs and Curriculum, Clinical Affairs, Admissions, Institutional effectiveness, Diversity Inclusion, and Dean's Executive Committee (DEC). Faculty members provide service by involvement in these committees as chairs or members.

Each college's department and/or program will regularly monitor student-to-faculty ratios as well as conduct workload analyses to ensure the appropriate numbers of faculty in each area to carry out faculty responsibilities, ranging from teaching to assessing student learning to advising and mentoring to

service and research. Each clinical faculty member is expected to provide clinical services in a capacity consistent with their training, continued competency and development and within their clinical privileges. Such care will normally be in a vertical team environment including students and residents where appropriate.

- 7. Describe the faculty background and experience to engage in doctoral-level instruction. Attach abbreviated vitae (three to five pages) for core faculty, which include an overview of the key credentials, publications, and if applicable, prior experience supervising dissertation work. Vitae for core faculty should reflect a range of scholarship including theoretical research, applied research in the field, and practice, as relevant. Vitae should distinguish between peer-reviewed articles and non-peer reviewed articles.**

The Rank and Promotion Committee of CNU will examine the CV of each candidate for examples of accomplishments in the areas of teaching, scholarly activity, and professional service. Faculty must have a DDS or DMD degree, unless they are teaching a course for which another degree would provide the required experience (e.g. a pharmacist could teach the Psychopharmacology course). The committee will also be looking for candidates with teaching or extensive professional experience and a valid California dental license, or those that are license eligible. As they advance through the academic ranks they must show significant accomplishments in teaching, research, and professional service.

CNU is currently recruiting for the associate deans and core faculty positions. A nationwide search is being performed with positions advertised on recruitment services (e.g. HireEdJobs) and the CNU website. Attached are CVs of local dentists and educators who have expressed interest in teaching in the dental program.

Basic Medical Sciences educators (in addition to COM common pathway educators = 6 FTE

These faculty will be DMD, DDS, MD, D. Psych, DPharm, or PhD terminal degrees with engagement for case based education in the common pathway curriculum, and in the teaching of head and neck anatomy, dental anatomy, and behavioral sciences

Preclinical educators = 6 FTE

These faculty will hold DMD, BDS or DDS and have appropriate postdoctoral certificate or degree education in operative dentistry, prosthodontics, periodontology, pediatric dentistry or oral and maxillofacial surgery.

Clinical educators general dentistry = 12 FTE

These are general dentists holding the DMD or DDS or BDS who will serve as student preceptors, team leaders, in comprehensive care. Some will serve in discipline based faculty in special needs, emergency care, and oral diagnosis among others

Clinical educators dental specialties = 12 FTE

These are full time positions in dental specialties for board certified specialists holding the DMD, MD, or DDS including specialists in prosthodontics, periodontology, endodontology, pediatric dentistry, orthodontics, oral and maxillofacial pathology, oral and maxillofacial radiology, and oral and maxillofacial surgery

Part time clinical educators = 12 FTE

These are ½ to 1 day a week positions for general dentists and specialists holding the DMD or BDS or DDS degree for clinical or preclinical assignments as educators.

Volunteer Clinical Adjunct Faculty (no cost)

Faculty salaried by health entities with whom CNU has affiliation agreements for clinical education will be given faculty appointments to provide clinical education. These faculty will hold a terminal degree such as DMD, DDS, MD, PhD, and PharmD.

California Northstate University believes education is an ongoing experience – an experience that simply does not end after graduation. With this belief in mind and the involvement of well-trained and experienced instructors, we strive to offer our educators a faculty development program in which they can continue to learn about advancements in healthcare, research, and teaching.

Refer to Attachment V.A.7 Faculty CVs.pdf, Attachment V.A.7 Faculty Development Series 2018

- 8. If the program will be offered via distance education, describe the preparedness of faculty to support the modality of instruction. What faculty development opportunities are available? Include any faculty guidelines for online instruction.**

N/A

B. Student Support Services

- 1. Describe the support services available for doctoral-level students, such as financial aid, placement and research opportunities.**

California Northstate University has a variety of student services including advising programs, alumni and career services, disability accommodations, mental health counseling, leadership organizations, wellness committees, financial aid assistance, library services, and centers for research.

The Office of Student Affairs and Admissions manages programs that promote student health and wellness. Services include providing information regarding alcohol and drug awareness and prevention and assisting with referrals to local agencies, treatment facilities, and clinical professionals. The OSAA staff are available for confidential referral assistance on a walk-in basis or by appointment. The office also provides guest presentations from health practitioners, and referral information to assist students with healthy lifestyle practices throughout the year. Information regarding programming is sent via campus email to all students at least two weeks in advance or posted on the campus information boards. Examples of programming include time management skills, nutrition guidance, stress reduction strategies, and work/life balance practices. Brochures offering guidance and tips for managing and understanding student focused problems are available from the OSAA. Assessment and evaluation of offerings through surveys and usage statistics enables the OSA to adapt to current program demands and develop new initiatives to better serve students.

Any student requiring disability assistance may apply for services through the Dean of Student Affairs. The University is committed to promoting equal access to programs and facilities, thereby insuring that students with disabilities experience the opportunity to participate fully in all academic experiences. Specialized services and academic accommodations are provided to meet the individual needs of students with disabilities to help them achieve successful completion of their professional degree.

The information technology department provides computer, CANVAS, email, and system assistance to all faculty, staff, and students. CANVAS is the University's learning management system which contains course information, assignment grades, and class documents and assignments. An introductory session to CANVAS is provided to new students during orientation. All students are assigned a unique campus email address for use during the program. The IT department offers assistance to students who experience problems with their account during normal business hours.

The Career Services Coordinator directs professional career planning and career counseling services. Information about career opportunities at various companies can also be found in the Career Resource section of the library or on the CNU website. In-class and extracurricular workshops are conducted throughout the program to assist students in analyzing their strengths and weaknesses. A job exposition is hosted on campus during the Fall semester to provide students with direct contacts for obtaining part-time employment during the summer months and possible post-graduation opportunities. Students are also encouraged to attend seminars and workshops in writing resumes, developing interview skills, and preparing for career placement. The Career Services Coordinator, in collaboration with the Alumni Coordinator, also follows up with graduates for the first 5 years after graduation through phone interviews and surveys to monitor how graduates' careers are progressing, and to solicit solutions for improvement in their respective programs and in the University as a whole.

Licensed therapists provide personal counseling to students and are on campus every day of the week, with varying hours to accommodate students' schedules. These counselors do not teach classes nor evaluate students' academic performance. Along with individual therapy, the counselors have made available to students a variety of group sessions and workshops covering topics such as stress, depression, and healthy relationships. The counselors are also available for faculty consultations and behavioral assessments and have also been active participants in CNU events, including student orientation, club day, suicide awareness and prevention programs, wellness day, and time management events. Due to increasing usage of counseling services and attendance at counseling-developed workshops and events, counseling hours available to students have increased this year, and the number of counselors working with CNU students has increased from two to three. In the Fall 2018 term, there were 200 personal counseling sessions provided to CNU students. Attachment V.B.1 details the presenting issues that students utilize the counseling services for (see Counseling Usage doc).

CNU offers two installment options and two private education loan programs. They are available through the Financial Aid Office along with a list of scholarships, grants, and loan repayment programs.

Alumni Services maintain graduates' relationship with the faculty, staff, and student body at CNU by building lifelong connections with the alma mater community. They sponsor alumni social events, continuing education course information, career resources and services, fundraisers, speaking engagements, e-newsletters, news about what fellow classmates are doing, and the current faculty research.

Refer to Attachment V.B.1 Counseling Usage.pdf

2. Identify the ongoing advising and academic support systems for students in the program.

All students in the DMD program are assigned an academic advisor with whom they meet at least twice per semester. These sessions include discussions about progress towards their degree, academic performance, career questions, engagement with practicums, and any other matters of concern. At the end of the first year of study, the academic advisor makes a formal recommendation for the student's continued progression in the program. During the first semester of year five, the academic advisor will also review with the student their progression towards graduation and address any outstanding requirements. Students are assigned an academic advisor based in their career interests and faculty experience. First-year students will also meet with the Dean and Associate Deans individually to establish personal contact with the program administrators. The DDM faculty are expected to be available to students for academic advising during regularly scheduled office hours and through personal appointments.

Students who experience difficulty in any course will be urged to seek help and assistance from the course instructor or their academic advisor before the problem becomes unmanageable. If academic problems arise, school-funded tutoring services are available through the OSA. Students who require this assistance must be referred by the faculty of the course or their academic advisor. Additional tutoring is offered by students and these tutors typically post their contact information on campus bulletin boards. The OSA keeps a list of recommended tutors.

C. Information Literacy and Resources

1. Describe the information literacy competencies expected of graduates and how they will be evaluated.

Information literacy is an Institutional Learning Outcomes (ILO) for all CNU graduates. This ILO is adapted for the degree level of each program offered. While for the undergraduate programs, this learning outcome focuses on students' ability to identify and search relevant libraries of information and databases for relevant sources and use citation appropriately; students in the doctoral programs are expected to effectively integrate and synthesize vital information obtained from primary literature and engage in and produce doctoral-level research.

To assist students in developing competency, an information literacy session at the CNU library can be integrated into course offerings at the discretion of the instructor. Library faculty will assist with in-class instruction and are available for consultation with small groups and/or individuals needing library assistance. At the request of the course instructor, library staff will provide verbal and/or written instructional materials, directions, or guides as needed.

Information Literacy is assessed in the foundations of dental medicine and in dental medicine and medicine seminars course through a research assignment in which the students will use the peer-reviewed literature and evidence-based approaches to addressing a clinical problem with a basic science foundation.

2. Describe the staffing and instructional services that have been put in place, as well as the library and informational resources available to students and faculty in support of the new degree program.

The Learning Resource Center is available for students, faculty, and staff. It includes 800 square feet of space devoted to the following: the library facility and its collection, the computer lab, classroom resources, the interlibrary loan program, and the career resources center. Space is also provided for individual and group study. Library staff and schedules are addressed in C.5.

The Learning Resource Center also maintains an Electronic Learning Resources System. Its purpose is to provide library and learning resources to students, faculty, and staff, and serve as an entry point for all users to meet their academic and research needs. A designated area of the learning resource center is also dedicated as a computer lab. The computers in the lab are available to students, where they can access the electronic resources and library materials. Additionally, the lab provides students with general PC software, access to the internet, and the ability to print desired materials.

3. Describe the access to library systems (local, national, or global), electronic services, internet, information utilities, service providers, and document delivery services for both faculty and students.

The Learning Resource Center subscribes to approximately 1,000 scholarly electronic journals and uses an integrated library system, "Library World," that contains modules for acquisition, cataloging, circulation, and inventory of physical library resources such as print books, print journals, models, kits, assessment tools, etc. The library's webpage contains a link to the online public access catalog (OPAC) which links to the ILS catalog records. For accessing electronic material, the library provides six public access terminals and wireless internet throughout the facility. Using a single sign-on, university users can access the library's electronic databases. These currently include the journal databases ScienceDirect, LifeSciences, OVID journals, electronic book collections, AccessMedicine, the Cochrane Database. CNU is also a member of the National Network of Libraries of Medicine which allows students and faculty to obtain books and articles from numerous other universities.

The DMD program has budget lines for purchasing additional journals and assessment tools. This will include the purchase or rental of electronic texts by the students. The library currently supports the doctoral research of the MD and PharmD doctoral programs. In the proposed budget for DMD program, there is additional funding for library resources including assessment materials and yearly subscriptions to the principle peer reviewed journals of dental medicine including the Journal of the American Dental Association, the Journal of Dental Research, the Journal of Oral and Maxillofacial Surgery, the Journal of Pediatric Dentistry, the Journal of Prosthetic Dentistry, Periodontology, Oral Oncology, the British Journal of Dentistry, the Journal of Dental Public Health among others.

CNU is both a wired and wireless institution with computers and data ports available to students and faculty for access to the internet and academic portals.

4. Describe staff and services available to students and faculty for instruction on how to use, access, and support information resources, both on-site and remotely.

At the beginning of each semester, a Learning Resource Center orientation session is scheduled to accommodate all interested students and faculty. The attendance is mandatory for all first-year

students and optional for others. During this orientation, students are introduced to the learning resources available as well as the policies and procedures relevant to their usage. The library staff is also available to assist students in further instruction as needed.

5. Describe the availability of library staff to support research activity.

The CNU library is managed and operated by a combination of a full-time health sciences librarian and a part-time library assistant. An information technology specialist works with the librarian to update, maintain, and operate electronic systems in the resource center. The librarian is available from 9 a.m. to 5 p.m. Monday through Friday. The library assistant is available from 12:30 p.m. through 9 p.m. Monday through Thursday and 9 a.m. through 5 p.m. on Friday. Both may be contacted through email, in person, or by telephone.

6. Describe the impact on the maintenance of the institution's library in terms of library and research support appropriate for doctoral-level research. For joint programs, provide this information for each institution.

The library currently supports the doctoral research of the MD and PharmD doctoral programs. In the proposed budget for DMD program, there is additional funding for library resources including assessment materials and yearly subscriptions to the principle peer reviewed journals of dental medicine including the Journal of the American Dental Association, the Journal of Dental Research, the Journal of Oral and Maxillofacial Surgery, the Journal of Pediatric Dentistry, the Journal of Prosthetic Dentistry, Periodontology, Oral Oncology, the British Journal of Dentistry, the Journal of Dental Public Health among others.

7. Explain the need for additional cooperative agreements with other institutions to supplement resources for doctoral work. Copies of the agreements should be attached.

The resources currently available through the CNU library are sufficient to support doctoral level work as evidenced by the research performed by the MD and PharmD programs. Due to the robust capacity of interlibrary loan with the National Library of Medicine, no cooperative agreements to achieve materials for doctoral work is needed. We are currently planning to utilize VitalSource, which will provide interactive texts and resources.

D. Technology

1. Describe the institution's technological capacity to support teaching and learning in the proposed program. For joint programs, provide this information for each institution.

CNU's IT infrastructure includes fully networked classrooms, each having data and power ports. Many of the labs are outfitted with individual workstations. A state-of-the-art media center sends and receives signals throughout the campus.

There are currently faculty and staff training sessions hosted by the IT department to ensure proficiency with university applications, including Canvas, Examsoft, and Mediasite. In addition, the Director of IT

ensures that a software program specialist is available to provide continuous assistance to faculty and staff in their use of university applications.

The informational technology support for students and faculty includes a minimum of one help desk staff member on site between the hours of 8 a.m. though 5 p.m. The IT team includes an IT Director, Systems Administrator, Network Administrator, Academic and Special Projects Administrator, Help Desk Administrator, Database and Web Administrator, and a Systems and Server Room Administrator.

2. What level of technology proficiency is expected of students? How will students receive training on how to access required technology used in the program?

All students are expected to be familiar with basic office software including a word processing program, a presentation program, email familiarity, and internet usage. Training will be available through the library in conjunction with the IT department. Some psychological tests use electronic scoring programs and students will be trained in their use as part of their assessment training in individual courses by instructors.

If 50% or more of the program will be offered via distance education:

3. Describe the institution's provisions for students in the proposed program to gain full access to course materials. For joint programs, provide this information for each institution.

N/A

4. Describe how the institution will ensure business continuity during system failures (major or minor) or scheduled service interruptions. For joint programs, provide this information for each institution.

N/A

E. Physical Resources

1. Describe the physical resources provided to support the proposed program and the impact of the proposed change on the physical resource capacity of the institution. This includes, but is not limited to, the physical learning environment, such as classrooms, study spaces, student support areas.

The CNU campus currently encompasses more than 200,000 square feet and includes the Elk Grove and Rancho Cordova facilities. The DMD program will be housed in 2700 Maritime Drive as well, a building of 14,000 square feet to house the preclinical laboratories and the first teaching clinic of the college. There will be two dedicated classrooms additional CNU class space, two laboratories, a library, distributed study rooms in both Elk Grove buildings, a cafeteria, and various offices. With this addition, the physical impact of the additional students will be minimal.

All dental students will begin clinical training in their first year, utilizing the preclinical laboratory and clinical simulation labs that are planned to be built on campus as well as with initial clinical experiences as part of the care team in the clinic. The clinical labs will be located near the main campus at an acquired facility. Students will also be able to practice their clinical skills on the main College of Dental

Medicine campus. A classroom on the main campus will contain 40 dental simulation units where the students will be able to practice the skills taught within the classroom. The unit will contain instruments and configurations, compartments to store instruments, a torso with adumbrated arms and shoulders, height adjustment. The unit will be on wheels and have the ability to fit comfortably under workstations.

The main clinical practicum of the CNUCDM program will be in two clinics operated by the university. The first is under contract for construction in Elk Grove. Like other dental school based clinics, CNU's clinics will feature faculty and students working side by side and providing the highest level of clinical care while completing competency evaluations and gaining clinical experience for the DMD students.

Refer to Attachment V.E.1 Dental Building Plans

F. Financial Resources

1. Provide the total cost of the program for students, including tuition and any fees. How are students expected to finance their tuition?

Student tuition will be \$76,000+ per year for the four-year dental program (Total \$304,000/four years) with student fees approximating \$6,000.00 to \$11,000.00.

Students may finance their tuition in the following ways: 1) student loan programs (i.e. parent plus loan, private student loan such Sallie Mae, Ed South Loan, iHelp loan program), 2) family financial support, 3) academic scholarship program, 4) other forgivable programs that promote careers in health sciences, 5) community-based scholarship programs through minority outreach, foundations and philanthropic donations.

2. Provide a narrative describing all start-up costs for the institution and how the costs will be covered, including direct program cost and institutional indirect cost. Explain how the institution ensures that the impact of additional services and support for a new program will be adequately supported as the program grows (i.e., are indirect costs changed on a program basis). For distance education programs, costs for licensing, hardware, software, technical support, training for faculty and students, and instructional design should be included.

The major start-up costs for the dental program includes the following: 1) classroom space, 2) laboratory space, 3) instructional equipment and supplies, 4) technology including hardware and software 5) team operating expenses, and 6) development of clinical facilities in the college and in hospital and clinics. CNU is fully committed to the development of the dental program and all start-up costs will be supported through new sources of capital. CNU will provide institutional support for the Dean of the College of Dental Medicine to begin the faculty recruitment plan and prepare for new faculty, review new course syllabi, etc.

Refer to Attachment V.F.2 Start-Up and Continuing Cost Breakdown.pdf

3. Describe the financial impact of the new program on the institution, including evidence that the institution has the capacity to absorb start-up costs. If the institution has incurred a deficit in the past three years, supplemental information describing the financial capacity of the institution to start and sustain the new program is required.

The institution has the capacity and commitment to absorb the start-up costs for the dental medicine program. The University will maintain a balanced budget for the dental program. Funding has been obtained through new sources of capital and there will be no financial impact from the Dental Medicine program on other offerings at CNU.

4. Identify the minimum number of students necessary to make the program financially viable.

The minimum number of students necessary is 80 per cohort for the program to remain financially viable.

5. Provide a budget projection, for at least the first three years of the proposed program, based on the enrollment data in the market analysis and including projected revenues and costs. The budget should reflect anticipated attrition. The budget should include all budgetary assumptions.

The attached budget outlines the budgetary details for the first three years of the proposed program. Some key assumptions include the following: a tuition rate increase of 3% to 5% annually and a steady attrition rate of 2.5% annually.

Refer to Attachment V.F.5 Financials.pdf

6. If the institution has a joint doctorate in the same or similar disciplinary area and plans to continue to offer it, describe the availability of resources for both programs, and the basis for allocation of resources to support both the joint and the new programs.

N/A

Section VI: Teach-out

B. Plan for Teach-out Provisions

- 1. Attach a copy of the institution's approved teach-out or program discontinuation policy detailing how students begin this program will finish if the institution determines that the program is to be closed.**

In the event that the DMD program is closed, all current students would be given the opportunity to complete the program and meet all requirements for the doctorate. A general announcement would be made to the student body and a notification posted on the CNU website indicating that the DMD program is suspended and that no new students would be accepted into the program.

Current students would still be able to attend required classes as scheduled. In addition, academic advisors would notify their students in person that each course is being taught for the last time and ensure that they are on track for graduation.

See: Attachment VI.A.1 DMD Teach-Out Plan.pdf

- 2. For joint doctoral programs transitioning to independent doctoral programs, describe the nature of the teach-out plan between/among the partnering institutions, including how financial responsibility and expenses will be shared, students served and dissertations supported. Identify the timelines established for the teach-out and the notice to be given to all students enrolled in the program. Copies of formal agreements for teach-out between/among partnering institutions and the notice provided to students are to be submitted with the proposal. The formal agreement should be agreed upon by all partnering institutions. If the original MOU contains a detailed description of the teach-out responsibilities for each institution, this document may be submitted in lieu of a new formal teach-out agreement.**
